A Checklist of *Pyracantha* Cultivars

By Donald R. Egolf and Anne O. Andrick

The United States Department of Agriculture (USDA) provides information in its programs of the world's diverse natural resources. The United States Department of Agriculture (USDA) provides information in its programs of the world's diverse natural resources. The United States Department of Agriculture (USDA) provides information in its programs of the world's diverse natural resources.

Publication of this checklist fulfills the requests of the U.S. National Arboretum as International Registration Authority for the genus *Pyracantha*.
Keywords: Cultivar names, documentation, botanical, international registration, scientific, taxonomic, synonymy, validation.
Mention of trade names in this publication is solely for the purpose of providing specific information and does not imply recommendation or endorsement by the U.S. Department of Agriculture over others not mentioned.

Egolf (deceased) was a research horticulturist and Andrick (retired) was an agricultural research technician, both of the U.S. National Arboretum, Agricultural Research Service, U.S. Department of Agriculture, Washington, DC 20002.

Abstract

Egolf, Donald R., and Anne O. Andrick. 1995. A Checklist of *Pyracantha* Cultivars. U.S. Department of Agriculture, U.S. National Arboretum Contribution No. 8, 97 pp.

Pyracantha, which is extensively grown throughout the United States and in some other areas of the world, is widely cultivated for its diverse growth habits, its brilliant display of fruit, and its adaptability to various landscape uses. This checklist comprises the history of *Pyracantha* cultivation, an alphabetical list of 347 cultivar names, and a list of the 56 registered names. Included with the cultivar names are sources, descriptions, registrations, synonyms, and other pertinent information.

Publication of this checklist fulfills the requirements of the U.S. National Arboretum as International Registration Authority for the genus *Pyracantha*.

Keywords: Cultivar names, documentation, firethorn, international registration, nomenclature, *Pyracantha*, synonyms, validation.

Mention of trade names in this publication is solely for the purpose of providing specific information and does not imply recommendation or endorsement by the U.S. Department of Agriculture over others not mentioned.

June 1995

While supplies last, single copies of this publication may be obtained at no cost from Ruth L. Dix, U.S. National Arboretum, 3501 New York Avenue, N.E., Washington, DC 20002.

Copies of this publication may be purchased from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161; telephone (703) 487-4650.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and marital or familial status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact the USDA Office of Communications at (202) 720-5881 (voice) or (202) 720-7808 (TDD).

To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, DC 20250, or call (202) 720-7327 (voice) or (202) 720-1127 (TDD). USDA is an equal employment opportunity employer.

Foreword

The firethorns, *Pyracantha*, have long been cultivated for their attractive flowers and fruits, and some have been grown for their evergreen foliage. This small genus of 10 species has thus far given rise to nearly 350 named cultivated forms, which can be found in most temperate regions of the world. Because of the vastness of this array, it has been difficult for botanists, horticulturists, and plant enthusiasts to keep track of the identity of the various forms. The work that follows will be of great help to those interested in firethorns and will serve as a basic reference for many years.

The U.S. National Arboretum has the primary responsibility among all federally funded institutions to conduct research relating to ornamental woody plants. These long-term efforts have produced checklists of cultivated forms of other genera, as well as numerous new ornamental and floricultural plants, for the American public. We are pleased to make available *A Checklist of Pyracantha Cultivars*.

THOMAS S. ELIAS
Director, U.S. National Arboretum
Washington, DC

Acknowledgments

It would be impossible to personally thank everyone who so generously helped Dr. Egolf and me in compiling this checklist, particularly during Dr. Egolf's long illness and upon his tragic death. However, I would like to express my sincere appreciation to the following people whose generosity enabled the completion of this work: Dr. Peter A. Hyypio, L.H. Bailey Hortorium, Ithaca, New York; Ir. F. Schneider, Institute for Horticultural Plant Breeding, Wageningen, Holland; and Dr. Elizabeth McClintock, California Academy of Sciences, San Francisco, California, who reviewed early versions of the checklist and provided much-needed information.

Dr. Theodore Dudley, U.S. National Arboretum, Washington, DC; Dr. Arthur O. Tucker, Delaware State College, Dover, Delaware; Harry J. van de Laar, Boskoop, Holland; and Freek Vrugtman, Royal Botanical Gardens, Hamilton, Ontario, Canada, who provided in-depth reviews of the current checklist and offered invaluable suggestions.

Mme. H. Bertrand-Breisch, École Nationale Ingénieurs Travaux Horticulture et Paysage, Angers, France, and Dr. Alain Cadic, Institut National de la Recherche Agronomique, Beaucouze, France, who were particularly helpful in obtaining additional information on specific cultivars and in completing registrations.

International Checklist of *Pyracantha* Cultivars

Introduction

Pyracantha—derived from the Greek *pyr* for fire and *akanthos* for thorn because of its red fruit and its spiny branches—is most commonly called firethorn. The plant is also known by other vernacular names; these include brandend-bos and vuurdoorn in Dutch; burning bush, Christ's thorn, evergreen thorn, everlasting thorn, fiery thorn, and white thorn in English; arbre-de moise, buisson-ardent, epine-ardente, petit-corail, and pyracanthe in French; brennender-busch, feuerbusch, feuerdorn, feuersträucher, and immergrüner-weissdorn in German; agazzino, marruca-nera, and prunogazzero in Italian; and kamatuka and kankasus in Japanese.

The genus *Pyracantha* Roem. belongs to the subfamily Pomoideae of the Rosaceae. *Pyracantha* taxa are evergreen or deciduous shrubs usually having thorny branches. A further description of these taxa is as follows: buds small, pubescent; leaves alternate, short petioled, narrow obovate, elliptic, oblong or oblanceolate, crenulate, serrulate, or entire, stipules minute, caducous; flowers in corymb or fascicled corymbose inflorescence, white or pale cream, petals suborbicular, spreading, sepals short, stamens 20, anthers yellow, carpels 5, free on ventral side, on dorsal side connate about half to the calyx tube; fruit a small pome with persistent calyx, yellow, orange, or red, nutlets 5.

As with other taxa of the Rosaceae, *Pyracantha* taxa (or species) have been classified as belonging to several related genera. The plant was first designated as *Mespilus* by Linnaeus (1737). It was later assigned to *Crataegus* by Medicus (1793), to *Cotoneaster* by Spach (1834), to *Pyracantha* by Roemer (1847), to *Sportella* by Hance (1877), and to *Timbalia* by Clos (1871). *Pyracantha* is most closely allied to *Cotoneaster* and *Crataegus*. It is distinguished from *Cotoneaster* by the presence of thorns, usually crenate or serrate leaves, flowers in corymbs, 5 pistils that are dorsally connate to the calyx tube along the basal half, and fruit with 5 nutlets. It is distinguished from *Crataegus* by having 2 fertile ovules in each

carpel rather than 1, evergreen unlobed leaves, and leafy thorns.

Pyracantha consists of 10 species that are indistinctly defined and overlap in their geographical distribution. The genus originally ranged from Spain through the Himalayas to China and may be divided into three geographic sections:

- the Mediterranean (Spain to the Caucasus Mountains) with *P. coccinea* Roem.
- the Himalayan with *P. crenulata* (D. Don) Roem.; and
- the Chinese with eight species—*P. angustifolia* (Franch.) Schneid., *P. atalantioides* (Hance) Stapf, *P. densiflora* Yu, *P. fortuneana* (Maxim.) Li, *P. inermis* Vidal, *P. koidzumii* (Hayata) Rehd., *P. mekongensis* Yu, and *P. rogersiana* (A.B. Jacks.) Bean.

Morphologically, the flowers and fruit of all 10 species are similar except in size and shape; the species are distinguished primarily on the basis of leaf characteristics. However, since leaf dimorphism may occur on the same plant or among seedlings in a population, the taxa cannot be accurately designated by using only a limited sample of herbarium specimens. With the exceptions of *P. koidzumii* and *P. angustifolia*, the Chinese species demonstrate only slight morphological divergence. Stapf (1926) reviewed the Chinese species complex. As species populations are known to overlap, it may well be that two or more species populations are in reality only interbreeding populations of the same species.

History of Cultivation

Pyracantha is extensively cultivated for its diverse growth habits—its dense, dark green, often evergreen foliage; its spectacular white or cream floral display in late spring; and, foremost, for its abundant and persistent, brilliant yellow, orange, or red fruit. The plant is highly

adaptable in landscape uses; it can be used successfully as a specimen plant, in mass plantings, in containers, and as espalier, screens, barriers, and hedges. *Pyracantha* is a major container-grown nursery crop throughout the world. In the United States, it is one of the most frequently planted berried shrubs.

Pyracantha coccinea was recorded in cultivation in Holland in 1594 and in England in 1629 and was the only species grown there before the introduction of *P. crenulata* in 1830 from the Himalayas. Chinese plant explorations resulted in the introduction of *P. angustifolia* in 1895, *P. fortuneana* in 1906, *P. atalantioides* in 1907, *P. rogersiana* in 1911, and *P. koidzumii* soon thereafter. Three additional species—*P. inermis*, *P. densiflora*, and *P. mekongensis*—are not known in cultivation and are dubious species with only minor morphological divergence. *Pyracantha* was introduced into the United States in the early nineteenth century. It was listed in the William Prince Catalog, Flushing, New York, in 1824, and was advertised for sale in the *Daily National Intelligencer* in 1825 (Saul 1906).

The cultivated *Pyracantha* species are confused by hybridization. As with many members of the Rosaceae, there are no barriers to hybridization and intermediate seedlings occur spontaneously. Although 'Lalandei' was recognized as a clone as early as 1874, many nurseries continued to propagate it by seed. These seedlings did not perpetuate the parent plant but became the progenitors of additional variations that were still identified as 'Lalandei'. Among the cultivars grown today as 'Lalandei' there are minor variants; some of the superior ones are designated as cultivars.

Very few of the cultivars included in this checklist resulted from controlled hybridization. The majority of new *Pyracantha* cultivars are chance seedlings selected because of growth habit, fruiting characteristics, hardiness, or disease resistance. The origin of many cultivars is further obscured by the reintroduction of an established cultivar under a new name because of lost identification or to promote sales.

About the Checklist

Content

This book, compiled in accordance with the *International Code of Nomenclature for Cultivated Plants—1980* (Brickell et al. 1980), is a specialized list of cultivar names for the gardener, horticulturist, nursery worker, and botanist. Publication of cultivar names in this checklist fulfills the basic prerequisite for determining the acceptability of cultivar names for international *Pyracantha* registration.

The checklist was compiled from materials gleaned from a thorough search of commercial, horticultural, and botanical literature. In addition to the primary literature, living material and herbarium specimens were studied. The three most significant categories of materials were (1) the collection of more than 140,000 nursery and seed trade catalogs at the National Agricultural Library, Beltsville, Maryland; (2) the botanical and horticultural literature; and (3) the *Pyracantha* evaluation planting at the U.S. National Arboretum, Washington, DC.

This checklist contributes to the nomenclatural stability of cultivar names, which are often known as cultivated or horticultural varieties or forms. Common names of cultivars were excluded to avoid confusion. According to the *International Code of Nomenclature for Cultivated Plants—1980*, a particular name is correct for only one cultivar; other names and designations must be treated as synonyms (sometimes called commercial synonyms). Since the same clone may have been known by several names at different times or in different regions, original and supplemental references frequently present repetitious descriptions.

