

TRANSPORTER

Private Peer-to-Peer Cloud Storage

Transporter is a private cloud storage device for syncing, sharing, accessing, and protecting your digital life. No privacy concerns, no fees. Access your digital life from any computer or mobile device, back it up, collaborate on it with colleagues, share it with family and friends and sync it across multiple devices. It's completely private. It's your digital life.

Sync

Sync your files across all of your devices. It doesn't matter if you're on a Mac, PC, tablet, or smartphone. Your files will sync automatically and always be up to date, and you'll never run out of space on your computer or mobile device.

Share

It's easy to share photos, videos, music and more with family and friends. Just invite them to your Transporter and that's it. Even if they don't own a Transporter, you can still share anything with them from yours.

Collaborate

Privately collaborate with co-workers. We all work remotely these days. Some are in the office, some are at home, some are across the country. With Transporter, you can open files from anywhere on any web connected device.

Backup

Back up your files with ease. Move important files from your desktop or notebook to your Transporter. With two Transporters, now you have an offsite back up.

Access

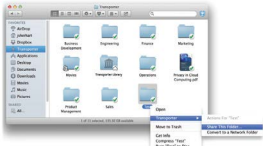

Access your files from anywhere, on any device. Travel a lot for business and need access to a contract? On vacation with the family and need to entertain the kids? Just access your Transporter remotely and you're good to go.

Mobile

Give your smartphone or tablet terabytes of data. Instead of storing movies, music, and photos on your mobile device, store them on your Transporter and use our mobile app to access your files.

Why Dropbox users love Transporter

Simplicity

Using Transporter is really easy. Just use the Transporter desktop app to sync, share, access, and backup. If you love Dropbox, you're going to love Transporter.

Privacy

Lack of privacy is a huge issue with cloud storage providers. Transporter eliminates this issue by giving you total control of your data.

Unification

Transporter lets you sync, share, access, and protect your data with a single device. Gone are the days of using separate services to perform all these functions.

Cost

Using cloud services to sync, share, and protect your data results in expensive monthly fees that add up. Transporter is a one-time purchase with no pesky fees.

Transporter vs. the Cloud

See how Transporter stacks up against popular cloud services over 3 years.
