

Thirtieth Year.

[1850.]

Thirtieth Year.

RAPHAEL'S PROPHECIC ALMANAC.

BEING THE

PROPHECIC MESSENGER,

WEATHER GUIDE,

AND

Ephemeris,

FOR 1850:

COMPRISING A VARIETY OF USEFUL MATTER;

WITH

Predictions of the Events, and the Weather,

THAT WILL OCCUR IN EACH MONTH DURING THE YEAR 1850.

ILLUSTRATED WITH

A LARGE COLOURED HIEROGLYPHIC,

An Explanation of which is given in next Year's Almanac.

BY RAPHAEL,

THE ASTROLOGER OF THE NINETEENTH CENTURY.

What, if amidst the shining stars serene
The fate be written? What, if each circling
Sphere

Disclose to mental view the far and dark universe?
This seemeth strange, yet both to some ap-
pear.

Thirtieth

Year,

1850.

Thirtieth

Year,

1850.

LONDON:

PUBLISHED ON THE 1st. OF EVERY OCTOBER,

BY THE PROPRIETOR,

WILLIAM CHARLTON WRIGHT,
PATERNOSTER-ROW;

AND MAY BE HAD TO ORDER OF ANY BOOKSELLER.

1850.

HALF-A-CROWN.

HIEROGLYPHIC FOR THE

Symbols by Raphael----- Drawn by Fussell.

THIRTIETH ANNUAL NOTICE, 1850.

THE increased demand for RAPHAEL'S PROPHEIC MESSENGER is the best proof of the estimation in which it is held. Some improvement will appear in the Ephemeris, viz., in substituting the column of *Sidereal time* for the *Sun's right ascension*, which will be found useful to persons erecting figures for natiivities or questions. RAPHAEL would direct the attention of his readers to the general correctness of the meteorological remarks, which are based on principles derived from the observations and experience of the ablest meteorologists for centuries past. Students will find this work contains everything necessary to facilitate their calculations.

Several IMPUDENT and WICKED attempts have been made by unworthy persons (who have "no part or lot in the matter") assuming the name of RAPHAEL, &c. &c., and by other tricks, to acquire a connexion with this work; for the security of the public, therefore, all letters, &c., should be addressed strictly to "Raphael," 17, Warwick Square, Paternoster Row, London.

THE PREDICTIONS,

Timely Warnings, and Salutary Precepts,

Founded on the Zodiacal Positions and Configurations of the Heavenly Bodies.

January, 1850.

Oft, while calm night's dark wings the globe surround,
When the pale moon begins her lonesome round,
Then does the soul to starry orbs repair,
Those radiant worlds that float in ambient air;
And, with a regular confusion, stray,
Oblique, direct, along the aerial way;
Then with an anxious mind their rays we scan,
And hence we learn what they presage to man.

“Ask counsel of all that are wise, and despise not any counsel that is profitable.” *Tobit* iv. 18. We again appear before our readers with warnings and predictions for the year 1850, feeling assured that our astrological remarks will be duly appreciated; and that the humble counsels of the astrologer will continue to merit that respect and attention which they have experienced for so many successive years. We will endeavour to unveil the presages of the stellar orbs at the new Moon on the 13th, at 19 minutes past 11 o'clock in the morning, when the last degree of the sign Aries ascends on the eastern horizon, with the luminaries culminating, in quartile to Uranus, and trine to Jupiter; the latter planet being in quartile to Mars. Strange scenes are witnessed in countries under the rule of Aries; and I regret to rank England among the number. Mars is retrograding through Gemini in the 2nd house of the figure, and in quartile to Jupiter, denoting daring robberies and acts of violence in London; also great failures in the mercantile world. Personal suffering is denoted to the Queen of Spain. The Sardinians appear inclined for war. Intrigues prevail in political circles; the press becomes violent and clamorous. The retrograde movement of Mars through Gemini, in quartile to Jupiter, denotes scarcity of money in places governed by that sign, for a list of which see ‘*Prophetic Messenger for 1849.*’ Otho, King of Greece, suffers from dissension with his ministers. Frederick William, King of Prussia, will be hardly tasked to quiet discord and keep his kingdom tranquil. Ferdinand II. of Naples experiences the influence of evil stars. About the 6th the configurations are ominous, and we hear of the demise of a female of note. Saturn again moves onward in Aries, causing a renewal of those eventful changes in the nations of Europe which have marked the transit of Uranus through that sign. Denmark will be benefited by the transit of Jupiter over the Sun's place in her sovereign's nativity.

THE PREDICTIONS,

Timely Warnings, and Salutary Precepts,

February, 1850.

Thus when the infant moon her circling sphere
 Wheels o'er the sun's broad disk, her shadow falls
 On earth's fair bosom; darkness chills the fields,
 And dreary night invests the face of heaven.
 Reflected from the lake, full many a star
 Glimmers with feeble languor. India's sons
 Affrighted in wild tumult rend the air.

THE flaming Mars is now passing direct through Gemini, and on the 15th meets the quartile of Jupiter, which foreshows *suffering and violence in the British metropolis*, where extensive fires and other accidents occur. Opposition is directed towards the rulers of Turkey, and the nations under the dominion of Virgo. Some intrigue or plot of the Russians will be discovered, and become a subject of debate. At the new Moon on the 11th the luminaries are angular in the east, while Saturn and Uranus occupy the 2nd house, foreboding pecuniary evils; Mars is on the cusp of the 5th, in quartile to Jupiter, afflicting the youthful, and causing great mortality from small-pox and fever. Sudden outbreaks occur in Prussia. Ferdinand II. of Naples is not yet free from the difficulties which have lately troubled him. Should he not take warning from the past by endeavouring to avert the evils hovering around him, and which threaten, *before many Moons are past*, to overwhelm him in difficulty and disaster? As the month wanes, Mars, the demon of war, opposes the Sun's place in the nativity of Leopold, King of the Belgians, influencing him to acts of warfare. The new Moon occurs in Aquarius, and being in trine aspect to Mars, denotes temporary success to the Russian arms. Prince George of Cambridge will have Saturn transitting over the place of the luminaries at his birth; he is cautioned against travelling, as he will be liable to accidents. To artists the configurations imply success, especially about the 9th; some discoveries in science will also be made. Mars progresses through Gemini, the ruling sign of London, and is within orbs of a quartile of Jupiter the whole of the month; daring robberies and acts of fraud are prevalent, the funds at a low ebb, and the money market suffers. America, Flanders, Lombardy, Wittenburg, and other states, in a lesser degree, will feel the sting of this violent star. Commerce receives a check in Liverpool. Inflammatory meetings are held, and violent language will prevail. Europe is still under the influence of evil rays.

**THE PREDICTIONS,
Timely Warnings, and Salutory Precepts,**

March, 1850.

Hither, as to their fountain, other stars
Repairing, in their golden urns draw light,
And hence the morning planet gilds his horns.
By his magnetic beam he gently warms
The universe, and to each inward part,
With gentle penetration, though unseen,
Shoots genial virtue even to the deep.

At the commencement of the month the Sun forms a conjunction with Venus in Pisces, improving the condition of places under the rule of that sign. Jupiter is retrograding through Virgo, and has passed from the evil rays of Mars; the Turks advance in civilization, and wise laws are made benefiting that people. Christianity spreads its benign influence over Jerusalem and other parts of the globe influenced by Virgo. On the 15th Mars leaves the sign Gemini, and passes into Cancer, afterwards forming a quartile aspect with Sol and Venus from Aries, the ruling sign of Great Britain, Germany, Denmark, Lesser Poland, Palestine, and Naples, where the spirit of strife continues. When will the world perceive the folly of war and bloodshed? Although the stellar orbs, by electrical currents, or other undiscovered causes, influence this sublunary sphere, it is the evil passions of man alone which become ignited and explode, from their combustible nature. Near the 18th, a female of note has to contend against slander and other evils, involving her probably in an important law-suit. Towards the end of the month death is more fatal than usual amongst women; those of high rank will not escape. As March closes, the Sun meets the quartile of Mars and conjunction of Saturn in Aries; this causes the rulers of Britain much uneasiness; Venus is likewise within a few degrees of this conjunction, denoting, I fear, anxieties and cares to a *Lady of the highest rank and dignity*. We now begin to feel the effects of Saturn passing through the sign Aries. A fatal epidemic will rage in nations governed by the sign Cancer. Much suffering is experienced in Scotland. At the solar ingress into Aries, that luminary will be on the northern meridian of those places in the longitude of 16 degrees east, being part of Italy, Austria, Vienna, and Sweden, causing distress amongst the people. Adelaide, the Queen Dowager, suffers in health. The Queen of Portugal should prepare for evils; the aspects near her birthday are inauspicious, and point out unhappiness during her next year.

THE PREDICTIONS,

Timely Warnings, and Salutary Precepts,

April, 1850.

Now came still evening on; and twilight grey
 Had in her sober livery all things clad;
 Silence was pleased: now glow'd the firmament
 With livid sapphires; HESPERUS, that led
 The starry host, rode *brightest*; till the moon,
 Rising in cloudy majesty, at length,
 Apparent queen, unveil'd her peerless light.

HE benevolent Jove still retrogrades in Virgo, showering
 own his genial influence on the Turks; peace and prosperity
 sign, and great improvements take place in their form of
 overnment. Commerce flourishes in Lyons, Paris, and Tou-
 nse; Liverpool derives benefit from the transit of Jupiter.
 A remarkable combination of aspects occurs about the 11th;
 he Moon, Mercury, and Saturn are in conjunction in Aries,
 uartiled by Mars from the sign Cancer; *the rulers of Britain*
find it difficult to hold the reins; much turmoil is witnessed
 broughtout the land; declamatory language emanates from
 he press, and many violent political meetings take place.
England may now be at war, or suffers from internal com-
 motion; let us hope that the wisdom of Government is directed
 toward the amelioration of the difficulties which hang over our
 country. The affairs of Scotland demand attention; and in
 Holland the trumpet of war sounds. Africa is visited by
 fearful convulsions of nature. At the new Moon on the 25th,
 he luminaries are in quartile to the Moon's place in the nati-
 vity of the Queen of Spain, denoting personal suffering and
 national evils. At the birthday of Maria da Gloria, Queen
 of Portugal, the two malignant planets, Saturn and Mars,
 afflicting the Sun, give her many troubles and difficulties to
 contend with. The Grand Seignior of Turkey witnesses
 strange events. The sidereal omens are evil for Sweden,
 and the horrors of war are experienced in that nation. At
 the close of the month Ferdinand II. of Naples suffers;
 fearful acts of violence are committed amongst his people.
 The King of Denmark experiences difficulty; nor is the Em-
 peror of Russia exempt from evil. The configurations of the
 stellar orbs during the present month are ominous, and the
 deeds of bloodshed and disorder throughout Europe, which
 formed a prominent feature in its annals during the past year,
 are again sadly prevalent.

“Behold! the day of the Lord cometh, cruel both with
 wrath and fierce anger, to lay the land desolate; and he shall
 destroy the sinners thereof out of it.”

THE PREDICTIONS,
Timely Warnings, and Salutary Precepts,
 May, 1850.

As when the sun new risen
 Looks through the horizontal misty air,
 Shorn of his beams, or from behind the moon,
 In dim eclipse, disastrous twilight sheds
 On half the nations, and with fear of change
 Perplexes monarchs: darken'd so, yet shone
 Above them all the archangel.

On the 1st, there is a conjunction of Venus and Mercury, and they remain within orbs in their transit through Gemini, nearly the whole of the month; pointing out benefits to London by an improved state of commerce. Talented works emanate from artists; and places of amusement prove more than usually attractive. Wise laws are framed, beneficial to the metropolis. On the 5th, 6th, and 7th, the two before-named planets pass over the places of the luminaries in the nativity of Queen Victoria, producing happiness and pleasure. Jupiter becomes stationary during the month, and is in trine aspect to Saturn; this should check the spirit of violence which has so long influenced European nations in acts of war and tumult. Parts of the world under the dominion of Virgo derive benefit from the stationary position of Jupiter. The trine aspect of the Sun and this planet should improve the condition of the suffering Irish. The violent Mars leaves the sign Cancer on the 15th, and enters Leo, exciting the Italians to acts of violence. In France the seeds of discord are again ripening. Sicily and Rome witness dissensions. The Queen of Spain suffers from excitable and inflammatory disorders. At the new Moon on the 25th, the luminaries are near the north and south meridians, with the fiery Mars in the western angle in the sign Leo; causing great sacrifices of human life in nations governed by that sign. The rulers of Great Britain act with firmness and decision. The reader will not at all times look for the events alluded to happening exactly within the scope of the month under which they are written, their effects extending over a period of six or eight weeks, and sometimes even longer. This lunation occurs near the place of the Sun and Moon, in the nativity of Queen Victoria, from which let us all pray that she experience no inconvenience.

Hence drew the enlightened sage the moral plan,
 That man should ever be the friend of man;
 Should eye with tenderness all living forms,
 His brother-*emmet*s and his sister-worms.

THE PREDICTIONS,
Timely Warnings, and Salutary Precepts,
 June, 1850.

Nor were the gods themselves more safe above ;
 Against beleaguer'd heav'n the giants move :
 Hills pil'd on hills, on mountains mountains lie,
 To make their mad approaches to the sky.
 Till Jove, no longer patient, took his time
 T' avenge, with thunder, their audacious crime ;
 Red lightning play'd along the firmament,
 And their demolish'd works to pieces rent.

THE fiery orb of Mars is flaming through Leo, still rousing the people of France to acts of insurrection; in Italy there is tumult; that people act with bravery and determination; Rome and Sicily are under martial influence. In Bath and Bristol acts of violence take place. In Philadelphia the evil effects of this violent star are experienced. The retrograde movement of Mercury in Gemini causes unusual agitation in London; important political meetings take place; near the 18th, the configurations denote evil to speculators; many bankruptcies occur. The mild beam of Venus in sextile aspect to Jupiter about the 10th benefits Scotland. At the full moon on the 24th, the sign Libra ascends; Leo is on the meridian, with Mars in that angle, which, Ramsay says, "denotes that rulers shall act with cruelty and tyranny towards the people." Let those nations under the dominion of Leo mark well the signification. The two infortunes, Saturn and Uranus, occupying the western angle, point out an unsettled state of affairs, and a continuation of evil in those parts of the world under the dominion of Aries. The Queen of Spain suffers from the influence of sidereal orbs now in operation, as does also Adelaide the Queen Dowager. The King of Hanover meets with pecuniary evils. The Duchess of Kent should guard against excitement towards the end of the month, as the configurations denote disease of the heart. Pius IX. will be under evil influences near the 5th; *he should guard against violence.* As the month closes, Ferdinand, Emperor of Austria, displays a tyrannical disposition. The Austrian people can hope for little good from the present sovereign, the luminaries being in conjunction with Saturn at his birth. Persons who feel an interest in astral doctrines and inferences may remember that in September, 1848, there was an eclipse of the Sun in the sign Libra, which sign, Ptolemy taught us more than 1700 years ago, *rules Austria*; and I would direct attention to the changes and unsettled state of that empire which so immediately followed after that eclipse.

THE PREDICTIONS,

Timely Warnings, and Salutory Precepts,

July, 1850.

The stars are forth, the moon above the tops
 Of the snow-shining mountains.—Beautiful!
 I linger yet with Nature; for the night
 Hath been to me a more familiar face
 Than that of man; and in her starry shade
 Of dim and solitary loveliness
 I learn'd the language of another world.

On the 6th, the tardy Uranus leaves the sign Aries and passes into Taurus; he however again retrogrades into the former sign in September, as if unwilling that Europe should be at rest. Saturn still lingers in the sign governing Great Britain, Denmark, Germany, Lesser Poland, Palestine, Naples, and other nations; disturbing their peace and happiness. Uranus hardly passes a sufficient distance in the sign Taurus during the present year, to produce mischief to Ireland, Great Poland, part of Russia, Asia Minor, and the Archipelago. But let the rulers of those nations take timely warning, and endeavour to prepare for the distress and suffering which will accompany the transit of Saturn and Uranus through Taurus. Jupiter still benefits nations under the dominion of Virgo, but as Mars passes into that sign on the 6th, he will for a time stir up discord and violence in Turkey, Lyons, Paris, Toulouse, and Liverpool. As the month passes out, the misfortunes or sufferings of a lady attract public attention. At the full moon on the 23rd, the luminaries are in square to Uranus, denoting evil in Italy, France, Sicily, Rome, Arabia, Prussia, Russia, Tartary, Poland, and other places under the dominion of Leo, Aquarius, and Taurus. The configurations denote many troubles and difficulties to the noble and high born of those nations. Saturn has now approached within a degree of the quartile aspect of the Sun's place at the birth of Ferdinand II. of Naples: he will be sorely afflicted. Uranus passes over the Sun's place at the birth of Louis Napoleon; his reign is nearly at an end; unexpected misfortunes overtake him, and from the conjunction of the Sun and Mars, in opposition to Uranus, at his birth, he is liable to sudden reverses of fortune, and from some rash and ill-advised measure he loses his present honour and power. *Let the President heed this warning from the Astrologer, who wishes him well, and not consider himself too firmly established in his high position.*

THE PREDICTIONS,
Timely Warnings, and Salutory Precepts,

August, 1850.