A published description has been required for validation (legitimization) of each cultivar name beginning January 1, 1959; descriptions were not necessary to validate cultivar names published before that date. Very few descriptions of *Pyracantha* cultivars are sufficiently clear to distinguish the hundreds of clones, and it is doubtful whether morphological descriptions or

color designations could ever be constructed that distinguish all named clones.

The dates of cultivation or introduction are important in establishing the priority of a cultivar name used for validation. (The terms "cultivated" and "introduced" are synonymous.) The dates of publication of valid cultivar names are accepted when there is evidence of dissemination of asexual propagations and subsequent cultivation in botanic gardens, arboretums, or private gardens. The acceptance of valid names is based on the *International Code of Nomenclature for Cultivated Plants—1980* and does not imply any judgment regarding a cultivar's horticultural superiority or distinctness. Supplemental and often diagnostic data are included here to amplify the original descriptions and have no relevance to the validation of names. Although many of the references to the cultivars consist of commercial sources, this list is not a buyers' guide. No responsibility can be accepted for current availability of plants from the sources mentioned.

A few cultivars of commercial importance are listed as invalid. Some of these names could be validated by publication of a description; others would require a published change of name by or with the permission of the originator.

A list such as this can hardly be compiled without some errors and misinterpretations. Information that will clarify the identity of any of the plants will be gratefully received.

Format

The checklist presents information in the format described next.

- Cultivar names are listed in alphabetical order.
- The earliest published reference for a name is shown in parentheses, followed by the published description or by the notation "without description" if the source contained no description. A second reference, with description, is included when

available. Subsequent references provide additional pertinent data.

- Important information from the original source follows the name and is introduced by a colon. Descriptive information is presented in the following order: habit, leaf characters, flower characters, fruit characters, and miscellaneous data such as hardiness and disease resistance. Information from sources other than the original one is also introduced by a colon. When available, the source, discoverer, selector, namer, and introducer, with significant dates, follow. Undocumented information is set off by periods.

- Taxa categories are differentiated by the following typefaces:

'Alba'	valid cultivar name
'Aurea'	invalid cultivar name
<i>angustifolia</i>	valid species name
<i>chinensis</i>	invalid species name.

- When synonyms are listed, they are presented under each entry and are preceded by an equal sign (=). The legitimate name, if there is one, appears first and in bold face, and then illegitimate synonyms follow in alphabetical order. Dubious, suspect, and unconfirmed synonyms are preceded by a question mark.
- Common misspellings and alternate listings of cultivar names are listed when known.
- The species identity, when determined for a cultivar, appears in italics.
- Color designations are included when available. They are differentiated by RHS for the RHS Colour Chart (Royal Horticultural Society 1966) or HCC for the Horticultural Colour Chart (British Colour Council in collaboration with the Royal Horticultural Society 1942).

Alphabetical Checklist of Cultivar Names

- 'Accadia' (H.L. Percy Nursery, Salem, Oregon. Catalog, p. 8. 1958–59, without description). Named prior to 1958. Probably a misspelling of '**Arcadia**'.
= ? '**Arcadia**'
- 'Alba' (Washington Street Nurseries, Geneva, New York. Catalog, p. 2. Spring 1874, without description).
- 'Aldenhamensis' (Beaumonts' Nurseries, Maurewa, Auckland, New Zealand. Catalog, p. 18. 1956) : Very ornamental hybrid with **angustifolia**. Letter May 12, 1965, Edgar Jones, Beaumonts' Nurseries : Printer's error in compiling catalog.
= **Malus sylvestris** '**Aldenhamensis**'
- 'Alexander' (Pépinière Renault, Gorrion, France. Catalog, p. 7. August 1972) : Leaves persistent, dark green, shiny; fruit globular, 5–10 mm in diameter, light yellow at first, then orange, finally coral red. Name registered by Jean Renault, Pépinière Renault, February 25, 1976, as 'Alexander Pendula': Seedling of *P. crenulata* *Gibbsii*; 2 m high, 1.2 m wide; branches hanging, long, reaching 1 m, brown; long thorns; leaves persistent, alternate, finely indented, rounded at tip, lanceolated, separated at petiole and often reddish, may reach 50 mm long and 15 mm wide, shiny green on top, pale green underneath, strongly ribbed; flowers white, small, in corymbs; susceptible to frost in northern countries.
= 'Alexander Pendula'
Also listed as 'Alexandra', 'Alexandra Pendula'
- 'Alexander Pendula'TM (Pépinière Renault, Gorrion, France. Catalog, p. 7. August 1972). Patent no. 7134338, 1970; trademark no. 114821.
= '**Alexander**'
- 'Andenken an Heinrich Bruns' (Herm. A. Hesse, Weener, Germany. Catalog, p. 180. 1961–62, as **P. coccinea** 'Andenken an Heinrich Bruns') : Fruit orange red, abundant; disease resistant.
= '**Henrich Bruns**'

'Apache'

(D.R. Egolf. HortScience 22:173-174. 1987a, as *P.* × **'Apache'**): Semi-persistent shrub; dwarf, compact growth habit; 1.5 m high by 2.1 m wide; dense branches with short internodes; spines on leafy shoots; leaves alternate, glossy, dark green above (Yellow Green 147A, RHS) and yellow green beneath (Yellow Green 146C), 2-5 cm long and 7-18 mm wide; flowers cream white, 10-12 mm in diameter, borne on spurs and short shoots all along the branches; fruit depressed, globose, glossy, bright red (Red 44A), 7-8 mm in diameter, 5-6 mm long, borne in 4- to 6-cm-diameter clusters of 20-60, ripens in August, persists until December; resistant to fire blight and scab; near evergreen in zone 7B and evergreen in warmer zones. Hybrid of *P. koidzumii* **'Victory'** × (*P. koidzumii* **'Rosedale'** × *P. fortuneana* **'Orange Glow'** seedling); developed at U.S. National Arboretum in 1971, selected in 1977, introduced in 1987. Name registered by D.R. Egolf, November 15, 1986. NA No. 48240; PI No. 499831.

'Arcadia'

(Coolidge Rare Plant Gardens, East Pasadena, California. Catalog, p. 5. 1941-42, as *P. formosana* **'Arcadia'**, without description). Ibid., p. 15. 1949 : Fruit red.

= ? *P.* **'Accadia'**

P. koidzumii

'Aurantiaca'

(Journal of the Royal Horticultural Society 45(2,3):cxiv. 1920, as *P. rogersiana* f. *aurantiaca*): Branching shrub, spreading growth habit; leaves dark olive green, slightly notched at the margin; fruit reddish orange, roundish, abundant. Originated at Exbury Gardens, Beaulieu, near Southampton, England. RHS Award of Merit, October 21, 1919; RHS First Class Certificate, November 6, 1934. Hillier & Sons, Ampfield, Romsey, Hampshire, England. Catalog, p. 44. 1924-25, as *P. crenulata* f. *aurantiaca*, without description. Vilmorin-Andrieux, Paris, France. Catalog, p. 56. 1925-26, as *Cotoneaster (Pyracantha) rogersiana* var. *aurantiaca*: Shrub, leaves narrow, crenate, persistent; fruit numerous, in clusters, yellow orange. Le-Mac Nurseries, Hampton, Virginia. Catalog. Spring 1933, as *P. coccinea* **'Rogersiana Aurantiaca'**, without description. Letter January 13, 1966, Jacques L. Legendre (previously with Le-Mac Nurseries), Gulf Stream Nursery, Wachapreague, Virginia: Imported from France; did not prove hardy. L. Späth, Berlin, Germany. Catalog, p. 58. 1937-38, as *P. crenulata* **'Rogersiana Aurantiaca'**: Shrub, evergreen, up to 3 m in height; young branches rusty brown, hairy; leaves glossy green, oblong, 2-5 cm long; fruit orange red. G.D. Böhlje, Westerstede, Germany. Catalog. 1939, as *Crataegus pyracantha* **'Rogersiana Aurantiaca'**, without

description. W.J. Bean. *Trees and Shrubs Hardy in the British Isles*, 7th ed., vol. 2, p. 590. 1951, as *P. rogersiana* var. *aurantiaca*: Fruit reddish orange. DeConinck-Dervaes & Pomona, Maldegem, Belgium. Catalog, p. 55. 1954–55, as *P. crenulata* '**Aurantiaca**': Fruit orange.

= 'Rogersiana Aurantiaca'
Misspelled as 'Aurantica', 'Auranticea', 'Auranticum'
P. rogersiana

'Aurantiaca Flava'

(F. deVos. *The Garden Journal* 10(6):217. 1960, as *P. crenulata aurantiaca flava*) : Fruit yellow; zone 6B.

= '**Flava**', 'Flava Nova', 'Lutea', 'Rogersiana Flava', 'Xanthocarpum'

'Aurea'

(*Journal of the Royal Horticultural Society* 62(2):xxx, 88. 1937, as *P. atalantioides* f. *aurea*) : Fruit golden; originated as ***P. atalantioides*** seedling raised at the Royal Horticultural Society Gardens, Wisley, England; RHS Award of Merit, November 10, 1936. W.J. Marchant, Stapehill, Wimborne, England. Catalog, p. 140. 1937 : Fruit golden yellow, abundant on branches from September until February.

P. atalantioides

'Aurea'

(B. Blackburn. *Popular Gardening* 4(9):53. 1953, as *P. coccinea* f. *aurea*) : Fruit rich yellow. G.H.M. Lawrence. *Baileya* 2(2):56. 1954, as ***P. coccinea*** 'Aurea' : Fruit deep yellow; hardy; selection of ***P. 'Lalandei'***.

= '**Fructu Lutea**', 'Fructo Flavus', 'Lalandei Fructu Luteo', 'Lutea'

'Autumn Glow'

(Tankard Nurseries, Exmore, Virginia. Catalog, p. 12. Spring 1975) : Vigorous; fruit orange; recent introduction. Name registered by John E. Tankard, Jr., Tankard Nurseries, August 3, 1989 : Parentage unknown; chance seedling originated at Wyman Nursery, Bobtown, Virginia. Propagation discontinued since cultivar proved very susceptible to disease.

'B.W.' (Herman Zulauf, Schinznach-Dorf, Switzerland. Catalog, p. 44. 1959-60, as *P. crenulata rogersiana* 'B.W.') : Healthy and very fruitful. Plants obtained from Böhlje Nursery, Westerstede, West Germany.

P. rogersiana

'Bad Zwischenahn' (Joh. Bruns, Oldenburger Baumschule, Bad Zwischenahn, Germany. Catalog, p. 155. 1959-60, as *P. coccinea* selektion 'Bad Zwischenahn') : Fruit abundant; completely disease resistant. Herman Zulauf, Schinznach-Dorf, Switzerland. Catalog, p. 72. 1961-62 : Evergreen; loose, upright, medium shrub, much branched; leaves dark green; fruit red, persistent. B.K. Boom. *Nederlandse Dendrologie*, 5th ed., p. 257. 1965 : Bushy, pyramidal growth habit; leaves broad, ovate to obovate, pointed to rounded apex, crenate serrate; fruit red (715, HCC), 9.5 by 8 mm, persistent, hardy, scab susceptible. Letter April 20, 1967, Willi Bruns : Originated as *P. coccinea* 'Kasan' seedling selected in 1957 by Willi Bruns, Oldenburger Baumschule, Bad Zwischenahn, Germany. Introduced 1959 by Joh. Bruns. Name registered by Willi Bruns, September 21, 1989.

