

BOTANICAL GARDEN of the Department of Biology
Faculty of Science, University of Zagreb

DELECTUS SEMINUM 2015

E COLLECTIONE ANNI 2015
QUAE HORTUS BOTANICUS FACULTATIS SCIENTIARUM NATURALIUM
UNIVERSITATIS ZAGRABIENSIS
PRO MUTUA OFFERT COMMUTATIONE

Exhibition Greenhouses (1889) southern façade drawing is a part of the restauration plan, started in 2016.

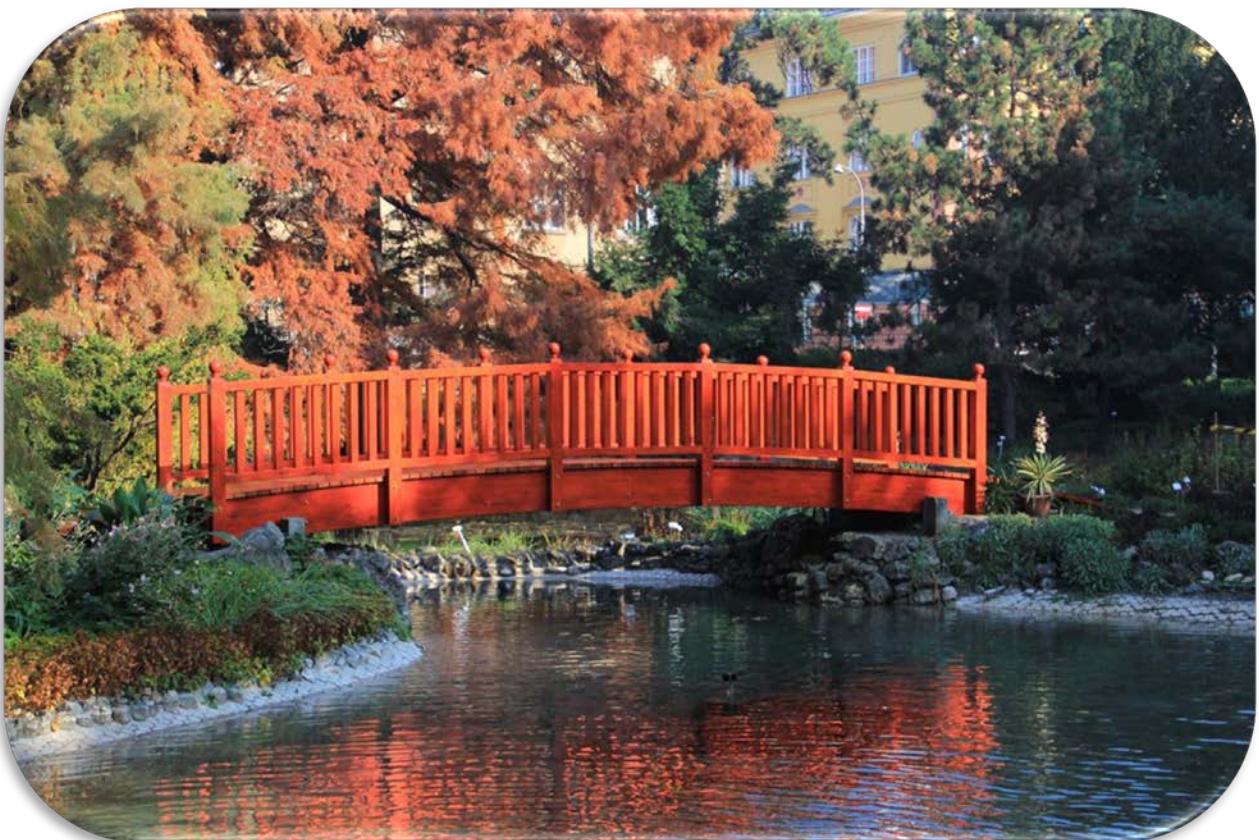

Exhibition Greenhouses and Nurseries photograph (ca 1900)

BOTANICAL GARDEN
Department of Biology - Faculty of Science
University of Zagreb

Address: Botanički vrt PMF-a, Marulićev trg 9a
HR-10000 Zagreb, CROATIA
☎ +385-1-4898060 ✉ botgarzg@biol.pmf.hr
<http://hirc.botanic.hr/vrt/home.htm>

Garden Manager: Biserka Juretić MSc; **Collection Curators:** Sanja Kovačić Phd, Vanja Stamenković Phd, Darko Mihelj BSc; **Seed collector:** Dubravka Sandev BSc; **Head Gardener:** Katarina Senfner

New pond bridge in oriental style was built by Garden employees in 2015.

GARDEN AREA: 4.7 ha
NUMBER OF TAXA: approx. 5 000
CLIMATHOLOGICAL DATA (in course of 1960-1999):
Abs max. annual temperature: 37.2 °C
Abs min. annual temperature: -17.2 °C
Mean annual precipitation: 889.9 mm
Mean annual sunshine/hrs: 1832.5
Mean annual days with snow (>/=1 cm): 32.5

**The Botanical Garden of the Faculty of Science in Zagreb is member
of the International Plant Exchange Network (IPEN).**

LEGEND

HR-0-ZAVRT- CW-5738

IPEN – Code our identification number

SYMBOLS

- * Seed and spores of native plant taxa, collected in their natural habitats.
- cw Seed and spores of known wild origin, cultivated in Botanical Garden
- G Seed collected in greenhouses
- IAS Invasive Alien Species

LITERATURE

- CULLEN, J. (et al. ed.), 1986 - 2000: The European Garden Flora. Vol. I-VI. Cambridge University Press.

NOTIFICATION

The seed for exchange is a result of open pollination, therefore we can not guarantee either its purity or germination. We invite our correspondents to kindly notify us with every mistake found, either in the name or in the dispatch of the species.

Please, **limit your order to 20 taxa** and send your *Desiderata* back by **April 1st** this year.

**At its little more than 55.000 km²,
Croatia has little more than 5500 plant taxa!**

Agreement

on the supply of plant material by Botanic garden, Faculty of Science in Zagreb:

The Botanic Garden is dedicated to the conservation, sustainable use and research of biological diversity. With regard to the acquisition, maintenance and supply of plant material, the Garden therefore expects its partners to act in a manner that is consistent to the letter and spirit of the Convention on Biological Diversity (Rio de Janeiro, 1992), the Convention on International Trade in Endangered Species (CITES) and in compliance with all relevant conventions and laws relating to the protection of biological diversity.

The seed material provided to you by our Botanic Garden can be used exclusively for education, scientific and research purposes, and serve interests of environmental protection. By your order you confirm, that in the work with provided seed and plant material, you accept all conditions and rules given by above mentioned conventions.

Orders:

PLETHORA OF PLANTS – COLLECTIONS OF THE BOTANICAL GARDEN, FACULTY OF SCIENCE, UNIVERSITY OF ZAGREB (1): TEMPERATE GLASSHOUSE EXOTICS – HISTORIC OVERVIEW

SANJA KOVACIĆ

Botanical Garden, Department of Biology, Faculty of Science, University of Zagreb, Marulićev trg 9a, HR-10000 Zagreb, Croatia (e-mail: sanja.kovacic@biol.pmf.hr)

Kovačić, S.: *Plethora of plants – collections of the Botanical garden, Faculty of Science, University of Zagreb (1): Temperate glasshouse exotics – historic overview*. Nat. Croat., Vol. 24, No. 2, 361–397*, 2015, Zagreb

Due to the forthcoming obligation to thoroughly catalogue and officially register all living and non-living collections in the European Union, an inventory revision of the plant collections in Zagreb Botanical Garden of the Faculty of Science (University of Zagreb, Croatia) has been initiated. The plant lists of the temperate (warm) greenhouse collections since the construction of the first, Exhibition Glasshouse (1891), until today (2015) have been studied. Synonymy, nomenclature and origin of plant material have been sorted. Lists of species grown (or that presumably lived) in the warm greenhouse conditions during the last 120 years have been constructed to show that throughout that period at least 1000 plant taxa from 380 genera and 90 families inhabited the temperate collections of the Garden. Today, that collection holds 320 exotic taxa from 146 genera and 56 families.

Key words: Zagreb Botanical Garden, warm greenhouse conditions, historic plant collections, temperate glasshouse collection

Kovačić, S.: *Obilje bilja – zbirke Botaničkoga vrta Prirodoslovno-matematičkog fakulteta Sveučilišta u Zagrebu (1): Uresnice toplog staklenika – povijesni pregled*. Nat. Croat., Vol. 24, No. 2, 361–397*, 2015, Zagreb

Slijedom najavljenog temeljitog popisivanja i službene registracije svih živih i neživih zbirki u Europskoj uniji, u Botaničkom vrtu Prirodoslovno-matematičkog fakulteta Sveučilišta u Zagrebu pokrenuta je revizija sadržaja stakleničkih zbirki. Sastavljeni su popisi biljaka toplog staklenika od njegovog podizanja (1891.) do danas (2015.), uređena sinonimka i nomenklatura te istraženo podrijetlo biljnog materijala. Rezultati pokazuju kako je kroz zbirku toplog staklenika tijekom posljednjih 120 godina prošlo barem 1000 svojti iz 380 rodova i 90 porodica. Danas u toj zbirci živi 320 biljnih svojti iz 146 robovoda i 56 porodica.

Ključne riječi: Botanički vrt u Zagrebu, povijesne zbirke biljaka, staklenički uvjeti, zbirka toplog staklenika

INTRODUCTION

Established in 1889 and statutorily protected in 1971 as a Monument of Park Architecture and an integral part of the Zagreb Green Horseshoe Monument of Culture (REGULA,

* **Supplementary Material:** Table 2 is available only in the Electronic Supplement of the online version of this article.

Dodatni materijal: Tablica 2 dostupna je samo u Dodacima elektroničke verzije ovoga članka.

1997; JURETIĆ *et al.*, 2014), the Botanical Garden of the Faculty of Science, University of Zagreb (in further text “the Botanical Garden” or “the Garden”) today is a member of the *Botanic Gardens Conservation International* (BGCI) and *International Plant Exchange Network* (IPEN). Though very small (4.45 ha) and placed in the very heart of the Croatian Capital, it has a 125-years-long tradition of university education and international seed exchange via *Delectus (Index) Seminum*-publications. Along with the easily accessible outdoor areas, the Garden also has several glasshouses. The largest, Exhibition Glasshouse (Figs. 1abcd), is one of the oldest in this part of Europe. It was built in 1891 on the model of the famous Viennese *Palmenhaus* in Schönbrunn, and by the same craftsmen, in the same well-regarded Viennese master-workshop. Though nowadays closed to the public due to the long deterioration, the glasshouses are still home to many plants from all continents and were during the century a home to many more, now vanished.

As a part of the announced need to register all, both living and non-living, collections in the European Union, and in view of the forthcoming total reconstruction of the old Garden Exhibition Glasshouse, in 2015 I made an inventory of all existing and once-existing plants of the temperate (warm) greenhouse collection. The main idea was to gain a combined and full inventory, which would provide, for a first time in the Garden’s history, a thorough insight to the “houseplants” grown in the Botanical Garden’s temperate collections (Figs. 2ab). After we published data on the Croatian statutorily strictly protected species grown in the Garden (cp. SANDEV *et al.*, 2013; KOVAČIĆ *et al.*, 2014), it is our intention, to systematically examine and register in such a manner all of our Garden collections.

The Greenhouses

Since the building of the first greenhouses of Emperor Tiberius in the 1st century AD, via the Far East glasshouses of 15th century Korea, 17th century Netherlands and early 19th century Europe (WOODS & SWARTZ WARREN, 1990; ANONYMOUS, 2007; PARIS & JANICK, 2008; BAVCON *et al.*, 2012 and the literature within; GRANT, 2013), the “indoor-space for plants” became a standard of any botanic garden. Heated buildings with adequate humidity and ventilation become necessary for any garden that wishes to preserve plant material for research and education, as well as to grow exotics to attract more visitors.

In the 20th century, it became common to classify greenhouses, according to the minimal winter temperatures provided, together with the required humidity and lightning, into “cool” (cold, *frigidaria*), “warm” (temperate, *lepidaria*), and “hot” (tropical, *caldaria*). Accordingly, in our Botanical Garden the “cool” glasshouse maintains a winter temperature below 12 °C or 10 °C, so light heating is required. Depending on the plant collection overwintering in such an environment, the amount of humidity should be levelled between very low (for example, for the collection of succulents) and relatively high (for the collection of Mediterranean plants). In our Garden, the “cool” glasshouses are used for the overwintering of Croatian and other Mediterranean native (potted) plants, as well as palms (fam. Arecaceae) and succulents (families Cactaceae, Mesembryanthemaceae, Euphorbiaceae etc.). In the “hot” glasshouses, the collections of tropical (and some subtropical) plants do not just overwinter, but in most of cases live permanently. These premises require a minimum all-year round temperature of at least 20 °C to 18 °C. The regular daily temperature is often higher than 30 °C, to mimic the conditions of tropical and rain forests. Along with the high temperatures, hot glasshouses must have a relative humidity above 80%, as well as rain-watering and appropriate misting- and shading-systems, so they are expensive to maintain.

In-between the "cool" and "hot" greenhouse conditions, there is a range of various so called "warm" or temperate ambiances, required for a vast spectrum of plants which we often call "the houseplants". The most common conditions are those of a "living room": the lowest temperature required during the wintertime is between 15 °C and 18 °C, along with a medium humidity and considerable shading at mid-day. In the temperate ("warm") glasshouse conditions, the maintenance of high humidity is appropriate, but not essential, as it is in the "hot" glasshouses. More important is regular ventilation: stale air is inappropriate and favourable only for the growth of various pests. However, draft is also harmful to the plants, so airing must be carried out with caution.

From the building of the Exhibition Glasshouse (1891) in our Botanical Garden, the "houseplants" and other exotics from temperate parts of the world were grown in the presentation area – later, presumably, in the "supplementary" glasshouse as well, which was erected in 1899 (REGULA, 1997). In 1985, that smaller greenhouse was enlarged to approx. 150 m² and colloquially named "The Aroideae" (Fig. 3), for it was initially intended for the members of Araceae family (especially subfam. Aroideae) and their relatives. Thirty years on, mostly due to the chronic shortage of space, a large number of various plants live there (Fig. 4), while the members of Araceae family dwell mostly in the tropical glasshouse.

In the warm greenhouse-conditions of the Garden today a collection of exotic plants from temperate and subtropical parts of the world (Australia, South America, Asia) overwinters and permanently lives; among these plants many are economically important (edible, medicinal, ornamental) and there are also popular ornamentals (cultivars, hybrids, forms).

The aim of this paper is to reveal the data on the plant species that have been grown in the temperate collections of the Botanical Garden (Faculty of Science, University of Zagreb) since its foundation. For establishing a list of associated taxa, during 2015 I thoroughly examined the published works, the Garden database and my own records. Lists of plants living in the temperate glasshouse collection between 1895 and 2015 were thus constructed and compared. The comprehensive inventory of the recent collection is a foundation for the announced thorough cataloguing and registration of all collections in the European Union. However, it is also important to discover the plants grown in the collections over the years, for by knowing both, we can plan our further steps in maintaining and supplementing the collections: replacing the *missing parts of the puzzle*, and adding new ones, to form a *meaningful whole*.

