Double / Dual Layer is a recordable disc providing 8.5GB capacity on a single side (2.6GB for 8cm discs). Compliant with the +RW Alliance (Double Layer) or DVD-Forum (Dual Layer) specifications.
The double / dual layer of recording has been made possible by the creation of a new substrate layer that sits in between each recording layer. This allows the laser beam to record on both layers. Once the first layer has been recorded, the laser re-focused to record on the second layer.

DVD+R DL is a recordable disc providing 8.5GB capacity. Compliant with the +RW-Alliance specifications.
AZO recording layer.
Highest Level of recording stability.
Superior Archival life.
Optimised for data, video & gaming applications.

The Wide White Inkjet disc has a white surface for inkjet printing up to the hub with printable diameter 21-118mm.

Verbatim SDHC Card

SDHC Card 44022
Specification:
Capacity: 32GB
Write Speed: 4MB/Sec
Read Speed: 4MB/Sec

Verbatim SDHC (Secure Digital High Capacity, SD 2.0) Cards are designed to be used in compatible digital cameras, portable music players, camcorders, smart phones, PC's or other consumer applications. SDHC Cards use a FAT32 file system, a specification that was established for applications with higher capacity needs and are especially suitable for high-quality video.

The increasing use of high-definition video, high-resolution digital photography and mobile applications demands higher storage capacity and more demanding data transfer rates. Because of this, SDHC cards guarantee a minimum sustained data transfer speed, not a maximum speed.

Verbatim SDHC Cards are fully compliant with all applicable SD standards. They also contain a write protect feature to prevent accidental erasure. SDHC cards use the same physical format as SD cards but cannot be used with SD host devices that do not comply with SDA Specifications Version 2.0.

SDHC logo is a trademark.

Speed Class Rating:
The speed class rating is the official unit of speed measurement for SD Cards defined by the SD Association. It is equal to 8 MBit/s, and it measures the minimum write speeds based on "the best fragmented state where no memory unit is occupied".
Class 4: Guaranteed minimum data transfer rate of 32 Mbit/s (4 MByte/s).

More Green, Less Plastic.
This package contains on average 90% less plastic than previous packaging.
*GB = 1 billion bytes. Capacity available for storage will be less; device uses up to 10% of memory for formatting and other functions. See