= 'Coccinea Selecta', 'Kasan Bad Zwischenahn', 'Typ. Zwischenahn'

P. coccinea

Orange 25A, RHS

'Bakeri' (Tingle Nursery, Pittsville, Maryland. Catalog, p. 17. 1952-53) : Fruit red. F. deVos. *Proceedings, Plant Propagators Society*, p. 34. 1958, as *P. atalantioides* 'Bakeri' : Zone 6. Letter February 20, 1960, E.L. Bennett, Greenbrier Farms, Chesapeake, Virginia : Introduced by Baker Bros. Nursery, Fort Worth, Texas.

Also listed as 'Baker', 'Baker's Red', 'Baker's Red Berry'

P. atalantioides

Red 43A, RHS

'Barlow'

(Wolfe's Nursery, Stephenville, Texas. Catalog, p. 37. 1941) : Semi-upright, profuse quantities of red berries. Aldridge Nursery, Von Ormy, Texas. Catalog, p. 16. 1952-53 : Fruit large, dark red; stands summer heat and winter cold very well. Letter January 6, 1965, R.C. Aldridge, Jr., Aldridge Nursery : Originated several years ago [1935-40 ?] at Brownwood, Texas; select seedling of *P. yunnanensis*; large, rather loose growth habit; fruit larger than **'Graberi'** or **'Victory'**.

Misspelled as 'Barlowi'

P. fortuneana

'Bellii'

(Monrovia Nursery, Azusa, California. Catalog, p. 15. 1953, without description). F. deVos. Proceedings, Plant Propagators Society, p. 34. 1958, as *P. atalantioides* **'Belli'**: Fruit red, similar to *P. koidzumii* but larger; zone 8. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):86. 1967 : Chromosome number 2n=34.

P. koidzumii

Orange Red 33A, RHS

'Beral'

(P.E. Brander. Statens Planteavlforog, Meddelelse Nr. 1218. September 11, 1975, as *P. coccinea* **'Beral'**) : Wide, low, almost creeping bush; densely branched, young shoots greenish on underside, reddish brown on top and extremely hairy, maturing brown and smooth; leaves bright green on top, lighter beneath, dull, smooth on both sides, 3.1-4.5 cm long, 1.7-2.8 cm wide, almost elliptic, base wedge shaped, pointed, end pointed, edge serrated; flowers on inflorescence 1 cm long; fruit almost round, 7-9 mm in diameter, becoming deep orange (32A, RHS) September-October, falling at end of December; well suited for ground cover.

P. coccinea

'Berlioz'

(H. Breisch and J.-L. Esnault. *l'Horticulture Francaise* 122:13, 15. 1980) : Develops into large shrub; heavy fruiting, fruit orange then red orange (40B, RHS), early, large (8.5 by 7 mm); numerous vegetative shoots. Name registered by H. Bertrand-Breisch October 19, 1989 : Chance seedling of *P. atalantioides* selected 1978 at École Nationale d'Ingenieurs des Tech-

niques Horticoles, Angers, France; named and introduced 1978 by André Briant, Pépinière André Briant, St. Barthelemy d'Anjou, France.

P. atalantioides

'Blaze'

(Oregon Garden Products, Hillsboro, Oregon. Catalog. 1986-87, as ***P. coccinea*** 'Blaze', without description).

'Blossil'

(Sneed Nursery, Oklahoma City, Oklahoma. Catalog, p. 15. Spring 1957, without description). McIninch Greenhouses, St. Joseph, Missouri. Catalog. 1959 : Leaves thick, shiny; fruit red. Letters February 22, 1960 and April 7, 1967, J. Frank Sneed, Sneed Nursery : Plant upright; leaves glossy; berries well; has withstood zero temperatures but has been killed back at 10 °F; originated at Midwest City, Oklahoma; introduced by Sneed Nursery 1957.

Orange Red 33A, RHS

'Bobs'

(Bobtown Nursery, Onancock, Virginia. Catalog, p. 7. 1985-86, without description). *Ibid.*, p. 10. 1986-87 : Fruit dark red. Name registered by Robert Papetti, Bobtown Nursery, August 3, 1989 : Chance seedling selected 1984 by Robert Papetti; introduced 1986; parent plant 15 ft tall; fast grower; leaf wider on end, tapering back to stem; hardy to 0 °F for short periods.

P. coccinea

'Bosley'

(Bosley Nurseries, Mentor, Ohio. Catalog, p. 13. 1968, as *P. lalandi* [Bosley Strain]) : Flowers and fruits profusely; hardy. Letter March 17, 1969, Paul R. Bosley, Sr., Bosley Nurseries : Selected because of its extreme hardiness; introduced 1968.

P. coccinea

'Boundsil'

(Howell Nurseries, Knoxville, Tennessee. Catalog, p. 9. 1939, as ***P. coccinea*** 'Boundsil', without description). Letter January 31, 1966, C.B. Howell, Jr., Howell Nurseries : Slow growing; compact plant; fruit orange;

winter hardy. Letters July 20, 1966 and August 26, 1966, Earl H. New, Cooperative Extension Service, University of Kentucky, Lexington, Kentucky : Supposedly named by J. Fike (deceased), Hopkinsville, Tennessee, for a Tennessee nurseryman by the name of Bound; Bound Nursery liquidated 1966.

P. coccinea

Orange Red 32A, RHS

'Boxwood'

(Monrovia Nursery, Azusa, California. Catalog, p. 72. 1966-67, as *P.* 'Boxwood' [**'Pyrabox'**]) : Broadly spreading, low-mounded plant; leaves typical, on very short, compact branches.

= **'Pyra-Box'**

'Brick Red'

(Goodwin Nurseries, Mission, Texas. Catalog. 1955) : Large, vigorous plant; fruit brick red.

'Brilliant'

(Monrovia Nursery, Azusa, California. Catalog, p. 74. 1960-61) : Fruit bright red, persistent; hardy. U.S. plant patent no. 1959, July 12, 1960 : Originated as hybrid of *P. crenata-serrata* '**Rosedale**' × *P. coccinea* '**Lalandei**'; selected in 1949 by W. Lee, Monrovia Nursery; characterized by upright, compact growth; abundant bright red fruit that retains coloration after exposure to cold weather. Name registered by Audrey Teasdale, Monrovia Nursery, March 27, 1990.

P. fortuneana* × *P. coccinea

Red 45D, RHS

'Bunch Bush'

(L.H. Bailey and E.Z. Bailey, compilers. Hortus Third, p. 930. 1976, as *P. coccinea* 'Bunch Bush', without description). No additional information available; possibly '**Burning Bush**'.

'Burning Bush'

(Armstrong Nurseries, Ontario, California. Catalog, p. 36. 1935, as *P. lalandii* '**Burning Bush**') : Height 8 ft; growth habit more slender and erect than others; fruit bright orange, persistent through fall into winter.

P. coccinea

'Buttercup'

(T. Hilling & Co., Chobham, Woking, England. Catalog, p. 99. 1960–61) : Fruit orange yellow. Hillier & Sons, Romsey, Hampshire, England. Catalog, p. 109. 1964 : New hybrid; fruit buttercup yellow.

= '**Knaphill Buttercup**'

'Burus'

(Aldridge Nursery, Von Ormy, Texas. Catalog, p. 32. 1960–61) : Dwarf, compact shrub; leaves light green; does not bear fruit. Letters January 6, 1965 and April 13, 1967, R.C. Aldridge, Jr., Aldridge Nursery : Nearly thornless and fruitless variety. Name registered by R.C. Aldridge, Jr., April 23, 1974 : Full dense growth; small boxwood-shaped leaves; selected by George Saimamoto, Mariposa Nursery, Montebello, California, in 1950; named in 1951; introduced in 1952.

'Cadange'

(Pépinière A. Briant, St. Barthelemy d'Anjou, France. Catalog, p. 49. 1989–90, as '**Cadange Saphyr® Orange**') : Growth habit erect, narrow; leaves small, green, persistent; fruit numerous, small, dark orange, shiny; resistant to fire blight; hybrid of *P.* × '**Shawnee**' × *P. atalantioides* '**Mozart**', resulting from controlled pollination June 1982; selected by A. Cadic, Institut National de la Recherche Agronomique, Beaucouze, France; named by G.I.E. Saphyr, Lyon, France. Certificat d'Obtention Vegetale 7904 France, August 24, 1988; SO997, Belgium, August 3, 1989. Name registered by A. Cadic, May 5, 1992.

= '**Saphyr® Orange**'

'Cadrou'

(Pépinière A. Briant, St. Barthelemy d'Anjou, France. Catalog, p. 49. 1989–90, as '**Cadrou Saphyr® Rouge**') : Growth habit erect, vigorous, spreads with age; leaves dark green, glossy, persistent; fruit numerous, flattened, bright carmine red; resistant to fire blight; hybrid of *P.* × '**Shawnee**' × *P.*

***atalantioides* 'Mozart'**, resulting from controlled pollination in June 1982. Selected by A. Cadic, Institut National de la Recherche Agronomique. Certificat d'Obtention Vegetale 7905, France, August 24, 1988; SO998, Belgium, August 3, 1989. Name registered by A. Cadic, May 5, 1992.

= 'Saphyr® Rouge'

- 'Dart's Daffodil' (Proefstation voor de Boomkwekerij te Boskoop. Alfabetische Lijst van Planten op de Sortimentstuim, p. 189. 1977, without description). Name registered by H.J. van de Laar, Boskoop, Holland, April 20, 1990 : Chance seedling; hybrid of unknown parentage; selected at Darthuizer Nurseries, Leersum, Holland, 1975; introduced 1975; very broad, loose shrub, hardy; fruit golden yellow, 6-7 mm. Probably no longer in cultivation.
- 'Dart's Moonlight' (H.J. van de Laar. Naamlijst van Houtige Gewassen, p. 153. 1987, without description). Name registered by H.J. van de Laar, Boskoop, Holland, April 20, 1990 : Chance seedling; hybrid of unknown parentage; selected at Darthuizer Nurseries, Leersum, Holland, 1975; introduced 1975; fruit light yellow, small. Probably no longer in cultivation.

'Dart's Red'

(Proefstation voor de Boomkwekerij te Boskoop. Alfabetische Lijst van Planten op de Sortimentstuim, p. 189. 1977, without description). Darthuizer Vademecum, 3d ed., pp. 16, 221. 1987 : Broad, upright, fairly open shrub; leaves glossy dark green; fruit bright red, numerous; very winter hardy; scab resistant; selection of Darthuizer Nurseries. Pépinière Renault, Gorrion, France. Catalog. Autumn 1989, as **P. 'Dart's Red®** Interrada' : Fruit red orange; disease resistant. Name registered by H.J. van de Laar, Boskoop, Holland, April 20, 1990: Chance seedling; parentage unknown; named in 1975; introduced by Darthuizer 1986.

= 'Interrada'

'Dart's Sunbeam'

(Proefstation voor de Boomkwekerij te Boskoop. Alfabetische Lijst van Planten op de Sortimentstuim, p. 189. 1977, without description). Name registered by H.J. van de Laar, Boskoop, Holland, April 20, 1990 : Chance seedling; hybrid of unknown parentage; selected at Darthuizer Nurseries, Leersum, Holland, 1975; introduced 1975; vigorous, broad-growing shrub; fruit golden yellow, 6–7 mm; less hardy than '**Dart's Daffodil**' and '**Dart's Red**'. Probably no longer in cultivation.

