- Routing options

NAVIGON Flow.

The revolutionary software.

The new navigation software, NAVIGON Flow, makes light work of operating the device with gesture control. All functions can be controlled by tapping or swiping the screen. This means users can glide through the menu in an instant. And best of all: the most frequently used functions can be accessed more easily and intuitively!

Premium TMC Traffic Info.

Even better circumnavigation in traffic jams.

Premium TMC provides early traffic jam warnings and route calculation via the integrated antenna in the car charger. Availability of this service is unrestricted, and the data is provided four times more quickly and precisely than free TMC services.

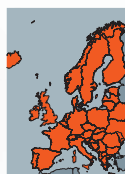

Active Lane Assistant.

Get in lane in time.

The Active Lane Assistant shows the best lane in a dynamic display from the driver's perspective – helping the driver get in lane in time and without stress even on complex stretches of road. It provides a clear and realistic display of the lane to be used so the driver can see even more clearly which lane to change into and when.

Technical and logistical data.

■ European map covering 44 countries.