MATERIAL & METHOD

Three main sources are used for constructing the lists of exotic plants growing in the Botanical Garden's temperate glasshouse collections, since its establishment: (i) published data on the historic collection of the early days (1891-1896), (ii) the passive database of plants cultivated in the Garden since 1948 but not living today, and (iii) active database of plants recently (2015) living in the temperate glasshouse collection, together with the attending gardener's glasshouse inventories.

The initial part of this study is based on a booklet written by the founder of the Botanical Garden, Professor Antun Heinz (1861-1919). In this work, published in 1895-1896, he depicts the astonishing amount of indoor- and outdoor-plants contained in the collections soon after the Garden was formally established (1889). It is quite hard to belie-

ve that in only four years after “the first shovel was stuck into the bare ground” in early March of 1891 (HEINZ, 1895-1896, pg. 13), such a *plethora of plants* inhabited the Garden facilities.

The booklet (HEINZ, 1895-1896) was written according to the then valid classification of the Plant Kingdom, which is today somewhat hard to follow, and was quite vague with respect to the details in the inventory. In numerous cases, only plant genera are named, as “containing several/many species”, without any further details (origin, acquirement, living conditions, etc.). Though back then the Garden Exhibition Glasshouse was divided in several temperature zones (“kuće”) and the collections accordingly, Heinz mostly named the location in the Garden where the certain plant group lives just as “in the greenhouses” or “in the open”, without information where exactly or in what conditions. Accordingly, Tab. 1 lists the plants grown in the temperate glasshouse collections in 1895. Since the precise data of Heinz (1895-1896) are missing, it must be stressed that much speculation went into the construction of Tab. 1: I had to make many “educated guesses” either as to the plant species that actually need the warm-glasshouse conditions to thrive, or the valid names of taxa of all ranks, which changed during the century. At first, I was guided by the data on life-requirements for the species listed by Heinz, or their relatives living conditions in our glasshouse collections today. Secondly, I kept the original names stated by Heinz, mainly for historical reasons, but with some notes on the currently valid nomenclature and classification, when possible. Though incomplete, this oldest inventory of the temperate greenhouse-plant collection (HEINZ, 1895-1896) is worth mentioning in order to project a picture of the collection as initially established, and identify the plant taxa that should be added to the recent collection, for historical reasons or “filling the gaps” in the inventory of certain families or genera.

After the booklet of HEINZ (1895-1896), there is a large gap of more than 50 years (until the establishment of the current Garden database in 1948), and throughout the data on the glasshouse collections are missing. Some data on the glasshouse-plants can be found in the gardeners’ working diaries (their manuscripts since 1926 are placed in the Botanical Garden archives), but never in the form of complete or thorough plant lists. REGULA (1997) supposes that a comprehensive Garden database did not exist in the first half of the 20th century – however, this is hard to believe, as every European botanic garden keeps a register of their inventory in one form or another, sometimes for centuries. Moreover, we are in possession of a single preserved notebook from 1898 (Figs. 5ab) containing a list of conifers in the Garden, which implies that there must have been something similar for at least some of the other collections. It could be assumed with some certainty that the Garden collections were in the first half of 20th century at least twice seriously impoverished (during the First and the Second World War), but also that there were some longer periods of thriving. Whatever the case, comprehensive data for the whole period are sadly missing.

Recent Garden records (Figs. 6ab) were founded in 1948, with the arrival of the first post-WWII director of the Garden, Dr. Sala Ungar (1908-1988). It is since then that we can track the contents of the collections in detail, and botanists of the Garden have kept up this activity. In addition, it is since 1948 that every potted plant in the Garden’s greenhouse-facilities has been labelled with its scientific name, town/botanical garden of origin, year of acquiring and the serial number of the Garden-database, so the tracking of the collections is much easier.

The Botanic Garden database holds approx. 28,000 cards (single entries for a single taxon, Figs. 6ab), which are divided in two parts: what is called the **passive database** (plants not present in the Garden, but grown during the years) and the **active database** (plants recently grown in the Garden), which was digitalized in 2002 as a component of the *Flora Croatica Database* with restricted access (<http://hirc.botanic.hr/fcd/crofloradb/>, Fig. 8). The contents of the passive and active card database are connected with several notebooks (Fig. 5b), listing the plant names of all received species in several groups (native plants, exotic plants, annuals), arranged by their serial numbers.

Cards (Figs. 7ab) were designed to carry vital data on each plant entering the collection: from the scientific and common names, through the city and year of acquiring, to practical notes on cultivating and managing the species. Valid scientific names of the time were occasionally unconfirmed or doubtful, due to the lack of adequate literature: for example, some names were stated only according to some *Delectus Seminum*. For most of the species already living in the glasshouses when the new database was launched, the oldest cards state just "plant found growing in the Garden", without any further data on origin etc., which were obviously unknown: for example, *Lunularia cruciata* (nn, 1949), *Isoloma pictum* (nn, 1950 – Figs. 7ab), *Callisia repens* (nn, 1950), *Selaginella involvens* (nn, 1950), *Streptocarpus rexii* (nn, 1950), etc. ("nn" is short for "unknown origin").

For all newcomers after 1948, the local area or the botanic garden of plant seed/cutting/bulb origin was noted, together with a year when the material was acquired: the oldest plant in the temperate collection recorded in such a manner was one *Dracaena 'Haageana'*, obtained from Palermo (Italy) in 1948. The facility or an outdoor-place where the plant was cultivated in the Garden was also noted: for example, "S" for a greenhouse (without further notice of which one exactly), "P" for arboretum, "Y" for nursery, etc.

Initially, a collection inventory was kept annually, when the status of each specimen was carefully noted in the card of each taxon: for example, the number of potted, replanted, sold or died-off specimens; newly grown specimens by seeds, cuttings or by dividing of the old ones, etc. For many taxa the data are incomplete, and for the minority it was noted only that they were successfully germinated and placed in the temperate collection, but nothing further. The reason for this may lay in the fact that during the years and even decades when the Garden staff and finances were limited, sometimes five or more years would pass between two inventories. Also, from some cards, it is obvious that the Garden staff struggled to grow certain interesting species in different conditions, year after year, but failed, probably due to the unfamiliar conditions under which some plant should be germinated or cultivated. It is also interesting to see that via *Delectus Seminum* publications the Garden obtained some species from native seeds, collected in remote regions of the world: for example, one *Cycas taiwaniana*, today listed in CITES' Appendix II (ANONYMOUS, 1979), as "Trade controlled to avoid use incompatible with species survival – Global". In places with a high rate of endemism (South Africa, Australia, Madagascar, China, Pacific Islands...) collecting in the wild is nowadays strictly forbidden.

Tab. 2 (not shown here; available in the Supplement of the electronic version of this article) comprises the details extracted from the passive Garden-database, contained in the cards of individual taxa grown in the warm greenhouse conditions since 1948, but now missing in the recent temperate collection (nonetheless, some are growing in the other parts of the Garden). After the digital Garden-database was established in 2002 (<http://hirc.botanic.hr/fcd/crofloradb/>), this "silent" catalogue of approximately 20,000

entries has rarely been consulted: during this study, some of the cards were extracted for the first time in decades after they were removed from the active database of living plants. In examination of this part of the database I found some very interesting data, as well as many synonyms and double (even triple) entries for the same plant sample or species. Most of the older passive database cards do not carry precise information on the greenhouse-conditions in which some plant lived, just a symbol "S" ("staklenik", a glasshouse in Croatian). In such cases, again, I had to make educated guesses so it is possible that I either overlooked some plant species which should be placed in the temperate (warm) glasshouse collection, or inventoried some that were never actually grown in such conditions. It is only since 1985, when the new "Aroideae" glasshouse was erected, that the cards have carried the "S8"-sign, depicting that some particular plant lives in the temperate glasshouse collection Number 8 – which is the "Aroideae". Also, it is worth mentioning that during my inspection of the passive database I have noticed several larger plant die-offs in the glasshouses – perhaps due to some disease or vermin, when the pest-control was insufficient. Unfortunately, there were some periods of time after WWII when even the basic care of the Garden was deficient: times with a severe lack of finances and trained staff – even in the recent era, during the Croatian War of Independence (1991–1995), when just the minimal care for plants could have been provided.

The final part of this study is based on our active Garden-database and recent records on the plants growing in the warm glasshouse, concluding with May 30th, 2015. Today, the inventories of the glasshouse collections are made biannually, when the new nomenclature is obtained, as the scientific names of plants often change according to the latest research on the origin and relations of species. A paradox is that, in contrast to the shortage of proper literature experienced during the olden days, today we are overwhelmed with information. Various authorities disagree greatly on the valid nomenclature and synonymy of plants (even in the proper name(s) of the author(s) of species, not even counting the accepted names of taxa), so we decided during the 2000s to consult the Tropicos database of the United States' St. Louis Missouri Botanical Garden (<http://www.tropicos.org/>), to obtain the recent valid scientific names of exotic, non-Croatian and non-European native species growing in the glasshouses. During the last several years, if Tropicos lacks information, the Plant List database (<http://www.theplantlist.org/>) has been consulted, followed by the other on-line sources, such as the International Plant Names Index (<http://www.ipni.org/>), etc.

Tab. 3 depicts plants that live in the warm, "Aroidea"-glasshouse today. The basis of that list is my own register of inventories, assembled biannually since 2000 by the attending gardeners in the temperate greenhouse collection. Besides, the active Garden database was thoroughly examined and compared with the data contained in the digitalized database (<http://hirc.botanic.hr/fcd/crofloradb/>), during which many cards ought to be removed to the passive part of the records. We are still keeping track of the origin of plant material and the precise place in the Garden where each specimen is placed. Most of the plants in the recent temperate collection are represented with three to five clay-potted-specimens, which are rejuvenated (vegetatively or germinatively) when possible. New plants for this collection are obtained through the *Delectus Seminum* network of inter-botanic-garden seed exchange, and grown in the Garden quarantine facilities. Rarely, some gardens offer living plants (bulbs, cuttings, plantlets) from which the growing is faster, if these vegetative fragments survive transport and frequent delays at the custom-offices. From time to time, some interesting plants (primarily cultivars that are impossible to grow from seeds) are purchased from nurseries or garden centres.

RESULTS & DISCUSSION

Tab. 4 depicts the relations in estimated numbers of families, genera and taxa living in the temperate glasshouse collection of the Botanical Garden (Faculty of Science, University of Zagreb) during the years.

Tab. 4. Compilation of numbers of families, genera and taxa for the five large groups of temperate glasshouse collection plants (Thallose liverworts, Spikemosses, Ferns, Dicotyledons and Monocotyledons), extracted from three sources: 1895 – the booklet written by HEINZ (1895-1896); 1948-2014 – the passive Garden database on the plants grown during that period, but recently not existing in the temperate glasshouse collection; 2015 – the active Garden database on the plants recently grown in the temperate glasshouse collection. An asterisk (*) depicts an estimated number, due to the lack of precise data.

Plant group	Year(s)	Families	Genera	Taxa
Thallose liverworts	1895	1	3	5*
	1948-2014	6	8	11
	2015	0	0	0
Spikemosses	1895	1	1	10*
	1948-2014	1	1	20
	2015	1	1	9
Ferns	1895	6	21	35*
	1948-2014	13	26	53
	2015	7	13	25
Dicotyledons	1895	40	92	130*
	1948-2014	38	120	297
	2015	31	72	159
Monocotyledons	1895	14	50	70*
	1948-2014	16	75	152
	2015	17	60	127
In total	1895	62	167	250*
	1948-2014	74	230	533
	2015	56	146	320

As already emphasized, it is hard to compare data from various ages due to the extensive synonymy and the many changes in taxonomic and systematic relationships of plants. For example, once known only as "Hepaticae" (Tab. 1), thallose liverworts were later subdivided into many families (Tab. 2), some monotypic. On the other hand, many previous, smaller families of monocotyledons are now integrated in the large "Asparagaceae" (Tab. 3), etc. As the aim of this study is neither to solve the taxonomical or nomenclatural problems, nor to get involved in the scientific debates on the more or less "natural" subclassifications of the Plant Kingdom, for purely "gardener-friendly" purposes I have provisionally assembled the plants of the Garden's temperate collection into five groups. These are: **Thallose liverworts** (Marchantias), **Spikemosses** (Selaginellas), **Ferns** (Pteridophyta), **Dicotyledons** ("Dicots", Magnoliopsida) and **Monocotyledons** ("Monocots", Liliopsida).

Here follow some explanations and clarifications of the data listed in Tabs. 1, 2 and 3 (in Supplements), arranged by five aforementioned provisional groups of plants formerly or recently grown in the temperate glasshouse collection of our Garden:

Thallose liverworts (Bryophyta-Marchantiopsida-Marchantiales)

According to the earliest data (HEINZ, 1895-1896, pg. 13-14), several taxa in three genera of "Hepaticae" (Tab. 1 & 4) were grown in the glasshouse in 1895: *Riccia* ("various"), *Marchantia* and *Lunularia*. There are no references to the origin of these liverworts in the early days of the Garden. These primitive plants were always in the first place important for the teaching of botany, but sometimes became troublesome weeds in other plant pots and Garden surfaces: for example, *Lunularia vulgaris* and *Marchantia polymorpha* were already infesting the greenhouses in the early 1890s (HEINZ, 1895-1896).

Since 1948, 6 liverwort families with 8 genera and 11 species (Tab. 2 & 4) passed through the warm glasshouses: Aytoniaceae (genera *Fimbriaria* and *Mannia*), Corsiniaceae (*Corsinia*), Lunulariaceae (*Lunularia*), Marchantiaceae (two species of *Marchantia* and two of *Dumontiera*), Targioniaceae (two species of *Targionia*) and Wiesnerellaceae (*Wiesnerella*), according to the recent nomenclature. Almost exclusively, the liverworts were obtained from the botanic gardens in Antwerp (Belgium) and Jena (Germany) in the early 1960s, but wilted or were displaced from the collection before 1970.

Recently, only the common liverwort (*Marchantia polymorpha*) is periodically placed in the temperate glasshouse, when it is needed in larger amounts for the purpose of botany classes or research, but not as a regular part of the temperate greenhouse collection (Tab. 3 & 4). Besides this, three representatives of thallose liverworts today grow in the Garden (and so outdoors): *Lunularia cruciata*, *Conocephalum conicum* and *Frullania dilatata* (data of Antun Alegro, pers. comm. – unpublished).

Spikemosses (Lycopodiophyta-Isoetopsida-Selaginellales)

Spikemosses or selaginellas belong to a monotypic family (Selaginellaceae), which contains only a single genus – *Selaginella*. Although there were some attempts to divide the genus and family into smaller groups, the simple "single family – single genus" approach still prevails.

According to HEINZ (1895-1896, pg. 16), "there is a nice collection of many beautiful spikemosses in the glasshouse", without a more concise description of the subordinate taxa: whether he was referring to the number of *Selaginella* species or to individual specimens (Tab. 1), I cannot tell.