'Dart's Yellow'

(H.J. van de Laar. Naamlijst van Houtige Gewassen, p. 153. 1987, without description). Name registered by H.J. van de Laar, Boskoop, Holland, April 20, 1990 : Chance seedling; hybrid of unknown parentage; selected at Darthuizer Nurseries, Leersum, Holland, 1975; introduced 1975; fruit yellow. Probably no longer in cultivation.

'Dauerbrand'

(Karl Foerster, Bornim-Potsdam, Germany. Catalog, p. 74. 1937–38, as **P. coccinea** 'Dauerbrand') : Fruit orange; persistent. Letter January 18, 1966, Karl Foerster : Compact shrub, 1.5 m high; flowers and fruit abundant; fruit persistent; winter hardy; selected by Karl Foerster at Bornim, Germany, prior to World War II; earlier named '**Praecox**'.

= '**Praecox**'

P. coccinea

'Debussy' (H. Breisch and J.-L. Esnault. *l'Horticulture Francaise* 122:13, 15. 1980) : Develops into large shrub; fruit red (dark around apex), late, moderately abundant, small (7 by 5 mm); many vegetative shoots. Name registered by H. Bertrand, École Nationale d'Ingenieurs des Techniques Horticoles (ÉNITH), Angers, France, October 19, 1989 : Chance seedling of *P. atalantioides* selected 1978 at ÉNITHP; named 1978 by André Briant, Pépinière André Briant, St. Barthelemy d'Anjou, France; introduced by Pépinière Détriche, Angers, France; same fruiting characteristics as **'Mozart'**, while less abundant; develops into shrub larger than **'Mozart'**; fruit redder than that of **'Berlioz'**.

P. atalantioides

'Delacourrii' (Jardin des Plantes, Université de Montpellier, Montpellier, France. Catalog, 1964, as *P. coccinea* var. *delacourrii*, without description [not seen]). Letter April 9, 1974, Prof. Hervé Harant, Directeur, Jardin des Plantes : Never existed; apparently printer's error in catalog.

'Dilatata' (J. Timm & Co., Elmshorn/Holstein, Germany. Catalog, p. 51. 1938-39, as *P. coccinea* **'Dilatata'**) : Broad, bushy growth habit.

P. coccinea

'Dr. Hook' (Tankard Nurseries, Exmore, Virginia. Catalog, p. 13. Spring 1963, as *P. coccinea* **'Dr. Hook'**) : Dense, upright; fruit orange. Letters February 15, 1963 and March 28, 1967, John E. Tankard, Jr. : Very erect; quite bushy; very sharp spines; does not berry at early age; hardy; obtained from Wyman Nursery [now defunct], Bobtown, Virginia; believed to have come from a Dr. Hook in Georgia.

P. coccinea

Orange 28A, RHS

'Duval' (Leonard Coates Nursery, San Jose, California. Catalog, p. 11. 1938, as *P. coccinea* **'Duval'**) : Fruit bright red, large, enormous clusters; introduced by Mound Nurseries, Ventura, California. F. deVos. Proceedings, Plant Propa-

gators Society, p. 36. 1958 : Fruit red, not eaten by birds; hybrid of *P. koidzumii* × *P. crenato-serrata*; zone 5. U.S. plant patent no. 346, November 14, 1939 : Vigorous, semi-upright, 10 ft tall; leaves dark green, lustrous; fruit scarlet, large, persists until late season. Originated by Edmy Bourdieu by crossing *P. koidzumii* × (*P. koidzumii* × *P. yunnanensis*); plant grown at Duval Ranch, Santa Paula, California; designated 'Duvali'TM. Trademark no. 392689, January 5, 1942.

Misspelled as 'Duavali', 'Duvaldi', 'Duvali'TM, 'Duvalle', 'Duvalli'
Red 44A, 45A, RHS

'Dwarf' (Porter Walton Co., Salt Lake City, Utah. Catalog, back page. 1948, as *P. 'Dwarf'*, *P. coccinea pauciflora*) : Compact, rounded formal growth habit; very hardy.

= *P. coccinea* var. *pauciflora*, 'Pauciflora'

'Dwarf' (Casadaban's Nursery, Abita Springs, Louisiana. Catalog, p. 10. 1968, as *P. 'Dwarf' Variegated*) : Leaves green and variegated.

= '**Variegated**', 'Harlequin', 'Tricolor', 'Vancouver Variegated', 'Variegata'

'Early Red' (Cottage Hill Nursery, Mobile, Alabama. Catalog, p. 7. 1956–57) : Similar to 'Graber' *Pyracantha*, with fruit ripening early. Letter October 5, 1960, Hunter H. Boulo, Cottage Hill Nursery : Probably the same as another named variety in propagation elsewhere.

Red 45D, RHS

'Ebben' (Proefstation voor de Boomkwekerij te Boskoop. Alfabetische Lijst van Planten op de Sortimentstuim, p. 174. 1962, as *P. coccinea 'Ebben'*, without description). B.K. Boom. Nederlandse Dendrologie, 5th ed., p. 257. 1965 : Bushy, round to broad pyramidal growth habit; leaves broad ovate to obovate, crenate-serrate; fruit orange (13, HCC), 8.5 by 7 mm, ripening in September; winter hardy; scab susceptible; originated

about 1935 in The Netherlands. H.J. van de Laar. *Dendroflora* 3:41.
1966 : Fruit from mid-September to late November; moderate scab resistance;
cultivar grown in 1935 by J.H. Ebben & Zoon, Cuyk, The Netherlands.

= 'Lalandei Major'

P. coccinea

'Eddie's Coral'

(H.M. Eddie & Sons Ltd., Vancouver, British Columbia, Canada. Catalog, p. 24. 1955-56) : Vigorous; leaves shiny; fruit coral red, persistent; hybrid produced by H.M. Eddie. F. deVos. Proceedings, Plant Propagators Society, p. 36. 1958, as ***P. koidzumii*** 'Eddie's Coral', without description. Letters February 22, 1960 and November 29, 1965, J.H. Eddie, H.M. Eddie & Sons : Originated by H.M. Eddie, Chilliwack, British Columbia, Canada, about 1951 as a result of hybridizing ***P. coccinea*** × ***P. rogersiana***; introduced 1955 by H.M. Eddie & Sons.

Orange Red 30D, RHS

'Eleagnes'

(Grimes Nursery, Semmes, Alabama. Catalog, p. 17. 1961-62, as *P. var. Eleagnes*, without description). Letter November 24, 1961, W.A. Grimes, Grimes Nursery : Not ***Pyracantha***; error in printing catalog.

'Ellis'

(Blackwell Nurseries, Semmes, Alabama. Catalog, p. 29. 1949-50, as *P. formosana* (Ellis Strain)) : Less upright than 'Lalandei'; fruit deep glossy red, immense clusters. Letters January 9, 1965 and March 30, 1967, R.O. Blackwell, Jr., Blackwell Nurseries : Origin uncertain; supposedly a hardier strain of *formosana*; obtained by Blackwell Nurseries from a Mr. Barrett south of Atlanta, Georgia; first cataloged by Blackwell Nurseries in 1949.

- 'Glauca'** [Supposedly listed by Royal Horticultural Society, Wisley, England, 1953, as *P. crenulata* 'Glauca', without description (not seen)]. No additional information obtained.
- 'Gloriosa'** (Fruitland Nurseries, Augusta, Georgia. Catalog, p. 22. 1929–30) : Dwarf, spreading; leaves small, light green; fruit bright orange. Letter May 25, 1967, J.G. Bailie, Fruitland Nurseries : Appears resistant to insect and fungal diseases.
- 'Gloriosa Upright'** (Jennings Nursery, Jennings, Louisiana. Catalog. June 1930, without description [not seen]). Griffing Nurseries, Beaumont, Texas. Catalog, p. 5. 1944–45 : Upright growth habit. Letters December 22, 1959 and November 16, 1965, Ralph C. Griffing, Griffing Nurseries : Developed and introduced in 1930 by Fritz Huber, Jennings Nursery [no longer in operation].

'Gnome'

(Appalachian Nurseries, Waynesboro, Pennsylvania. Catalog, p. 18. 1962, as *P. angustifolia* 'Gnome', without description). U.S. plant patent no. 1816, March 10, 1959 : Horizontally spreading branches, low growth habit; leaves, flowers, and fruit do not differ from species. Originated as seedling of *P. angustifolia* selected by H. Kleine, Newport, Michigan. Name registered by Henry Kleine, May 2, 1961.

= 'Gnozam', 'Monon', 'Yukon Belle', 'Yukon Jack'

P. angustifolia

Orange 28A, RHS

'Gnozam'

(Lake County Nursery, Perry, Ohio. Catalog, p. 196. 1990, as *P. 'Gnome'*® *P. angustifolia* cv. Gnozam) : Extremely hardy; height 6 ft; spread 6–8 ft; compact, rounded, densely branched; fruit orange, 1/4 to 3/8 inch.

= 'Gnome', 'Monon', 'Yukon Belle', 'Yukon Jack'

'Gold Nugget'

(Wolfe's Nursery, Stephenville, Texas. Catalog, p. 44. 1954, as *P.* [Wolfe's Evergreen] 'Gold Nugget') : Leaves dark green; flowers bell-like, snow white; fruit rich golden; extremely hardy. Letters January 4, 1965 and December 10, 1965, Dan Wolfe, Wolfe's Nursery : Extremely upright plant; rapid grower; leaves long, pointed; fruit very large; appears to be disease resistant.

Yellow Orange 23A, Orange 25A, RHS

'Gold Rush'

(J.A. Witt. Arboretum Bulletin, University of Washington 39(2):9. 1976) : Spreading, intricately branched, about 10 ft tall; leaves 1 to 2 1/2 inches long and 1/2 inch broad, shining green above, paler beneath, persistent; fruit in dense clusters, flattened, globose, nearly 1/2 inch broad, orange yellow (17B, RHS), coloring in early September and persisting into early winter; probably hardy to zone 7. Name registered by Joseph A. Witt, February 26, 1976 : Seedling of open-pollinated *P. angustifolia* × ? *P. crenato-serrata*; selected by Brian O. Mulligan, University of Washington Arboretum in 1959; named and introduced by Joseph A. Witt in 1975.

