

# Copper Structured Cabling Solutions

## Mutoa Outlet Point

## Mutoa Box Outlet Point

Global **SIX**

### Specifications

- 50x50 Cutout
- 50x50 Snap-in Collar
- 25x50 Modular Adapters
- Allows moves, adds and changes without terminating and testing again
- Shutter modules
- Rugged steel enclosure for durability
- 22-24 AWG solid cable accomodation

### Mutoa (Multi-User Telecommunications Outlet Assembly)

#### Features and Benefits

Mutoa Outlet Points are intended to provide increased flexibility and economy for installations where open office spaces require frequent reconfiguration. Instead of re-routing or installing new cable from a telecommunications closet, horizontal cabling can be accessed and repositioned without re-testing by means of a Mutoa Outlet Point.

The Mutoa is the Telecommunications Outlet itself.

It is not a hardcore termination on IDC (Insulated Displacement Connector). It is literally 8-12 ports which are RJ45 data jacks next to each other with the cable entering on the side of the box. It works on an architecture of up to 90m horizontal cable and you cannot exceed that length.

Its benefits are when the moves, adds and changes are required between fixed cabling and moveable furniture system layouts, particularly when solid floors are installed but the box can also be installed on the ceiling if required.