——— Things are now afloat
 That shall shake hearts like fearful prodiges;
 Strip the patrician's robe from many a back,
 And give it to a slave! make beggars rich!
 And rich men beggars!—drag authority
 Down on its knees.

At the commencement of the month a conjunction of the three planets, Mars, Venus, and Jupiter, occurs in the celestial sign Virgo, denoting important events in Turkey; extensive fires taking place and acts of violence perpetrated. The Governors of Lyons, Paris, and Toulouse should guard against sudden outbreaks of the people, as much angry feeling is directed towards them. The magistrates or town council of Liverpool fall into disrepute or perform some rash act, and in these events a female appears to figure. On the 3rd, Saturn and Uranus are stationary, the former having the parallel declination of Mars, he also forms a true aspect with Mercury on the 9th. Violent shocks of earthquake are felt during the first week, and those parts of the globe under the dominion of the sign Aries are most likely to be affected by these influences. The configurations at the end of August are evil for women, pointing out much mortality amongst them; Death lays his cold hand on some fair star who has spent her days in the highest ranks of society. In Austria acts of cruelty are perpetrated on ladies, disgraceful to the rulers of that nation. At the full moon on the 22nd, Taurus ascends, with Venus, Mars, Jupiter, and Mercury, in the Sixth house, the three latter being in the sign Virgo; these positions denote a sickly period; disorders of the bowels are very prevalent. Ferdinand II. of Naples now experiences the influence of Saturn being stationary and afflicting the luminaries at his birth; the vial of wrath will be poured upon him, and he will drink from the cup of sorrow. During the whole of the month, Uranus will be within a few minutes of the Sun's place at the birth of Louis Napoleon; he will find it a difficult matter to govern the people of France; disasters will fall upon him. England and other European nations will, I fear, suffer severely from the stationary position of Saturn; distress and ruin visit thousands; loud complaints are heard from the people, and a want of trade is one amongst many sad casualties attending the transit of Saturn through Aries.

B

THE PREDICTIONS,

Timely Warnings, and Salutary Precepts,

September, 1850.

——— There is given
Unto the things of Earth, which Time hath bent,
A spirit's feeling; and where he hath leant
His hand, but broke his scythe, there is a power
And magic in the ruined battlement;
For which the palace of the present hour
Must yield its pomp. ——

On the 6th, there is a conjunction of Mars and Mercury in the sign Libra, denoting violence in Austria; that people become infuriated, and as these two planets meet the opposition of Saturn during the month, the stability of the empire is shaken. In China there are many acts of treachery occurring. Lisbon and other nations under the rule of Libra experience violent effects from the transits and aspects of the stellar orbs; treachery, murders, and robberies are amongst the evils afflicting those places. In England many evils arise from the configurations in operation; the rulers of the nation should take precautionary measures to suppress insurrection likely to occur about the 22nd; much commotion exists throughout the country from political meetings, and great outcry amongst the people for a more popular system of legislation; it is to be feared, however, that no laws will pass materially benefiting the nation while Saturn remains in the sign Aries. The unity of the German States is rent asunder; in Denmark the horrors of war afflict and cripple the commerce of that nation. At the full moon on the 21st, the 11th degree of Sagittarius is rising, Libra is culminating, with a conjunction of Mars and Mercury in that sign, in opposition to Saturn and Uranus; this is a lunation of great importance as being the one nearest to the Sun's entrance into Libra; and the configurations therein threaten distress to the people; oppressive laws create dissatisfaction. To rulers the aspects imply many difficulties and much vexation; the reins of government require skilful hands and wise heads at this important crisis; heavy burdens press on the agriculturist, who makes loud appeals to the ruling powers for the correction of existing evils; famine and consequent misery menace town and street. The position of the stellar orbs is evil for the Queen of Spain, and denotes suffering to that lady. Maria da Gloria, Queen of Portugal, will also feel the influence of Mars about the 13th. Ferdinand II. of Naples is now passing days of sorrow; as the month wanes he should act cautiously.

THE PREDICTIONS,
Timely Warnings, and Salutory Precepts,

October, 1850.

*Furious Mars, thy fiery star
 Warns of danger from afar!
 While thy evil aspects show
 Times of wretched want and woe!
 Strife and peril—warlike ire—
 Conflagrations fierce and dire!
 May Heaven avert thy fatal fire.*

THE month opens with all the sidereal orbs, excepting Venus, being in the equinoctial signs Aries and Libra. Important and stirring events will be acted on the stage of Europe. On the 6th, Mars meets the opposition of Uranus, and Mercury the opposition of Saturn; the lunar orb also passes an aspect with all four planets on that day; seldom does it fall to our lot to observe such DIREFUL CONFIGURATIONS. The government of Great Britain should watch well the coming events of this period; internal commotion or foreign war disturbs the peace of the country; and although we are at a loss to point out the exact nature of the events pending over this month, we are justified in predicting *much lamentation and woe to the people*; there is great political agitation throughout the country; commerce will suffer materially; and even the very elements at this time conspire against man. Awful convulsions of nature are witnessed, sweeping away thousands of the human race. An eminent military character is called from the busy scene of life. The palaces of royalty are hung with mourning, for Death summons those of high and mighty lineage as well as many of humbler birth. In Germany horrid deeds of slaughter are perpetrated, and in Denmark severe suffering experienced by the people. Lesser Poland, Syria and Palestine, Naples, Capua, Verona, and Cracow, are amongst the parts of the globe towards which the influence of stellar rays is particularly directed. In Austria the troops meet defeat and no success. The Emperor may see the folly of soliciting aid from Russia; he will, in all probability, ere now have lost nearly the whole of his territories. In Japan and China the stellar omens imply discord and acts of violence. Vienna, Lisbon, and Antwerp are visited by evils. Near the 8th, the Princess Royal and Prince Alfred are liable to slight irritation of the system, requiring medical treatment; and as the Prince of Wales has Mars afflicting his ascendant, some contagious disease may afflict the Royal children. Louis Napoleon should beware of violence about the 8th.

**THE PREDICTIONS,
Timely Warnings, and Salutary Precepts,**

November, 1850.

The sun
Is centre to the world, and other stars
By his attractive virtue and their own
Incited, dance about him various rounds ;
Their wand'ring course now high, now low, then hid,
Progressive, retrograde, or standing still.

As Jupiter moves onward in the celestial sign Libra, Saturn by a retrograde motion meets his opposition on the 20th, keeping up the spirit of strife in Austria. The influences of the sidereal monitors are evil for Bactriana, Japan, and China; serious disasters befall those nations. Trade suffers in Vienna, Lisbon, and Antwerp, and those places experience want and poverty. In England there is much complaint of taxation, and of the dullness of trade; the funds are low and insolvencies numerous. In our remarks for the present year we have so often referred to the sufferings of European nations under the dominion of Aries, that we have now only to reiterate our former opinions. On the 28th, the Sun, Mercury, and Mars are in conjunction in the sign Sagittarius, denoting an important battle in Hungary. At the new Moon, on the 19th, the 10th degree of Gemini ascends, and the 5th degree of Aquarius culminates; the Sun is in conjunction with Mercury and Mars in the 6th house, pointing out a sickly period. In Judea, Mauritania, Catalonia, Norway, Bavaria, Barbary, and Morocco, there are various afflictions and disasters. In Spain affairs assume a warlike aspect, but as Jupiter transits the Sun's place in the Queen's nativity, he may have a tendency to avert some of the evils otherwise denoted by Saturn's opposition. Near the 23rd, the configurations point out some excitement to our Royal Sovereign; happily it is but transitory. Saturn is applying to the conjunction of the Sun's place at the birth of Maria da Gloria, Queen of Portugal; she experiences pecuniary and other difficulties. The King of Bavaria will be under the influence of Mars near the 27th, which may incline him for war. The rays of Uranus fall on Nicholas, Emperor of Russia, he must not, therefore, look for success in his undertakings; strange affairs harass his mind. The King of Prussia, near the 10th, will be under martial influence; affairs seem warlike in his dominions. The favourable rays of Jupiter passing over the Sun's place in the nativity of the King of Denmark will be mitigated by the opposition of Saturn, he therefore experiences but little good results from the planetary configurations for some time to come.

THE PREDICTIONS,
Timely Warnings, and Salutory Precepts,

December, 1850.

'Tis done! dread Winter spreads his latest glooms,
And reigns tremendous o'er the conquer'd year.
How dead the vegetable kingdom lies!
How dumb the tuneful! Horror wide extends
His desolate domain. Behold, fond man!
See here thy pictur'd life! Pass some few years,
Thy flowering Spring, thy Summer's ardent strength,
Thy sober Autumn fading into age,
And pale concluding Winter comes at last,
And shuts the scene.

ABOUT the middle of the month the slow-moving Saturn becomes stationary, and then takes an onward course in the sign Aries, inflicting misery and woe on thousands. The British nation will have great evils and difficulties to contend with, but the united spirit and indomitable energies of her freeborn sons will still bear her in safety through the storm of adversity. The German States still continue under the influence of malignant stars: in Denmark the people are suffering from the effects of war and the want of trade. Austria appears more prosperous, and is recovering from the dreadful evils which have afflicted it since the solar eclipse in October, 1847. In China commerce increases. On the 27th and 29th, Mars passes over the ascendant and quartile of the Moon's place in the nativity of the Prince of Wales, from which we hope he will experience no accident while riding. King Leopold is under evil influences; commotions may disturb the peace of Belgium. Otho, King of Greece, must beware of accidents about the 4th. The Queen of Portugal suffers, as does also the King of Denmark. Our warnings and predictions for the year are brought to a termination, and it must be confessed that their tone and character "is dark and sad:" the endeavour to unfold more bright and cheering influences has been made in vain—for alas! the period we have travelled over is fraught with gloomy and sinister forebodings. May those, into whose hands it has pleased Providence to delegate the guardianship of the prosperity and happiness of men and empires, use every effort within their grasp, to ameliorate or avert by wise and merciful laws the evils and sufferings which will surely and inevitably press with iron sway upon the millions whom it is their vocation to govern. Then will they, when the fulness of time shall come, be united with the great and good of all ages in that far-off land where is neither care nor sorrow; while posterity will honour their memories and point to their example.

CELESTIAL PHENOMENA IN 1850.

ECLIPSES OF THE SUN.

In the year 1850 there will be only two Eclipses, both of the Sun.

1.—An Annular Eclipse of the Sun.

February 12th, 1850, invisible at Greenwich.

Begins on the Earth generally February 12th, 3h. 25m. 9s. A.M. mean time at Greenwich, in longitude $39^{\circ} 22'$ East of Greenwich, and latitude $11^{\circ} 21'$ South.

Central Eclipse begins generally February 12th, 4h. 32m. 8s. A.M., in longitude $22^{\circ} 53'$ East of Greenwich, and latitude $10^{\circ} 21'$ South.

Central Eclipse at noon, February 12th, 6h. 30m. 9s. A.M., in longitude $85^{\circ} 54'$ East of Greenwich, and latitude $10^{\circ} 58'$ South.

Central Eclipse ends generally February 12th, 8h. 26m. 4s. A.M., in longitude $143^{\circ} 6'$ East of Greenwich, and latitude $15^{\circ} 49'$ North.

Ends on the Earth generally February 12th, 9h. 33m. 3s. A.M., in longitude $126^{\circ} 37'$ East of Greenwich, and latitude $14^{\circ} 50'$ North.

The central line passes over the points on the Earth's surface whose positions are—

Occultations of Planets by the Moon.

May 19th, JUPITER. Time of Immersion, 6h. 32m. P.M. Emersion, 7h. 37m. P.M.

July 12th, MARS. Time of Immersion, 5h. 28m. P.M. Emersion, 6h. 33m. P.M.

THE SPRING QUARTER.

We, though from heav'n remote, to heav'n will move
 With strength of mind, and tread the abyss above;
 And penetrate, with an interior light,
 Those upper depths, which Nature hid from sight.
 Pleas'd we will be to walk along the sphere
 Of shining stars, and travel with the year;
 To leave the heavy earth, and scale the height
 Of Atlas, who supports the heav'nly weight;
 To look from upper light, and thence survey
 Mistaken mortals wand'ring from the way.

The Spring Quarter commences March 20th, at 11^h 3^m P.M.

At the minute the Sun enters the sign Aries, the 22nd degree of Scorpio ascends on the eastern horizon, the 13th degree of Virgo culminates with Jupiter in the 17th degree of that sign; the Sun is in conjunction with Venus and Saturn, and quartiled by Mars from the 8th house; while the lunar orb also occupies that mansion, and applies to the quartile of the Sun and conjunction of Mars. The configurations and positions of the planetary orbs in this figure appear of great importance; and must be considered in connection with the lutation happening nearest to this ingress. Mars, the

general signicator of the population, being in the 8th house, and in evil aspect to Venus, Saturn, and the Sun, denotes great mortality amongst the people; also heated discussions and angry feelings in the House of Commons respecting ecclesiastical and commercial affairs. The position of Jupiter in the mid-heaven augurs well for the ruling powers of the nation: they will be able to maintain their dignity and supremacy, and may pass some beneficent and wise laws; unfriendly feelings exist with neighbouring nations: the aspects point out the deaths of more than one of the ruling powers in Europe. At the full Moon nearest this ingress the 1st degree of Sagittarius ascends on the eastern angle, the 26th degree of Virgo on the meridian, the positions of the Stellar orbs are nearly the same as in the figure for the vernal equinox; the luminaries are afflicted by both the infortunes, keeping up the spirit of discord in Austria, Denmark, Syria, and Palestine, also Great Britain, Naples, and other countries under the dominion of Aries. The orb of Mars afflicts nations and cities ruled by Cancer, some of which are Scotland, Holland, Africa, Algiers, Constantinople, Amsterdam, Cadiz, Venice, and New York: military slaughter and fearful diseases reign in those parts of the earth. Another fatal testimony in the figure for the commencement of the spring quarter is the Moon in the 8th house, applying to the conjunction of Mars and quartile of the Sun, denoting death by violence to many, and, if I mistake not, it will be by military and naval engagements. The affliction of Saturn implies evil for railroad speculations; the quartile of Mars pointing to violent accidents in the steam department. The peace of China will be disturbed by foreign intruders. Portugal will be under the influence of malignant stars, and the Queen of that nation suffers personally. The Grand Duke of Tuscany will also be afflicted. Wise laws are enacted and prosperity reigns in Turkey, Mesopotamia, and all the country between the Tigris and Euphrates, Candia, Jerusalem, and other places ruled by Virgo. From the affliction of Venus I pronounce a sickly season, more especially amongst children, who will suffer from small-pox, measles, and other contagious disorders. At the lunation, Saturn and Mars afflict Mercury in the nativity of the Russian Czar, while Uranus squares the Sun's place; he may now be at war, but must expect little or no success; the affairs of his empire will be unsettled, which will greatly perplex him.

The most striking feature in the figure for the Spring quarter is the Moon, lady of the 8th, applying to a conjunction of Mars, lord of the ascendant, and both being posited in the *house of death*. This should warn Sanitary Commissioners, and those engaged in matters connected with improving the health of towns, not to slacken their endeavours, but persevere in so desirable an object, **FOR DEATH WILL BE BUSY IN CLAIMING HIS VICTIMS!**

THE SUMMER QUARTER.

The Summer Quarter commences June 21st, at 8^h P.M.

The above chart is set for the minute the Sun enters the sign Cancer; the 27th degree of Sagittarius is rising on the eastern horizon, with the 2nd degree of the sign Scorpio culminating; the Moon is in the 11th house, in trine aspect to Venus from the western angle, the latter being in quartile to Uranus, while Mercury is in square to Jupiter. The two infortunes in the 3rd house denote some alterations and difficulties in the Post Office, failures in railway companies, and many accidents to travellers. The figure implies a favourable state of the finances of the country; the attention of Government is directed towards the better management of railroads. From the position of Mercury and Jupiter we apprehend much sickness and great mortality from disorders of the bowels; let us hope it may not be in the more virulent form of cholera; deaths from violence, as also from fire, will be prevalent. The position of Venus in the western angle in quartile to Uranus denotes many unhappy marriages and divorcements. Ramsay, in his '*Astrologia Munda*,' says, "the Sun in the western angle denotes discord between the people and their rulers, and between the sovereign and nobles." The people of Italy are bold in their demand for liberty, and determined to purchase that blessing even at the price of their lives; they will experience much violence and suffering; **THE PEOPLE OF ROME WILL NOT HAVE THE POPE TO REIGN OVER THEM.** In France the principles of the Red Republicans spread; the rulers of that nation find it difficult to check revolutionary movements. The two planets Saturn and Uranus are within ten degrees from each other. European nations still experience internal commotions and changes in their forms of government. The Turks prosper; and trade improves in Lyons, Paris, Toulouse, and Liverpool.