- 'Golden Berry'** (Grandview Nursery, Youngsville, Louisiana. Catalog, p. 3. 1957–58) : Fruit yellow.
- 'Golden Charmer'** (Darthuizer Boomkwekerij, Leersum, Holland. Catalog. 1960 [not seen]) : Spreading branches; fruit orange yellow, ripening in September and persisting until December; disease resistant. B.K. Boom. Nederlandse Dendrologie, 5th ed., p. 258. 1965, as *P. rogersiana* **'Golden Charmer'** : Bushy, slender growth habit; leaves 2–4 (–5) cm broad to long oval, tip pointed to rounded, crenate serrate; fruit orange yellow (10, HCC), 9.5 by 9 mm, from September; hardy, scab resistant; originated about 1950 in Germany. H.J. van de Laar. Dendroflora 3:44, 46. 1966 : Originated from cross of *P. coccinea* × *P. rogersiana*, H. Bruns Nursery, Westerstede, Germany, in 1950 as two forms—one orange yellow, the other orange; the orange-yellow form named **'Golden Charmer'** by Darthuizer Nurseries. The two types are cultivated in Germany under the name 'Andenken an Heinrich Bruns'. D.R. Egolf and R.F. Drechsler. Bailey 15(2):87. 1967 : Chromosome number 2n=34.
- = 'Yellow Charmer'
Misspelled as 'Golden Charm', 'Golden Charming'
Yellow Orange 23A, Orange 25B, RHS
- 'Golden Delicious'** (Select Nurseries, Brea, California. Catalog, p. 51. [1967]) : Vigorous bush; fruit golden yellow.
- = **'Lynnli'**, 'Select Yellow'
- 'Golden Dome'** (Proefstation voor de Boomkwekerij te Boskoop. Alfabetische Lijst van Planten op de Sortimentstuum, p. 189. 1977, without description). Hillier Nursery, Ampfield, Romsey, Hampshire, England, Plant List, p. 4. 1985–86 : Low, spreading; leaves bright green; flowers small, white; fruit yellow, persisting well into winter. Letter April 10, 1991, A.J. Coombes, Hillier Gardens and Arboretum, Ampfield, Romsey, Hampshire, England : Propagation from original plant, which at about 10 yr old, is now 1 by 2 m. The earliest record we have states that the original, which still exists, was 3 ft tall in 1973. Since it increases in height very slowly, it must have been at least 5 yr old then and probably older. It is the only remaining member of a group of apparently wrongly named plants of which the origin and name

under which they arrived are not recorded. Name registered by A.J. Coombes, May 5, 1992 : Parentage unknown; selected and named by Roy Lancaster, Hillier Gardens prior to 1973; mound shaped with arching branches; very profuse flowers, often completely covering the foliage; fruit slightly depressed, globose, 6–7 mm in diameter, 5 mm long, Orange-Yellow 23A (RHS).

'Golden Glow'

(Pépinière Minier, Angers, France. Catalog, p. 7. 1964, as *P. crenatoserrata* '**Golden Glow**') : Vigorous; leaves light green, broad, glossy; fruit very large, golden yellow, 10–12 mm wide, 8–10 mm high, abundant; hardy; resistant to scab; MINra 00024; MD No. 3181; MDI No. 282204. G. Krüssmann. Deutsche Baumschule 16:354–355. 1964 : Perhaps a chance cross between *P. crenatoserrata* and *P. crenata* '**Flava**'. Name registered by Pépinière Minier May 30, 1974 : Chance seedling of *P. crenatoserrata* selected at Pépinière Minier in 1964 and introduced in 1965.

'Golden Queen'

(Aldridge Nursery, Von Ormy, Texas. Catalog, p. 39. 1959–60) : Leaves bright green, dainty; fruit golden yellow. Letter January 6, 1965, R.C. Aldridge, Jr., Aldridge Nursery : Fruit clear golden yellow, does not mature to orange, small to medium in size; susceptible to winter cold. Name registered by R.C. Aldridge, Jr., April 23, 1974 : Parentage unknown, originated as clone from southern California; selected by Tom Yamamota, Tom's Nursery, Hawthorne, California, in 1947; named and introduced ca. 1958 by Aldridge Nursery.

Yellow Orange 21A, RHS

'Golden Sun'

(Darthuizer Vademecum, 2d ed. p. 221. 1978, without description). E.R. Johnson (Nurseries) Ltd., Whixley, York, England. Catalog, p. 23. Autumn 1984 : Fruit orange yellow.

= '**Soleil d'Or**', 'Orange Sun', 'Pluie d'Or', 'Sungold'

'Golden Yellow'

(Louisiana Nursery, Opelousas, Louisiana. Catalog, p. 32. 1987–88) : Large evergreen shrub; fruit yellow gold. Letter July 20, 1989, Ken Durio, Louisiana Nursery : Cultivar proved inferior; propagation has been discontinued.

- 'Goldenen Horn'** [Registration form for *P. coccinea* '**Koralle**' dated March 20, 1980, from H. Lorberg Baumschule, Berlin, Germany, indicates that '**Koralle**' is a chance seedling of 'Goldenen Horn']. No other reference to the name 'Goldenen Horn' has been found.
- 'Government Orange'** (Portland Wholesale Nursery, Portland, Oregon. Catalog, p. 49. 1962-63, without description). Ibid., p. 50. 1963-64 : Fruit orange; sport of '**Government Red**'. Rich Northwest Nursery, Hillsboro, Oregon. Catalog, p. 24. Spring 1967, as *P. koidzumii* '**Government Orange**' : Upright growth habit; leaves glossy; fruit orange; zone 7.
- 'Government Red'** (Adams Nursery, Westfield, Massachusetts. Catalog, p. 27. Spring 1948) : Leaves glossy, dark green; fruit rich maroon red all winter; new form. Bonnell Nurseries, Renton, Washington. Catalog No. 13, p. 19. 1954 : Evergreen; fruit dark red. Deutsche Baumschule 9:220. 1957 : Leaves large; fruit brilliant red; winter hardy to -10 °F. F. deVos. Proceedings, Plant Propagators Society, p. 36. 1958, as *P. koidzumii* '**Government Red**' : Fruit ripens early; zone 8. Clarendon Gardens Nursery, Pinehurst, North Carolina. Catalog, p. 35. [1958] : Dense growth habit. F. deVos. The Garden Journal 10(6):217. 1960, as *P. coccinea* '**Government Red**' : Zone 6b. D.R. Egolf and R.F. Drechsler. Bailey 15(2):87. 1967 : Chromosome number 2n=34.
- P. coccinea*
Red 44A, RHS
- 'Government Sp.'** (Edward H. Rust, Pasadena, California. Catalog, p. 11. 1930) : Recent introduction; fruit brilliant red.
- 'Government Yellow'** (Bulk's Nurseries, Babylon, New York. Catalog, p. 25. Fall 1965, without description). Letter March 1, 1974, C. van Abshoven, Bulk's Nursery : Origin uncertain; propagation discontinued because the cultivar was not winter hardy.

'Graber'

(Armstrong Nurseries, Ontario, California. Catalog, p. 36. 1939, as *P. yunnanensis* **'Graber'**) : Vigorous grower; leaves glossy; fruit very large, bright crimson. Monrovia Nursery, Azusa, California. Catalog, p. 22. 1940 : Low growing; leaves light green; fruit brilliant red, abundant. Armstrong Nurseries. Catalog, p. 54. 1946, as *P. crenato-serrata* **'Graber'** : 8–10 ft high; hardy to 5 °F. American Association of Nurserymen, Proceedings of the 74th Annual Convention, pp. 148–149. 1949, as *P. crenato-serrata* Graber's Firethorn : Leaves large; fruit exceptionally large, oblate, crimson, very abundant; wide soil tolerance; selected ca. 1937 by H.C. Swim, Armstrong Nurseries, introduced 1939 by Armstrong Nurseries; American Association of Nurserymen Register No. 31. Letter February 26, 1960, Herbert C. Swim, Swim and Weeks, Chino, California : Originated as seedling from open-pollinated *P. crenato-serrata* at the home of C.C. Graber, Ontario, California. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):87. 1967 : Chromosome number 2n=34.

'Knaphill Lemon'

(Knap Hill Nursery, Woking, Surrey, England. Catalog, p. 3. 1948–49) : Fruit lemon yellow. Same origin as '**Knaphill Buttercup**'; introduced in 1948.

= 'Knap Hill Form'

P. rogersiana

'Koralle'

(Kordes, Bilsen/Holstein, Germany. Catalog, p. 77. 1979–80) : Compact growth habit; dense, spiny shoots; leaves small, evergreen, glossy; flowers white, in umbellate panicles; fruit globular, 5–6 mm in diameter, brilliant coral red, remaining into the winter. Name registered by H. Lorberg Baumschule, Berlin, Germany, August 11, 1989 : Originated as chance seedling of *P.* 'Goldenen Horn'; introduced in 1962 by H. Lorberg Baumschule.

'Kutayi'

(H.J. van de Laar. *Dendroflora* 20:65–66. 1983, as *P. coccinea* 'Kutayi') : Shrub, very wide spreading; leaves very small; fruit light orange red, small; winter hardy.

= *P. coccinea* var. *kuntayi* Kasapligil

'Lalandei'

(A. Lavallée. Arboretum Segrezianum, p. 89. 1877, as *P. coccinea* var. *lalandeii*, without description). E. de Duren. Revue de Horticulture Belge et Étrangère 8:145. 1882, as *Crataegus pyracantha* '**Lalandei**' : Vigorous, thorny shrub; leaves semi-evergreen; fruit persistent. May. Revue Horticole 55:68. 1883, as *Crataegus* '**Lalandei**' : Shrub 1 1/2 to 3 m high; dense branching, thorns long, stiff; leaves oval-lanceolate or obovate-elliptical, serrate, glossy, nearly evergreen; flowers dull white, small; fruit brilliant orange, persistent for 5 months. L. Möller. Möller's Deutsche Gärtner-Zeitung 3(6):57-58. 1888, as *Cotoneaster Pyracantha* '**Lalandei**'. L. Dippel. Handbuch der Laubholzkunde, vol. 3. p. 421. 1893, as *P. coccinea* var. *Lalandii* : Upright, bushy shrub; leaves crenate; fruit bright orange, abundant. A. Voss, in Vilmorin's Blumengärtnerei, vol. 1, p. 269. 1894, as *Pyracantha Pyracantha* f. *Lalandii*. L. Parde. Arboretum National des Barres, p. 199. 1906, as *Pyracantha europaea* '*Lalandii*'. W.J. Bean. Trees and Shrubs Hardy in the British Isles, 1st ed., vol. 2. pp. 268-269. 1914, as *Pyracantha coccinea* var. *Lalandei* f. *Fructo-albo* : White-fruited form. Rocknoll Nursery, Morrow, Ohio. Catalog, p. 44. Spring 1959, as *P. lalandi coccinea* : Upright; leaves small, leathery; fruit scarlet. B.K. Boom. Nederlandse Dendrologie, 4th ed., p. 265. 1959, as ***P. coccinea*** cv. **Lalandei** : Spreading growth habit, shoots sparsely pubescent; leaves long, ovate, blunt; fruit orange red, about 9 by 8 mm, from September; moderate scab resistance; moderately hardy; originated 1874, France. G. Krüssmann. Handbuch der Laubgehölze, vol. 2, p. 287. 1961 : Broad, flat growth habit; leaves linear, dull, with broad teeth; scab susceptible; found ca. 1874 by M. Lalande, Nantes, France. B.K. Boom. Nederlandse Dendrologie, 5th ed., pp. 257-258. 1965, as ***P. rogersiana*** cv. **Lalandei** : Narrow, pyramidal growth habit, young shoots densely pubescent; leaves dark green (113, HCC), 2-4 cm long, finely crenulate; fruit deep orange (713), 10.5 by 8.5 mm, scab susceptible. D. Wyman. American Nurseryman 122(1):42. 1965, as ***P. coccinea*** **Lalandi** : One of the hardiest, zone 5. D.R. Egolf and R.F. Drechsler. Bailey 15(2):84. 1967 : Chromosome number 2n=34. RHS Award of Merit, December 8, 1925.

