## Overcoming the challenges of lack of Technical know-how among Small Scale fish farmers

Highlighting that there is a general lacuna in respect of technical know-how among small scale fish farmers, the author tells on measures needed to overcome this deficiency .. 20

## Policy Deficit in Open Sea Mariculture in India

The CMFRI accomplished the basic work needed for the promotion of sea cage farming in the coastal waters of Indian EEZ. In this background, the author has highlighted the immediate and imperative need to formulate a plan of action for the installation of fish cages along the Indian coastline. He observes that, under the leadership of the Union Fisheries Division, the various maritime States have to undertake follow-up work in respect of installation of cages all along the coastline, adding that this involves allotment of sites at sea for cage installation, and organising the fabrication of cages and their supply to the stakeholders, to be selected through needed publicity among the stakeholders. It is obvious that the suggestions of the author require immediate attention/follow-up action by the centre and the coastal States as needed ..... 30

## Instant Fish Gravy Powder – A New Product from CIFT, Cochin

The Central Institute of Fisheries Technology, Cochin has made yet another distinctive contribution to the fish-oriented culinary products of commercial importance for domestic consumption. The institute has formulated a new instant product which bears the name 'Instant Fish Gravy Powder', which has the potential for purchase by every fish consuming home, besides the commercial consumer centres. The Ready-to-cook powder was launched by Mr. Damodaran, Hon. Minister for Agriculture, Tamilnadu in the presence of Dr. S. Ayyappan, Director-General of ICAR. There was a huge gathering at the launching function at the inaugural session of XXIII Meeting of ICAR Regional Committee no VIII, held at Tamil Nadu Agricultural University, Coimbatore on 15 June 2012 ..... 43

## Successful induced breeding of the Cauvery carp, *Puntius carnaticus* (Jerdon)

The carnatic carp (Cauvery carp), a native of Cauvery river has now become a threatened species, because of its popularity and offtake from the river. As at present, it is a highly exploited species that needs measures for reviving and sustaining its population. Recognising this imperative need, Basavaraja and his associates at the Department of Aquaculture of Karnataka Veterinary, Animal and Fisheries Science University, Mangalore have undertaken and succeeded in the induced breeding of the fish. This is an achievement which will go a long way in reviving the population of the fish in Cauvery river on one hand and for supplies of its seed for the farming of the fish. The results of the work done will help to create 'live gene bank' for the threatened fish ..... 44