THE AUTUMN QUARTER.

The Autumn Quarter commences September 23rd, at 10^h A.M.

At the minute the orb of day enters the sign Libra, the positions and configurations of the sidereal monitors are as represented in the above map erected for that time, when we find the 14th degree of Scorpio ascending on the eastern angle, and the 1st degree of Virgo occupying the mid-heaven; Venus is just rising, while the Sun is near the cusp of the 11th house, in conjunction with Jupiter; the Moon is near the 6th mansion, in conjunction with Saturn and Uranus, and in opposition to Mercury and Mars; ASPECTS OF DIRE IMPORT. The position of the Sun and Jupiter implies the exchequer of the nation to be prosperous; it also denotes that good laws will be framed for the benefit of the people; although the position of Mercury with Mars in opposition to Saturn, Uranus, and the Moon, points out much suffering from want of trade, scarcity, and the high prices of provisions. After a short time peace will be effected in Austria, and prosperity will reign there; not, however, without a struggle. It is much to be desired that the benevolent Jupiter in Libra will direct the mind of the Emperor to nobler objects than the unmanly and brutal infliction of corporal punishment on ladies for political offences, which so deeply disgraced his government in the year 1849. In China there is an extension of commerce, and a more liberal intercourse with foreigners prevails. Vienna, Lisbon, and Antwerp derive benefit from the position of the Sun and Jupiter in the sign Libra. The configurations from the equinoctial signs denote political meetings in England; much declamatory language also emanates from the press. Some of the German states continue in an unsettled condition. Denmark is under the influence of evil rays; and Palestine, Naples, and other places under the dominion of Aries suffer from malignant stars.

THE WINTER QUARTER.

The Winter Quarter commences December 22nd, at 3^h 38^m A.M.

The above figure is set for the minute the Sun enters the first degree of the sign Capricorn, when the 9th degree of Scorpio ascends, and the 23rd degree of Leo culminates; Venus is in conjunction with Mars in the second house, in sextile aspect to Jupiter; Saturn and Uranus occupy the sixth in opposition to Jupiter; while the Moon is near her north node in the ninth mansion. The lunar orb being in the ninth house favourably configured, denotes an improved state of commerce, benefits resulting from the principles of free trade begin to be experienced; the alteration in the navigation laws operates beneficially. From the positions in this figure the taxes press with more than usual severity. Robberies are frequent and extensive in the Post-Office; and frauds are practised by the servants of some of the railway companies. Cold disorders and diseases of the head are prevalent. Indian affairs are not very promising during this quarter. The Hungarians prosper in arms and act with great bravery. In Spain affairs are warlike. Other nations are still under the influence of malignant stars. The Austrians are more inclined for peace, but still suffering under the effects of the late wars; while China, Japan, Vienna, Lisbon, and Antwerp, being under the domiuiou of Libra, benefit from the favourable influence of Jupiter passing through that sign. The positions of the sidereal monitors in this figure denote affliction to literary characters; important trials occur in courts of law; and political offences cause a great sensation in the country.

RAPHAEL'S
ASTRO-BIOGRAPHY FOR 1850.

Astrological Remarks on the Thirty-first Solar Revolution following the
Birth of our Most Gracious Sovereign

QUEEN VICTORIA.

That she be all our present hopes conceive,
And hers be all a grateful land can give;
May Britain long her guardian care engage,
And Heaven support her to a lengthen'd age;
Till, full of days and honours, she shall rise
To share a nobler kingdom in the skies.

The Planets' places at Birth, 4^h 4^m 34^s A.M., May 24th, 1819, and at the 31st return of the Sun to his place.

At Birth.

☉	☽	♃	♅	♄	♂	♀	♁
♈ 2 6	♈ 3 33	♏ 23 20 R	♋ 28 46	♌ 16 57	♈ 17 38	♈ 26 35	♏ 8 56

Planets' places, May 23rd, 1850, 3h 47^m P.M.

☉	♃	♁	♂	♄	♅	♆	♇
♈	♈	♈	♈	♈	♈	♈	♈
2 6	4 27	28 18	17 1	13 22 R	4 40	22 55	22 17

The Sun completes his 31st revolution on the 23rd of May, 1850, at 3h. 47m. p.m., when the 20th degree of Libra ascends on the eastern horizon, and the 26th degree of Cancer culminates; Saturn and Uranus are setting in the west, the former being on the radical place of Mars, and the latter on the place of Venus. Mercury and Venus are in conjunction in the 9th house, and they are near the cusp of the 2nd in the Radix; which is a favourable omen for pecuniary matters, pleasure, and royal progresses. The Moon is in opposition to Uranus and in quartile to Mars. Previous to the influence of this figure coming into operation the Moon forms a square of Mars by secondary motion, measuring to the month of April, when I fear her Majesty will experience some excitement, trouble from secret enemies, and health slightly deranged. In the Revolutionary figure the configurations denote domestic affliction; and as Mars holds a prominent position in the midheaven, in aspect to both luminaries, we may anticipate some hostile demonstrations in the country. As there are no primary directions of importance in operation in her Majesty's nativity, no serious evils can happen to the Queen during 1850.

NATIVITY OF HIS GRACE THE DUKE OF WELLINGTON.

Planets' places at Birth, midnight, May 1st, 1769.

☉	♃	♁	♂	♄	♅	♆	♇
♈	♈	♈	♈	♈	♈	♈	♈
11 48	16 8	7 36	13 17	19 7 R	7 10	19 18	23 17

Planets' places at the 81st Solar revolution, May 2nd, 1850, at 2h 51^m P.M.

☉	♃	♁	♂	♄	♅	♆	♇
♈	♈	♈	♈	♈	♈	♈	♈
11 48	21 57	27 11	14 45	13 11 R	23 8	27 26	27 58

When the Sun returns for the 81st time to the place in the zodiac which he occupied at the birth of his Grace the Duke of Wellington, the 25th degree of Virgo ascends on the eastern angle, and the 24th degree of Gemini is on the meridian. It is remarkable that in this figure the Moon

is in opposition to Mars, being the same aspect as they formed in the last year's revolution. In the chart before us, the lunar orb and Mars are in quartile to Saturn and Uranus. The Sun is in trine to Jupiter; his Grace will continue to enjoy honour and renown. The configurations denote excitement, and will render the Duke liable to accidents and inflammatory disorders of the chest or lungs. In a great measure the evil influence of Mars is mitigated by being configured with Venus and Jupiter. The most unfavourable periods for the Duke, during the year 1850, will be near the middle of March, the 5th of June, 1st of August, 24th of October, and towards the end of December. At those times the planetary aspects denote excitement, which, at the Duke's great age, may be attended with serious results.

NATIVITY OF SIR ROBERT PEEL.

Planets' places the day of his Birth, February 5th, 1788.

(Hour unknown.)

☉	☽	♃	♄	♅	♆	♁	♂
☉	♃	♁	☉	♁	♁	♁	♁
16 28	26 47	27 30	29 40	16 36	8 56	12 44	11 26

Planets' places on the return of the Sun to his place on the 62nd Birthday, 1850.

☉	☽	♃	♄	♅	♆	♁	♂
☉	♃	♁	♁	♁	♁	♁	♁
16 28	3 24	22 56	4 32	21 47 E	18 49	10 15	20 45 E

Having only a knowledge of the day on which the Right Honourable Baronet was born, we are precluded from entering minutely into the particular events of his life; we must therefore content ourselves with taking a general view of them. The most prominent feature at the Solar return is the conjunction of that luminary with Venus and Mercury, and all three of these being in trine aspect to Mars, denote an active year for Sir Robert; he displays much tact and energy, and may be called upon to take the reins of government; if so, he will be successful in conducting the affairs of the kingdom under the critical circumstances which the country may have to encounter, and the direction of which will require the exercise of sound wisdom and extensive knowledge—qualities which the Right Honourable Baronet possesses in a high degree.

Use and Pleasure of Astrology.

One sun by day, by night ten thousand shine ;
 And light us deep into the DEITY.

Oh ! how loud
 They call devotion, genuine growth of night !
 Devotion, daughter of astronomy !
 An undevout astronomer is mad.

SINCE we first offered our opinions on astral science to the public, rapid progress has been made in the diffusion of its principles ; and we have ever felt perfectly convinced that such a result must take place, being fully assured that the doctrines of planetary influences rested upon a sound basis, and would consequently bear the test of examination.

The greatest difficulty was the removal of long and deeply-rooted prejudices in the public mind, and to lead reflecting and impartial men to a fair investigation of the science. This, however, has been in a considerable degree accomplished by the continued and successful results of our predictions.

The Prophetic Messenger is now, at each annual appearance, favourably noticed by the greater part of the leading journals of the kingdom ; and although it may be matter of regret that some of them do not attach so much importance to our labours as the scientific principles on which they are founded may fairly and reasonably claim, we confidently trust that the day is fast approaching when the doctrines of planetary influences will be fully recognised, and the study of the science universally acknowledged as innocent, useful, and interesting.

Astrology is a science, the study of which is well calculated to expand the mind, and produce exalted ideas of the Deity. The intellectual faculties of the astrologer are continually employed in watching and examining the various operations of the laws of Nature ; daily and nightly he contemplates the wisdom displayed in the government of the earth and its inhabitants by means of secondary causes ; his intellect is exercised in the contemplation of the wisdom, power, and goodness of God, naturally calling into operation the moral organs ; his soul becomes enraptured, and he is led to adore that omnipotent Being who wisely regulates, upholds, and directs the vast machinery of the universe.

Astrology, in all ages, has been studied and venerated by the greatest philosophers ; even the present day can boast of many literary and scientific characters on the list of its admirers. Truth, invincible truth, is the magic touchstone which has been the means of bringing inquiring and searching minds to this study ; and whilst there exist bold and independent persons who will come forward, regardless of the ridicule of those whose indolence or incapacity will not permit them to investigate or acknowledge any philosophical facts beyond their limited comprehensions, we unhesitatingly assert that Astrology will reign triumphant.

We are compelled to make some remarks on those persons who exclaim, "It is sinful to look into futurity!" forgetting how often they are guilty of this same act. Do we not repeatedly hear them say, "I think, by the appearances of certain phenomena of the atmosphere, that it will rain;" or that the sun will shine, or that we shall have thunder and lightning, and many more such observations? Again, how frequently do we hear those very persons who speak of the sinfulness of attempting to look into futurity, say, "I think such an undertaking will prosper;" and, from certain circumstances, "I think such a person will fail in his pursuits"? What is this but predicting future events, and does it not prove the existence in their minds of a desire to obtain a glimpse of the future? The astrologer has the same object in view when he is contemplating the various positions and configurations of the sidereal orbs at the period of a birth, or when the mind is anxious to know the result of any undertaking or event—feeling assured that the planetary bodies are the instruments in the hands of an all-wise Providence to gratify that inherent property in the mind, viz. a desire to know the future. Nothing is created in vain: hence this faculty has not been implanted in man without lawful means being provided for its gratification, and it is man's fault if he refuse to profit by them.

Those who have paid attention to this subject are convinced of the benefit and gratification they derive from its study. Astrology furnishes man with the means of acquiring a knowledge of the periods most inimical to his well-being, and it behoves him to guard against the evils, and to use every means in his power to mitigate or prevent them; or, on the contrary, to push his affairs at such times as the stellar orbs indicate as benign. Innumerable instances occur in the every-day transactions of life, proving the amount of misery which might have been avoided by the exercise of moderate foresight. The poet says,—

FORTUNE at some hours to all is kind;
The lucky have whole days, which still they choose;
The unlucky have but hours, and those they lose.

It is unnecessary to extend these remarks, since we daily find men eagerly seeking a knowledge of those principles which we have from the purest motives promulgated for many years.

ASTROLOGY AND MEDICINE.

In the Prophetic Messenger of last year we made a few remarks on the necessity of combining a knowledge of Astrology with that of Medicine, as was the case in the days of Hippocrates and Galen; we gave also a list of the various diseases of each planet; and we intend now to speak of the different herbs, pointing out the stellar influence by which they are governed, and also the most proper times for gathering them, and the disorders for which they are applicable. Those who will take the pains to act

upon our remarks will find their time to have been well spent, and will reap a rich harvest for their industry.

SATURN.—Under the dominion of this planet are the following:—Amaranthus, barley, red-beet, beech-tree, bifoil, birdsfoot, snakeweed, blue-bottle, buck's-horn plantain, buck's-horn, campion winds, clown's woundwort, comfrey, sciatica cresses, darnel, dodder, elm-tree, water-fern, fleawort, fluxweed, fumitory, stinking gladwin, goutwort, winter-green, heartsease, hawkweed, hemlock, hemp, henbane, black hellebore, horsetail, holly, ivy, knapweed, knotgrass, medlar-tree, mosses, mullein, nightshade, polypody of the oak, poplar-tree, quince-tree, rupturewort, Solomon's seal, Saracens' consound, service-tree, shepherds' purse, spleenwort, tamarisk-tree, melancholy thistle, blackthorn, thorough-wax, tulsan, and woad.

JUPITER rules over agrimony, alexander, asparagus, avens, balm, white-beet, water-betony, wood-betony, bilberries, borage, chervil, chesnut-tree, cinquefoil, costmary, dandelion, dock, dogs'-grass, endive, fig-tree, clove gilliflowers, hart's-tongue, hyssop, house-leek or sengreen, liverwort, lungwort, maple-tree, mellilot, the oak, roses, sage, samphire, scurvy-grass, succory, and lady's thistle.

MARS governs the following:—Allheal, anemone, water-pepper, asarabacca, barberry, garden-basil, briony, brooklime, butchers' broom, broom-rape, carduus benedictus, pilewort, cives, black cresses, crowfoot, cuckoo-point, dovesfoot, down or cotton thistle, dragons, flaxweed, furze-bush, garlic, gentian, hawthorn, hedge-hyssop, hops, madder, masterwort, nettles, onions, pepperwort, ground-pine, horse-radish, rest-harrow, rocket, rhubarb, savine, star-thistle, tobacco, woollen-thistle, treacle-mustard, wold or dyers' weed, and wormwood.

The **SUN** rules over angelica, the ash and bay trees, one-blade, burnet, butterbur, camomile, celendine, small centaury, eye-bright, St. John's-wort, juniper-bush, lovage, marygolds, misseltoe, mustard, peony, St. Peter's-wort, pimpernel, rosa-solis or sundew, rosemary, meadow-rice, garden-rue, saffron, tormentil, turnsole, heart-trefoil, vine, vipers'-buglos, and the walnut-tree.

VENUS influences alkanet, alehoof or ground-ivy, the black and common alder-tree, arrack, wild and stinking Archangel beans, ladies' bedstraw, birch-tree, bishops'-weed, bramble, blites, bugle, burdock, cherry-tree, earth-chesnuts, chickpease, cock's-head, columbines, colt's-foot, cudweed, cowslips, crab's-claw, crosswort, daisies, devil's-bit, eringo, featherfew, figwort, dropwort, foxgloves, golden-rod, gromel, gooseberry-bush, groundsel, artichokes, herb-robert, truelove, kidneywort, ladies'-mantle, marshmallows, French mercury, dog-mercury, mint, moneywort, motherwort, mugwort, nep or catmint, orchis, parsley piert, parsnip, peach-tree, pennyrown, pear-tree, periwinkle, plantain, plums, poppy, purslane, primroses, privet, queen of the meadows, ragwort, rye, woodsage, sanicle, selfheal, sope-wort, sorrel, sowthistle, spignel, strawberries, tansey, teasle, thyme, vervain, violets, wheat, and yarrow.

MERCURY.—This planet governs amara-dulcis, calamint, wild

carrots, carraway, dill, elecampane, fern, fennel, germander, hazelnut, horehound, houndstongue, lavender, lily of the valley, liquorice, wallrue or white maidenhair, golden maidenhair, wild and sweet marjoram, mulberry-tree, nailwort, oats, parsley, cow-parsnip, pellitory of the wall, saucealone, savory, scabious, smallage, southernwood, honeysuckles, and valerian.