- 'Lutea' (Barnham Nurseries Ltd., Barnham, England. Catalog, p. 11. 1929, as *Crataegus pyracantha* 'Lutea') : Similar to *C. pyracantha lelandi* ; fruit yellow.
- = '**Fructu Lutea**', 'Aurea', 'Fructo Flavus', 'Lalandei Fructo Luteo'
P. coccinea
- 'Lynnii' (Coolidge Gardens, East Pasadena, California. Catalog, p. 13. 1954-55) : Fruit yellow. Letters October 26, 1961 and November 4, 1961, J. Lynn Mossholder, Mossholder Nursery, Santa Ana, California : Originated as chance seedling of **P. 'Graberl'**, grown by J.L. Mossholder, Santa Ana, California; selected and introduced in 1945 by Mossholder Retail Nursery, El Monte, California.
- = 'Golden Delicious', 'Select Yellow'
P. fortuneana
- '**Macracantha**' (M.L. de Vilmorin and D. Bois. Fruticetum Vilmorianum Catalogus Primarius, p. 114. 1904, as **P. coccinea 'Macracantha'**, without description).
- P. coccinea**
- '**Macrocarpa**' (W.B. Clarke & Co., San Jose, California. Catalog, p. 20. 1937-38, as *P. yunnanensis* '**Macrocarpa**') : Fruit much larger than species. Ibid., p. 9. 1938 : A recently discovered variety.
- P. fortuneana**
- 'Macrocarpa' (May. Revue Horticole 55:68. 1883, as *Crataegus Lalandei* 'Macrocarpa') : Spelled '**Microcarpa**' in text.
- = '**Microcarpa**'

'Magnifica' (R.E. Harrison & Co. Ltd., Palmerston North, New Zealand. Catalog, p. 39. 1957-58) : Erect-growing shrub; fruit bright crimson scarlet. R.E. Harrison. Handbook of Trees and Shrubs for the Southern Hemisphere, 2d ed., p. 274. 1959, as *P. coccinea* '**Magnifica**' : Bushy, round headed; evergreen with pointed, narrow foliage, leaves 1-2 inches long and 1/2 inch wide; fruit bright coral red. Letters January 12, 1965 and June 2, 1967, R.E. Harrison : First cataloged in 1950 by R.E. Harrison & Co. as selected form of *P. coccinea*. D.R. Egolf and R.F. Drechsler. *Baileya* 13(2):84. 1967 : Chromosome number 2n=34.

P. coccinea

'Massagnensis' (V. Lemoine & Son, Nancy, France. Catalog, p. 14. 1933-34) : Leaves long, narrow, obovate; originated from cross of *P. Gibbsii* × *P. angustifolia*. *Gardeners' Chronicle* 111(2875):49. 1942, as *P.* '**Massaguensis**' : Hybrid inherits vigor and hardiness of the female with large corymbs of white flowers and the larger orange-red fruit of *angustifolia*; late ripening and persistent.

Misspelled as '**Massaguensis**'

'Mi Oun' (Tingle Nursery, Pittsville, Maryland. Catalog, p. 45. 1966-67, without description). Name registered by Norman R. Batho, Tingle Nursery, April 30, 1974 : Vigorous; fruit red orange; originated as seedling of *P.* '**San Jose**'; named and introduced by L.G. Tingle, Tingle Nursery.

Red 42A, RHS

'Michell' (F.C. Galle et al. American Association of Botanic Gardens and Arboreta Quarterly Newsletter 60:27. 1964, as *P.* '**Michell**' (Dodd) and *P.* '**Michell**' 5900, without description).

'Microcarpa' (May. *Revue Horticole* 55:68. 1883, as *Crataegus lalandei* '**Microcarpa**') : Shrub, strong, vigorous; fruit cherry red, much more brilliant than the type, much smaller than '**Lalandei**', numerous, persists for 6 months.

Chance seedling discovered in planting of '**Lalandei**'. '**Macrocarpa**' in title of article apparently is typographical error.

= '**Macrocarpa**' (May)

'Microphylla'

(Baker Bros., Fort Worth, Texas. Catalog, p. 28. 1941-42) : Upright with slightly spreading branches; leaves dark green, small; fruit red; winter hardy.

'Miller'

(W.B. Clarke & Co., San Jose, California. Catalog, p. 19. 1935, as *P. formosana* 'Miller Variety') : Fruit bright orange, large clusters. Sarver Nursery, Dallas, Texas. Catalog, p. 14. 1942 : Medium grower; leaves dainty blue green; fruit bright red. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):86. 1967 : Chromosome number $2n=34$.

Also listed as 'Miller Type', 'Miller Variety', 'Milleri'

Red 40A, RHS

'Minute Man'

(Wyman's Garden Centers, Framingham, Massachusetts. Catalog, p. 37. 1960, as ***P. coccinea*** '**Minute Man**') : Fruit orange red; hardy. Letter January 18, 1966, Paul F. Bobula, Waltham Field Station, Waltham, Massachusetts : Probably originated as seedling selection of ***P. coccinea*** by Luke May, Lexington Nurseries, Lexington, Massachusetts, prior to 1945; fruit color more red than that of ***P. coccinea*** '**Lalandei**'. Letter December 29, 1956, R.M. Wyman, Wyman's Framingham Nurseries, Framingham, Massachusetts : Leaves thin and "papery"; fruit plentiful but small; clone named by R.M. Wyman to indicate it was from a cultivar growing in Lexington, Massachusetts; introduced ca. 1960. Letter January 19, 1966, C.J. Gilgut, University of Massachusetts, Amherst, Massachusetts : Small plants received ca. 1945 from Lexington Nursery (now out of business); supposedly grown from seed; reported to be much hardier than other pyracanthas; propagation material distributed to nurserymen. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):84. 1967 : Chromosome number $2n=34$.

P. coccinea

'Mohave'

(D.R. Egolf. *Baileya* 17(2):79–82. 1970) : Semi-evergreen to evergreen shrub; upright, openly branched, 4 m high and as much in breadth; stout stems widely spreading from base, young branches light green, becoming smooth dark reddish brown; thorns on leafy shoots or terminating lateral branches; leaves short petioled, 1.4–6.0 cm long, 0.6–2.0 cm wide, oblanceolate to elliptic, glossy, dark green (Yellow Green 147A, RHS); flowers in corymbose panicles, mostly 4–5 cm in diameter, with 35–55 flowers, 9–12 mm in diameter, creamy white, abundant in early May; fruit oblate, 20–40 per inflorescence, 3.6–6.2 mm in diameter, 6–12 mm long, Orange Red 32A, with less intense red coloration as fruit matures to a much lighter orange, smooth and waxy, ripening in mid-August and persisting until midwinter, not readily eaten by birds; resistant to fire blight and scab; chromosome number $2n=34$; zone 6; a hybrid of *P. koidzumii* × *P. coccinea* 'Wyatti' developed at the U.S. National Arboretum in 1963; selected in 1965; introduced in 1971. Name registered by Donald R. Egolf, May 25, 1970; NA No. 32225; PI No. 347258. Awarded RHS Certificate of Preliminary Commendation, October 26, 1971; RHS Award of Merit, October 1973; RHS First Class Certificate, November 1984.

'Mohave Silver'

(Name registered by H.J. van de Laar, Boskoop, Holland, May 5, 1992) : Leaves greyish green, with irregular, narrow white margin; slower growing than 'Mohave'; flowers and fruit not yet seen; not hardy in severe winters; mutation of 'Mohave' selected 1985 by P.M. van Sleuwen, Boekel in Province North Brabant, The Netherlands; named and introduced by P.M. van Sleuwen in 1990.

'Moretii'

(Rivoire Père & Fils, Lyon, France. Catalog, p. 44. Autumn 1937, as *Crataegus pyracantha* 'Moreti') : Vigorous; leaves bright green above, pale beneath; fruit orange, hard, abundant. Letter October 19, 1960, F. Delaunay, Pépinière F. Delaunay, Angers, France : Originated as natural hybrid of *P. coccinea* 'Lalandei' × *P. pauciflora* in the garden of a Mr.

Moret at Saint Cyr au Mont d'Or, near Lyon, France; introduced ca. 1920; plant hardier and more dwarfish than '**Lalandei**'.

Misspelled as 'Moretti', 'Morettii'

Orange Red 32A, 33B, RHS

'Mozart'

(H. Breisch and J.-L. Esnault. *l'Horticulture Francaise* 122:13, 15. 1980) : Develops into small shrub; fruit red, having same characteristics as '**Debussy**', but very abundant; few vegetative shoots. Name registered by H. Bertrand, École Nationale d'Ingenieurs des Techniques Horticoles (ÉNITH), Angers, France, October 19, 1989 : Chance seedling of **P. atalantioides** selected 1978 at ÉNITH; named 1978 by André Briant, Pépinière André Briant, St. Barthelemy d'Anjou, France; introduced by Pépinière Minier, Beaufort-en-Vallée, France; is less vigorous and bears more fruit than '**Debussy**'; fruit is more red than that of '**Berlioz**', 44B RHS.

P. atalantioides

'Myeri'

(Port Stockton Nursery, Stockton, California. Catalog, p. 20. 1941) : Vigorous growth habit; flowers small, white; fruit orange red, large clusters. Letter November 8, 1965, Port Stockton Nursery : Obtained ca. 1930-35 from Nathaniel Henderson, Santa Cruz, California, who secured plants from the U.S. Experiment Station, Chico, California; presumably from plants collected in China by Frank Meyer of the U.S. Department of Agriculture.

Red 44A, RHS

'Navaho'

(D.R. Egolf. *HortScience* 13:483-484. 1978) : Semi-evergreen to evergreen shrub; up to 2 m high and 2.5 m in breadth; stout stems widely separating from base; young branches dense, light green becoming Brown 200C (RHS) and finally grey brown; spines few on leafy shoots; leaves oblanceolate to elliptic, 2-8 cm long, 0.5-1.5 cm wide, Green 137A above and Greyed Green 191A beneath, only slightly glossy above; inflorescence corymb borne on spurs and short shoots all along the branches, 4-5 cm in diameter, with 8-25 flowers; flowers 10-12 mm in diameter, white or cream white; fruit depressed-globose, 10-15 per inflorescence, fruit cluster 4-5 cm in diameter, 6-9 mm long, first Orange 28A-28B, then maturing to Red 40B to Orange Red 32A in November and persisting until

late spring, smooth and waxy; scab resistant; highly fire-blight tolerant; hardy to zone 7B; chromosome number $2n=34$. Second generation seedling of the cross *P. angustifolia* × *P. 'Watereri'* (*P. coccinea* 'Lalandei' × *P. crenulata*), made in 1963 at U.S. National Arboretum; selected in 1973; introduced in 1978. Name registered by Donald R. Egolf, June 6, 1978; NA No. 38451; PI No. 427118.

'New Red'

(Joseph A. Hren, East Hampton, New York. Catalog, p. 34. 1959, as *P. rogersi* ['New Red'], without description). Assumed to be '**Nu Red**'.

= '**Nu Red**'
P. rogersiana

(Gresham's Nursery, Richmond, Virginia. Catalog, p. 6. 1953-54, without description).

= 'New Red'

'Orange Cadence'

(C. Philip, compiler. The Plant Finder, 6th ed., p. 421. 1992, without description) : Listed as available from Johnstown Garden Centre, Johnstown, County Kildare, Republic of Ireland. No additional information available.