After WWII, as many as 20 spikemoss species with two subordinate taxa went through the temperate glasshouse collection, which are absent today (Tab. 2 & 4). It seems that *Selaginella kraussiana*, *S. millspaughii* and *S. stellata* were most often ordered from the various *Delecti Semini* – however, the most favourite botanical garden from which to order these attractive plants was that in Lyon (France), during 1960s. The longest-running specimens in the collection were some of *S. kraussiana* and *S. stellata*, living for about 25 years (1962-1988).

Nine species of spikemoss are permanently living in the temperate glasshouse today (Tab. 3 & 4). Most of them are quite old, originating from the 1960s: for example, our recent *S. tenuissima* was obtained from Lyon (France) in 1951. It is worth mentioning that Tabs. 2 and 3 overlap in two species: *Selaginella involvens* and *S. kraussiana*, ordered among others from Cluj-Napoca (Romania) in 2015. The reason for this is simple: the newcomers are not yet fully established after they arrived as plantlets, and in poor shape.

Ferns (*Pteridophyta – Polypodiopsida/Pteridopsida*)

The classification of ferns and their relatives is very difficult and much disputed. In almost every source consulted – printed or accessible on-line – one will find different views on the taxonomy, nomenclature and systematic position of taxa. The synonymy of ferns is enormous, sometimes counting 30-or more “accepted”, “valid”, “synonymic” and “rejected” names for a single taxon, which could be attributed to several different families. To make it all worse, a confusion around the natural and cultivated varieties (“cultivars”), forms and hybrids tangles the nomenclature furthermore.

According to HEINZ (1895-1896; pg. 14-15), “many species” from 21 fern genera and 6 families (Tab. 1 & 4) of that time grew in the Exhibition Glasshouse in 1895, many of which are today missing. For various taxa just a genus is stated, as “containing several species”, so it was impossible to sort out which. It is very impressive to see, just three years after the construction of the Exhibition Greenhouse, so many ferns living in the Garden: even the primitive whisk fern (*Psilotum nudum*) of the ancient Psilotales, and many other true-fern species (as seen in Tab. 1), which never appeared again.

In Tab. 2 I have listed all ferns grown since WWII in the temperate greenhouse conditions: the list includes 13 recent families, 26 genera and 53 taxa (Tab. 4) which are not present in the nowadays collection. We now miss the representatives of 7 fern families and 10 genera – but this is, actually, disputable. As already stated, different botanical sources classify ferns in different ways: for example, the genus *Arachniodes* is included in *Polystichum*, *Histiopteris* in *Pteris*, *Drymaria* in *Polypodium* etc., so this “lack” in representatives of genera and families is relative.

Recent collection of the temperate glasshouse ferns lacks some species today living in the tropical facilities of the Garden (*Platycerium*, *Ceratopteris*). The temperate glasshouse collection is at the moment home to 7 fern families (Tab. 3 & 4) and 13 genera with several dozen specimens from 25 taxa (species, subspecies, cultivars). As the ferns are not easily developed from spores, in ordering taxa from other gardens the living-plants were preferred. Many specimens were obtained in a form of already established plants, just after the WWII often from the Croatian Opeka Arboretum, but also from other gardens and private donations (in Tab. 3 assigned as “nn” – origin unknown; acc. to Dr. Ljerka Regula – pers. cont.). The oldest living fern specimen in our collection originates from plants obtained in 1954: these are well-known ornamentals *Pteris multifida* and *Nephrolepis exaltata* (Tab. 2). Always very popular among the visitors, our exotic ferns overwinter indoors, but oversummer in the open: in the Garden *fernarium*, where they can be closely approached. Potted tropical and subtropical ferns (for example Fig. 9a) are combined in between the permanently planted, open-air ferns of the cooler parts of the world, to form a summertime-long fern collection.

“Dicotyledons” (“dicots”, Magnoliopsida)

Most of the former and recent exotic plants of the Garden collections belong to the large and (also disputed) angiosperm group of “dicotyledons” or “magnoliopsida”.

As seen in Tab. 1 (HEINZ, 1895-1896), in the late 19th century more than 90 genera from 40 families lived in the temperate glasshouse collection (Tab. 4) – and this is just an estimation. Like today (Tab. 3), the most abundant were the families of Gesneriaceae, Moraceae and Amaranthaceae, out of which many of the listed plants are present in the recent collection. Some scientific names are difficult to confirm (especially because the authors of species-names are missing): for example, genus “*Candollea*” (fam. Dilleniaceae), or species such as “*Uragoga (Cephaelis) Ipecacuanha*” (fam. Rubiaceae).

According to my calculations (Tab. 2 & 4), during the last 70 years almost 300 "dicot"-taxa passed through the temperate glasshouse collection but are now missing, from 120 genera and 38 families. Some of the species are growing in other parts of the Garden (for example *Ruellia blumei*, *Iresine herbstii*, etc.), but a large portion was linked to the warm-greenhouse environment exclusively (for example begonias, peperomias, etc.) and are not grown elsewhere. More than 70 now absent taxa of Begoniaceae, 40 of Gesneriaceae, 30 of Piperaceae etc., once lived in the warm greenhouse. Some species were ordered repeatedly (for example *Begonia dregei*, *B. grandis* ssp. *evansiana*, cultivars of *Begonia x tuberhybrida*, *B. 'Rex Cultorum'* or *Saintpaulia ionantha*; *Jacaranda mimosifolia*, *Tipuana tipu*, *Clerodendrum speciosissimum*, many peperomias, etc.), among which the absolute winner is *Streptocarpus rexii*: it was ordered a dozen times during the years, but lived briefly (Tab. 2). Also, it is obvious that *Delecti Semini* of some botanic gardens were more popular than the others: for example the gardens in Besançon, Gent and Nancy (France), Antwerp (Belgium) and Vienna (Austria – Institute, Belvedere and Schönbrunn). For about 50 samples the source is unknown ("nn" in Tab. 2). Some of those plants were received from the Garden staff and visitors, and some were purchased, but without a known origin (acc. to Dr. Ljerka Regula – pers. comm.).

In the current "Aroideae"-glasshouse about 160 "dicots" from 72 genera and 31 families have recently been grown (Tab. 3 & 4). The most abundant are the families Piperaceae (26 taxa in two genera) and Moraceae (24 taxa in two genera), followed by Acanthaceae (20 taxa in 15 genera, among which *Pleuropetalum darwinii* is placed in the IUCN Red list), and Gesneriaceae (12 taxa in 6 genera). The Begoniaceae family recently holds 10 taxa (Fig. 9b), while in the past (Tab. 2) it was far more abundant. Around a dozen families hold only a single representative (again, the nomenclature is conducted according to the Tropicos botanic database – other sources might consider the ranges of families and subordinate taxa differently), but most of them are represented in the other (glasshouse) collections (for example, Araliaceae, Oleaceae, Passifloraceae, etc.). Most of the plants grown in the large pots are placed during the summertime in the open, to be reachable to our visitors. To them, the most interesting are the collections of *Coffea* (many pots, Fig. 9c), *Piper* (several taxa) and *Ficus* (more than 20 taxa, Figs. 9de). The Garden glass houses have been closed to the public for almost a century now: in future, when the old Exhibition Glasshouse is reconstructed, part of the temperate collection will gain a space of its own ("topla kuća" – "warm house").

"Monocotyledons" ("monocots", Liliopsida)

A few of the exotic plants once grown in the temperate-glasshouse collections belong to the angiosperm group of "monocotyledons" or "liliopsida". At the end of the 19th century, Heinz (1895-1896) depicts the representatives of at least 50 genera in 14 families at the time (Tab. 1 & 4). Members of the Araceae, Bromeliaceae, Liliaceae and Zingiberaceae were most abundant.

According to my calculations (Tab. 2 & 4), in the temperate-glasshouse collection after 1948 about 150 "monocots" from 75 genera and 16 families once grew but are now missing. Families of Bromeliaceae, Araceae, Commelinaceae and Asparagaceae were most abundant in the temperate greenhouse collection. Most of the representatives of, for example, fam. Orchidaceae and Amaryllidaceae (s.l.) are today cultivated in the other greenhouse collections.

The recent temperate glasshouse collection holds around 130 "monocots" from 60 genera and 16 families (Tab. 3 & 4). The most abundant are the families Asparagaceae

(40 taxa in 11 genera) and Bromeliaceae (35 taxa in 14 genera – *Billbergia macrolepis* is placed in the IUCN Red List). Several families hold only a single representative, but, again, according to other sources, some of them are included in other (larger) families. Some of our temperate collection “monocots” are also placed during the summertime in the open, such as the famous birds of paradise (*Strelitzia*), the currently large Asparagaceae (dracaenas, sansevierias) and some larger Bromeliaceae (Fig. 9f).

Representatives of other evolutionary groups and families were occasionally placed in the warm greenhouse facilities for various reasons, among which the most often was a simple lack of space. These “ephemerals” are not included in Tab. 2, for they were regularly moved to the other collections after some time. For example, members of the ancient Gnetaceae family (mostly *Gnetum gnemon*) lived occasionally in the temperate glasshouse, as well as the young plants of the Araucariaceae family (*Araucaria angustifolia*, *A. araucana*, *A. bidwillii*, *A. cunninghamii*), which spent several years of their “childhood” in the temperate greenhouse collection, before being added to the cool greenhouse collection.

CONCLUSIONS

According to a thorough examination of the available sources, I found that during the last 125 years at least 1000 plant taxa from 380 genera and 90 families were cultivated in the temperate (warm) glasshouse collection of the Botanical Garden, Faculty of Science, University of Zagreb. As early as 1895 (HEINZ, 1895–1896), at least 250 taxa of 167 genera and 62 families inhabited this collection. After that, until the end of the WWII, data on the glasshouse collections are missing.

The passive part of the recent database, keeping details on plants that are today missing, shows that between 1948 and 2014 at least 533 taxa from 230 genera and 74 families passed through the temperate glasshouse collection.

The active part of the recent database holds information on the plants cultivated in the Garden at the moment: accordingly, the temperate glasshouse plant collection contains 320 taxa from 146 genera and 56 families.

Acknowledgements

I wish to express my sincere gratitude to the Botanical Garden volunteers Renata Biba, Kristina Blagušević, Anja Gotić and Livia Hamaček, students of biology (Faculty of Science, University of Zagreb), who typed and sorted the vast lists of plants grown in the temperate glasshouses extracted from the Garden database. My appreciation extends to my colleagues, Biserka Juretić, Darko Mihelj and Dr. Vanja Stamenković, who patiently compared these lists with their own; the gardeners Zrinka Dević, Gordana Ljevar and Mirela Ravlić, for constructing the inventories of the recent temperate glasshouse collections since 2000; and Dr. Ljerka Regula, retired manager of our Botanical Garden, for sharing countless stories and unpublished data over the years. I am also thankful for the good will and valuable suggestions of my esteemed peers, Dr. Jože Bavcon, Director of the Ljubljana University Botanical Garden (Slovenia), and Dr. Dario Kremer, Head of the Fran Kušan Pharmaceutical Botanical Garden, Zagreb University (Croatia). Finally, the efforts of all Garden managers, curators and gardeners, in maintaining the collections of living plants in the Botanical Garden of the Zagreb Faculty of Science, since its foundation in 1889 until today, are greatly admired and appreciated – most of all those of its founder, Professor Antun Heinz.

Uresnice toplog staklenika – povijesni pregled***

S. Kovačić

Dvije godine po osnutku Botaničkoga vrta (1889.) današnjeg Biološkog odsjeka Prirodoslovno-matematičkog fakulteta Sveučilišta u Zagrebu, u njemu su dovršeni staklenici (1891.). Najveći, izložbeni staklenik izgrađen je po uzoru na slavni *Palmenhaus* u bečkome Schönbrunnu te podijeljen na nekoliko manjih prostorija namijenjenih uzgoju uresnih (egzotičnih) biljaka hladnih, umjerene i tropskih podneblja svijeta ("zdena kuća", "topla kuća", "kuća za palme"...). Već 1899. staklenici su dograđeni (REGULA, 1997), čime se dobilo na prostoru za proširenje zbirki. Nekoliko godina prije stotog rođendana Vrta, 1985. godine, na mjestu jednog manjeg staklenika podignut je novi, kolokvijalno nazvan "Aroideae" jer je

inicijalno bio namijenjen uzgoju pripadnika porodice kozlaca (Araceae). Otada, u tom prostoru od oko 150 m², prezimljuje i trajno živi velika zbirka biljaka toplih i umjerenih podneblja svijeta, koja je davno prerasla okvire planirane porodice i proširena mnogim drugim vrstama sličnih zahtjeva ("sobne biljke"). Uz 30. obljetnicu toga staklenika i 125. rođendan Botaničkoga vrta počeli smo s temeljitim inventariziranjem zbirki. Prema nadolazećim propisima Europske unije ubrzo će biti potrebno službeno registrirati, između ostalog, i sve žive zbirke biljaka, kako bi se moglo pratiti njihovo podrijetlo i put od sjemenke do odrasle biljke te sprječilo neovlašteno korištenje i moguća zlouporaba materijala.

Analiziranje zbirki toploga staklenika obuhvatilo je, osim današnje kartoteke biljaka, i jedini sačuvani povijesni opis iz 19. stoljeća, objavljen u knjižici osnivača Botaničkoga vrta, profesora Antuna Heinza ("Kr. Botanički vrt u Zagrebu", 1895-1896). Iz knjižice doznajemo kako je već 1895. u staklenicima raslo zapanjujuće obilje bilja: barem 250 svojta iz 167 rodova i 62 porodice samo u zbirci toploga staklenika! Iako podatci koje donosi Heinz nisu potpuni i teško ih je uspoređivati s današnjima, na tom popisu ipak možemo prepoznati mnogobrojne vrste koje i danas uzgajamo u Botaničkom vrtu. Nažalost, tijekom sljedećih pola stoljeća sudbina stakleničkih zbirki posve nam nepoznata. Sve do 1948. – kad prva poslijeratna upraviteljica Botaničkoga vrta PMF-a, dr. sc. Sala Ungar, osniva današnju kartoteku – nemamo gotovo nikakvih podataka o stakleničkim zbirkama Vrta. Teško je vjerovati kako u razdoblju od 50 godina nije postojalo sustavno vođenje popisa biljaka u uzgoju, uobičajeno u svim europskim vrtovima već više stotina godina: iako ne možemo biti sigurni, prepostavljamo kako su inventarne liste, u kojem god obliku bile vođene, izgubljene tijekom Prvog i/ili Drugog svjetskog rata.

Kartoteka osnovana 1948. danas broji oko 28 000 kartica – pojedinačnih unosa svojti uzgajanih u Vrtu tijekom posljednjih gotovo 70 godina. Sastoji se od dva dijela: "pasivnog", s odloženim karticama biljnih vrsta i nižih sistematskih kategorija (uključujući kultivare) koje su tijekom desetljeća uzgajane u Vrtu, a danas manjkaju; te "aktivnog", s karticama biljnih vrsta i nižih sistematskih kategorija koje se trenutačno uzgajaju u Vrtu. Taj je dio kartoteke 2002. godine i digitaliziran, u sklopu *on-line* "Baze hrvatske flore" /Flora Croatica Database/ s ograničenim pristupom.