The Moon rules over adderstongue, garden-arrack, brankursine, coleworts, water-caltrops, chickweed, garden and wild clary, cleavers, coralwort, water-cresses, cucumbers, duckmeat, flower-de-luce or water-flag, fluettin, cuckoo-flower, lettuce, water-lily, white lilies, loosestrife, moonwort, mouse-ear, orpine, pellitory of Spain, rattlegrass, saxifrage, stonecrop, pearl-trefoil, wallflowers, and the willow-tree.

To procure the full virtue of all herbs, they should be gathered in the hour of the planet by which they are governed, and also when that planet is in the angle of the horizon or meridian—that is, a little before it rises or souths. The planet should also be free from the affliction of other orbs, and favourably configured with the Moon by a sextile or trine aspect. It will be better also if the planet governs the day as well as the hour. For example: suppose you gather herbs governed by the Moon; Monday being assigned to her government, that day is most proper for the purpose, having regard to the hour she rules, which is every Monday at sunrise. The same must be observed of the herbs governed by the other planets. The planetary hours are readily found in the Table subjoined.

The following observations concerning sympathy of cure are taken from a valuable old author:—"Whatever griefs or infirmities are produced by any planet, there are herbs by sympathy as well as antipathy to cure them: therefore observe, that although an herb or plant may by elemental qualities be under the dominion of Mars, as being hot and dry, and so be gathered at his hour, yet, because of his virtues, and being good to cure such infirmities as are under the dominion of Saturn, it may justly and rationally be called a sympathetical cure, because Mars is exalted in Capricorn, the house of Saturn. For instance, agues, especially quartans, are usually produced by Saturn. Now, wormwood, carduus-benedictus, and such like plants, are of known virtues to cure agues which Saturn produceth, and may be properly called a sympathetical cure; and so herbs under the dominion of Sol cure infirmities by sympathy produced by Mars, because the Sun is exalted in Aries, the house of Mars; also herbs under Venus cure by sympathy infirmities under Jupiter, because Venus is exalted in Pisces, the house of Jupiter; and so herbs of Jupiter cure by sympathy such diseases as are under the dominion of the Moon, because Jupiter is exalted in Cancer, which is her house. The benefit which we have from this observation is thus:—If Saturn, Mars, or any other planet, be the afflicting planet, and strong (which argues a compliance), then those herbs which are under the dominion of that planet which is exalted in his house, being good for

curing the infirmity, may be used; and for this reason it shall be called a sympathetical cure, for when planets are strong and afflicting we must comply with them."

The efficacy of herbs in curing some of the most troublesome disorders is well known to country people, and they manage to keep a whole village in health by means of a few simple remedies: for example—let those troubled with sore or inflamed eyes gather marygolds in the day and hour of the Sun, make an ointment therewith, and apply it to the eyes; they will soon derive benefit. The reason of this is, marygolds are ruled by the Sun, and, therefore, cure by sympathy diseases in the organs of the eye. Celendine is also under the dominion of the Sun, and the juice of this herb, with that of field-daisies and ground-ivy, clarified with white sugar, is a valuable remedy to remove inflammation and take away films from the eyes.

The author of the Prophetic Messenger has several times been attacked with *Hæmoptysis*, or spitting of blood, and can speak from experience of the juice of garden sage sweetened with honey being an invaluable remedy in this complaint. The astrological reason for this is, that the chest is ruled by Cancer, and the lungs by Jupiter; sage is governed by Jupiter, and he having his exaltation in Cancer, consequently cures complaints of the chest and lungs by sympathy. Our readers will now see to what an extent astrological doctrines were carried in former days; all remedies for diseases originate from causes, as I have here pointed out, and are simply the operations of nature acting in harmony with the influences of the planetary bodies.

Method of obtaining the Planetary Hour.

THE number of hours elapsing between sunrise and sunset must be multiplied by 60, and the product divided by 12; the number of times that twelve is contained, or the quotient of this division, will show the number of minutes constituting the planetary hour by day; for those of the night it is necessary to apply the same rule to the number of hours elapsing between sunset and sunrise.

The following table will be found useful in determining the order of the planetary hours:—

♄ ♀ ♂ ☉ ♁ ☿ ☽

Observing that the first hour of SUNDAY commences under the dominion of the SUN, the second under that of VENUS, the third MERCURY, and so on, according to the order in the table.

The first hour of MONDAY under the MOON.

The first hour of TUESDAY under MARS.

The first hour of WEDNESDAY under MERCURY.

The first hour of THURSDAY under JUPITER.

The first hour of FRIDAY under VENUS.

The first hour of SATURDAY under SATURN.

Note.—The planetary hours commence at sunrise.

Example.—What planet rules the hour at 11 o'clock in the morning of the 10th January, 1850?

The time elapsed between sunrise, 8 ho. 6 min., and sun-setting, 4 ho. 12 min., on that day is 8 ho. 4 min., which multiplied by 60, gives 484 minutes, and this divided by 12 gives 40 min. 20 sec. for the length of each planetary hour. Being Thursday, Jupiter rules from 8 ho. 6 min. till 8 ho. 46 min. 20 sec., and Mars from that time till 9 ho. 26 min. 40 sec., and then the Sun till 10 ho. 7 min., after which Venus rules till 10 ho. 47 min. 20 sec., so that we find Mercury to rule at 11 o'clock, the hour required.

The Prophecy of Orval,

POINTING OUT ALL THE REMARKABLE EVENTS FROM THE FIRST
FRENCH REVOLUTION DOWN TO THE PRESENT TIME.

THE author was Philip Olivarius, a monk, to whom is attributed the '*Previsions of a Solitary*,' printed in 1544; it bears the name of the '*Prophecy of Orval*,' being handed down to the present time by copies taken from the one in the possession of the monks of Orval:—

“At that time a young man comes from beyond the sea into the country of Celtic Gaul, shows himself strong in counsel. But the mighty, to whom he gives umbrage, will send him to combat in the land of captivity. Victory will bring him back to the former land. The sons of Brutus will be confounded at his approach, for he will overrule them and take the name of Emperor. Many high and powerful kings will be sorely afraid, for the eagle will carry off many sceptres and crowns. Foot and horsemen carrying blood-stained eagles, and numerous as gnats in the air, will run with him throughout Europe, which will be confounded and full of carnage. For he will be so powerful that God will be thought to combat with him.

“The Church of God in great desolation will be somewhat consoled in seeing her temples opened again to her many lost sheep, and God is praised. But all is over, the moons are passed. The old man of Sion cries to God from his grief-stricken heart, and behold! the powerful one is blinded for sins and crimes. He quits the great city with so brilliant an army that none was ever seen to be compared to it; but no warrior will be able to stand before the face of the heavens, and behold! the third part, and again the third part, of his army has perished by the cold of the Almighty. The mighty that have been humbled take courage again, and league together to overthrow the redoubted man. Behold! the ancient blood of centuries accompanies them, and resumes its place and abode in the great city, whilst the man so greatly humbled returns to the country beyond the sea whence he came. Gaul is covered with men and machines of

war ; all is over with the man of the sea. Behold ! again returned the ancient blood of the Cap. God ordains peace, and that his holy name may be blessed. Therefore shall great and flourishing peace reign throughout Celtic Gaul. The white flower is greatly in honour, and the temples of the Lord resound with many holy anticles.

“ At this time a great conspiracy against the white flower stalks about in the dark, through the designs of an accursed band, and the poor old blood of the Cap quits the great city, and the sons of Brutus mightily increase. Woe to Celtic Gaul ! The cock will smother the white flower, and a powerful one will call himself the King of the people. A great commotion will agitate men, for the crown will be placed by the hands of workmen who have combated in the great city. Behold ! the thoughts of the men of Celtic Gaul are in collision, and confusion is in all minds. The King of the people will be seen very weak, many of the wicked will be against him ; but he was not well seated, and behold ! God hurls him down.

“ Gaul, as it were dismembered, is about to reunite ; God loves peace. Come, young Prince, quit the isle of captivity ; listen, join the Lion to the white flower ; come. The ancient blood of centuries will again terminate long contestations, then a sole pastor will be seen in Celtic Gaul. The man made powerful by God will be firmly seated, peace will be established by many wise laws. So prudent and wise will be the offspring of the Cap, that God will be thought with him. Many lost sheep come and drink at the living source. Three kings and princes throw down the mantle of heresy and open their eyes to the faith of the Lord. At that time two-third parts of a great people of the sea will return to the true faith.

“ God is yet blessed during fourteen times six moons, and six times thirteen moons. The measure of God's mercies is exhausted, and yet, for the sake of his elect, he will prolong peace during ten times twelve moons. God alone is great. The good is accomplished, the saints are about to suffer. The man of sin is born of two races. The white flower becomes obscured during ten times six moons and six times twenty moons, then disappears never to reappear more. Much evil and little good in those days ; many cities perish by fire. Israel then returns for good to Christ the Lord. The accursed sects and the faithful are separated into two distinct parts. The third part of Gaul, and again the third part and a half, will be without faith. It will be the same among other nations. And behold thirty-eight moons, and there is a general falling off, and the end of time has begun. After a number not completed of moons, God combats in the persons of his two Just Ones, and the man of sin has the advantage. But all is over ! The mighty God has placed before my understanding a wall of fire, and I can see no longer. May he be blessed evermore ! Amen.”

The Astrolabe, and a Short History of Astrology.

It will probably interest our readers if we give a few extracts from a modern Dictionary of Science, on the subject treated in our annual:—

“**ASTROLABE**.—from two Greek words signifying *to take the stars*. It has an earlier and a later meaning. As used by Ptolemæus, it may stand for any circular instrument used for observations of the stars; but in the sixteenth and seventeenth centuries it signified a projection of the sphere upon a plane, being used in the same sense as the word *Planisphere*. To this small projection, which had a graduated rim, sights were added, for the purpose of taking altitudes; and in this state it was the constant companion and badge of office of the astrologer. In later times, before the invention of Hadley's quadrant, a graduated circular rim with sights attached, called an *Astrolabe*, was used for taking altitudes at sea.

“A collection of circles, such as the *Armillary Sphere*, might, by furnishing each circle with tubes, be made a complete *Astrolabe*. The practical difficulty consists in keeping so many circles exactly in their proper relative positions. The distinction between the *Astrolabe* of the ancients and the circular instruments of the moderns is as follows:—First, the ancients endeavoured to form an *Astrolabe* of two circles, so as to measure both latitude and longitude, or both right ascension and declination by the same instrument; while the moderns, in most cases, measure only one of the two. Secondly, the ancient instruments were made to revolve to find the star, or were furnished with at least one revolving circle, moving round the pole of the equator or ecliptic, according as the declination or latitude was to be measured. The moderns for the most part fix their instruments in the meridian and wait for the star. But the *equatorial*, the *altitude and azimuth circle*, and the *theodolite* are strictly *Astrolabes*, according to the ancient meaning of the term.

“**ASTROLOGY**.—If this word were used in a sense analogous with that of *geology* or *theology*, it would mean simply the *science of the stars*; while *astronomy* might mean the science of their order and arrangement. But the term, at least when coupled with the epithet *judicial*, has long signified the discovery of future events by means of the positions of the heavenly bodies.

“*It has long been unusual to produce any arguments against this pretended science*; but it may be useful to show some of its details. Works seriously professing to inculcate and defend the principles of astrology are not only sold, but bought with avidity. Several of our most popular almanacks do actually give astrological predictions at the present time. This, however, may be a mere matter of amusement with the more enlightened.

“Our old English writers, particularly the dramatists, cannot be well understood without some information upon the leading terms and principles of this art; which, therefore, may be as

lawfully studied as the history of Jupiter and the Metamorphoses of Ovid.

“The science which, under the name of Astrology or some term of equivalent meaning, found universal belief amongst all nations of antiquity except the Greeks,* and also prevailed through the whole world of the middle ages, is based upon the supposition that the heavenly bodies are the instruments by which the Creator regulates the course of events in the world, giving them different powers according to their different positions. This is the description of the more learned astrologers; for we need hardly say, that the ignorant have made the stars themselves the agents, just as the image of the Deity has generally come in time to be regarded by the vulgar as the Deity himself. Looking at the more credible description, it might be philosophical for a newly created being, in possession of rational powers, to suspend his opinion on such a point till he had observed facts enough to affirm or deny the connexion asserted to exist between the places of the planets and his own fortunes. That there is nothing repugnant to human nature in the basis of Astrology is sufficiently proved by the number of great minds which have been led by it, when properly prepared by education.

“The history of judicial astrology, at least up to the middle of the fifteenth century, is very nearly that of astronomy, since the latter branch of the science, except among the Greeks, was mostly cultivated for the sake of the former. Hence to it, as to alchemy, we owe many useful discoveries. There is no question that the necessity which the astrologers lay under of being ready, at any moment, to lay down the positions of the heavenly bodies, produced great numbers of useful tables and observations, and the Greek works which have been preserved by the Arabs were valued principally for the use to which their mathematics could be turned in astrology. The history of the science is beyond the reach of history, nor is it much worth while to collect all that is known on this point. It certainly came into Europe from the East, where it is mentioned in the earliest records of every nation. The Chinese are said to have placed it on the same footing with agriculture and medicine; the Chaldæans cultivated it sedulously, and the invention is attributed to them by Suidas. The Hindoos have long regulated the most important actions of their lives by the stars, but Mr. Colebrooke has shown that several of their fundamental terms are not Sanscrit, from which he apparently leaves us to conclude that he *thinks* the science neither ancient nor indigenous in India. Among the Egyptians it was of great antiquity; but it is not mentioned in the books of Moses, unless included in magic or sorcery, which is most probable. The

* We must here remind the author of Anaximander, the friend and disciple of Thales; also of Anaxagoras, the preceptor to Socrates, Euripides, and Pericles, who devoted his whole life to the study of astrology: to these we will add amongst the Greeks, Pythagoras, Plato, Porphyry, Aristotle, Hippocrates, and hundreds of other learned men.—R.

books of Isaiah and Jeremiah allude directly to it in several places, as also that of Daniel. During the captivity the Jews appear to have learnt the art, and from that time probably, but certainly in the earlier centuries of the Christian æra, became much addicted to it.

“ In Greece, at least during the classical ages, judicial astrology found no reception ; nor do we trace any marks of it even in the earlier astronomical writers of that country. The system was little in harmony with the allegorical mythology which prevailed there ; and the oracles afforded perhaps sufficient nourishment to the appetite for the marvellous. But among the Romans astrology was cultivated with avidity from the time of the conquest of Egypt, in spite of several edicts of the senate. In the second century, the whole world was astrological ; and even Ptolemæus was infected. There is a work entitled ‘ Tetrabiblos ’ attributed to him, which is entirely devoted to astrology ; and though its genuineness has been doubted by some, merely because it is astrological, there appears no sufficient reason to reject it.

“ All the followers of Mohammed are and have been astrologers. The predestinarian doctrines of their system render the transition easy and natural ; for, as we have seen, the science of astrology is based upon the notion of the necessity of human actions. The establishment of the Moors in Spain, and the Crusades, caused the introduction or the increased cultivation of the art among the descendants of the barbarians who destroyed the Roman empire ; probably the former, for we have no distinct traces either of astronomy or astrology among the Northern nations. But the predestinarian principle assumed a modified form, more consistent with the belief of the Roman Catholic Church. It was said that the stars only incline, but cannot compel ; which position, while it left the will free, was a convenient explanation of any failure in the predictions. The Greek and Roman Christians of the earlier centuries had in many instances received the whole of astrology ; in others, the modified belief above mentioned. Origen, though he recognises the stars as rational beings, yet, in his ‘ Philocalia,’ contends that the stars neither incline nor compel, but only prophesy or point out what men will do, without exerting any influence. He then gives a long and curious argument against their compelling power, without explaining how it does not hold equally against their predicting faculty.* St. Augustine argues against astrology altogether. The church, in its public capacity, condemned the art in the first councils of Braga and Toledo, and in the Decretals. The doctrine of astrology was among the errors imputed to the Priscillianists. But many Roman Catholics in later times adopted the same opinions, and among them churchmen of the highest rank, such as the Cardinal d’Ailly (died in 1425), who calculated the horoscope of Jesus Christ. The astrology of

* We can tell the Editor why Origen did not do so ;—because he had proved by experience that events are indicated by the planetary orbs.—R.

comets, which is hardly yet out of date, has even been recognised by a Pope; in the fifteenth century Calixtus III. directed prayers and anathemas against a comet which had either assisted in or predicted the success of the Turks against the Christians."

Space will not allow us to make further comments on these extracts: we shall leave them as they are, feeling assured that they will have a tendency to produce inquiry and examination, and this is all we desire.—R.

Periods of the Year 1850 when the Planets will be in the most favourable positions for Observation.

NEPTUNE.

This planet is not discernible without the aid of a powerful telescope; it may be seen during the fall of the year after sunset, between the eastern horizon and meridian. The influence of Neptune in an astrological point of view, remains for future generations to discover.

