Our Quality

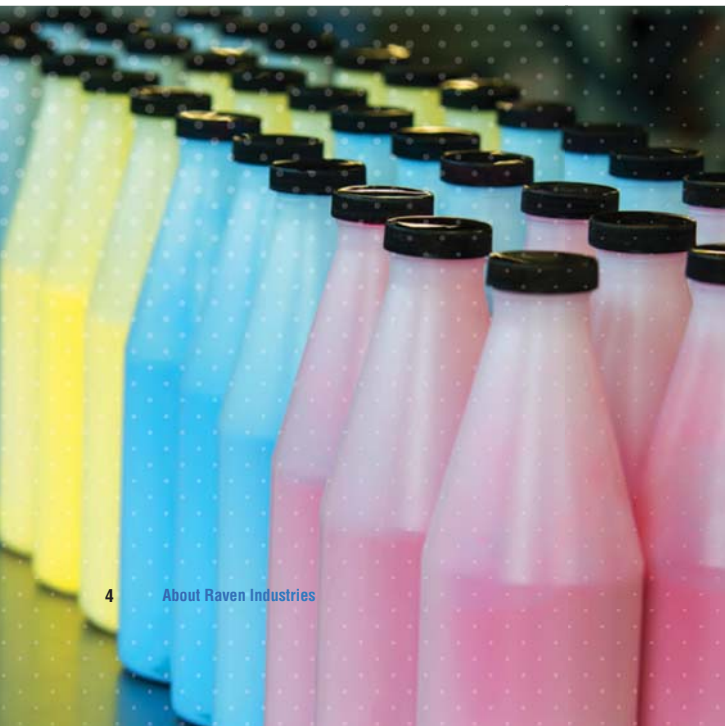

Toner formulations are developed in Raven's lab.

Raven's lab is equipped with over 400 machines which are dedicated to product development and quality assurance testing. The toner development process allows our team to learn valuable information about the machines' toner systems.

Toners are tested for the life of the machine components (ie. developer, starter and photoreceptor). OEM toner is benchmarked to evaluate its performance. Toner formulations include critical components needed for optimal machine performance. Toner tests include: taber testing to check fusing properties, yield, background development, resolution, density, waste toner, compatibility with OEM and cartridge fit and function.

The Raven Difference

1. We are a toner manufacturer.
Buy direct from the manufacturer and save on the cost without sacrificing quality.
2. Our products offer true cost savings.
Using Raven toners provide real value to the customer. Raven toners provide the same OEM quality, but are more economical.
3. We provide technical support.
Raven chemists work closely with service managers and technicians to optimize toner formulations.
4. We are first to market with new products
Raven aggressively monitors new machine introductions around the world and is committed to developing the latest toners.