Analizom rijetko korištenog, "pasivnog" dijela današnje vrtne kartoteke utvrdila sam kako su kroz zbirku toplog staklenika od 1948. do danas prošle najmanje 533 biljne svojte koje nam danas nedostaju, iz 230 rodova i 74 porodice (poneke rastu u drugim vrtnim zbirkama).

Trenutačno (popis zaključen s krajem svibnja 2015.), u zbirci toplog staklenika obitava 320 svojta iz 146 rodova i 56 porodica. Naravno, valja imati na umu da je nomenklatura vezana uglavnom uz jednu referentnu botaničku bazu, "Tropicos" Botaničkog vrta savezne države Missouri u St. Louisu (SAD), koji u Vrtu koristimo za ujednačavanje važećih naziva vrsta od ranih 2000-tih. Konzultacijom drugih botaničkih baza dolazimo često do posve različitih podataka o važećim znanstvenim nazivima, sinonimici, pa i pripadnosti rodovima i porodicama.

Usporedbom triju tablica (zbog dužine sve nisu prikazane uz tiskani tekst) s podatcima iz 1895. te iz današnje "pasivne" i "aktivne" kartoteke, nalazimo kako je od 1891. do danas kroz zbirku toplog staklenika prošlo **barem 1000 biljnih svojti iz 380 rodova i 90 porodica**. Međutim, potrebno je i na kraju naglasiti kako postoji velika "praznina" u podatcima o stakleničkim zbirkama između 1895. i 1948., te su ti brojevi zasigurno veći.

Prilikom buduće registracije zbirki Botaničkoga vrta svakako je važno temeljito popisati sve postojeće biljne vrste u našim zbirkama. No, također je dobro znati i koje su vrste nekad u Vrtu rasle, a danas nedostaju, kako bismo ih mogli ciljano nadomjestiti.

Fig. 1a. The Exhibition Glasshouse in the Botanical Garden shortly after the construction was finished, probably before the time of Heinz's booklet (1895-1896). The buildings of the Lower City of Zagreb around the Garden are still missing. (Botanical Garden Archives)

Slika 1a. Izložbeni staklenik u Botaničkom vrtu nedugo nakon izgradnje, vjerojatno prije objavljanja Heinzove knjižice (1895-1896). Zgrada današnjega Donjeg grada nema; parcele uokolo Vrta još su prazne. (arhiv Botaničkog vrta)

Fig. 1b. The view onto the central flower parterre and the Exhibition Glasshouse before the First World War (probably 1912-1913): it is noticeable that the familiar buildings of the Lower City of Zagreb in the meantime had grown around the Garden. (Botanical Garden Archives)

Slika 1b. Središnji cvjetni parter i izložbeni staklenik prije Prvoga svjetskog rata (vjerojatno 1912.-1913.). U međuvremenu su podignute i danas prepoznatljive građevine na Marulićevu trgu: Donji je grad narastao oko Botaničkoga vrta. (arhiv Botaničkog vrta)

Fig. 1c. Central flower parterre and the Exhibition Glasshouse from the newly erected Karstic rockery (probably 1928); far left, below the Exhibition Glasshouse, is a smaller one (steep roof), at which place since 1985 the "Aroideae" warm glasshouse has stood. (Botanical Garden Archives)

Slika 1c. Pogled na cvjetni parter i izložbeni staklenik s novoosnovane Krške vegetacijske skupine (vjerojatno oko 1928.): sasvim lijevo, ispod razine izložbenog staklenika, vidi se manji, strmoga krova, na mjestu kojega je 1985. izgrađen današnji topli staklenik ("Aroideae"). (arhiv Botaničkog vrta)

Fig. 1d. Central flower parterre and the Exhibition Glasshouse (in 2005): after a long period of deterioration, this old building today faces the very beginning of its full restoration. (photo by Mirna Kirin)

Slika 1d. Cvjetni parter i izložbeni staklenik 2005. godine. Nakon dugog razdoblja propadanja, stari je staklenik danas napokon pred potpunom obnovom. (fotografija Mirne Kirin)

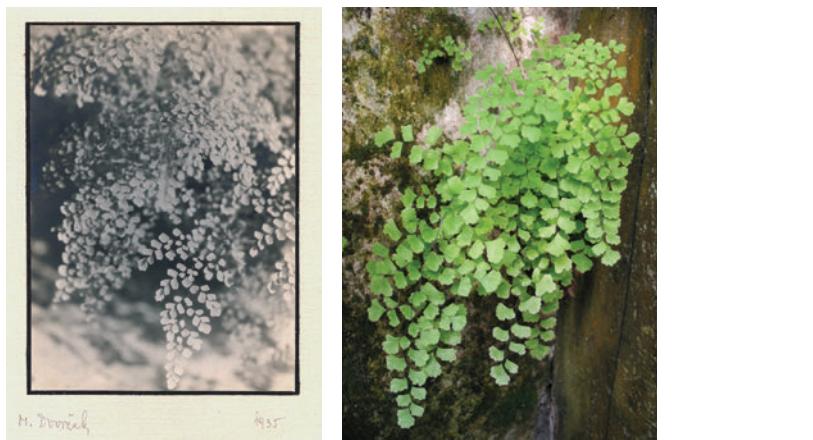

Fig. 2a. A nice example of the temperate collection is a maidenhair fern (*Adiantum capillus-veneris*), emblem of the Botanical Garden: this photo was taken in the greenhouse in 1935, by Croatian photographer Milan Dvoržak (Botanical Garden Archives)...

Slika 2a. Od samoga osnutka, stalni je stanovnik zbirke toploga staklenika nježna paprat gospin vlasak (*Adiantum capillus-veneris*), danas logo Botaničkoga vrta. Ovu je fotografiju u stakleniku snimio samoborski fotograf Milan Dvoržak 1935. ... (arhiv Botaničkog vrta)

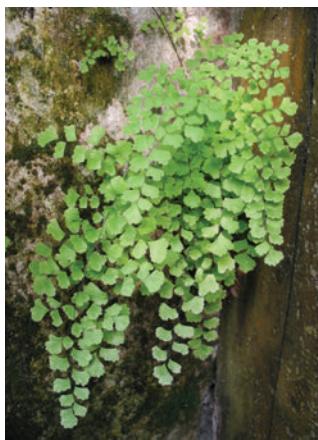

Fig. 2b. ...and this, of the same species in the same place, in 2015 by Dr. Vanja Stamenković, senior Garden curator.

Slika 2b. ...a ovu, iste vrste na istome mjestu, ali 80 godina kasnije (2015.), stručni savjetnik Botaničkoga vrta dr. sc. Vanja Stamenković!

Fig. 3. The "Aroideae" warm glasshouse holds the collection of temperate exotic "houseplants". (photo by Mirna Kirin)

Slika 3. "Aroideae" topli staklenik zatvoren je javnosti kao i svi drugi staklenici u Vrtu. U njemu živi bogata zbirka egzotičnih uresnica, od kojih su mnoge znane "sobne biljke". (fotografija Mirne Kirin)

Fig. 4. Recent view of the central part of the temperate glasshouse collection, at "the bridge" over the freshwater pools: on the left, a collection of snake plants (*Sansevieria*, fam. Asparagaceae); on the right, various Bromeliaceae. (photo by Mirna Kirin)

Slika 4. Današnji pogled na središnji dio toploga staklenika, tzv. "most" iznad bazenčića s kišnicom: lijevo se nalazi zbirka sanseverija (rod *Sansevieria*, porodica Asparagaceae), a desno raznovrsnih bromelija (porodica Bromeliaceae). (fotografija Mirne Kirin)

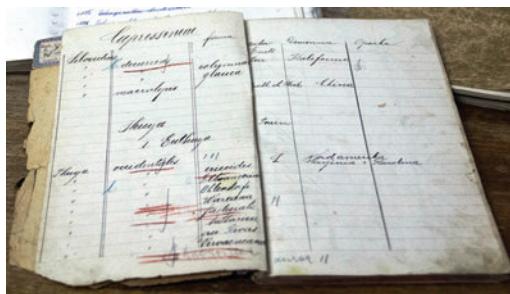

Fig. 5a. The single remaining inventory-notebook from the 19th century ("Coniferae" manuscript, 1898) implies that similar inventories must have existed for the other Garden collections, but were lost during the years. (photo by Vanja Stamenković)

Slika 5a. Jedina sačuvana bilježnica s popisom vrsta u vrtnom uzgoju s kraja 19. stoljeća (zbirka četinjača, "Coniferae", iz 1898.), daje naslutiti kako su slične evidencije postojale i za druge zbirke u Vrtu, no izgubljene su tijekom stoljeća. (fotografija Vanje Stamenkovića)

Fig. 5b. Several notebooks connect the passive and active database: all the plants in the collections are arranged numerically and listed in the notebooks. (photo by Vanja Stamenković)

Slika 5b. Nekoliko bilježnica povezuje sadržaje "pasivne" i "aktivne" kartoteke: vrste su u njima popisane po brojevima, pod kojima se vode u kartoteci. (fotografija Vanje Stamenkovića)

Fig. 6a. The "paper-card" database, established in 1948, consists of 24 compartments. Every compartment contains around 1000 entries, each of a single plant taxon. The lower (open) drawers hold the passive dataset of the plants currently missing from the collections. (photo by Vanja Stamenković)

Slika 6a. Vrtna kartoteka, osnovana 1948., sastoji se od 24 ladice, od koji svaka sadrži i preko 1000 kartica – pojedinačnih unosa svojti uvršćenih u vrtnim zbirkama. Donji dio ladica čuva "pasivnu" kartoteku, kartice onih vrsta kojih danas više nema u zbirkama. (fotografija Vanje Stamenkovića)

Fig. 6b. A single database compartment, holding the alphabetically ordered cards: active and passive parts are held separately. (photo by Sanja Kovačić)

Slika 6b. Svaka ladica kartotekе sadrži abecednim redom složene kartice pojedinačnih svojti. "Aktivna" i "pasivna" kartoteka čuvaju se odvojeno. (fotografija Sanje Kovačić)

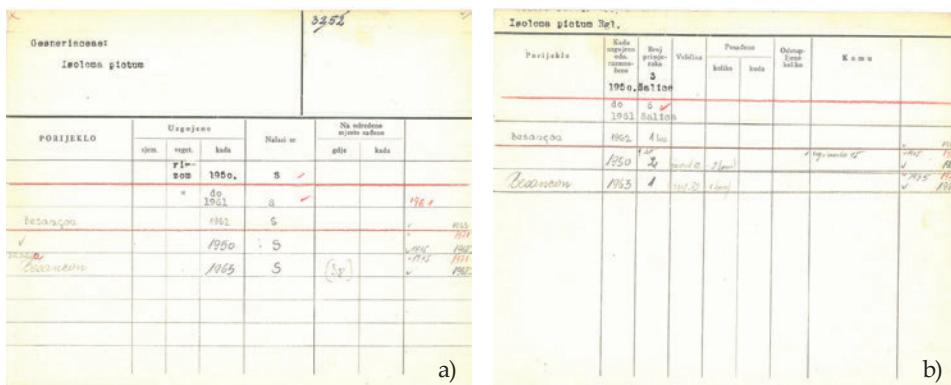

Fig. 7. Card of *Isoloma pictum*, one of the oldest temperate glasshouse collection-entries in the Garden database: **a)** front; **b)** back of the card. (photo by Sanja Kovačić)

Slika 7. Kartica vrste *Isoloma pictum*, jedne od najstarijih stanarica zbirke toploga staklenika: **a)** prednja strana kartice; **b)** stražnja strana kartice. (fotografija Sanje Kovačić)

Dobro došli! Welcome!

FCD Flora Croatica Database

Dobrodošli, Vanja Stamenković, Botanički vrt, Zagreb (CroFloraVrt)

Table 1. Estimated collection of temperate (warm) glasshouse in 1895 (Heinz, 1895-1896)

Family	Scientific name (original, acc. to Heinz)	Still exists in Garden collections	Valid & accepted names, notes and remarks
THALLOSE LIVERWORTS ("Embryophyta zooidiogama")			
Hepaticae	<i>Riccia</i> spp.	yes	several taxa, today fam. Ricciaceae
	<i>Marchantia polymorpha</i>	yes	today fam. Marchantiaceae
	<i>Lunularia vulgaris</i>	yes	probably <i>L. cruciata</i> ; today fam. Lunulariaceae
SPIKE MOSESSES ("Embryophyta zooidiogama")			
Selaginellaceae	<i>Selaginella</i> spp.	yes	
FERNS ("Embryophyta zooidiogama" - Pterydophyta)			
Cyatheaceae	<i>Alsophila</i> sp.	no	many synonyms and accepted names
	<i>Dicksonia</i> spp.	no	today fam. Dicksoniaceae
Hymenophyllaceae	<i>Hymenophyllum tunbridgense</i>	no	also <i>H. rugosum</i> ; many synonyms
	<i>Trichomanes radicans</i>	no	several synonyms
Marattiaceae	<i>Angiopteris longifolia</i>	no	unresolved name, maybe a cultivar?
Osmundaceae	<i>Todea</i> sp.	no	
	<i>Blechnum brasiliense</i>	no	several synonyms; today fam. Blechnaceae
	<i>Lomaria Gibba</i>	no	unresolved name, maybe a cultivar? today fam. Blechnaceae
	<i>Pteris longifolia</i>	no	syn. <i>P. vittata</i> ; today fam. Pteridaceae
	<i>Pteris serrulata</i>	yes	syn. <i>P. dentata</i> & <i>P. multifida</i> ; today fam. Pteridaceae
	<i>Pteris cretica</i>	yes	many synonyms; today fam. Pteridaceae
	<i>Adiantum capillus-veneris</i>	yes	
	<i>Adiantum cuneatum</i>	yes	syn. <i>A. raddianum</i> ; today fam. Pteridaceae
	<i>Adiantum Farleyense</i>	no	most probably <i>A. tenerum</i> Sw. 'Farleyense'; today fam. Pteridaceae
	<i>Adiantum trapeziforme</i>	no	many synonyms; today fam. Pteridaceae
Polypodiaceae	<i>Asplenium</i> spp.	yes	today fam. Aspleniaceae
	<i>Gymnogramme</i> spp.	no	rejected genus-name; today either <i>Eriosorus</i> or <i>Hemionitis</i> in fam. Pteridaceae
	<i>Scolopendrium hybridum</i>	no	"from Lošinj island" (Croatia, endemic); today <i>Asplenium h.</i> , fam. Aspleniaceae
	<i>Nephrodium</i> sp.	no	today fam. Dryopteridaceae
	<i>Polypodium</i> spp.	yes	
	<i>Platycerium alcicorne</i>	yes	several synonyms
	<i>Ceratopteris thalictroides</i>	yes	many synonyms; today fam. Pteridaceae
	<i>Didymochlaena</i> sp.	no	<i>Didymochlaena</i> ; today fam. Dryopteridaceae
	<i>Davallia</i> sp.	yes	today fam. Davalliaceae