URANUS, OR "HERSCHEL."

This orb will be in opposition to the Sun on the 22nd of October, and will therefore then be on the meridian at midnight, consequently in the best place for observation. Towards the end of August and beginning of September Uranus may be seen just ascending above the eastern horizon at nine o'clock at night; and in the middle of November he may be observed about halfway between those points at 6 hours P.M. The influence of Uranus is evil, and his place in a nativity unfortunate; his effects are of a most unaccountable nature; if afflicting the signifiers of marriage, he denotes everything *but happiness, order, or sociality* in domestic concerns; he has a peculiar tendency to cause discord, family quarrels, &c. His position and configurations should be well considered in every figure of the heavens.

SATURN

Will be in opposition to the Sun on the 11th of October, and being then on the meridian at midnight, will be in the best position for observation; this planet may be seen at the same periods as mentioned for observing Uranus, as he rises a little before that orb during the year 1850. Saturn is the most malefic planet in the solar system, and to him as a secondary cause we owe great part of our misfortunes and troubles; his position in the ascendant or midheaven afflicts the native through life, *unless there should be found powerful rays of the benific planets* to mitigate his influence. His conjunction, quartile, or opposition to the luminaries is equally unfortunate; particular attention should be paid to his position in every horoscope; for should he afflict the hyleg, or giver of life, *a weak constitution, delicate health,* and

continual sickness must be the result; or should he cast malign rays to the significators of wealth, the griping hand of poverty will seize on the individual in whose nativity such testimonies occur.

JUPITER.

This beautiful planet will be in opposition to the Sun on the 8th of March, when at midnight he will be on the meridian, and as there will be a New Moon on the 13th, this will be the most favourable period for observing him. In January he will rise late in the evening, and in February he may be seen approaching the western horizon a little before sunrise; during June, July, and August he is observed between that point and the meridian after sunset. The influence of Jupiter is benefic; he is the author, next under Divine Providence, of every earthly good, and "every perfect gift;" he is quite opposite in nature to Saturn, and when placed in positions or configured favourably with the luminaries, he denotes a *sound constitution, health, happiness, and prosperity*. He is the author of justice and benevolence.

MARS

Will pass the meridian in January between nine and ten o'clock at night, and will then be in a good position for observation; during February and the four following months he may be seen between the meridian and western horizon after sunset. The nature of this planet is most violent and evil; he is capable of causing perhaps greater mischief than even Saturn, but with this difference, his effects are not so lasting as Saturn's. The influence of these two orbs have been very properly compared, the one to a burning fever, and the other to consumption. Mars is the author of violence and cruelty; he denotes the most ungovernable passions, and on examination will be found to afflict the mental rulers in the horoscopes of all those unfortunate beings who have appeared before the world as murderers and criminals of the worst dye.

VENUS.

In September, October, and November this planet may be observed in the western horizon after sunset, she being then an evening star. Her astrological signification is benefic; she has great influence over all elegant pursuits; from her fortunate position and aspects emanate the poet, musician, and artist; the finer and softer feelings of the human mind are engendered by her propitious rays: the author of 'Guy Mannering' in speaking of Venus says:—

*'Tis Jupiter brings whatso'er is great,
And Venus who brings every thing that's fair.*

MERCURY

Being generally so near to the Sun renders him but seldom visible to the inhabitants of the earth. About the 7th of March he rises nearly an hour before Sol, when he may be seen ascending above the eastern horizon; also in November he may be

observed in the east a little before sunrise. This planet, although small in size, has very important functions allotted to him; he governs the intellectual faculties of man; he is very powerful in the sign Gemini, and when so placed, and in an angle favourably configured with the ascendant Moon and benefics, he produces the most exalted specimens of intellect: on the contrary, *imbecility of mind* is denoted by his being *weak and unfavourably configured* with the malific orbs.

A Brief Account of the Reformation of the Calendar.

FROM the founding of the city of Rome to the 708th year of that era, the Roman year consisted of 354 days, and was thus calculated:—The Moon was considered to perform her revolution round the earth in $29\frac{1}{2}$ days, and 12 lunations were performed in one year: hence $29\frac{1}{2} \times 12 = 354$.

In the year of Rome 708, about 45 years before the birth of Christ, Julius Cæsar, observing with others that the calendar then in use throughout the empire was incorrect, and considering that the seasons were regulated by the course of the Sun, and that the proper length of the year should correspond with his motion, ordered the year to be reformed in the following manner:—As the annual revolution of the Sun was found to be 365 days and about 6 hours, Julius Cæsar made the year to consist of 365 days, for three successive years, the 6 hours being omitted in each year, which hours in 4 years made 24 hours or 1 day; this day was added to every fourth year, making it thereby 366 days, which fourth year was called a bissextile or leap year, the 24th of February being reckoned twice over every fourth year to account for the day. But it was computed that in the course of 708 years 90 days had been lost by the erroneous method of computation then in use; these were accounted for by adding them to the number of days of which the year then consisted, that is $354 + 90 = 444$ days; so the first Julian year was made to consist of 444 days. After this, the beginning of the year was fixed to the 1st of January, and thus the first Reformation was accomplished. The Julian account, however, though far superior to any which preceded it, was still imperfect; for as the Sun really performs his annual revolution in 365 days 5 hours 48 minutes and 49 seconds, the civil year, or that reckoned by the State, namely, 365 days 6 hours, must exceed the solar year by 11 minutes and 11 seconds. This difference in about 130 years amounted to a whole day, and consequently in that portion of time the true equinox preceded the civil one by one day.

Now as the Council of Nice, which was held in the year A.D. 325, had fixed the vernal equinox to the 21st March, it was found that from that time to the year 1582, when the next Re-

formation took place, the error had accumulated to nearly 10 days, consequently the vernal equinox, that is, the time when the Sun enters the sign Aries, was now found to happen on the 11th day of March instead of the 21st, as it ought to have done had the Julian account accorded with the course of the Sun. This increasing error in the computation of time having been noticed in most European countries, in the month of March, 1582, a plan for the further reformation of the calendar was submitted to Pope Gregory XIII. by Aloisius Lilius, a celebrated astronomer, which being generally approved, the ancient calendar was entirely abrogated, and a new one called the GREGORIAN account, or new style, on the following principle, was substituted in its place:—

In order to make the length of the year agree more correctly with the course of the Sun, it was determined that the ten days which had been gained by the old or Julian account, should be taken from the month of October of the year then current, and the equinox brought back to the 21st March, as it had been by the Council of Nice; and to prevent a recurrence of the annual error of 11 minutes 11 seconds, which is the difference between the civil and the true solar year, as before observed, it was ordered that instead of making every hundredth year a bissextile, as according to the former method (that is, the Julian method) it should be, every four hundredth year *only* should be considered as a bissextile, and the rest of the centenaries or hundredth years should be considered as common years. For as the error of 11 minutes and 11 seconds in one year, amounts to 1 day in 130 years, and to 3 days in 400 years, it is manifest that the Julian account must in 400 years be 3 days too much for the course of the Sun, or, in other words, the true equinox must precede the civil one by 3 days; therefore, to correct the error, or excess, it was agreed that three successive centenaries, that is, three successive hundredth years, should each be common years and not bissextiles: by this method the civil account was lessened 3 days, and consequently the error or excess before mentioned was corrected.

Had the solar year really consisted of 365 days and 6 hours, there would have been no necessity for using any other correction than that of adding one day to every four years, making thereby the fourth year to consist of 366 days, called bissextile; but as the solar year is not exactly 365 days and 6 hours, but only 365 days, 5 hours, 48 minutes, and 49 seconds, the annual difference of 11 minutes and 11 seconds, which amounts to 3 days in 400 years, as already observed, must be applied as a second correction, which is done by omitting to make each of three successive hundredth years, which would otherwise be *leap years*, a bissextile, or, which is the same, by making every four hundredth year a bissextile, and thus the proper corrections are made, by which the civil account is made to correspond with the course of the Sun.

This reformation of the calendar was not at this time, however, adopted in the British dominions; but in 1752 an Act of

Parliament was obtained for the purpose of introducing it. But as a hundred and seventy years had elapsed since the Gregorian alteration took place, the old or Julian style had consequently gained above a day more upon the course of the Sun; it was, therefore, enacted that instead of cancelling ten days, as had been done by Pope Gregory, eleven days should be left out of the month of September: accordingly, on the second day of September, 1752, the old or Julian style ceased in Britain, and the next day, which would have been the 3rd September, was called the 14th, thus the eleven days which had been gained by the old or Julian method of computation, were accounted for, and the vernal equinox brought to correspond with the course of the Sun.

From the foregoing explanation it will be perceived, that to find the day of the New Style corresponding to a given day of Old Style, the following rule obtains agreeably to the British reformation:—To the given day of Old Style, add twelve; the result will be the day required.* And to find the day of the Old Style corresponding to a given day of the New Style the rule is thus:—From the given day of the New Style subtract twelve, the result will be the day required.

It is to be observed that the Council of Nice ordered that Easter day should be celebrated upon the first Sunday after the first full Moon next following the vernal equinox, that is, the time when the Sun enters the sign Aries, or the Ram.

The British legislature certainly manifested some bigotry in its refusal to adopt the calendar as reformed by Pope Gregory, which was generally approved and used by most of the European states. That the calendar required a reformation was acknowledged by all; but because it originated in the Papal dominion, and was sanctioned and recommended by the Pope, it was rejected by the British legislature when proposed to them, although confessing the ingenuity and utility of the plan.

In the year 1752, however, the British legislature finding it had no better method of reforming the Calendar than that proposed by the Pope, and being fully sensible of the necessity of a reformation, resolved that the Calendar should be reformed in the same manner as that proposed by Pope Gregory, only that instead of 10 days, as in the Papal Calendar, 11 days should be left out, because it was computed that in the course of 170 years, which is the difference between the year of the Gregorian Reformation and the year 1752, one day more had been gained, which added to 10, the number gained by the Gregorian computation, made 11, and accordingly in September, 1752, the Reformation of the Calendar took place in England.

* From September, 1752, when the British Reformation of the Calendar took place, to the end of the year 1799, eleven days are to be used; from 1800 to 1899 inclusive, twelve days are to be used; from 1900 to 1999 inclusive, thirteen days are to be used, and so on, adding a day for every successive century, excepting the four hundredth century.—Rule for determining universally the number of days difference betwixt new and old style:

From the hundreds of Christ take their fourth, adding two;
And the days will remain betwixt old style and new.

The Manner in which the Ancients depicted their Gods.

It is our intention to give a full account in the Prophetic Messengers of the various methods used by the ancients in depicting their idols, according to the customs of the several nations wherein they were adored and worshipped; being selected from the most ancient and best approved authors extant.

SATURN.

The ancient Romans figured Saturn like an old man, with a scythe or hook in his hand, by some signifying Time, as his name Chronos also intimates. They also represented him in the form of a very aged man, as one who began with the beginning of the world, and holding in his hand a child, which by piecemeal he seems greedily to devour.

By this is signified the revenge he took for being expelled from Heaven by his own children, of whom four only escaped his fury, namely, *Jupiter*, *Juno*, *Pluto*, and *Neptune*; and by them is shadowed forth the four elements, *Fire*, *Air*, *Earth*, and *Water*, which are not perishable by the all-destructive sickle of devouring Time.

MARTIANUS CAPELLA depicts him as an old man, holding in his right hand a serpent, with the end of its tail in its mouth, turning round with a very slow pace, his temples girt with a green wreath, and the hair of his head and beard milk-white. The wreath on his head shows the spring time; his snowy hair and beard, the approach of churlish winter; the slowness of the serpent's motion, the sluggish revolution of that planet.

MACROBIUS describes him with three heads, those of a Lion, a Dog, and a Wolf. By the lion's head is signified the time present, (which is always strongest, for that which *is*, must needs be more powerful than that which *is not*;) by the dog's head, the *time to come*, (which always fawns on us, and by whose alluring delights we are drawn on to vain and uncertain hopes;) and by the wolf's head, *time past* (which greedily devoureth whatsoever it finds, leaving no trace thereof behind). Macrobius likewise says, that his feet are tied together with threads of wool; by which is shown that *God does nothing in haste*, nor immediately castigates the iniquities of man, but proceeds slowly and unwillingly, thereby granting him time and leisure to amend.

EUSEBIUS says that Astarte (the daughter of Cœlum, wife and sister of Saturn) did place also upon his head two wings: demonstrating by the one, the excellence and perfection of the mind; by the other, the force of sense and understanding. The Platonics understand by Saturn, the mind, and its inward contemplation of things celestial, and therefore called the time in which he lived *the Golden Age*, it being replete with quietness, concord, and true content.

JUPITER.

ORPHEUS describes Jupiter with golden locks, having on his temples, peeping forth, two golden horns, his eyes shining, his breast large and fair, having on his shoulders wings. By the golden locks is signified the firmament, and its glorious host of translucent stars: by his two horns, the east and west; by his eyes, the sun and moon; by his breast, the spacious ambulation of the air; and by his wings, the fury of the winds.

PORPHYRIUS and SUIDAS depicture the image of Jupiter sitting upon a firm and immoveable seat, the upper parts naked and unclothed, the lower parts covered and invested; in his left hand a sceptre; in his right hand a great eagle, joined with the figure of Victoria. This image was erected on the Piræus, a stately and magnificent gate of Athens; by the seat is shown the permanence of God's power; the naked parts show that the compassion of the divinity is always manifest to those of an understanding spirit; the lower parts, covered, show that while we wallow in the mire of this world, or as it were rocked asleep by the blandishments thereof, that the divine knowledge is hidden and obscured from us. By the sceptre is signified his rule over all things; by the eagle and Victoria, how the universe stands in vassalage and subjection to the all-commanding power.

MARTIANUS depicts him with a régál crown, adorned with most precious and glittering stones; over his shoulders, a thin veil (made by Pallas' own hands) entirely white, in which is inserted divers small pieces of glass, representing the most resplendent stars; in his right hand he holdeth two balls, the one all of gold, the other, half of gold and half of silver; in the other hand an ivory harp with nine strings: he is sitting on a foot-cloth, wrought with strange works and peacock's feathers; near his side lieth a tridental gold embossed mass.

PLUTARCH says that in Crete he had wholly human shape and proportion, *but without ears*. By this was signified, that superiors and judges ought not to be carried away by prejudice or persuasion, but should stand firm, stedfast, and upright towards all without partiality. The Lacedæmonians represented him with *four ears*. By this they signify that God heareth and understandeth all things; and that princes and judges should listen to all informations, before they deliver definite sentence or judgment.

PAUSANIAS says that in the temple of Minerva (among the Argives) the statue of Jupiter was made with three eyes; two of them in their right places; the other in the centre of his forehead. By which is signified his three kingdoms, HEAVEN, EARTH, and OCEAN.

With the Eleans (a people of Greece) the statue of Jove was composed of gold and ivory, empaled with a coronet of olive leaves; in his right hand the image of Victoria; in his left a sceptre, on the top of which was mounted the portraiture of an eagle upon a seat of gold, enchased with the forms of many unknown birds and fishes, upheld and supported by four images of Victoria.

In Caria (a province of Lesser Asia) the statue of Jupiter was formed holding in one of his hands a poleaxe. The reason for this was (as Plutarch says) that Hercules, when overthrowing Hippolyta, the Amazonian queen, took the poleaxe from her and gave it to Omphale his wife, a Lydian. The Platonists understand by Jupiter THE SOUL OF THE WORLD, and THAT DIVINE SPIRIT through whose almighty power everything receives its being and its preservation.

He is also painted with long curled black hair, in a purple robe trimmed with gold, and sitting on a golden throne, with bright yellow clouds dispersed about him.

(To be continued in the Prophetic Messenger for 1851.)

ASTROLOGY.

NATIVITIES AND HORARY QUESTIONS.

When we survey yon circling orbs on high,
Say, do they only grace the spangled sky?
Have they no influence, no functions given
To execute the awful will of heaven?

The numerous applications that Raphael is constantly receiving from persons residing in all parts of Great Britain, also throughout Europe and America, convince him of the advantages correspondents derive from his labours. Individuals desirous of having their nativities accurately calculated, are requested to be particular in stating the exact time of birth, also the town wherein born, and the sex of the party.

Letters and communications intended for Raphael to be addressed strictly as below: those requiring a Nativity to enclose a Post-Office Order for 1*l.*, for a question 5*s.* Orders to be made payable at the General Post-Office, London. The most inviolable confidence observed on all occasions.

Edwin Raphael,
No. 17, Warwick Square,
City, London.

Raphael's Thirtieth Yearly Address.