'**Orange Charmer**'

(Vuyk van Nes, Boskoop, Holland. Catalog. 1962 [not seen]). Proefstation voor de Boomkwekerij te Boskoop. Alfabetische Lijst van Planten op de Sortimentstuum, p. 174. 1962, without description. Old Farm Nursery, Boskoop, Holland. Catalog, pp. 58, 80. 1962-63, as *P. 'Orange Charmer'* : Fruit orange; disease resistant. B.K. Boom. Nederlandse Dendrologie, 5th ed., p. 258. 1965, as *P. rogersiana* '**Orange Charmer**' : Similar to '**Golden Charmer**'; fruit deep orange (713/1, HCC), 9.5 by 8 mm, from September; originated ca. 1950 in Germany. H.J. van de Laar. Dendroflora 3:44, 46. 1966, as *P. 'Orange Charmer'* : Very hardy; scab resistant. Originated in Germany as probable hybrid of *P. coccinea* × *P. rogersiana* under the name 'Andenken an Heinrich Bruns'. Two clones frequently grown, one orange yellow and one orange. The orange clone named and introduced as '**Orange Charmer**' by Vuyk van Nes in 1962. D.R. Egolf and R.F. Drechsler. Bailey 15(2):87. 1967 : Chromosome number $2n=34$.

Misspelled as 'Orange Charm'
Orange Red 32A, RHS

'Orange Cup' (M. Forrest. *Trees and Shrubs Cultivated in Ireland*. 1985, without description) : Indicates cultivar is grown in the J.F. Kennedy Park, New Ross, County Wexford, Ireland. Letter March 23, 1990, Christopher P. Kelly, John F. Kennedy Arboretum : Error in listing of name.

= 'Orange Glow'

'Orange Giant' (B.K. Boom. *Nederlandse Dendrologie*, 4th ed., p. 265. 1959a, as *P. coccinea* 'Orange Giant') : Leaves dull; fruit rather large, 13 by 13 mm, orange; scab resistant; originated 1950, The Netherlands. B.K. Boom. 21st Jaarboek, *Nederlandse Dendrologische Vereniging* (1956, 1957, en 1958), pp. 152-153, 155-156. 1959b : Vigorous, shrubby growth habit, young shoots white pubescent; leaves oval, obtuse, on vigorous shoots, 5 by 2.5 cm, underside midveins white pubescent, later glabrous, short shoot leaves smaller, 35 by 27 mm, practically glabrous; fruit orange, about 13 by 11 mm, ripening in early August, about 14 days before other cultivars; very hardy; scab resistant. Selected by A.E. Schiphorst, Wageningen, The Netherlands, in 1950; presumably a natural hybrid of *P. coccinea* 'Lalandei' × *P. coccinea* 'Kasan'. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):84. 1967 : Chromosome number 2n=34.

= 'Kasan'

P. coccinea

Orange 28A-30B, RHS

'Orange Glow' (Den Ouden & Son, Old Farm Nursery, Boskoop, Holland. Catalog, p. 50. 1957-58 [not seen]). *Ibid.*, p. 26. 1958-59, as *P. coccinea lalandii* 'Orange Glow' : Fruit orange; disease resistant; winter hardy. B.K. Boom. 21st Jaarboek, *Nederlandse Dendrologische Vereniging* (1956, 1957, en 1958), pp. 156-157. 1959b, as *P. fortuneana* 'Orange Glow' : Bushy growth habit; young shoots white pubescent; leaves obovate to broad oval, 5 by 2.5 cm, glabrous; flowers sparse; fruit orange red, later red, about 9 by 7 mm, abundant, ripens in August; very hardy; scab resistant; seedling selected in 1930 by Mrs. L.J.M. Banga-Oelmeyer, Wageningen, The Netherlands. G. Krüssmann. *Handbuch der Laubgehölze*, vol. 2, p. 287. 1961, as *P. crenatoserrata* 'Orange Glow' : Flowers in glabrous inflorescence; fruit flat, conical, to 9 mm wide and 7 mm long. B.K. Boom, *Nederlandse Dendrologie*, 5th ed, p. 258. 1965, as *P. rogersiana* 'Orange Glow' : Leaves 2-4 cm long, tip rounded, crenate-serrate; fruit red (16, HCC), later

deep orange (713), 9.5 by 7.5 mm, from September; scab resistant; winter hardy. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):87. 1967 : Chromosome number $2n=34$.

Orange 28A-Orange Red 30A, RHS

'Orange Sun'

(C. Philip, compiler. *The Plant Finder*, 2d ed., p. 296. 1988, without description) : Indicates cultivar is available from Mallorn Garden, Redruth, Cornwall, England. Letter June 10, 1989, Mallorn Garden : Error in 1987-88 catalog; should read 'Golden Sun'.

= 'Soleil d'Or', 'Golden Sun', 'Pluie d'Or', 'Sungold'

'Orange Thornless'

(W.E. Lammerts. *Pacific Coast Nurseryman* 3(2):8. 1945, as ***P. crenulata*** var. 'Orange Thornless') : Semi-tall, 6- to 10-ft shrub; branches arching, free of thorns or only occasionally a very few near the base of the plant, rusty pubescent when young, becoming glabrous when older; leaves narrow oblong to oblanceolate, obtuse, 1 to 1 1/2 inches long, 1/4 to 3/8 inch wide, with small mucronate tip, dark green above, paler green beneath, glabrous on both surfaces; inflorescence puberulent; fruit 3-11 per cluster on short pedicels, depressed, globose, 3/8 to 7/16 inch in diameter by 1/4 inch thick; bright orange. Originated by W.E. Lammerts, as an F_3 of ***P. angustifolia*** × ***P. crenulata***, ca. 1945.

= 'Thornless Orange'

- 'Oxford'** (W.B. Clarke, San Jose, California. Catalog No. 8, p. 8. 1941, as *P.* hybrid **'Oxford'**) : Fruit yellow orange, abundant; fire-blight resistant; originated at Deciduous Fruit Station, University of California, San Jose, California. D. Wyman. *Shrubs and Vines for American Gardens*, p. 243. 1949 : 10 ft; flowers small, white, in flat clusters; fruit bright orange to red; zone 7. Letter April 4, 1960, Alfred M. Amstutz, Deciduous Fruit Field Station, San Jose, California : Originated as cross of *P. angustifolia* × *P. gibbsii yunnanensis* made by H.E. Thomas, Department of Plant Pathology, University of California, Berkeley, California; selected for its resistance to fire blight. Introduced by W.B. Clarke Nursery, ca. 1940.
- = 'Oxford Red'
- 'Oxford Red'** (Bonnell Nurseries, Renton, Washington. Catalog No. 10, p. 11. 1949) : Similar to **'Carrieri'**; leaves dark green. *Ibid.* Catalog No. 13, p. 19. [1954] : Similar to **'Government Red'** but not so vertical in growth habit.
- = **'Oxford'**
- 'Pannosa'** (Harry E. Saier, Dimondale, Michigan. Catalog, p. 128. February 1957, without description). F. deVos. *Proceedings, Plant Propagators Society*, p. 36. 1958, as *P. koidzumii* **'Pannosa'**, without description.
- 'Pauciflora'** (G. Krüssmann. *Handbuch der Laubgehölze*, 2d ed., vol. 3, p. 68. 1978, as *P. coccinea* **'Pauciflora'**) : Habit very dense and rounded; leaves small, glossy; fruit orange red, hidden beneath foliage, rather sparse; very hardy; susceptible to scab; very old cultivar grown in W. Germany since 1847.
- = *P. coccinea* var. *pauciflora*, 'Dwarf Orange Red 32A, RHS
- 'Pendula'** (Royal Botanic Gardens, Kew. *Hand-List of Trees and Shrubs, Excluding Coniferae, Grown in Arboretum*, 2d ed., p. 349. 1902, as *Crataegus pyracantha* var. *pendula*, without description). J. Fraser and A. Hemsley, eds.

Johnson's Gardener's Dictionary, p. 249. 1916, as *Crataegus pyracantha pendula* : Pendulous growth habit.

P. coccinea

'Perle d'Olivet'

(J.-L. Esnault. Memoire de Fin d'Études, É.N.I.T.H., pp. 9, 49. 1978) : Shrub; leaves elliptical, narrow, margins crenate-serrate, extremely bristly, base tapering, wedge shaped, longer, average 35 mm; upper and lower surfaces of young leaves pubescent; flowers large (average 11 mm in diameter). Name registered by H. Bertrand-Breisch, École Nationale d'Ingenieurs des Techniques Horticoles, Angers, France, October 19, 1989 : Very old selection; chance seedling selected by M. Burte, Orleans, France; shrub, very thorny; leaves similar to ***P. coccinea***; fruit large, spherical, 8 by 7 mm, yellow orange tinted pink and red. Probably no longer in cultivation.

'Piersoni'

(Cottage Gardens, Lansing, Michigan. Catalog. 1959-60, without description [not seen]). Letter January 25, 1974, N.I.W. Kriek, Cottage Gardens : Introduced by Pierson Nursery, Cromwell, Connecticut. No additional information available.

'Pine Cone'

(D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):87. 1967, without description). Plants received at U.S. National Arboretum in 1966 as ***P.*** 'Pine Cone'. Supposedly hybrid of ***P.*** (white flowers) × *Cotoneaster parviflora*, made by William E. Silva, Sebastopol, California, in 1946. No additional information available.

'Pinkie'

(D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):87. 1967, without description). Plants received at U.S. National Arboretum in 1966 as ***P.*** 'Pinkie'. Supposedly seedling of *P. formosiana* × *Cotoneaster parviflora*, selected in 1954 by William E. Silva, Sebastopol, California. No additional information available.

- 'Pirate' (H.J. van de Laar. *Dendroflora* 3:41–42. 1966, as *P. coccinea* 'Pirate', synonym for *P. coccinea* 'Lalandei', without description).

'Sepers'

[Plants received at U.S. National Arboretum, September 23, 1957, from John Vermeulen & Son, Neshanic Station, New Jersey, and April 11, 1960, from Arnold Arboretum, Jamaica Plain, Massachusetts, without description.] Letter February 25, 1960, Leonard Sepers, Sepers Nursery, Vineland, New Jersey : Very hardy; bushy; leaves turn bronze about November; believed to be a *P. coccinea* seedling. No additional information available.

'Shawnee'

(D.R. Egolf. *Baileya* 14(2):61-63. 1966) : Globose, densely branched shrub, 3.5 m high and as much in breadth; young shoots rusty pubescent, soon becoming glabrous and reddish brown, older branches dark brownish grey; thorns on leafy shoots and terminating lateral branches; leaves short stalked, 0.5-5 cm long, 0.5-1.8 cm wide, oblanceolate to narrow-elliptic, coriaceous, glossy, dark green above (Parsley Green 00962, HCC) and Willow Green 000862/1 beneath, pubescent at first, soon becoming glabrous, semi-persistent; flowers in corymbs 2.5-3.5 cm in diameter, with 12-20 flowers, about 2 mm long and wide, petals white; fruit oblate, 6-9 mm in diameter and 4-7 mm long, Yellow Orange 23A to Orange 25A (RHS), smooth and glossy, ripening in early August and persisting until midwinter, not readily eaten by birds; resistant to scab and fire blight; zone 7b. F₂ seedling of *P. 'San Jose'* (considered a spontaneous hybrid of *P. koidzumii* × *P. crenato-serrata*); selected at the U.S. National Arboretum in 1963; introduced in 1966. Name registered by Donald R. Egolf, January 3, 1966; NA No. 28179; PI No. 315887. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):87. 1967 : Chromosome number 2n=34.