	<i>Chrysodium crinitum</i>	no	unresolved name, maybe a cultivar? today fam. Pteridaceae
	"and many others"	yes	family is today divided to many smaller
Schizeaceae	<i>Aneimia Phyllitidis</i>	no	<i>Anemia phyllitidis</i> ; several synonyms; today fam. Anemiaceae
DICOTYLEDONAE ("Embryophyta siphonogama") - Angiospermae)			
	<i>Thunbergia</i> spp.	yes	
	<i>Aphelandra</i> sp.	no	
	<i>Sanchezia</i> sp.	yes	
Acanthaceae	<i>Ruellia</i> spp.	yes	many synonyms
	<i>Fittonia</i> sp.	yes	
	<i>Strobilanthes</i> sp.	yes	more than 20 genus-synonyms
	"and others"	yes	
	<i>Achyranthes</i> sp.	no	Amaranthaceae
Amarantaceae	<i>Iresine</i> sp(p.)	yes	several synonyms; Amaranthaceae
	<i>Alternanthera</i> sp(p.)	no	Amaranthaceae
Anonaceae	<i>Anona</i> spp.	no	<i>Annona</i> ; Annonaceae
	<i>Asimina triloba</i>	yes	Annonaceae
Apocynaceae	<i>Thevetia nerifolia</i>	yes	accepted name is <i>Th. peruviana</i> ; many synonyms
	"also other species"	yes	
Araliaceae	<i>Aralia</i> spp.	yes	several synonyms
	<i>Fatsia papyrifera</i>	no	accepted name is also <i>Tetrapanax papyrifer</i> ; several synonyms
	<i>Aristolochia elegans</i>	yes	valid name is <i>A. littoralis</i> ; several synonyms
Aristolochiaceae	<i>Aristolochia fimbriata</i>	no	several synonyms
	<i>Aristolochia ornithocephala</i>	no	also <i>A. labiata</i> ; several synonyms
	<i>Aristolochia</i> spp.	yes	
Asclepiadaceae	<i>Stephanotis floribunda</i>	yes	several accepted names, incl. <i>Marsdenia</i> f.; today fam Apocynaceae
Balsaminaceae	<i>Impatiens Sultani</i>	no	accepted name is <i>I. walleriana</i> ; several synonyms, incl. <i>I. balsamina</i>
	<i>Impatiens</i> spp.	yes	
Begoniaceae	<i>Begonia</i> spp.	no	
Bignoniaceae	<i>Bignonia</i> spp.	yes	
Bombaceae	<i>Durio zibethinus</i>	no	today fam. Malvaceae
Candolleaceae	<i>Stylium adnatum</i>	no	today fam. Stylidaceae
Caricaceae	<i>Carica Papaya</i>	yes	<i>C. papaya</i> , accepted also <i>Papaya carica</i> ; more than 30 synonyms
Chenopodiaceae	"many species also in the greenhouses"	yes	today fam. Amaranthaceae
Compositae	"many species in glasshouses"	yes	today fam. Asteraceae
Convolvulaceae	<i>Calonyction speciosum</i>	no	accepted name is <i>Ipomoea alba</i> ; many synonyms

	<i>Pharbitis hispida</i>	yes	accepted name is <i>Ipomoea purpurea</i> ; many synonyms
	<i>Quamoclit</i> spp.	yes	accepted name is also <i>Ipomoea</i> ; many synonyms
	<i>Mina lobata</i>	yes	accepted names are also <i>Ipomoea l.</i> and <i>Quamoclit l.</i> ; many synonyms, incl. <i>Ipomoea lobata</i>
	<i>Ipomoea</i> spp. ("many")	yes	vast spectrum of accepted names and synonyms
	"and many more lianas"	no	
Cucurbitaceae	"many species in the greenhouses"	yes	
Erythroxylaceae	<i>Erythroxylon Coca</i>	yes	<i>Erythroxylum coca</i> , two synonyms
Euphorbiaceae	<i>Phyllanthus</i> spp.	no	approx 50 genus-synonyms! Today fam. Phyllanthaceae
	<i>Daleschampsia</i> sp.	no	<i>Dalechampia</i> ; several genus-synonyms
	<i>Acalypha</i> spp.	no	many genus-synonyms
	<i>Manihot</i> spp.	no	several genus-synonyms
	<i>Jatropha</i> sp.	yes	many genus-synonyms
	<i>Alchornea (Coelbogyne) ilicifolia</i>	no	many synonyms of both genera; sometimes considering as separate
	"more species in the greenhouses"	yes	
Gesneraceae	<i>Streptocarpus</i> spp.	yes	fam. Gesneriaceae
	<i>Aeschynanthus</i> sp.	yes	syn. <i>Trichosporum</i> ; fam. Gesneriaceae
	<i>Didymocarpus</i> sp.	no	accepted name is also <i>Petrocodon</i> ; many synonyms; fam. Gesneriaceae
	<i>Chirita</i> sp.	no	3 synonyms; fam. Gesneriaceae
	<i>Gloxinia</i> sp.	yes	
	<i>Achimenes</i> sp.	yes	fam. Gesneriaceae
	<i>Naegelia</i> sp.	no	
	<i>Tydaea</i> sp.	no	
	<i>Gesnera</i> sp.	no	<i>Gesneria</i> ; fam. Gesneriaceae
Hydrophyllaceae	<i>Sinningia speciosa</i> ("Gloxinia of the gardeners")	yes	syn. <i>Gloxinia</i> s.; fam. Gesneriaceae
	"and others"	yes	fam. Gesneriaceae
	<i>Wigandia caracasana</i>	no	valid name is <i>W. urens</i> ; fam. Boraginaceae
Labiatae	"and many others, mostly ornamentals"	yes	today fam. Boraginaceae
	<i>Pogostemon Patschuli</i>	no	<i>P. patchouli</i> ; accepted also <i>P. cablin</i> ; several synonyms; today fam. Lamiaceae
Leguminosae	<i>Tamarindus indica</i>	no	several synonyms; fam. Fabaceae
	<i>Bauhinia</i> spp.	yes	fam. Fabaceae
	<i>Carmichaelia</i> sp.	no	
	<i>Desmodium gyrans</i>	no	several accepted names; fam. Fabaceae
	<i>Amicia zygomeris</i>	no	syn. <i>Hedysarum grandiflorum</i> , fam. Fabaceae

	<i>Dalbergia</i> sp.	no	fam. Fabaceae
	"many more species in the greenhouses"	yes	
Malvaceae	<i>Hibiscus Rosa Sinensis</i>	yes	<i>H. rosa-sinensis</i>
	<i>Gossypium</i> spp.	yes	
	<i>Abutilon</i> spp.	yes	two genus-synonyms
Melastomataceae	<i>Sonerilla</i> spp.	no	valid genus-name is <i>Sonerila</i>
	<i>Centradenia</i> spp.	no	
	<i>Medinilla</i> spp.	no	
	<i>Heterocentron</i> spp.	no	2 synonyms
	<i>Melastoma</i> spp.	no	
	<i>Bertolomia</i> spp.	no	<i>Bertolonia</i>
	<i>Rhexia</i> spp.	no	
Moraceae	<i>Dorstenia Contrayerva</i>	yes	<i>D. contrajervia</i> ; many synonyms
	<i>Artocarpus incisa</i>	no	unknown; acc. to ITIS-database it is an older syn. of <i>A. altilis</i> or <i>A. communis</i>
	<i>Artocarpus integrifolia</i>	no	<i>A. integrifolius</i> , also <i>A. heterophylla</i> ; many synonyms
	<i>Castilloa elastica</i>	no	<i>Castilla e.</i> ; many synonyms
	<i>Ficus elastica</i>	yes	several synonyms
	<i>Ficus religiosa</i>	yes	
	<i>Ficus australis</i>	no	
	<i>Ficus lanceolata</i>	no	
	<i>Ficus stipulata</i>	yes	also accepted <i>F. pumila</i>
Oleaceae	<i>Ficus</i> spp.	yes	
	<i>Jasminum</i> spp.	yes	
Oxalidaceae	<i>Biophytum sensitivum</i>	yes	also <i>B. umbraculum</i> ; several synonyms
	<i>Oxalis</i> spp.	yes	
Passifloraceae	"several representatives in the glasshouse"	yes	incl. fam. Turneraceae
Phytolaccaceae	<i>Rivina</i> spp.	yes	
Piperaceae	<i>Piper nigrum</i>	yes	
	<i>Piper Cubeba</i>	yes	<i>P. cubeba</i>
	<i>Piper Betle</i>	no	<i>P. betle</i>
	<i>Piper</i> spp.	yes	
	<i>Peperomia</i> spp.	yes	
Rubiaceae	<i>Cinchona</i> sp.	no	2 synonyms
	<i>Bouvardia</i> spp.	no	
	<i>Gardenia florida</i>	no	<i>G. jasminoides</i> ; many synonyms
	<i>Nertera</i> sp.	no	2 synonyms
	<i>Coffea arabica</i>	yes	
	<i>Coffea liberica</i>	no	2 synonyms

	<i>Uragoga (Cephaëlis) Ipecacuanha</i>	no	U. ipecacuanha; unresolved; several synonyms and accepted names, incl. <i>Carapichea</i> i. and <i>Psychotria</i> i.; also <i>Cephaelis ipecacuanha</i>
	"and others"	yes	
Rutaceae	<i>Pilocarpus pennatifolius</i>	no	many synonyms
Scrophulariaceae	<i>Tetranema mexicanum</i>	yes	accepted name also <i>T. roseum</i> ; several synonyms; fam. Plantaginaceae
	"many others"	yes	today fam. Plantaginaceae
Solanaceae	<i>Cestrum</i> spp.	yes	several genus-synonyms
	<i>Brunfelsia</i> spp.	yes	
	"many others"	yes	
Sterculiaceae	<i>Theobroma Cacao</i>	yes	many synonyms; today fam. Malvaceae
	<i>Hermannia</i> spp.	no	today fam. Malvaceae
	<i>Dombeya (Astrapaea)</i> sp.	yes	several genus-synonyms, among which also <i>Astrapaea</i> ; today fam. Malvaceae
Turneraceae	"several representatives in the glasshouse"	yes	today fam. Passifloraceae
Urticaceae	<i>Laportea Gigas</i>	no	<i>L. gigas</i>
	<i>Boehmeria nivea</i>	no	several synonyms
	<i>Pilea</i> spp.	yes	
Verbenaceae	<i>Clerodendron</i> spp.	yes	valid genus-name is <i>Clerodendrum</i> ; fam. Lamiaceae
	<i>Lippia citriodora</i>	yes	valid name is <i>Aloysia c.</i> ; several synonyms
Vitaceae	<i>Cissus</i> spp. ("with variegated leaves")	yes	several genus-synonyms
MONOCOTYLEDONAE ("Embryophyta siphonogama" - Angiospermae)			
Amaryllidaceae	<i>Sprekelia formosissima</i>	yes	several synonyms
	<i>Fourcroya gigantea</i>	yes	syn. of <i>Furcraea foetida</i> , <i>F. gigantea</i> or <i>Agave foetida</i> (all valid)
	<i>Beschorneria yuccoides</i>	no	today fam. Asparagaceae
	<i>Curculigo recurvata</i>	no	syn. <i>Molinieria r.</i> ; today fam. Hypoxidaceae
	"and other"	yes	(today many smaller families belong to Amaryllidaceae)
Araceae	<i>Pothos</i> spp.	yes	several synonyms
	<i>Anthurium Scherzerianum</i>	yes	<i>A. scherzerianum</i>
	<i>Anthurium radicans</i>	no	
	<i>Anthurium Andreanum</i>	yes	<i>A. andreaeum</i>
	<i>Anthurium crystallinum</i>	no	
	<i>Anthurium Warocqueanum</i>	yes	<i>A. warocqueanum</i> T. Moore or <i>A. x warocqueanum</i>
	<i>Aglaonema</i> sp.	yes	
	<i>Philodendron</i> spp.	yes	several synonyms
	<i>Remusatia vivipara</i>	yes	several synonyms

	<i>Typhonium divaricatum</i>	no	several synonyms
	<i>Sauromatum</i> spp.	yes	
	<i>Ariopsis peltata</i>	yes	
Bromeliaceae	<i>Nidularium</i> spp.	yes	
	<i>Cryptanthus zonatus</i>	yes	
	<i>Ananas sativus</i>	no	syn. <i>A. comosus</i>
	<i>Bilbergia</i> spp.	yes	
	<i>Aechmea</i> spp.	yes	
	<i>Pitcairnia</i> spp.	yes	
	<i>Dyckia</i> spp.	yes	
	<i>Tillandsia</i> spp.	yes	
	<i>Vriesea</i> spp.	yes	
	"and many others of the same family"	yes	
Commelinaceae	<i>Zebrina pendula</i> (<i>Tradescantia zebrina</i>)	yes	both valid; several synonyms
	<i>Palisota Barteri</i>	no	<i>Palisota barteri</i>
	<i>Dichorisandra</i> sp.	no	
	<i>Rhoeo discolor</i>	yes	accepted names include <i>Rh. spathacea</i> , <i>Tradescantia spathacea</i> and <i>T. discolor</i> ; several synonyms
Dioscoreaceae	<i>Testudinaria Elephantipes</i> ("wilted")	no	<i>T. elephantipes</i> ; also <i>Dioscorea e.</i>
Gramineae	"several in the greenhouses"	yes	today fam. Poaceae
Iridaceae	"many species in the greenhouses"	yes	(today is family devided)
Liliaceae	<i>Chlorophytum Sternbergianum</i>	no	<i>Ch. sternbergianum</i> ; today fam. Asparagaceae
	<i>Bowiea volubilis</i>	yes	
	<i>Dasyliion</i> spp.	yes	
	<i>Cordyline</i> spp.	yes	
	<i>Dracaena draco</i>	yes	
	<i>Dracaena</i> spp.	yes	
	<i>Aspidistra elatior</i>	yes	
	<i>Ophiopogon</i> sp.	yes	
	<i>Sansevieria</i> sp.	yes	valid genus-name is <i>Sansevieria</i> ; fam. Asparagaceae
	<i>Lapageria rosea</i>	no	today fam. Philesiaceae
	<i>Aletris</i> sp.	no	today in genus <i>Hosta</i> , fam. Asparagaceae (? acc. to other sources, valid genus of Nartheciaceae family)
	<i>Smilax medica</i>	yes	today <i>Smilax aristolochiifolia</i>
Marantaceae	<i>Maranta arundinacea</i>	no	many synonyms
	<i>Phrymum</i> sp.	no	accepted is also genus-name <i>Saranthe</i> ; several synonyms
Musaceae	<i>Strelitzia</i> spp.	yes	today fam. Strelitziaceae

Orchidaceae	"many species in the greenhouses"	yes	
Pandanaceae	<i>Pandanus utilis</i>	yes	many synonyms
	"and other similar species"	yes	
Taccaceae	<i>Tacca pinnatifida</i>	no	accepted also <i>T. leontopetaloides</i> ; many synonyms; today fam. Dioscoreaceae
Zingiberaceae	<i>Curcuma Zedoaria</i>	no	also <i>C. phaeocaulis</i> ; several synonyms
	<i>Hedychium Gardnerianum</i>	yes	<i>H. gardnerianum</i>
	<i>Brachychilum</i> sp.	yes	some taxa accepted, some in <i>Hedychium</i>
	<i>Kämpferia</i> sp.	no	<i>Kaempferia</i>
	<i>Alpinia nutans</i>	yes	accepted names <i>A. zerumbet</i> and <i>A. speciosa</i> ; several synonyms
	<i>Alpinia vittata</i>	no	
	<i>Zingiber Zerumbet</i>	no	it is not clear if such species exists: it could be <i>Alpinia zerumbet</i>
	<i>Amomum Melegueta</i>	no	accepted <i>A. melegueta</i> , also <i>Aframomum melegueta</i>
	<i>Globba</i> spp.	no	
	"and many others of the same family"	yes	