COURTEOUS READER,

I HAVE NOW brought my annual labours to a close; I have gone with thee through the various seasons of the year; and the earth has once more travelled round its regular course, and brought us one year nearer to that period when the hyleg meets the anaretic star, and the thread on which hangs our mortal existence is divided: until that period arrives it becomes us to endeavour to make our paths as smooth as possible; the contemplation of the heavenly orbs is calculated to produce this effect, and the astrologer invites thee to partake of that pleasure; and may the benefic planets assist thee in this and in every other laudable pursuit. With this and all good wishes I bid thee farewell!

RAPHAEL,
The Astrologer of the Nineteenth Century.

Life of Henry Cornelius Agrippa.

HENRY CORNELIUS AGRIPPA, a learned philosopher and astrologer, was born at Cologne on the 14th of September, 1486, and descended from a noble and ancient family of Neltenheim, in Belgia. Desiring to walk in the steps of his ancestors, who for many generations had been employed by the princes of the House of Austria, he entered early into the service of the Emperor Maximilian. He began life as secretary to the Emperor, but, being equally qualified for wielding the sword and the pen, he afterwards became a soldier, and served seven years in his Italian army. He signalised himself on several occasions; and as a reward for brave actions was created a knight on the field. He wished to add academical to the military honours he had achieved, and therefore commenced the study of law and physic.

He was possessed of a very wonderful genius, and from youth applied himself to learning. By his great natural talents he obtained an extensive knowledge of almost all arts and sciences, and was early engaged in a search after the mysteries of nature. The prodigious compass of his knowledge astonished every one who conversed with him. He carefully studied *every science*, and of course was profound in the Rosycrusian and Alchemical arcana. He was celebrated throughout Europe, most of the courts of which he visited. The history of his life, as recorded by Bayle, is curious and interesting. Sometimes, in all the pride of literature, he was disputing in schools and universities; at other times visiting courts and camps; then in the shops of projecting mechanics, and in the laboratories of hermetic philosophers.

The prejudices of the times in which he lived often brought him into trouble, and he was sometimes cited before the civil tribunal as a sorcerer: his poor dog was even dreaded as an *evil demon*. At other times it is recorded that he practised "magic, necromancy, and similar arts;" although it was probably his surprising skill in judicial astrology that caused these absurd rumours, since we find he was daily consulted by, and cast the horoscopes of, kings, princes, and warriors. He visited England in 1510, and "performed wonders in the astrological art; and in 1529 so great was his reputation as a prophet, that, having cast the nativity of Henry VIII., and predicted many surprising

things (all of which came to pass) to the knights and retinue of the court," the King gave him an invitation to settle here, and offered him a magnificent pension to become the "Astrologer-Royal," which invitation, however, he thought proper to decline, most likely on account of the knowledge obtained, by means of his scientific skill, of Henry's real character. He practised astrology at most of the courts of Europe, and many marvellous legends are on record of his profound knowledge of the stars. He is even said to have predicted the very day and hour of the death of a highly celebrated hero of the time. However, be this as it might, he was the first mathematician of the age. He died in 1535. Some of his works evince admirable skill, and are filled with proofs of his extraordinary genius. The most celebrated of these, in Latin, is his treatise of 'Occult Philosophy,' a rare work, and calculated to hand this author's name down to the latest posterity.

Influence of the Moon over the Vegetable World.

To prove the wonderful occult power which "the empress of the night" possesses over the vegetable creation, proceed as follows:—Take any given quantity of common peas, and divide them into four parts, keeping each part separate. Then, on any spot of ground at all fit for vegetation, when the season approaches, sow the contents of the *first* parcel on the *first* or *second* day of the *new moon*; the *second* parcel sow near the same spot on the *first* or *second* day of the *second quarter*; the *third* sow on the *second* or *third* day before the *full moon*; and, lastly, sow the *fourth* parcel on the *second* or *third* day before the moon is out. The *first* parcel, sown under the *new moon*, will grow very fast, and blossom most beautifully, but will not bear fruit; the *second* will blossom, and bear very little; the *third* parcel will not only blossom beautifully, but bear fruit in abundance; and the *fourth* and last parcel will scarcely rise from the ground. All fruit-trees set at the *new moon* blossom, but never bear fruit, whilst all others, set three days before the full, bear abundantly; and in pruning trees the same effects occur, for trees pruned at the *new moon* will shoot forth branches, but are unbearable, and if pruned at the full they will be prolific.

A Table of Celestial Influences,

FOR THE YEAR 1850.

IN WHICH THE GOOD OR EVIL SIGNIFIED BY THE LUNAR AND MUTUAL ASPECTS OF THE PLANETS IS NOTED FOR EACH DAY.

There's not a pulse beats in the human frame
That is not govern'd by the stars above us;
The blood that fills our veins, in all its ebb
And flow, is sway'd by them as certainly
As are the restless tides of the salt sea
By the resplendent moon; and at thy birth
Thy mother's eye gazed not more stedfastly
On thee, than did the star that rules thy fate,
Showering upon thy head an influence
Malignant or benign.

Days	JANUARY.	Days		Days	
		15	Fortunate for surgical operations and for military men.	30	Evil for military men and surgeons.
1	A fortunate day for courtship and marriage; also for the operations of surgeons.	16	Void of aspects.	31	Affairs commenced this day may promise well, but the opposition of Saturn threatens an evil termination.
2	Seek favours from those in power and authority.	17	Sue the fair for favours; engage in elegant pursuits.		FEBRUARY.
3	Avoid litigations and lawsuits; speculations in money matters may succeed.	18	The influences of this day are evil.	1	Seek favours from surgeons, military men, and persons in office.
4	Deal not with the aged: avoid contracting for houses and lands; and be careful of making overtures to females.	19	Commence nothing of importance.	2	Success crowns the efforts of literary men; fortunate for business with lawyers.
5	Expect no favours from the great.	20	Evil for courtship and marriage: affairs commenced this day terminate with unexpected disappointments.	3	Avoid wedlock, and expect no favours from the fair.
6	Deceit lurks in the influences of this day.	21	Apply not to persons in office for favours.	4	The influences are conflicting, and not to be depended on.
7	Success attends applications to persons in office.	22	Marriages effected this day prove successful in money matters, but not so for domestic happiness.	5	Deal with the aged; fortunate for speculating in mines and landed property.
8	Fortunate for business and money transactions.	23	Deal with the aged; speculate in houses or lands; agricultural pursuits prosper.	6	The aspects are dubious; defer matters of importance.
9	Literary men prosper; favourable for agricultural pursuits.	24	The aspects of this day are evil; avoid contentions and quarrels.	7	Evil for money transactions; literary pursuits prosper, and dealings with lawyers.
10	Evil for military men and surgeons; avoid speculating in money affairs.	25	Make no bargains, and part with thy money cautiously; favourable for literary pursuits.	8	Unfortunate for all but military men, who may seek promotion.
11	Evil and unfortunate.	26	This will be a favourable day for those born about the middle of September.	9	Favourable for business and money matters; also for pleasure and amusement.
12	Marry or woo; but expect no favours from the great.	27	A mixture of good and evil aspects.	10	Fortunate.
13	Apply for favours from high and noble personages.	28	A day not to be depended on.	11	Favourable for most undertakings, especially so for literary men.
14	Deal in lands or houses, but avoid literary pursuits.	29	Literary characters should shun this day as ominous.		

A Table of Celestial Influences.

Days	Days	Days
12 The aspects are of little moment.	6 Avoid contentions, and part not with thy money.	27 Unfortunate for military men and surgeons.
13 No lunar aspects.	7 Ominous. Be careful in thy dealings.	28 Evil for courtship and marriage; deal not with usurers.
14 Avoid speculations; misfortunes attend affairs commenced this day.	8 Fortunate for wooing and wedding; but seek not preferment.	29 Unexpected difficulties thwart affairs commenced this day.
15 Choose not this day for engaging in matters of importance, misfortune will attend them.	9 Disappointments attend affairs commenced this day.	30 To surgeons, military men, and bankers, the aspects prove propitious.
16 Travel, sign deeds, or employ lawyers; favourable for commencing business and for trade in general.	10 A day of little note.	31 Rest quiet and contented.
17 Strange events attend those who this day make love or marry.	11 Sign deeds, make contracts, and pursue all matters connected with writings.	—
18 Avoid travelling; evil for commercial men.	12 Successful for military men and surgeons.	APRIL.
19 A mixture of good and evil aspects; a day not to be trusted.	13 To be avoided by speculators in money matters.	1 Hire or purchase lands and houses.
20 Fortunate for business, employing lawyers, and for dealing in lands, houses, and mines.	14 To the fair the aspects denote treachery and deceit.	2 A.M. avoid speculations; P.M. favourable for courtship.
21 The aspects of this day are conflicting; defer matters of importance.	15 Shun usurers, and engage not in matters of importance.	3 Engage no servants, nor employ lawyers.
22 Evil and unfortunate for most undertakings.	16 Fortunate for travelling, also for trading in general.	4 Evil for most undertakings.
23 Those born about the 13th of September meet with pecuniary success.	17 To the fair the aspects are ominous, and Raphael warns them against treachery and deceit.	5 Unfortunate for marriage and courtship.
24 Do not travel.	18 Pursue honourable dealings, and success will crown thy efforts.	6 Engage with servants, clerks, and employ lawyers.
25 The aspects are moderately fortunate.	19 Sign no papers of importance; marry; deal with the aged.	7 Those born the beginning of July must guard against inflammation of the chest.
26 Evil for courtship and marriage.	20 An ill day to speculate in money matters.	8 Favourable for pleasure-parties and for ornamental pursuits
27 Good for money transactions, but avoid contentions.	21 Engage in no matters of importance.	9 Conflicting influences rule this day.
28 The opposition of Saturn clouds the events of this day; speculators, beware!	22 In the morning the aspects are favourable, in the afternoon deceptive.	10 Literary pursuits prove unsuccessful.
—	23 Pursue thy business with spirit and confidence.	11 Decidedly unfortunate; be cautious in transacting business.
MARCH.	24 Those born near the 28th March, 29th June, 1st October, and the 29th December, now begin to suffer many evils, pecuniary difficulties, loss of honour, and ill health.	12 To travellers the aspects are promising.
1 Fortunate for travelling and literary undertakings, also for engaging with clerks and servants.	25 Evil for most undertakings.	13 Fortunate for courtship, marriage, pleasure parties, and fancy employments.
2 The aspects are of little import.	26 Literary men and those employed with the pen must not expect any great reward for the labours of this day.	14 Favourable.
3 Promising for marriage.		15 Void of lunar aspects.
4 No lunar or mutual aspects.		16 Money transactions prove unsuccessful.
5 Neither woo nor wed, but deal with aged people and speculate in agricultural affairs.		17 Apply for favours to those in office.
		18 However promising affairs may seem, rest assured thou wilt not succeed in matters of importance.
		19 The omens are evil.
		20 Be cautious of making overtures to ladies.
		21 The aspects are favourable and promising.

A Table of Celestial Influences.

Days		Days		Days		
12	Take advantage of this day, and pursue thy business cheerfully.	20	Unfortunate for musicians, artists, and literary men.	16	The aspects are of a conflicting nature.	
23	Void of aspects.	21	Apply for favours to those in office.	17	Void of aspects.	
24	Evil.	22	A.M. defer thy business; P.M. take pleasure, and engage in literary and elegant pursuits.	18	Evil; defer thy business until a more favourable day.	
25	Avoid domestic contentions.	23	Evil.	19	Evil for courtship and marriage.	
26	Expect no favours from the great.	24	Favourable for business in general.	20	Select this day for improving thy pecuniary circumstances.	
27	Unfortunate for courtship, but the reverse for money transactions.	25	Expect no favours.	21	A day of conflicting testimonies.	
28	Void of aspects.	26	The proprietors of theatres and places of amusement should shun this day as ominous.	22	Ladies! beware of new faces and the promises of lovers.	
22	Deal with aged people, but avoid speculation.	27	No lunar aspects.	23	The aspects are of a mixed nature.	
30	The aspects are of small import.	28	A day of doubtful issues.	24	Seek not promotion from the great.	
MAY.			29	Fortunate for military men.	25	Settle accounts with bankers, and speculate in money affairs.
1	The aspects are conflicting; success cannot be depended on.	30	Avoid travelling; and beware of contentions.	26	Expect no success in affairs commenced this day.	
2	Evil and contentious: take no journeys.	JUNE.			27	Evil for courtship, marriage, and pleasure parties.
3	To travellers, merchants, and literary men, the aspects are favourable.	1	Engage servants, employ lawyers, sign deeds, and hire or purchase houses and lands.	28	Rent or purchase farms, lands, and houses.	
4	Defer matters of importance.	2	Fortunate for courtship and marriage.	29	Violence is prevalent on this day; avoid quarrelling.	
5	Overtures to the fair prove unsuccessful.	3	Travellers and merchants should defer business.	30	Evil.	
6	The aspects are unfortunate for trade in general.	4	Void of aspects.	JULY.		
7	Military men may seek promotion; surgeons will be successful.	5	Favourable for military men and surgeons; but evil for matrimony.	1	Those born about the 20th of April meet with domestic losses and afflictions.	
8	To artists the aspects are promising.	6	Strange interruptions affect the transactions of to-day.	2	Expect no favours from persons in high life; favourable for pleasure parties.	
9	Gloomy forebodings preponderate.	7	Deal with bankers and clergymen; avoid contention.	3	Fortunate for engaging with servants; evil for most other affairs.	
10	Noted for contentions, robberies, violence.	8	Void of aspects.	4	Favourable for surgeons, military men, and those employed with metals.	
11	Apply for favours; deal with bankers; speculate in money matters.	10	Choose this day for engaging in business of all kinds.	5	Applications should be made to persons in high life; evil for wedlock.	
12	Favourable.	11	No lunar or mutual aspects.	6	Avoid travelling and contentions.	
13	Marry or woo; light and fancy pursuits prosper.	12	A.M. the omens are propitious for money affairs and marriage; P.M. evil for most matters.	7	Overtures to the fair prove successful.	
14	Of small import.	13	Not to be depended on.	8	Hire servants, employ lawyers, and travel.	
15	The aspects are dubious; success cannot be depended on.	14	To the fair the aspects are ominous: those employed with the pen are successful.	9	The aspects are conflicting.	
16	Quarrels prevail; avoid risks.	15	A day to be selected for antiquarian research.	10	Apply for favours in high life.	
17	Fortunate for courtship, marriage, pleasure parties, and elegant pursuits.					
18	A.M. lawyers and literary men succeed; P.M. seek no favours.					
19	The aspects are favourable for clergymen.					

A Table of Celestial Influences.