'Shirofu-fukurin'

(Iseli Nursery, Boring, Oregon. Catalog, p. 56. 1989) : Mounding shrub; up to 6 ft high and 8 ft wide; leaves with white margins; fruit red, large; zone 5. Name registered by Philip M. Normandy, Brookside Garden, Maryland National Capital Park and Planning Commission, Wheaton, Maryland, September 21, 1989 : Presumed to be selection of *P. koidzumii*; collected by Barry Yinger in garden of Yoshimichi Hirose, Tokyo, Suginami-ku, Japan, in 1977 for Brookside Garden; growth appears to be more spreading than upright; leaves obovate to oblanceolate, white margins, and white overcast giving a gray appearance; flowers typical for genus; fruit bright cherry red; probably hardy to zone 6b or 7a. Introduced by Brookside Garden in 1978.

? *P. koidzumii*

- 'Sibyl'** (Griffing Nurseries, Beaumont, Texas. Catalog, p. 22. 1940) : Weeping; evergreen; fruit dark red. Originated as seedling of *P. formosana* selected by W.C. Griffing, Beaumont, Texas, ca. 1938.
- P. koidzumii***
- 'Sneed's Thornless'** (Nebraska Nursery, Lincoln, Nebraska. Catalog, p. 14. 1958, as *P. Lalandi* '**Sneed's Thornless**') : Evergreen. Letters December 3, 1965 and December 21, 1965, J. Frank Sneed, Sneed Nursery, Oklahoma City, Oklahoma : Appears to be disease resistant; hardy and faster growing than regular *Lalandi*; but does not fruit as young plant; originated in 1948 as selection among *P. coccinea* '**Lalandei**' at Sneed Nursery; introduced by Sneed Nursery in 1948 but not listed in any published catalog.
- P. coccinea***
- 'Soleil d'Or'** (F. Delaunay, Angers, France. Catalog, p. 39. 1970-71) : Leaves coral. G. Krüssmann. Handbuch der Laubgehölze, 2d ed., vol. 3, p. 69. 1978 : Upright habit, medium sized; leaves oval-lanceolate, light green, glossy; fruit light yellow, abundant, appearing early; scab resistant; mutation of '**Moretii**' originated on a plant in the National Arboretum les Barres, Nogent-sur-Vernisson, France, ca. 1970; introduced into the trade by Salle-Proust, Orleans, France.
- = 'Golden Sun', 'Orange Sun', 'Pluie d'Or', 'Sungold'

'Tall Red'

(Louisiana Nursery, Opelousas, Louisiana. Catalog, p. 32. 1987–88) : Fast grower; flowers white, abundant; fruit red. Letter July 20, 1989, Ken Durio, Louisiana Nursery : Cultivar proved inferior; propagation discontinued.

'Tellmaniana'

(Laxton Bros., Huntingdon, England. Catalog, p. 13. [1938]) : New hybrid (*L. tragophylla* × *L. sempervirens*); flowers golden yellow, flushed red. Catalog error; description does not pertain to **Pyracantha** but to **Lonicera**.

'Telstar'

(Proefstation voor de Boomkwekerij te Boskoop. Alfabetische Lijst van Planten op de Sortimentstuim, p. 174. 1962, as *P. coccinea* 'Telstar', without description). B.K. Boom, Nederlandse Dendrologie, 5th ed, p. 257. 1965, as *P. coccinea* 'Telstar' : Narrow, pyramidal growth habit; leaves dark green, broad oval, tip pointed, serrate to crenate; fruit red (15, HCC), 11 by 8.5 mm from September; scab susceptible; winter hardy; originated 1962, The Netherlands. H.J. van de Laar. Dendroflora 3:42. 1966 : Introduced in 1962 as 'Lalandei' by Gebr. van Klaveren, Hazerswoude, The Netherlands.

P. coccinea

'Teton'

(D.R. Egolf. HortScience 13:483-484. 1978) : Semi-persistent shrub, up to 4 m high and 3 m in breadth; strongly vertically branched trunk from the base; young branches light green becoming greyed brown; spines on leafy shoots or terminating lateral branches; leaves oblanceolate to elliptic, 1.2-4.5 cm long, 1.0-1.4 cm wide; Yellow Green 147A (RHS) above and Green 137C beneath, glossy above; inflorescence corymb densely borne on spurs or short shoots all along the branches, 3.5-5.0 cm in diameter with 20-35 flowers; flowers white, 8-9 mm in diameter; fruit subglobose, 10-30 per inflorescence, 4-6 cm in diameter, 5-7 mm long, Orange 23A becoming more intense as fruit matures to Orange 24A, in cooler climates color is more intense Orange 28A-28B, smooth; hardy to zone 6b; chromosome number $2n=34$. Hybrid of *P. 'Orange Glow'* (probably *P. coccinea* × *P. fortuneana*) × *P. rogersiana 'Flava'*, crossed in 1963 at the U.S. National Arboretum; selected in 1969; introduced in 1978. Name registered by Donald R. Egolf, June 6, 1978; NA No. 38450; PI No. 427117.

'Texas Red'

(Select Nurseries, Brea, California. Catalog, p. 20. 1972, without description). Letter April 22, 1974, F.C. Tomlinson, Select Nurseries : Name changed to 'Colorado Red'.

= 'Colorado Red'

'Thieranerie'

(C. Kneip. Deutsche Baumschule 37:401 (Table 1). 1985, without description).

= 'Renault d'Or', 'Renaudor'

'Thornless' (Woodlea Nursery, Moriches, New York. Catalog, p. 11. Fall 1962, without description). Ibid., p. 12. 1963, as *P. coccinea* 'Thornless' : Fruit red, large. Letter February 25, 1974, Eric Lundstrom, Woodlea Nursery : Discontinued due to lack of interest; no additional information available.

P. coccinea

'Thornless Orange' (Monrovia Nursery, Azusa, California. Catalog, p. 55. 1949-50) : Rapid, bushy growth habit; fruit orange. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):86. 1967 : Chromosome number $2n=34$.

= '**Orange Thornless**'

'Thornless Red' (Monrovia Nursery, Azusa, California. Catalog, p. 63. 1951-52) : Rapid and bushy growth; fruit bright red; generally thornless.

= '**Scarlet Thornless**'

'Tiny Tim' (Select Nurseries, Brea, California. Flyer. 1965) : Compact, dwarf, maximum height 3 ft; practically thornless; fruit bright red, tight clusters. Ibid., p. 45 : Leaves tiny, rich green; fruit cinnamon red, in long clusters. *Flower and Garden* 9(2):26. 1965 : For warmer regions of California and the South. U.S. plant patent no. 2684, November 8, 1966 : Slow growing, normally requires about 6 yr to attain height of 30 inches and spread of 4 ft; leaves very heavy, 1 1/8 inches long, 1/4 to 5/16 inch wide, upper surface Spinach Green 0960 (HCC), underside Lavender Green 000761; fruit 5/16 to 3/8 inch in diameter, first Vermillion 18, maturing to Signal Red 719/1; hardy to 25 °F; reported to be resistant to fire blight; original 10-yr-old plant 3 ft high and 4 ft in breadth; originated as chance seedling of *P. fortuneana*, selected by F.C. Tomlinson, Whittier, California, in 1953; introduced in 1965 by Select Nurseries. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):87. 1967 : Chromosome number $2n=34$.

P. fortuneana

Orange Red 33A, RHS

'Tricolor' (Heronswood Nursery, Kingston, Washington. Catalog, p. 24. Spring 1991) : Evergreen shrub to 6 ft; leaves cream, pink, and green variegated. Letter received March 1992, David Hinckley, Heronswood Nursery : This is a misnomer; the proper name is 'Harlequin'.

= 'Variegated', 'Dwarf', 'Harlequin', 'Vancouver Variegated', 'Variegata'

'True Yellow' (Cottage Hill Nursery, Mobile, Alabama. Catalog, p. 6. 1961-62, without description). Ibid., p. 8. 1962-63 : Compact; leaves dark green; fruit canary yellow. Letter January 12, 1961, Hunter H. Boulo, Cottage Hill Nursery : Originated at Truelock Wholesale Nursery, Houston, Texas; named and introduced by Cottage Hill Nursery.

= 'Yella Berry'
Yellow Orange 21A, RHS

'Turkish' (E.F. Steffek, ed. Plant Buyers Guide, 5th ed., p. 216. 1949, without description) : As available from Sherwood Nursery, Portland, Oregon. Clone unknown in cultivation.

'Typ. Zwischenahn' (J. Timm & Co., Elmshorn/Holstein, Germany. Catalog, p. 93. 1964-65, as *P. coccinea* 'Typ. Zwischenahn') : Compact; fruit orange red, abundant.

= 'Bad Zwischenahn', 'Coccinea Selecta', 'Kasan Bad Zwischenahn'

'Upright' (deWilde's Rhodo-Lake Nursery, Shiloh, New Jersey. Catalog, p. 3. 1950-51, as *P. rogersiana* 'Upright', without description). J.H. Schmidt & Son, Milburn, New Jersey. Catalog, p. 11. 1954 : Upright variety of *P. crenulata rogersiana*. deWilde's Rhodo-Lake Nursery, Shiloh, New Jersey. Catalog. 1959-60, as *P. rogersiana* 'Upright' Red : Upright, bushy, fruit red. Letter November 17, 1960, C. Willard Stoner, Westminster Nursery, Westminster, Maryland : Have had this variety in our nurseries for about 25 yr; selected as chance seedling of *coccinea lalandi*; definite upright growth habit; fruit orange red, somewhat larger than *coccinea lalandi*.

'Vancouver Variegated' (North Haven Garden, Dallas, Texas. Catalog. 1967, without description). Letter March 29, 1974, Ralph Pinkus, North Haven Garden : Probably came originally from a nursery in the northwest; plant reverts to original green color.

= 'Variegated', 'Dwarf', 'Harlequin', 'Tricolor', 'Variegata'

'Variegata' (W.B. Clarke, San Jose, California. Catalog, p. 20. 1940, as *P.* sp. 'Variegata', without description). Monrovia Nursery, Azusa, California. Catalog, p. 16. 1942-43 : Variegated in summer, red in winter. Sherwood Nursery, Portland, Oregon. Catalog, p. 30. 1942-43, as *P. yunnanensis* 'Variegata' : Evergreen shrub; leaves tiny, variegated, turn to shades of red and pink during winter; fruit red; hardy. Louisiana Nursery, Opelousas, Louisiana. Catalog, p. 32. 1987-88, as *P.* 'Variegata' : Dwarf shrub, rounded, compact; leaves small, variegated green, white, and pinkish.

= 'Variegated', 'Dwarf', 'Harlequin', 'Tricolor', 'Vancouver Variegated'

'Variegated' (W.B. Clarke & Co., San Jose, California. Catalog No. 6, p. 7. 1939, as *P.* 'Variegated') : Leaves small, freely marked with silver, ruddy in winter. E.F. Steffek, ed. Plant Buyers Guide, 5th ed., p. 216. 1949, as *P. crenatoserrata* 'Variegated', without description : Listed as available from Sherwood Nursery, Oregon. Mitsch Nursery, Aurora, Oregon. Catalog, p. 5. Spring 1960, as *P.* 'Variegated', without description. Letter John Mitsch, Mitsch Nursery, December 8, 1965 : Stock plants about 15 yr old, about 7-8 ft tall; grow more slowly and are more compact than other varieties grown here; hardy in this climate. D.R. Egolf and R.F. Drechsler. *Baileya* 15(2):86. 1967, as 'Variegata' : Chromosome number 2n=34.