Table 2. Collection of the temperate (warm) glasshouse between 1948 and 2014: recently non-existing plants

Family	Scientific name (acc. to Tropicos database)	City of plant material origin (seed, cutting, bulb, <i>planta viva</i>), year of ordering/purchasing	Year when the plant was last recorded in collection (and the exact year of wilting, if known)	Still exist in (other) collections	Notes and remarks
	THALLOSE LIVERWORTS				
Aytoniaceae	<i>Fimbriaria ludwigii</i> (Schwaegr.) Limpr. ex Muell. Frib.	Jena, 1963 & 1964	1963 & 1966	no	syn. <i>Marchantia ludwigii</i>
		Antwerp, 1967 & 1968	1968	no	
	<i>Mannia dichotoma</i> S.W. Arnell	Jena, 1966	1968	no	older: <i>Grimaldia d.</i>
Corsiniaceae	<i>Corsinia marchantioides</i> Raddi	Antwerp, 1968	1968	no	
Lunulariaceae	<i>Lunularia cruciata</i> (L.) Dumort. ex Lindb.	nn, 1949	1961	yes	
		Jena, 1963	1963	yes	
		Antwerp, 1965	1966	yes	
Marchantiaceae	<i>Dumontiera hirsuta</i> (Sw.) Nees	Jena, 1963	1963	no	
		Budapest, 1963	1963	no	
		Antwerp, 1966	1968	no	
	<i>Dumontiera velutina</i> Schiffn.	Jena, 1964	1966	no	not listed in Tropicos, Plant List nor IPNI; Catalogue of Life states that it is one of the many synonyms of <i>D. hirsuta</i>
		Antwerp, 1965, 1966 & 1967	1966, 1968 & 1969	no	
	<i>Marchantia paleacea</i> Bertol.	Antwerp, 1962, 1964 & 1965	1963, 1966 & 1966	no	
		Jena, 1963	1966	no	
	<i>Marchantia polymorpha</i> L.	Jena, 1970 & 1981	no furter records	yes	replaced?
Targioniaceae	<i>Targionia hypophylla</i> L.	Jena, 1963 & 1966	no further record & 1968	no	
		Antwerp, 1968	no further record	no	
	<i>Targionia lorbeeriana</i> Muell. Frib.	Antwerp, 1965, 1966 & 1968	1966, 1968 & 1968	no	
Wiesnerellaceae	<i>Wiesnerella denudata</i> (Mitt.) Stephani	Jena, 1966	1968	no	
	SPIKEMOSSES				
Selaginellaceae	<i>Selaginella apoda</i> (L.) C. Morren	nn, 1961	1984	no	

	<i>Selaginella biformis</i> A. Braun ex Kuhn	Lyon, 1965	1968 (1975)	no	
	<i>Selaginella delicatula</i> (Desv. ex Poir.) Alston	Lyon, 1965	no further record	no	arrived as <i>S. canaliculata</i> , one of about 10 recognized synonyms
	<i>Selaginella erythropus</i> (Mart.) Spring	Oslo, 1957	1966 (1975)	no	arrived with the synonym " <i>S. umbrosa</i> ", which is nowdays syn. of <i>S. erythropus</i> var. <i>major</i>
	<i>Selaginella haematodes</i> (Kunze) Spring	Szeged, 1963	1975	no	
		Lyon, 1963	1975	no	
	<i>Selaginella involvens</i> (Sw.) Spring	nn, 1950	1952	no	arrived as <i>S. caulescens</i> ; there are atleast 3 more accepted names and many synonyms
	<i>Selaginella kraussiana</i> (Kunze) A. Braun	nn, 1961	no further record	no	synonyms are also <i>S. cansecens</i> and <i>S. denticulata</i>
		Besancon, 1963	no further record	no	
		Szeged, 1963	no further record	no	
		Genova, 1963	no further record	no	
		Cork, 1963	1988 ("incorrect!")	no	
		Antwerp, 1968	1969	no	arrived as <i>S. denticulata</i>
	<i>Selaginella kraussiana</i> (Kunze) A. Braun 'Aurea'	Lyon, 1965	1965 (1975)	no	arrived as "var. <i>aurea</i> "
	<i>Selaginella lepidophylla</i> (Hook. & Grev.) Spring	nn, 2007	2009	no	given to the students' laboratory
	<i>Selaginella lyallii</i> (Hook. & Grev.) Spring	Lyon, 1963 & 1965	no further records (both)	no	arrived as <i>S. laevigata</i> var. <i>lyallii</i>
	<i>Selaginella martensii</i> Spring var. <i>watsoniana</i> (?)	Antwerp, 1968	1969 (1975)	no	arrived as "var. <i>aurea</i> "; the variety is unknown to Tropicos, it could be "hort."
	<i>Selaginella millspaughii</i> Hieron.	Antwerp, 1962	1966	no	3 other accepted names
		Lyon, 1963, 1964, 1965 & 1966	1975, 1968, 1978 & 1978	no	
		Besancon, 1965	1966	no	
	<i>Selaginella pilifera</i> A. Braun	Lyon, 1965	1969 (1975)	no	
	<i>Selaginella plana</i> (Desv. ex Poir.) Hieron.	Lyon, 1963	no further record	no	
		Cork, 1963		no	
	<i>Selaginella stellata</i> Spring	Antwerp, 1962	1988 ("incorrect!")	no	
		Lyon, 1963 & 1965	1966 & no further record	no	arrived as <i>S. galeottii</i> Spring, a single synonym

		Szeged, 1965	1966	no	1 synonym
		Besançon, 1965	1988	no	arrived as <i>S. galeottii</i> Spring, a single synonym
	<i>Selaginella uncinata</i> (Desv. ex Poir.) Spring	nn, 1951	1966	no	1 synonym
		Lyon, 1966	1966 (1975)	no	
	<i>Selaginella usteri</i> Hieron.	Pisa, 1963	1969 (1975)	no	
	<i>Selaginella victoriae</i> Moor.	Antwerp, 1968	1969 (1975)	no	not recognized in Tropicos nor IPNI; acc. to the caverock.net.nz' World Species list of Selaginellaceae, it is a forgotten synonym of <i>S. atroviridis</i> Spring
	<i>Selaginella viticulosa</i> Klotzsch	nn, 1952	1969 (1975)	no	
	<i>Selaginella watsonii</i> Underw.	Antwerp, 1964 & 1965	no further record & 1966	no	
	<i>Selaginella willdenovii</i> Baker	Oslo, 1965	no further record (1975)	no	
	FERNS				
Anemiaceae	<i>Anemia rotundifolia</i> Schrad.	Marburg, 1982	1982	no	
		Karlsruhe, 1982	1988	no	
Aspleniaceae	<i>Asplenium bulbiferum</i> G. Forst.	Haren, 1974	1975	no	4 synonyms
		Strasbourg, 1986	1988	no	
	<i>Asplenium nidus</i> L. 'Osaka'	nn, 2008	2009	no	purchased; famous old cultivar
	<i>Asplenium scolopendrium</i> L. <i>Crispum Group</i>	Essen, 2001	2005 (2006)	no	arrived as <i>Phyllitis 'Crispa'</i> ; several synonyms & accepted names of species
Blechnaceae	<i>Blechnum brasiliense</i> Desv.	nn, 1953	no further record	no	6 synonyms
		Amsterdam, 1968	1969	no	
		Berlin, 1969	1971	no	
	<i>Blechnum moorei</i> C.Chr.	Kiel, 1982	1988	no	acc. to IPNI & Plant List; an unresolved name
		Muenchen, 1982	2000	no	
	<i>Blechnum neohollandicum</i> Christenh.	Lyon, 1954	1963	no	arrived as syn. <i>Doodia aspera</i> , which is replaced by <i>B. n.</i>
	<i>Stenochlaena palustris</i> (Burm. f.) Bedd.	Antwerp, 1966	1968	no	10+ synonyms
	<i>Stenochlaena tenuifolia</i> (Desv.) T. Moore	Besançon, 1977	1980	no	10+ synonyms
Cyatheaceae	<i>Cyathea australis</i> Domin	Amsterdam, 1968	1969	no	arrived as syn. <i>Alsophila australis</i>
		Potsdam, 2010	2012 (2013)	no	

	<i>Cyathea leichhardtiana</i> Copel.	Amsterdam, 1968	1969	no	arrived as syn. <i>A. leichardtiana</i>
Cystopteridaceae	<i>Cystopteris bulbifera</i> (L.) Bernh.	Bologna, 1974	1975	no	6 synonyms
		Berlin, 1989	1996	no	
Davalliaceae	<i>Davallia denticulata</i> (Burm. f.) Mett. ex Kuhn	Antwerp, 1967 & 1973	1968 & 1978	no	accepted name is also <i>D. chaerophylloides</i>
	<i>Davallia solida</i> (G. Forst.) Sw.	Tuebingen, 1971	1972	yes	accepted name is also <i>D. sinensis</i>
	<i>Nephrolepis biserrata</i> (Sw.) Schott var. <i>furcans</i> L.H. Bailey	Montreal, 1978	1979	no	also as 'Furcans' hort.
	<i>Nephrolepis cordifolia</i> (L.) C. Presl	Szeged, 1970	1980 (1988)	no	12 synonyms
	<i>Nephrolepis exaltata</i> (L.) Schott f. <i>muscosa</i> Clute*	nn, 1963	1969 ("incorrect!")	no	f. acc. to IPNI (as fam. Oleandraceae)
	<i>Nephrolepis exaltata</i> (L.) Schott 'Green Fantasy'	nn, 2003	2005 (2006)	no	purchased; well known cultivar
	<i>Nephrolepis exaltata</i> (L.) Schott 'Whitmanii'	Opeka, 1963	1978	no	4 species-synonyms
	<i>Nephrolepis hirsutula</i> (G. Forst.) C. Presl	Szeged, 2002	2007 (2008)	no	3 synonyms
Dennstaedtiaceae	<i>Histiopteris incisa</i> (Thunb.) J. Sm.	Leningrad (St. Petersburg), 1981	1988	no	arrived as syn. <i>Pteris quadriaurita</i> (Pteridaceae); 9 synonyms; perhaps the family is monotypic
	<i>Microlepia speluncae</i> (L.) T. Moore	Muenchen, 1958	1961	no	accepted name is also <i>M. hancei</i> ; 30+ synonyms
Dicksoniaceae	<i>Dicksonia antarctica</i> Labill.	Potsdam, 2010	2012	no	
Dryopteridaceae	<i>Arachniodes aristata</i> (G. Forst.) Tindale	Berlin, 1968	1972 (1988)	no	arrived as syn. <i>Polystichum aristatum</i> ; 20+ synonyms
	<i>Cyrtomium falcatum</i> (L. f.) C. Presl 'Rochfordianum'	Stockholm, 1958	1988	no	7 species-synonyms
		Cluj-Napoca, 1969	1975	no	
	<i>Cyrtomium lonchitooides</i> (Christ) Christ	nn, 1961 & 1963	1988 & 2001 (2003)	no	arrived as <i>Polystichum lonchitooides</i> , one of 4 today's synonyms
	<i>Diacalpe aspidiooides</i> Blume	nn, 1961	2000	no	2 more accepted names (<i>Peranema a.</i> , <i>Dryopteris pseudocaenopteris</i>)
		nn, 2005	2005 (2007)	no	purchased
	<i>Polystichum braunii</i> (Spenn.) Fée	nn, 1961	no further record	no	4 species-synonyms
	<i>Polystichum polylepharum</i> (Roem. ex Kunze) C. Presl	nn, 2007	2008	no	3 synonyms
Lygodiaceae	<i>Lygodium japonicum</i> (Thunb.) Sw.	Lyon, 1966	no further record	no	15+ synonyms

		Brno, 2001	2003 (removed)	no	
		Lyon, 1967	no further record	no	
Onocleaceae	<i>Onoclea sensibilis</i> L.	Amsterdam, 1958	1963	no	8 synonyms; perhaps the family is monotypic
Polypodiaceae	<i>Drynaria quercifolia</i> (L.) J. Sm.	Aachen, 1990	1991	no	syn. <i>Polypodium q.</i>
		Berlin, 1969	1975 ("incorrect!")	no	
	<i>Microsorum punctatum</i> (L.) Copel.	nn, 1961 & 1969	2000	no	arrived as <i>M. polycarpon</i> , which is also an accepted name; contains 60+ synonyms
		nn, 1961, 1972, 1981	1981 ("incorrect!"), 1991	no	arrived as <i>Microsorium p.</i> ; accepted name is also <i>M. polycarpon</i> ; contains 60+ synonyms
	<i>Platycerium 'Wilhelminae-Reginae'</i>	Potsdam, 1982	1982	no	?, probably <i>Platycerium grande</i> J. Sm. 'Queen Wilhelmina'
	<i>Polypodium glaucum</i> Thunb. ex Houtt.	Cluj-Napoca, 1968	1973	no	with 4 accepted names; several synonyms
	<i>Polypodium leiorhizum</i> Wall.*	Karlsruhe, 1969	1973 ("incorrect: Pteris!")	no	that name is marked as "unsolved" in all consulted databases
	<i>Pyrrhia nummulariifolia</i> (Sw.) Ching	Leiden, 1985	2007 (2008)	no	10+ synonyms
Pteridaceae	<i>Adiantum 'Magnificum'</i> (?)	Bucarest, 1986 & 1988	1988 & 1989	no	unknown cultivar
	<i>Adiantum raddianum</i> C. Presl 'Gracillimum'	Riga, 1959	2010 (2011)	no	arrived under also accepted name: <i>A. cuneatum</i> var. <i>gracillimum</i>
	<i>Adiantum raddianum</i> 'Brilliantelse' or 'Brilliant Elze'	Opeka, 1963	1968	no	arrived as <i>A. brilliantelse</i>
	<i>Adiantum tenerum</i> Sw. (cult.?)	Opeka, 1963	1969	no	arrived as syn. <i>A. tenerum</i> var. <i>scutatum</i> hort f. <i>roseum</i> , hard to tell which cultivar it was, perhaps 'Scutum Roseum'
	<i>Adiantum tetraphyllum</i> Humb. & Bonpl. ex Willd.*	Szeged, 1970	1984 ("incorrect: A.capillus-veneris!")	no	4 synonyms
	<i>Pellaea atropurpurea</i> (L.) Link	Muenchen, 1997	2005 (2006)	no	5 synonyms; there is also <i>P. x atropurpurea</i> (pro. sp.)
	<i>Pellaea paradoxu</i> Hook. "Glow Star"	nn, 2007	2008	no	purchased; well known cultivar
	<i>Pellaea rotundifolia</i> (G. Forst.) Hook.	Cork, 1960	1961	no	
		Zurich, 1982	1983	no	
		Marburg, 1982	2007 (2008)	no	
	<i>Pityrogramma calomelanos</i> (L.) Link	Berlin, 1968	1969	no	15+ synonyms