Days		Days		Days		
11	Hire farms, lands, and houses; marry and engage in pleasure parties.	7	Favourable for hiring farms, lands, and houses.		ship, marriage, and affairs in general.	
12	Avoid travelling, and run no risks.	8	Deal with elderly persons; literary undertakings prosper.	3	Speculations in trade succeed.	
13	A fortunate day for engaging in most affairs.	9	Void of aspects.	4	Hire or purchase houses and farms.	
14	Engage in no controversy.	10	Important to persons born about the third week in September.	5	Engage in pleasure parties, and attend places of amusement.	
15	Void of lunar aspects.	11	Void of lunar aspects.	6	Avoid contentions; public writers should be circumspect.	
16	Decidedly evil and unfortunate; the fair must remember that deceit lurks in the aspects of this day.	12	Evil for affairs in general.	7	Pursue thy business with cheerfulness, and thy exertions will meet with success.	
17	Fortunate for mathematical and scientific pursuits; propitious for travellers.	13	A day of small import.	9	A strange day for marriage; females have to contend with unexpected difficulties.	
18	Engage in matters of importance.	14	Propitious for railway speculations.	10	Slightly favourable.	
19	Ladies! beware of the flattering tongues of lovers.	15	Fortunate for wooing and wedding; also for pleasure parties.	11	Fortunate.	
20	Evil for speculations; agricultural pursuits succeed.	16	Engage not with servants, nor employ lawyers: avoid travelling.	12	To scientific men the influences are propitious.	
21	A strange day for marriage.	17	The aspects are dubious: avoid risks.	13	Success not to be depended on.	
22	Surgeons succeed.	18	Press not thy suit to the fair.	14	Fortunate, except for money-matters.	
23	Defer matters of importance.	19	Affairs commenced to-day terminate in disappointment.	15	A day noted for robberies and violence.	
24	Conflicting testimonies rule this day.	20	A favourable day for military men.	16	Sign no deeds; deal not with lawyers; avoid speculations in literary matters.	
25	Deal with the aged, and hire lands or farms.	21	Engage in elegant pursuits; woo or wed.	17	Seek no pleasure; nor expect favour from the fair.	
26	Of little import.	22	Apply not to the great for favours; agricultural pursuits prosper.	18	Fortunate for trade.	
27	The fair must guard against intrigues; a day noted for quarrels of lovers.	23	Void of aspects.	19	Of small import.	
28	This day part with thy money only in acts of charity.	24	Avoid travelling; engage with no servants; and run no risks in trade.	20	Marriages consummated this day prove advantageous.	
29	Write letters to persons in office, and engage in literary pursuits.	25	The configurations are decidedly unfortunate.	21	Evil. Persons born about the 14th of October will meet with misfortunes, accidents, &c.	
30	Evil and unfortunate.	26	Evil for engaging in wedlock.	22	Void of aspects.	
31	Defer matters of importance.	27	Business-affairs prove unsuccessful: shun this day as evil.	23	Violence and acts of cruelty abound.	
—		28	Literary men prove successful.	24	No lunar aspects.	
AUGUST.		29	Deal with bankers, clergymen; and speculate in money-affairs.	25	Evil for courtship and marriage; engage not in pleasure-parties.	
1	Strange events occur in love-affairs to those born about the 9th of September.	30	Persons born near the 14th of October will be involved in unpleasant love-affairs.	26	Highly fortunate; apply for favours from great personages: most undertakings prosper.	
2	Honourable pursuits prosper; speculators succeed.	31	Deal with landlords; and expect favours from the fair.	27	Deal with the aged; speculate in buildings.	
3	Fortunate for literary men.	—			28	Conflicting. Avoid risks.
4	Conflicting aspects this day; ladies! beware of treachery.	SEPTEMBER.			30	Commence no business of importance, and
5	Void of lunar aspects.	1	An evil day.			
6	Strange and conflicting.	2	Unfortunate for court-

Days		Days		Days	
	be cautious of entering into engagements.		for agricultural pursuits.		no success to attend thy pursuits.
	—	30	Favourable for applications to persons of rank.	24	Favourable.
	OCTOBER.	31	Defer thy marriage for a more favourable day.	25	Farming and agricultural pursuits are favoured by the influences of this day.
1	Favourable for entering farms, and purchasing lands and houses.		—	26	The aspects are numerous and conflicting; defer matters of importance.
2	Fortunate for travelling and for trade.		NOVEMBER.	27	Void of aspects.
3	Void of aspects.	1	Select this day to commence affairs of importance; also for speculating in money-matters.	28	Fortunate for trade.
4	Woo or marry.	2	In the forenoon the aspects are evil, defer thy business till the after part of the day.	29	Inducements may be held out to speculators, but let them avoid the temptations.
5	Choose this day for applying to great men for favours.	4	Be careful of litigation.	30	In the forenoon the aspects are evil; P.M. engage in pleasure-parties.
6	A gloomy day.	5	No lunar aspects.		—
7	Void of aspects.	6	Agricultural pursuits prosper: a fortunate day for most things.		DECEMBER.
8	No lunar aspects.	7	Press thy suit to the fair; favourable for courtship and marriage.	1	No lunar aspects.
9	The celestial influences this day invite thee to pleasure, prosperity, and happiness.	8	Avoid risking thy money in speculative matters.	2	Void of configurations.
10	Travel, engage servants, and deal in lands and houses.	9	The aspects are conflicting; incur no risks.	3	A day of mixed influences; evil for martial men.
11	Rely not on success.	11	Hire farms; engage in trade; seek not favours from the great.	4	Auspicious; pursue thy vocation with diligence.
12	Three quartile aspects cloud the events of to-day; be cautious!	12	Evil for surgeons and military men.	5	The conjunction of Venus favours the suits of lovers.
13	Evil.	13	Engage with servants, and travel.	6	Losses and disappointments attend those who commence business this day.
14	A.M. evil for surgeons and military men. P.M. the aspects are fortunate for elegant pursuits.	14	Seek favours from those in office.	7	The omens are unfavourable.
15	Deal in lands and houses.	15	Propitious; to the fair ominous.	8	A favourable day.
16	Favourable for artists and musicians.	16	Evil; be careful not to speculate in money-matters.	9	A good day for commencing business, travelling, speculating, and all other matters.
17	A bad day to woo or wed.	17	Favourable for courtship and marriage.	10	Seek promotion from those in office; woo or wed.
18	Void of aspects.	18	Those born in the first week of April must be careful of pecuniary losses, sickness, and other evils during this month.	11	An evil day; avoid quarrels.
19	Speculations in business prove unsuccessful; avoid travelling.	19	Sign no deeds, nor transact any business of importance.	12	Engage not in love-affairs; avoid travelling; and hire no servants.
20	The conjunction of Saturn clouds the day.	20	Depend not on the aspects of to-day.	13	Shun this day as ominous.
21	Expect no favours from the great, nor success in thy undertakings.	22	Engage not in courtship or marriage; avoid taking pleasure.	14	The issue of affairs commenced to-day is doubtful, the aspects being numerous and conflicting.
22	Engage not in controversies.	23	Unfavourable; expect	15	Favourable.
23	Void of aspects.			16	No lunar aspects.
24	A propitious day, except for marriage or courtship.			18	For courtship and mar-
25	Favourable.				
26	Conflicting; be careful of putting thy name to paper.				
27	Evil for orators.				
28	The issue of affairs commenced to-day is doubtful.				
29	Fortunate for courtship and marriage, also				

A Table of Celestial Influences.

	riage the aspects are treacherous.		promotion; and surgeons will be successful.	28	Favourable for applying to persons in office.
19	Those born near the 13th of December may be involved in troublesome love-affairs.	24	Fortunate for travelling and for trade.	29	Fortunate.
20	The aspects denote treachery to the fair. An evil day.	25	Do not commence matters of importance. (<i>Christmas-day.</i>)	30	No lunar aspects.
21	Unfavourable.	26	Shun this day as ominous.	31	The aspects are highly fortunate for wedlock; dealing in lands and houses; also for speculating in business.
22	Fortunate for courtship and marriage.	27	Defer matters of importance: the aspects are conflicting.		
23	Military men may seek				

NOTICE TO CORRESPONDENTS.

As a vast number of persons are entirely unacquainted with the nature of *Horary Astrology*, and of its great importance in the application of its principles and inferences to the varied transactions and pursuits of life, Raphael is induced to offer the following explanations to his readers, with the hope that they will be found eminently useful in cases where *Horary questions* are required to be resolved, as to the success or otherwise of all important undertakings.

When the mind is anxious on any subject, a letter should be written to the author, stating a desire to know the result of any matter, when a map of the heavens, erected for the minute the letter is opened, will enable the astrologer (if the querist be really anxious) to give a correct answer, thereby enabling the party to pursue or give up the object. The advantages attending such foreknowledge must be obvious. Correspondents are requested not to ask questions a second time on any particular subject, as in such cases the figure will not be radical, and the first question only will point out the final issue.

Some of the particular uses to which this science may be applied by questions are as follows (and in such cases it is not requisite that the hour of birth or name of the party should be stated):—

To acquire a knowledge of the circumstances or state of health of a distant friend—the most prosperous quarter to reside in—the degree of success that will attend any undertaking.

To ascertain the real nature of the disease and probable recovery of a sick person—inquiries whether property lost will be recovered—the result of speculations in the funds, shares in companies, &c.; whether to purchase or sell at given periods—if debts will be paid—pecuniary transactions of every description—the purchase or hiring houses or lands, &c.

Inquiries respecting law-suits, marriage, setting up in business, journeys, and removals; also as to gaining any office, appointment, or employment, the fittest trade or occupation for an individual to pursue; whether orders given to tradesmen be safe—the state and condition of a ship at sea, and whether her voyage will be safe and profitable. In fact there are no transactions in life which may not most certainly be determined, when the party inquiring be anxiously and sincerely desirous of information.

FULFILMENT OF PREDICTIONS

IN THE

PROPHETIC MESSENGER,

During the last Twelve Months.

Ye Stars! which are the poetry of Heaven,
 If in your bright leaves we would read the fate
 Of men and empires,—'t is to be forgiven
 That in our aspirations to be great,
 Our destinies o'erleap this mortal state,
 And claim a kindred with you; for ye are
 A beauty and a mystery, and create
 In us such love and reverence from afar,
 That fortune, fame, power, life, have nam'd themselves a star.

“*Multæ terricolis linguæ—coelestibus una.*”

PREDICTIONS.

FULFILMENTS.

OCTOBER, 1848.

The very recent oppositions of Venus and Mercury to Herschel, from Aries and Libra, are not without special significance; the former from all time recognised as the presiding star over Eastern destinies, thus afflicted in her domal dignities, impresses the mind with presages of impending strife in those far distant countries. * * *

The opposition of Mars and the Sun to Herschel, on the 11th and 13th, is likely to be the period of military engagements both there and in other parts of the great Indian continent.

Planetary aspects from cardinal signs, such as have lately occurred, are always indicative of great events in the political world, and which, though not in themselves of a fixed nature, are generally the forerunners of permanent changes. Austria will feel uneasy, and her sway over so many tongues and people share the fate of decaying greatness. Ere long there will be movements among the Slavonic tribes towards her Turkish frontier; and in speaking of that ancient and widely-spread people, I do not hesitate to predict that the conjunction, some very few years hence, of Herschel and Saturn in Taurus, will originate an astounding union among them, followed by their regeneration as a distinct nation.

* * * It will also be remarkable for some further cases, or trials, for the crime of poisoning.

The native intelligence from the scene of insurrection (Mooltan) states that the Indian inhabitants, having heard of the approach of the British troops, were quitting the place, and that the Dewan in consequence had built up the gates. An outbreak occurred at Candy, in the Island of Ceylon, which occasioned much alarm, but was fortunately suppressed by the energetic measures of the local Government.

In this and the following month remarkable political events and astounding changes indeed followed each other in rapid succession. A formidable insurrection broke out in Vienna, attended with immense loss of life, and ending in revolution. The Emperor of Austria was compelled to secure his personal safety by flight, his Minister of War brutally murdered, and the city finally was bombarded.

The siege of Paris was raised, and the French Chambers passed a resolution to elect a President of the Republic by universal suffrage.

The Hungarians are victorious over the Croats at Valandze, and all the male population of Hungary from 15 to 60 years of age called to arms. Passing events forewarn important changes in this part of Europe.

The extraordinary cases of poisoning in Essex, as well as elsewhere, during the investigation of the former of which the coroner observed, “that many of them had doubtless been unfairly dealt with, although no legal proof could be obtained.” This atrocious species of crime, the more deadly because, like the bite of the snake in the grass, its effects are felt before it is seen, is evidently most seriously on the increase.

PREDICTIONS.

NOVEMBER, 1848.

November of 1848 bears the semblance of martial influence: the Sun, the source of rule and power; Mars, symbol of the upraised arm and ruddy hand; and Mercury, alternately the messenger of weal or woe, are in Scorpio,—a sign urging subtlety in cabinets and stratagem and slaughter in the open field.

The times will be difficult, but there are grounds for predicting unanimity among our population.

• • • Russia is this year little affected by the planetary positions and aspects, except only where they touch her attempted strangling of Caucasian liberty and the never-dying hatred of Poland towards the oppressor; she hoards her strength and lavishes her gold preparatory to future and desperate strokes of policy.

Some singular case of suspicion against a female will occur, and trials of more than usual interest occupy the courts of law.

The year yet lingers but a span, ere it will be added to the annals of time; many of its events will form melancholy pages in history, while others serving to inspirit nations yet in bondage, the hymn of liberty shall at length re-echo through the world!

FULFILMENTS.

In this month, as in the preceding one, the affairs of nearly the whole of Europe were in fearful disarrangement, with the exception of our own peaceful and, beyond comparison, happy country. All Germany is convulsed, Denmark involved in war, and the heavy swell of the waves of revolution in France still unsubided. An insurrection in Rome; Rossi, the prime minister, murdered, and the Pope besieged in his palace. The Pontiff yields to the people, and a democratic ministry is appointed.

Prussia proposes to cede to Russia that part of the Grand Duchy of Posen which, according to the line of demarcation, has not been incorporated into Germany, on condition that Russia consents to the re-establishment of the ill-fated kingdom of Poland, and places the Duke de Leuchtenburg over it as king—a Russian counsellor's arrival at Kelish has reference to this important treaty. Similar negotiations commenced with Austria for the cession of Cracow and the Polish part of Galicia.

The new kingdom of Poland to be placed provisionally under the protection of the three powers.

A remarkable charge was brought before the magistrates at Marylebone against the Baroness de St. Marc, who was accused by Sir John Hare of robbing him of some valuable jewellery.

Her Majesty and Prince Albert are brought into the Court of Chancery as plaintiffs against Strange and others, for having improperly availed themselves of some private sketches and drawings (the rational amusement of the leisure hours of those high personages) for the purposes of publication.

The arguments on the Writ of Error in Mr. S. O'Brien's case commenced.

Trial of the Chartist prisoners in Edinburgh. The investigation as to the perpetrators of the dreadful murders of Mr. Jermy, the Recorder of Norwich, and his son, which took place on the 28th of this month, were begun.

DECEMBER, 1848.

“Departed spirits of the mighty dead!
Ye that at Marathon and Leuctra bled!
Friends of the world! restore your swords
to man,
Fight in his sacred cause, and lead the van:
Yet for Sarmatia's years of blood atone,
And make her arm puissant as your own!
Oh! once again to Freedom's cause return,
The patriot Tell—the Bruce of Banuock-
burn.”

It is impossible to shut our eyes to the conviction, that, throughout the whole civilised world, the most important changes are progressing in all old institutions, the results of which, even imagination shrinks from the attempt to fathom. Nevertheless, the handwriting is on the wall. May they be for the advancement of the freedom and happiness of all nations!

PREDICTIONS.

The stellar features of the month are the progress of the Solar Orb through Sagittarius, which sign both Mars and Mercury ingress on the 9th, having previously formed a conjunction on the 8th, Jupiter at the same time becoming stationary in Leo. It is not unlikely that we may hear of guerrilla warfare in Spain, for *there* faction still rears its many heads.

Italy seems more tranquil; the Sun, disposed by Jupiter, and receiving his trine on the 14th, will cause some amity or treaty to be promulgated, by which that country may be greatly pacified.

The frequent aspects of the former (Mercury traversing Sagittarius) to the superior planets denote much stir in legal matters of a public nature; nor is December likely to pass without one or more remarkable deaths being placed upon its records.

The number of Planets in the 12th house may signify unexpected events; but a continuance of the lofty supremacy and wise counsels that mark the rule of our "Island Queen" are strongly typified by the rising positions of the Sun and Mercury: these symbols of power are, moreover, accompanied by an applying sextile of Venus to Jupiter and Mars, and trines of the latter orbs to Saturn; hence benevolence and the milder virtues are united with firmness and a ready acquiescence in measures proposed for their interests, assured to her people. The wish aspirated by millions, that her reign may be long and prosperous, is reiterated from the humble *studio* of the Astrologer.—"Nativity of Queen Victoria," *Pro. Mess.* 1848, p. 41.

In closing my observations it is cheering to dwell for a moment upon the firm and glorious position Britain holds amongst contemporary states; the freedom of her citizens and the prowess of her arms being surpassed only by commercial energies which have attracted hither a large portion of the wealth of the world. These elements of strength and endurance, combined with the rule of a beneficent sovereign, inspire that confidence under temporary difficulties which has never failed, not only to restore, but to augment our national prosperity.

JANUARY, 1849.

The scheme is fraught with configurations of importance, and points out unexpected measures brought forward opposed to the landed interest, also affecting ancient rights and customs. The highest

FULFILMENTS.

A Carlist conspiracy was discovered in Spain, and many arrests made. The unfortunate young Queen Isabella is again a *captive in her own palace*. On the 13th, Narvaez and the Queen Mother compelled the Queen to withdraw her acceptance of the resignation of the ministers, and to banish her own private friends from the royal presence.

A provisional Government was established at Rome, and in other parts of Italy fairer prospects seemed to unfold themselves; unhappily evanescent, like the summer cloud of her own sunny skies, as subsequent events have too soon evinced.

Parliament was finally summoned to meet for the dispatch of business on the 1st February.

Viscount Melbourne, formerly prime minister of England, and one of the earliest and most favoured of Queen Victoria's advisers and private friends, was consigned to the tomb. Also the only son of the late public-spirited Duke of Sussex, Sir Augustus F. D'Este, and the Earl of Auckland, First Lord of the Admiralty, and late Governor-General of India, a highly-talented and estimable man, "Who may resist thy power, oh King of Terrors?"

A few hours will find us upon the threshold of another year. Already the curtain is descending, that will hide, as with a pall, the year that is dying before us. Nations have been shaken to their foundations, thrones crumbled into dust, crowns scoffed at—but we are left scathless. The storm has howled at our threshold, but there is that within an Englishman's home which preserves it inviolate. A noble sense of reciprocal duty, on the part of the governing and the governed, has preserved us from anarchy, and raised a barrier far better than triple steel round the throne of the sovereign, from which she may look with grateful pride and well-deserved affection upon a people who never lose sight of that national feeling of loyalty and good faith which enables them to distinguish between the personal virtues and just claims of the sovereign, and the errors or faults in policy of her servants.