	<i>Pityrogramma sulphurea</i> (Sw.) Maxon	nn, 1954 & 1982	no further record & 1984	no	
		Muenster, 1988	1990	no	
		Dresden, 1989	1990	no	
		nn, 2005	2005	no	purchased
	<i>Pteris argyraea</i> T. Moore	Opeka, 1963	1972	no	
		Nancy, 1968 & 1982	1975 & 1991	no	
		Potsdam, 1982	1991	no	
		Muenchen, 1982	1991	no	
	<i>Pteris cretica</i> L.	nn, 1961	2010	no	accepted name is also <i>P. stenophylla</i> ; 10 synonyms
	<i>Pteris cretica</i> L. 'Gauthierii' (?)	Opeka, 1963	1978	no	accepted species-name is also <i>P. stenophylla</i> ; 10 species-synonyms; the cultivar is unknown, maybe 'Gauthieri'?
	<i>Pteris cretica</i> L. 'Rowerii'	Opeka, 1963	1966	no	accepted name is also <i>P. stenophylla</i> ; 10 species-synonyms; the cultivar arrived as 'Roeweri'
	<i>Pteris multifida</i> Poir. 'Cristata'	nn, 1975	1978	no	3 species-synonyms
	<i>Pteris vittata</i> L.	nn, 1961 & 1963	1981	no	arrived as <i>P. longifolia</i> , accepted name of <i>P. vittata</i> together with 2 others; 10 synonyms
		Utrecht, 1980	2010	no	10 synonyms
	DICOTYLEDONS (Magnoliopsida)				
Acanthaceae	<i>Aphelandra aurantiaca</i> (Scheidw.) Lindl.	Rouen, 1961 & 1966	1962 & 1968	no	10 synonyms
	<i>Aphelandra squarrosa</i> Nees	nn, 1961	no further record	no	
	<i>Barleria lupulina</i> Lindl.	Bogor, 2004	2005	no	2 synonyms
	<i>Barleria prionitis</i> L.	Wuppertal, 1964	no further record	no	5 synonyms
		Glasgow, 1987	1988	no	
		Copenhagen, 1986	1988	no	
	<i>Brillantaisia lamium</i> (Nees) Benth.	Saarbruecken, 1968	1969	no	syn. <i>Leucorhaphis lamium</i>
	<i>Brillantaisia palisotii</i> Lindau	Goettingen, 1965	1988	no	
	<i>Chamaeranthesmum beyrichii</i> Nees	Aachen, 1966	1977	no	
	<i>Crabbea velutina</i> S. Moore	Besancon, 1965	1969	no	arrived as <i>C. reticulata</i> , one of 2 synonyms
		Jena, 1964	1988	no	

	<i>Crossandra flava</i> Hook.	Haren, 1979	1979	no	
		Basel, 1981	no further record	no	
		Muenster, 1980	1989	no	
	<i>Crossandra infundibuliformis</i> (L.) Nees	Basel, 1972	1978	no	5 synonyms
		Cobham, 1980	1995	no	
	<i>Crossandra infundibuliformis</i> (L.) Nees 'Mona Wallhead'	Karlsruhe, 1978	1979	no	
	<i>Crossandra massaica</i> Mildbr.	Bonn, 1970	no further record	no	syn. <i>C. nilotica</i> var. <i>massaica</i>
	<i>Crossandra subacaulis</i> C.B. Clarke	Bonn, 1971	1973	no	
		Rotterdam, 1989	1995 ("incorrect!")	no	determined as <i>C. nilotica</i> in 2001
	<i>Eranthemum wattii</i> (Bedd.) Stapf	Marburg, 1963	1966	no	
		Aachen, 1966	1975	no	
		Copenhagen, 1966	1972	no	
		Duesseldorf, 1989	1989	no	
	<i>Eremomastax speciosa</i> (Hochst.) Cufod.	Copenhagen, 2003	2005	no	accepted name is also <i>E. polysperma</i> , among other synonyms
	<i>Graptophyllum pictum</i> (L.) Griff.	Brno, 1963	1966	no	2 synonyms
	<i>Jacobinia pohliana</i> (Nees) Lindau var. <i>velutina</i> Nees	Besancon, 1968	1975	no	accepted name is also <i>Justicia carnea</i>
	<i>Perilepta dyeriana</i> (Mast.) Bremek.	nn, in collection in 2000	2007	no	unresolved name; not in Tropicos, acc. to Plant list maybe <i>Strobilanthes dyeriana</i> Mast.
	<i>Ruellia blumei</i> Steud.	nn, 1961	2003 (2010)	no	unresolved name (acc. to IPNI, not in Tropicos!)
		nn, in collection in 2000	2005	yes	relocated; unresolved name
	<i>Ruellia ciliosa</i> Pursh	Vienna, 1961	1975	no	2 synonyms
	<i>Ruellia elegans</i> Poir.	Kaunas, 1970	1972 (1975)	no	4 synonyms
	<i>Ruellia graecizans</i> Rech. f.	nn, 1961	1966 (1968)	no	10+ synonyms
		Copenhagen, 1969	2005	no	relocated; 10+ synonyms
	<i>Ruellia lorentziana</i> Griseb.	nn, 1961	1978	no	accepted name is also <i>R. ciliatiflora</i> ; several synonyms
		Lisbon, 1970	2003 (2005)	no	
	<i>Ruellia strepens</i> L.	Pallanza, 1970	1971	no	
		Bruxelles, 1970	1971 (1975)	no	

	<i>Ruellia tuberosa</i> L.	nn, 1961	2003	no	
	<i>Ruspolia seticalyx</i> (C.B. Clarke) Milne-Redh.	Berlin, 1967	1984 (1988)	no	
		Turlen, 1989	2001	no	
	<i>Strobilanthes glabrata</i> Nees	Tuebingen, 1963	1966 (1975)	no	
	<i>Strobilanthes "roseus</i> Nees" (?)	Kaunas 1962	1968 (1975)	no	unresolved name (acc. to IPNI, not in Tropicos nor Plant List); perhaps <i>Ruellia rosea</i>
	<i>Thunbergia fragrans</i> Roxb.	Bonn, 1987	1991	no	accepted name is also <i>Th. convolvulifolia</i> ; 6 synonyms
	<i>Thunbergia grandiflora</i> Roxb.	Barcelona, 1963	1972	no	5 synonyms
	<i>Whitfieldia longifolia</i> T. Anderson	Caen, 2002	2003 (2010)	no	accepted name is also <i>Whitfieldia elongata</i> , syn. <i>Ruellia elongata</i> and 4 more
Amaranthaceae	<i>Iresine herbstii</i> Hook.	nn, 1981	2005	yes	3 accepted names, 2 synonyms
Anacardiaceae	<i>Mangifera indica</i> L.	nn, 1981	1984	no	2 synonyms
	<i>Maytenus "serrotina"</i> (?)	Muenchen, 1979	1988	no	unknown species, perhaps a misspelling; maybe " <i>M. serrata</i> " ...?
Annonaceae	<i>Annona reticulata</i> L.	Potsdam, 1982	1984	no	accepted names are also <i>A. mucosa</i> and <i>Rollinia mucosa</i> ; 20+ synonyms
Apocynaceae	<i>Acokanthera spectabilis</i> (Sond.) Hook. f.	Dublin, 1964	1965	no	accepted name is also <i>A. oblongifolia</i> ; 2 synonyms
	<i>Carissa macrocarpa</i> (Eckl.) A. DC.	Antibes, 1978	1981	no	arrived as <i>C. grandiflora</i> , one of 4 synonyms

Table 3. Collection of the temperate (warm) glasshouse: recently existing plants (May, 2015)

Family	Scientific name (acc. to Tropicos database)	City of plant material origin (seed, cutting, bulb, <i>planta viva</i>), year of ordering/purchasing	Notes and remarks
	SPIKEMOSSES		
Selaginellaceae	<i>Selaginella inaequalifolia</i> Spring	Cork, 1963	valid
	<i>Selaginella involvens</i> (Sw.) Spring	Cluj-Napoca, 2015	3 accepted names, 20+ synonyms
	<i>Selaginella krausiana</i> (Kunze) A. Braun		synonyms are also <i>S.cansecens</i> and <i>S.denticulata</i>
	<i>Selaginella martensii</i> Spring	Oslo, 1968	2 synonyms
		Cluj-Napoca, 2015	
	<i>Selaginella pallescens</i> (C. Presl) Spring	Lyon, 1966	arrived as <i>S.cuspidata</i> , one of the recognized synonyms
		Cluj-Napoca, 2015	8 synonyms, among which <i>S.cuspidata</i> and <i>S.emmeliana</i>
	<i>Selaginella pulcherrima</i> Liebm.	Cork, 1963	3 synonyms
		Cluj-Napoca, 2015	arrived as <i>S.serpens</i> , a valid synonym
	<i>Selaginella tenuissima</i> Fee	Lyon, 1951	
		Berlin-Dahlem, 2013	
	<i>Selaginella umbrosa</i> Lem. ex Hieron.	Cluj-Napoca, 2015	arrived as <i>S. erythropus</i> var. <i>umbrosa</i> ; syn. Is also <i>S. e.</i> var. <i>major</i>
	<i>Selaginella vogelii</i> Mett.	Lyon, 1966	accepted name is also <i>S.braunii</i> ; 3 synonyms
	FERNS		
Aspleniaceae	<i>Asplenium dimorphum</i> Kunze	Berlin-Dahlem, 2003	unresolved name (not in Tropicos; acc. to IPNI & Plant List)
	<i>Asplenium nidus</i> L.	nn, 2011	purchased; 12 synonyms
	<i>Asplenium scolopendrium</i> L. <i>Crispum Group 'Cristatum'</i>	nn, 2005	purchased as <i>Phyllitis cristata</i> ; several synonyms & accepted names of species
	<i>Asplenium viviparum</i> (L. f.) C. Presl	Nancy, 1963	arrived as <i>A. daucifolium</i> var. <i>viviparum</i> , one of 10+ synonyms
Blechnaceae	<i>Blechnum 'Silver Lady'</i>	nn, 2012	purchased; full name should be " <i>B.gibbum</i> ", but the author is missing
Davalliaceae	<i>Davallia solida</i> (G. Forst.) Sw. 'Superba'	Antwerp, 1972	5+ species-synonyms; accepted species-name is also <i>D. sinensis</i>
	<i>Nephrolepis exaltata</i> (L.) Schott	nn, 1954	4 more accepted species-names; 20+ synonyms
	<i>Nephrolepis exaltata</i> (L.) Schott 'Piersonii'	nn, 1961	
	<i>Nephrolepis exaltata</i> (L.) Schott 'Selecta'	Opeka, 1963	
	<i>Nephrolepis</i> 'Pearls of Living'	nn, 2012	purchased - unknown cultivar

	<i>Niphidium crassifolium</i> (L.) Lellinger	nn, 1961	accepted name is also <i>Polypodium c.</i> ; 10+ synonyms
Dryopteridaceae	<i>Bolbitis heteroclita</i> (C. Presl) Ching	Haaren, 1974	4 synonyms
	<i>Cyrtomium falcatum</i> (L. f.) C. Presl	Stockholm, 1958	arrived as <i>Polypodium f.</i> , one of 7 synonyms
	<i>Dryopteris pseudocaenopteris</i> (Kunze) L.B. Zhang	nn, 2009	purchased as <i>Cyathea aspidiooides</i> , one of 2 accepted names; 5+ synonyms
Polypodiaceae	<i>Microsorum punctatum</i> (L.) Copel.	nn, 1961	accepted name is also <i>M. polycarpon</i> ; 60+ synonyms; colonizes the walls inside the greenhouse
	<i>Polypodium aureum</i> L.	nn, 1963	accepted species-name is also <i>Phlebodium a.</i> ; 2 species-synonyms
	<i>Polypodium aureum</i> L. 'Umbellatum'	Essen, 1982	
Pteridaceae	<i>Adiantum capillus-veneris</i> L.	Szeged, 1970	20+ synonyms; colonizes the walls inside the greenhouses
	<i>Adiantum raddianum</i> C. Presl	nn, 2012	purchased; 15 synonyms
	<i>Pteris biaurita</i> L.	Jibou, 1984	7 synonyms
	<i>Pteris cretica</i> L. 'Cristata'	nn, 1961	
	<i>Pteris cretica</i> L. var. <i>albolineata</i> Hook.	nn, 1961	accepted species-name is also <i>P. stenophylla</i> ; 5 synonyms
	<i>Pteris cretica</i> L. 'Wimsettii'	Opeka, 1963	
Tectariaceae	<i>Pteris multifida</i> Poir.	Szeged, 1954	3 synonyms
	<i>Tectaria cicutaria</i> (L.) Copel.	nn; plant found in collection in 2000	several synonyms
	DICOTYLEDONS (Magnoliopsida)		
Acanthaceae	<i>Beloperone guttata</i> Brandegee	nn, 1960	accepted name is also <i>Justicia brandegeana</i> ; several others are accepted, many synonyms
	<i>Crossandra nilotica</i> Oliv.	Bonn, 1970	
	<i>Crossandra pungens</i> Lindau	Duesseldorf, 2002	
	<i>Dicliptera squarrosa</i> Nees	Antibes, 1960 & 1973	arrived as <i>Jacobinia suberecta</i> , one of 15 synonyms
	<i>Elytraria carolinensis</i> (Walter ex. F. Gmel.) Pers.	Goettingen, 2001	syn. <i>Tubiflora c.</i>
	<i>Elytraria carolinensis</i> (Walter ex. F. Gmel.) Pers. var. <i>angustifolia</i> (Fernald) S.F. Blake	Havana, 1990	several combinations of this name
	<i>Fitttonia albivenis</i> (Lindl. ex Veitch) Brummitt	nn; plant found in collection in 2000	several combinations of this name; incl. <i>F. verschaffeltii</i>
	<i>Fitttonia</i> cult. div.	nn, 2008	purchased
	<i>Gymnostachyum ceylanicum</i> Arn. & Nees	Brno, 1963	
	<i>Hemigraphis alternata</i> (Burm.f.) T. Anderson cult.	Duisburg, 1989	5 synonyms, inc. <i>H. colorata</i> and <i>Ruellia colorata/alternata</i>
	<i>Hemigraphis repanda</i> (L.) Hallier f.	Caen, 1988	not in Tropicos; acc. to Plant List accepted, syn of <i>Ruellia r.</i>

	<i>Hypoestes phyllostachya</i> Baker cult.	nn; plant found in collection in 2000	
	<i>Justicia carnea</i> Lindl.	Prag, 1964	accepted name is also <i>Jacobinia c. 6</i> <i>Justicia magnifica</i> , 10+ synonyms; plant was in the collection before WWII
	<i>Peristrophe hyssopifolia</i> (Burm.f.) Bremek.	Besancon, 1968	unresolved name acc. to Tropicos and Plant List
	<i>Phaulopsis imbricata</i> (Forssk.) Sweet	Utrecht, 1971	3 synonyms
	<i>Pseuderanthemum alatum</i> (Nees) Radlk.	Dresden, 2002	2 synonyms
	<i>Ruellia makoyana</i> Closon	nn, 2003	purchased
	<i>Ruellia rosea</i> (Nees) Hemsl.	Wroclaw, 1988	3 synonyms
	<i>Sanchezia nobilis</i> Hook.f.	nn; plant found in collection in 2000	accepted name is also <i>S. oblonga</i> ; 6 synonyms
	<i>Strobilanthes reptans</i> (G. Forst.) Moylan ex Y.F. Deng & J.R.I. Wood	Muenchen, 1967	arrived as <i>Hemigraphis primulifolia</i> , one of 10+ synonyms
Amaranthaceae	<i>Aerva scandens</i> (Roxb.) Moq.	nn, 1972	accepted name is also <i>Ae.</i> <i>Sanguinolenta</i> ; 5 synonyms
	<i>Pleuropetalum darwinii</i> Hook. f.	Utrecht, 2004	EN B1ab(ii, iii, v); B2ab(ii, iii, v) - Endangered - Global and VU D2 - Vulnerable - Global
Annonaceae	<i>Annona muricata</i> L.	Phillipines, 2009	5 synonyms
Apocynaceae	<i>Cataranthus roseus</i> (L.) G. Don 'Albus'	Coimbra, 1961	syn. <i>C. (roseus var.) albus</i> ; 50+ synonyms
	<i>Cataranthus roseus</i> (L.) G. Don 'Roseus'		arrived as <i>C. (roseus var.) roseus</i> ; 50+ synonyms
	<i>Mandevilla splendens</i> (Hook.) Woodson	nn, 2008	purchased; 3 synonyms
	<i>Ochrosia coccinea</i> (Teijsm. & Binn.) Miq.	Bogor, 2004	3 synonyms
	<i>Trachelospermum jasminoides</i> (Lindl.) Lem.	Nanjing, 1987	4 synonyms
Araliaceae	<i>Plerandra elegantissima</i> (Veitch ex Mast.) Lowry, G.M. Plunkett & Frodin	nn, 2010	purchased as <i>Aralia e.</i> ; 7 synonyms, along with <i>Schefflera e.</i> and <i>Dyzigotheca e.</i>
Aristolochiaceae	<i>Aristolochia gigantea</i> Mart.	Linz, 2002	accepted is also <i>A. elegans</i> ; 2 synonyms
	<i>Aristolochia littoralis</i> D. Parodi	nn; plant found in collection in 2000	accepted is also <i>A. cordiflora</i> ; 2 synonyms (in collection since 1949)
	<i>Aristolochia zollingeriana</i> Miq.	Hengchun, 2013	4 synonyms
Begoniaceae	<i>Begonia acutifolia</i> Jacq.	Potsdam, 1986	
	<i>Begonia × erythrophylla</i> Herincq	nn; plant found in collection in 2000	<i>B. hydrocotylifolia</i> X <i>B. manicata</i>
	<i>Begonia fuchsoides</i> Hook.	Nantes, 1970	accepted names are also <i>B. miniata</i> & <i>B. foliosa</i> var. <i>miniata</i>
	<i>Begonia nelumbiifolia</i> Schltdl. & Cham.	nn; plant found in collection in 2000	4 synonyms
	<i>Begonia peltata</i> Otto & D. Dietr.	Vienna, 2003	arrived as <i>B. kellermannii</i> ; one of several synonyms

	<i>Begonia × reichenheimii</i> G. Bartsch	Potsdam, 1969	
	<i>Begonia 'Rex Cultorum'</i>	nn, 2010	purchased; various cultivars
	<i>Begonia × rycinifolia</i> A. Dietr.	nn; plant found in collection in 2000	<i>B. heracleifolia</i> X <i>B. peponifolia</i>
	<i>Begonia subvillosa</i> Klotzsch var. <i>leptotricha</i> (C. DC.) L.B. Sm. & Wassh.	Vilnius, 2013	arrived as syn. <i>B. leptotricha</i>
	<i>Begonia venosa</i> Skan ex Hook.f.	Braunschweig, 2002	
Bignoniaceae	<i>Crescentia cujete</i> L.	Bonn, 1980	8 synonyms
	<i>Kigelia africana</i> (Lam.) Benth.	Bogor, 2004	accepted name is also <i>K. pinnata</i> ; 15+ synonyms
	<i>Pandorea jasminoides</i> (Lindl.) K. Schum.	Brisbane, 2002	several synonyms
Boraginaceae	<i>Cordia caffra</i> Sond.	Jerusalem, 2010	
Cucurbitaceae	<i>Momordica rostrata</i> A. Zimm.	Wroclaw, 1987	
Erythroxylaceae	<i>Erythroxylum coca</i> Lam.	Utrecht, 1975	2 synonyms
Euphorbiaceae	<i>Dalechampia roeziana</i> Muell. Arg.	Amsterdam, 1973	accepted name is also <i>D. spathulata</i> ; 8 synonyms
	<i>Euphorbia pulcherrima</i> Willd. ex Klotzsch	Stuttgart, 1970	arrived as unknown cultivar 'Kolle'; 10+ synonyms
	<i>Jatropha curcas</i> L.	Bogor, 1978	15+ synonyms
	<i>Melanolepis multiglandulosa</i> (Reinw. ex Blume) Rchb. f. & Zoll.	Hengchun, 2013	5 synonyms
	<i>Bauhinia japonica</i> Maxim.	Kyoto, 1994	2 synonym
Fabaceae	<i>Hardenbergia comptoniana</i> (Andrews) Benth.	Menton, 2011	
	<i>Schotia latifolia</i> Jacq.	Melbourne, 1986	
	<i>Alsobia dianthiflora</i> (H.E. Moore & R.G. Wilson) Wiegler	Caen, 2002	arrived as <i>Episcia d.</i> , one of several synonyms
Gesneriaceae	<i>Episcia cupreata</i> (Hook.) Hanst. 'Silver Sheen'	nn, 2003	
	<i>Episcia cupreata</i> (Hook.) Hanst. 'Silver Skies'		purchased; 2 species-synonyms
	<i>Gloxinia perennis</i> (L.) Fritsch	Goteborg, 1978	15 synonyms
	<i>Gloxinia sylvatica</i> (Kunth) Wiegler	Aachen, 1989	accepted name is also <i>Seemannia s.</i> ; 20+ synonyms
	<i>Nematanthus gregarius</i> D.L. Denham 'Gievoltz'	nn, 2002	purchased as <i>Nematanthus</i> 'Gietvoz'
	<i>Sinningia aggregata</i> (Ker Gawl.) Wiegler	Duesseldorf, 2003	syn. <i>Gesneria a.</i>
	<i>Sinningia cardinalis</i> (Lehm.) H.E. Moore	Muenchen, 1978	several synonyms
	<i>Sinningia cooperi</i> (Paxton) Wiegler	Duesseldorf, 2003	3 synonyms
	<i>Sinningia eumorpha</i> H.E. Moore	Ulm, 2012	

	<i>Sinningia speciosa</i> (Lodd.) Hiern.	Amsterdam, 1984	
	<i>Streptocarpus saxorum</i> Engl. 'Blue Velvet'	Berlin-Spaeth, 2013	
Lamiaceae	<i>Clerodendrum cyrtophyllum</i> Turcz.	Wroclaw, 1988	arrived as fam. Verbenaceae
	<i>Clerodendrum glandulosum</i> Lindl.	Kunming, 1987	invalid name acc. to Tropicos; accepted acc. to Plant List, with several synonyms; fam. Verbenaceae
	<i>Clerodendrum inerme</i> (L.) Gaertn.	Tsukuba, 1988	2 more accepted names; 5+ synonyms; fam. Verbenaceae
	<i>Clerodendrum philippinum</i> Schauer	nn, 1971	purchased as syn. <i>C. fragrans</i> 'Pleniflorum' - incl. to <i>C.</i> <i>philippinum</i> , with several more accepted names and many synonyms; as fam. Verbenaceae
	<i>Clerodendrum splendens</i> G. Don	Porrentruy, 1990	arrived as fam. Verbenaceae
	<i>Clerodendrum ugandense</i> Prain	nn, 2001	purchased; fam. Verbenaceae
	<i>Holmskioldia sanguinea</i> Retz.	Menton, 2009	
	<i>Plectranthus prostratus</i> Guerke	Gembloix, 2089	
Malvaceae	<i>Abroma augustum</i> (L.) L.f.	Berlin-Dahlem, 1995	arrived as fam. Sterculiaceae
	<i>Dombeya burgessiae</i> Gerrard ex Harv. & Sond.	Barcelona, 1990	arrived as fam. Sterculiaceae
	<i>Hibiscus elatus</i> Sw.	Graz, 1995	2 accepted names; several synonyms
	<i>Hibiscus rosa-sinensis</i> L.	nn; plant found in collection in 2000	
	<i>Theobroma cacao</i> L.	Potsdam, 2010	arrived as fam. Theobromaceae; 20 synonyms
Moraceae	<i>Dorstenia contrajerva</i> L.	Oxford, 1992	10+ synonyms
	<i>Ficus benjamina</i> L.	Antwerp, 1969	5 synonyms
	<i>Ficus benjamina</i> L. 'Golden Monique'	nn, 2001	purchased; 5 species-synonyms
	<i>Ficus benjamina</i> L. 'Nastasia'	nn, 2001	purchased; 5 species-synonyms
	<i>Ficus binnendijkii</i> Miq. 'Alii'	nn, 2003	purchased
	<i>Ficus elastica</i> Roxb. ex Hornem.	nn; plant found in collection in 2000	3 synonyms
	<i>Ficus elastica</i> Roxb. ex Hornem. 'Decora'		3 species-synonyms
	<i>Ficus elastica</i> Roxb. ex Hornem. 'Belize'	nn, 2001	purchased; 3 species-synonyms
	<i>Ficus elastica</i> Roxb. ex Hornem. 'Melany'		
	<i>Ficus elastica</i> Roxb. ex Hornem. 'Petite Melany'		
	<i>Ficus fistulosa</i> Reinw. ex Blume	Hengchun, 2011	1 syn.
	<i>Ficus irisana</i> Elmer	Hengchun, 2013	1 syn.
	<i>Ficus lyrata</i> Warb.	nn; plant found in collection in 2000	1 syn.

	<i>Ficus lyrata</i> Warb. 'Bambino'	nn, 2008	purchased; 1 species-synonym
	<i>Ficus microcarpa</i> L.f.	nn, 2001	purchased, 15 species-synonyms
	<i>Ficus microcarpa</i> L.f. 'Formosa'		
	<i>Ficus triangularis</i> Warb.	Prag, 1964	acc. to Plant List, accepted name is <i>F. natalensis</i> Hochst. ssp. <i>lepturii</i> (Miq.) C.C. Berg
	<i>Ficus pumila</i> L.	Antwerp, 1962	2 synonyms
	<i>Ficus pumila</i> L. 'Minima'	Linz, 1994	
	<i>Ficus pumila</i> L. 'Variegata'	Turku, 1989	cutting; 2 species-synonyms
	<i>Ficus racemosa</i> L.	nn, 1966	2 synonyms
	<i>Ficus rubiginosa</i> Desf. ex Vent. 'Variegata'	Brijuni Croatia, 1963	1 syn.
	<i>Ficus septica</i> Burm. f.	Hengchun, 2011	4 synonyms
	<i>Ficus tinctoria</i> G. Forst.	Hengchun, 2007	
Oleaceae	<i>Jasminum officinale</i> L.	nn; plant found in collection in 2000	
Oxalidaceae	<i>Biophytum sensitivum</i> (L.) DC.	Berlin-Dahlem, 2004	accepted name is also <i>B. umbraculum</i> ; several synonyms
	<i>Oxalis lasiandra</i> Zucc.	Berlin-Spaeth, 2013	bulbs; 5 synonyms
	<i>Oxalis triangularis</i> A. St.-Hil. 'Rubra'	Berlin-Dahlem, 2003	bulbs; 10+ species-synonyms
Passifloraceae	<i>Turnera ulmifolia</i> L.	Joensuu, 1989	9 synonyms; arrived as fam. Turneraceae
Phytolaccaceae	<i>Rivina humilis</i> L.	Halle, 1983	arrived as <i>R. aurantiaca</i> ; one of 35+ synonyms
		Giesen, 1990	arrived as <i>R. brasiliensis</i> ; one of 35+ synonyms
		Frankfurt, 2014	35+ synonyms; arrived as fam. Riveniaceae
Piperaceae	<i>Peperomia alata</i> Ruiz & Pav.	Vienna, 1961	15 synonyms
	<i>Peperomia blanda</i> (Jacq.) Kunth	Wroclaw, 1989	arrived as <i>P. langsdorffii</i> , one of 40 synonyms
	<i>Peperomia caperata</i> Yunck. 'Rubra'	Caen, 1988	cutting
	<i>Peperomia caperata</i> Yunck. 'Variegata'	nn, 2002	purchased
	<i>Peperomia clusiifolia</i> (Jacq.) Hook.		arrived as <i>P. obtusifolia</i> var. <i>clusiaeifolia</i> , one of 2 synonyms
	<i>Peperomia clusiifolia</i> (Jacq.) Hook. 'Variegata'	Cluj-Napoca, 1966	spontaneously, in some newly vegetatively reproduced plants
	<i>Peperomia fenzlei</i> Regel	Stockholm, 1969	
	<i>Peperomia flexicaulis</i> Wawra	Duisburg, 1990	
	<i>Peperomia glabella</i> (Sw.) A. Dietr.	Stockholm, 1960	35 synonyms
	<i>Peperomia incana</i> (Haw.) A. Dietr.	nn; plant found in collection in 2000	
	<i>Peperomia longispicata</i> C. DC.	Rome, 1960	
	<i>Peperomia obtusifolia</i> (L.) A. Dietr. 'Variegata'	Napoli, 1963	

	<i>Peperomia orba</i> Bunting	Dijon, 1993	not in Tropicos; unresolved name acc. to Plant List
	<i>Peperomia pseudovariegata</i> C. DC.	Vienna-Belvedere, 2012	3 synonyms
	<i>Peperomia reticulata</i> Balf. f.		
	<i>Peperomia rubella</i> Hook.	Iasi, 1961	
	<i>Peperomia serpens</i> (Sw.) Loudon 'Variegata'	Besancon, 1971	arrived as <i>P. serpens</i> f. <i>variegata</i> , one of 25+ synonyms
	<i>Peperomia trifolia</i> (L.) A. Dietr.	Caen, 2002	3 synonyms
	<i>Peperomia urocarpa</i> Fisch. & C.A. Mey.	Besancon, 1971	15 synonyms
	<i>Peperomia urvilleana</i> A. Rich.	Berlin-Dahlem, 1991	
	<i>Piper apiculatum</i> C. DC.	Antwerp, 1966	accepted name is also <i>P. divaricatum</i> ; one of 30+ synonyms
	<i>Piper arboreum</i> Aubl.	Joensuu, 1989	40 synonyms
	<i>Piper auritum</i> Kunth	Marburg, 1966	13 synonyms
	<i>Piper cernuum</i> Vell.	Kopenhagen, 1988	20 synonyms
	<i>Piper cubeba</i> L.f.	Prague, 1963	
	<i>Piper nigrum</i> L.	Antwerp, 1967	
Plantaginaceae	<i>Tetranema roseum</i> (M. Martens & Galeotti) Standl. & Steyerm.	Haren, 1989	arrived as fam. Scrophulariaceae