The condition and prospects of affairs in Ireland prove extremely harassing to Government, and the Rate in Aid Bill, with other measures, was brought into Parliament with the view of amelioration;

PREDICTIONS.

power in the land will be afflicted and sorely harassed by contending parties. The Moon, being in her own dignity, shows a determination on the part of rulers to carry out projects for the amelioration of difficulties.

It will be an ill time for national amusements; failures take place in theatres and exhibitions; violent accidents occur on railroads, and robberies will be frequent in the Post-office.

I regret to announce a sickly season; cold disorders and consumption will prove fatal, and rheumatic complaints prevail.

Jupiter in the 11th house denotes the exchequer of the Government to be improving.

Violence will berife in Spain, Portugal, and other nations under the rule of Sagittarius and Pisces.

Jupiter retrogrades through Leo, which augurs measures adopted by the new Government of France calculated to benefit that nation; but the fleeting Mercury opposes that planet on the 26th, producing angry discussions; inflammatory articles likewise emanate from the press.

The numerous aspects between the 6th and 10th will produce high winds with a very cold and rugged atmosphere, also storms doing much mischief.—*Vide Weather Guide for Jan., p. 4.*

January will prove a severe and trying month; the benevolent will now find ample room to assist in relieving the distress of the poor and needy.—*Ibid.*

“Take physic, pomp!
Expose thyself to feel what wretches feel,
That thou mayest shake the superflux to them,
And show the heavens more just.”

FEBRUARY, 1849.

The tardy Herschel is still wending his way through Aries, and is in trine aspect to Jupiter, the source of great mutations among European states. Changes take place in the old forms of government. A friendly relation exists between many nations.

FULFILMENTS.

but, as pointed out in the lunation, was vehemently opposed by certain interested parties, who, to promote their own base and selfish views, would sacrifice the permanent interest and welfare of their country.

Mr. Cobden commenced his agitation respecting the national expenditure, &c.

Many extensive robberies took place; amongst others, on the night of the 1st, on the Great Western Railway, the mail-bags were stolen both in the up and down trains. Other serious deceptions were discovered in the General Post Office and elsewhere.

The Bills of Mortality in London for the weeks ending December 30th, January 13th and 20th, exhibit an increase of 249, 279, and 176 above the average of the corresponding months of the five preceding years.

The cholera broke out at the Infant Pauper Asylum, Tooting, causing great alarm throughout the whole community from the serious mortality attending it. The same scourge appeared at Hertford. Bronchitis also very prevalent, and often fatal.

The national finances at this time present a favourable aspect, and the quarter's revenue ending on the 6th January shows an increase of 442,615*l.*

Riots and skirmishes between the adverse political parties in Spain continue as fierce as ever.

In Portugal a republican insurrection was on the *tapis*, but seasonably suppressed.

The ‘Times’ of the 29th inst. contains an account of the alarm which prevailed in France on the 26th inst., and the inflammatory remarks of some of the French journals. A dissolution of the National Assembly was proposed; also a measure to put down the meetings of the clubs.

The ‘Hampshire Advertiser’ of the 13th contains an account of a tremendous gale of wind on the 11th. A disastrous storm occurred on the east coast of Scotland on the 8th, 9th, and 10th. In the news from Ireland it is stated that on Tuesday night, the 9th inst., it blew a perfect hurricane.

Several deaths took place during the month, from starvation. A woman and her child were both found dead from this cause at Birkenhead. Also a man starved to death in York Street, Westminster, and his family nearly so.

There have been very few periods in history where so many changes were in progression as at this eventful time; all Europe seems on the eve of the most important revolutions. In our own land, various measures or plans are brought forward for effecting the most serious changes in every branch of the administration of the affairs of the nation.

PREDICTIONS.

About the middle of the month the furious Mars sends forth a fiery and malign quartile ray to the Georgian planet, disseminating wrath and violence, and prompt to sow the seeds of discord in Greece, India, Mexico, and other nations.

On the 18th of the month Venus forms a trine aspect with Jupiter, when a fair lady meets renown, and becomes the topic of much conversation.

Mars, ever the precursor of strife, in his progress through Capricorn will not fail to disturb the peace of India; and in some of our Eastern possessions acts of violence will become flagrant, blood will flow, and the military spirit of that clime be called into operation.

Jupiter is retrograde in Leo, and on the 17th of the month is opposed by Mars. France is again the scene of much violence; the rulers of that nation become unpopular, or commit some rash act, creating confusion and bloodshed.

In Bath, Bristol, and other places under the dominion of the afflicted signs, riots and tumult will be experienced.

Let the Russian autocrat tremble, for Mars does not flame through Aquarius in vain. The glowing spirit of liberty kindles in Polish breasts, but alas! it ignites only to be extinguished, and many of that brave but unhappy race become a prey to the tyrant, who glories to hear the clanking of the chains and the agonies of his victims.

Venus enters Taurus, the ruling sign of Ireland, on the 4th, and moves onward, receiving a quartile ray from Mars the whole of the month. This bodes ill for that unhappy land. Violence abounds, and unheard-of acts of atrocity and cruelty will be perpetrated. One of the

FULFILMENTS.

The readers of Raphael need not be reminded of the important events occurring in India about this time, which are now become matter of history; and have terminated by adding another principality to our Empire.

At an inquiry into the proceedings of the Sisters of Mercy, at Devonport, the Bishop of Exeter addressed the ladies in the following terms:—"Most heartily do I thank you for having come hither on this mission of Christian love; for having endured more than I ever knew women to be called upon to endure, with patience and resignation, and a feeling of superiority to all human considerations which I never hoped to see in any person. I declare most solemnly that the result of this investigation is to me a feeling of the most unmixed admiration."

Accounts from India were of a very painful description at the close of this month. A sanguinary contest took place on the banks of the Jelum, on the 13th January; and, although the British were victorious, the fight was won by the sacrifice of 2000 British officers and men.

The fort of Attock was surrendered to the Afghans, who plundered the town and violated the women.

MARCII, 1849.

Great excitement prevails in France from the measure passed by the Assembly to dissolve the Clubs. The Clubbists have resolved to resist the Government, should it venture to make the attempt. Party spirit still runs high.

At Bristol, Miss Jeffries was barbarously murdered by her servant Sarah Thomas, creating great consternation throughout the city.

Accounts have been received from Constantinople of a most important character. A general European war would appear to be imminent. These accounts state that M. Titoff, the Russian Minister at Constantinople, had officially demanded a passage into the Bosphorus, and out of the Dardanelles into the Mediterranean, for the Russian fleet. The Divan having consulted the other foreign ambassadors, the demand was refused. M. Titoff then declared that Russia would take by force that passage, which she was determined to have.

For some months past Russia has manifested a disposition to treat Turkey as a conquered province, and to seize her territory in defiance of the remonstrances of the European powers. The conduct of Russia in Wallachia and Moldavia has aroused the reasonable jealousy of the Divan.

For an account of crime, destitution, acts of atrocity, murder, and death from starvation in Ireland, the readers of the Prophetic Messenger are referred to the various papers of that period; they are too numerous to be particularized. Great excitement prevailed in that unhappy

PREDICTIONS.

fair sex will become a victim to the infuriated passion of an enthusiastic maniac. If I judge aright, the priests of Ireland become irritated.

The weather will not be so boisterous as it usually is in March.

Weather Guide for March.

The month opens with a trine aspect of the Sun and Jupiter. Not only does the tranquillity of the atmosphere enliven the minds of men, but measures adopted by rulers of nations give satisfaction. England has her due share; Sol meets the body of Herschel on the 12th, causing unexpected events to occur. The fleeting Mercury meets the orb of Saturn on the 11th, and then quickly passes through Aries; presaging, in his progress, grave and deliberate discussions. The press will be busy, and the Government actively resolving on various plans and measures.

The winged messenger forms a conjunction with Uranus on the 24th, when slander abounds, and proceedings in law of an extraordinary nature give food for the newspapers.

The moon is in the 9th house, being that part of the heavens representing the ecclesiastical and commercial power of the nation; and as the luminaries are afflicted by the malefic orb of Saturn, we may expect that planet to work disunion and various evils among the clergy; much dissension is presaged from the true Protestant faith.

The celestial harbingers point out some unsatisfactory decisions in our courts of equity; a learned judge or divine is summoned to his account.

Eclipse of the Moon, 8th March.

The Moon, with Mars in the 5th house, forebodes affliction to the youthful and rising generation. Small-pox, measles, and fevers will cause great mortality among children; for observe! Mars governs the house of death.

The configurations of the stellar orbs in the chart presented to our view are startling, and presage many of the evils which will be caused by the transit of Saturn through Aries, and some of which have been pointed out in the monthly warnings for the year. Mercury, significator of the people, in his detriment, and posit'd in the house of sickness, is an ill omen for the public health: * * * * the same effect is also pointed out by the near approach of Saturn to Sol at his ingress.—Spring Quarter, *Pro. Mess.* 1849, p. 33.

Violence will occur in theatres and other places of public resort.

FULFILMENTS.

land respecting the Rate-in-Aid Bill; the priests violently declaiming against the measure.

At Liverpool, Mrs. Henrichson and her two children were barbarously murdered by an Irishman, named John G. Wilson, who has met the punishment due to the appalling crime.

For many years the weather had not been so mild and favourable, during the month of March, as it was in 1849.

APRIL, 1849.

The House of Commons went into Committee on the Navigation Bill; the Rate-in-Aid measure for Ireland was also discussed in the House at this period, with many other propositions of great importance.

The trial of Rush, the murderer of Messrs. Jermy, filled the columns of the daily papers.

“Murder, though it have no tongue, will speak

With most miraculous organ.”

Our readers will remember having read the secession from the Church of the Rev. John Dodson, Vicar of Cockerham—the imprisonment of the Rev. — Shore, and the opinions promulgated by the Rev. Baptist Noel, excite much public attention about this period.

Professor Thomas Starkie, Downing Professor of the Laws of England, expired at his lodge in Downing College, Canterbury.

Epidemics.—We regret to learn that the small-pox is still prevailing in many parts. This scourge has been unusually severe in this city, and has continued now nearly four months, visiting in that period every part of the borough, and the abodes of the wealthy as well as the poor. A considerable number of severe cases have been reported to us, and several deaths have occurred during the last few days. Scarlet-fever, too, is prevalent in some parts of the city; and much general indisposition, resulting from the extreme severity of the season.

A riot and disturbance, of a nature very disgraceful to the American character, took place at the theatre, New York, in consequence of Macready's per-

PREDICTIONS.

Russia and Prussia will be the scenes of much violence; the Poles will struggle for freedom, and cause the rulers of those nations great embarrassment.—*Spring Quarter, 1849.*

The mild beams issue from the planet Venus as she retrogrades through Taurus, the ruling sign of Ireland; she is joined by Mercury, on the 8th, when the vituperative spirit which has so long held sway over that unhappy land will give place to gentler feelings. Their sufferings will be ameliorated, and wise counsels will be adopted, tending to promote a better order of things.

Poland will derive benefit from this configuration.

On the 17th Mars leaves the sign Pisces, and enters Aries, and joins the malignant orb of Saturn in the ruling sign of Britain on the 25th. RAPHAEL would fain be the prophet of better days, but, alas! distress and violence will be severely experienced; great failures in the commercial world occur; medical men will reap a rich harvest; feverish disorders will be prevalent. Internal commotions will rend the peace of England; we shall hear of daring robberies, murders, and military outbreaks. Let the rulers look well to the maintenance of peace and tranquillity in the nation.

Other countries which will feel the sting of this conjunction are, Syria, Naples, Palestine, Lesser Poland, Germany, Denmark, and some few of inferior note. Commerce still flourishes, and tranquillity reigns in parts of the earth under the dominion of Leo, some of which are France, Italy, and Philadelphia; much will be done to favour the spirit of liberty in those nations.

Charles Albert, King of Sardinia, will be sorely afflicted and troubled.

FULFILMENTS.

formance; the military were called out, and several lives lost in the affray.

Bem suddenly found himself opposed to from 30,000 to 40,000 Russians, who, it seems, on hearing the disaster which had befallen their comrades in arms, had entered Transylvania. The conflict was short, but most sanguinary. Bem's Polish and the Viennese legion were annihilated. Five Polish officers of rank were hung. A Polish legion, amounting to 2000 men, has now been raised in Tuscany.

MAY, 1849.

A grant of money was made by the Government to relieve the distress in Ireland; also a Bill to make temporary provision for a General Rate in Aid of certain distressed unions and electoral districts, was read a third time.

Some thousands of Poles, ever ready to serve under the banner of freedom and liberty, have joined the Hungarian army to struggle against the combined power of Austria and Russia.

Up to the time of my penning this, which is on the 20th July, only a portion of the evils, indicated by this conjunction, has visited us. The numerous cases of poisonings and murders which daily appeared in the columns of the periodicals for this month are clear proofs of the powerful influence of the planets in exciting the human mind.

The cholera raging in many parts of England.

An outbreak took place in Canada, where a personal attack was made on Lord Elgin, and the Parliament House burned by the insurgents.

Great excitement respecting Mr. Hudson's affairs and important investigations into the actual position of Railway Companies generally.

Her most Gracious Majesty the Queen was annoyed by a villain firing off a pistol near her person with a view to excite alarm.

The state of affairs at this period in some of these nations is too well known to require any comments from Raphael.

On the 4th a grand fête took place in Paris in honour of the first anniversary of the Revolution.

Letters from Rome state that the Constituent Assembly had declared itself permanent, and decreed that every deputy who abandoned his post in the present critical circumstances should be considered a traitor to his country.

Under the influences in operation the King of Sardinia lost a decisive battle, abdicated his throne, and suffered severely from illness.

PREDICTIONS.

JUNE, 1849.

The configurations of the sidereal monitors are at this time numerous and important. The red ray of Mars is reflected to the Sun on the 1st, infusing a military spirit and ardour in the rulers of Great Britain; their measures are firm and decisive; wise counsels emanate from the Government, calculated to improve the commercial welfare of the nation.

The form of government in France becomes more firmly established, and the people of that country recover from the evils naturally following revolution.

The Sun in Gemini, receiving the sextile aspect of Jupiter on the 8th, points to one of high rank in London signaling himself, and gaining the approbation of the community by his tact and talent in affairs of emergency.

The winged Mercury becomes retrograde in the sign Cancer, and twice meets the quartile ray of the pernicious Saturn. This bodes ill for speculators in railways; several banks will be shaken to their centre, and important failures take place in the commercial world; this will be a busy time for lawyers; the Gazette will teem with insolvencies, &c.

A high military character meets with sudden reverses, or becomes an inmate of the tomb.

On the 1st there is a quartile ray of Mercury and Saturn from the cardinal signs Aries and Cancer; Mercury is retrograde, and continues within a few degrees of the aspect for the greater part of the month. Political strife reigns throughout the land; ministers disagree, and angry discussions take place. * * *

FULFILMENTS.

At the final triumph of Ministers over Lord Stanley in the House of Lords, on the important question of the Navigation Laws, it is said that the Premier declared to his friends that at no period since he had been at the head of Her Majesty's Government had his position been more secure, or that of the Government generally been in a more satisfactory state; and that he should be able, early in July, to relieve Parliament from further attendance, under circumstances upon which the country might be warmly congratulated.

An attempt at insurrection was made on the 13th by the Red Republicans, but in consequence of the prompt measures adopted by the Government it was suppressed, and terminated in the arrest of several hundred persons. The 'Times' of the 8th contained the important message of the President of the French Republic—moderate in its views and pacific in its tone.

Mr. Hume gained 82 votes in the House of Commons in favour of his Bill "To amend representation, by extending the elective franchise to all householders; that votes shall be taken by ballot; that the duration of parliaments shall not exceed three years, and that the apportionment of representatives be rendered more equal to the population." Although a minority, this was a great triumph for the Reform party.

In addition to the long list of bankrupts and insolvents which appears in the daily papers, an important measure is brought forward in the House of Lords on the subject of the amendment of the bankruptcy laws.

Mr. Hudson's railway defalcations scandalise all England.

The death of Marshal Bugeaud occurred on the 9th, creating a great sensation in Paris, and universal regret. His death will be felt as a great loss to France.

JULY, 1849.

Much angry discussion occurred in both Houses of Parliament relative to the "Parliamentary Oaths" Bill, having for its object the relief of the Jews from the disabilities under which they labour; when, in despite of the efforts of the Ministry and of the most enlightened and liberal public men both in and out of Parliament, the measure, after having passed the Lower House, was finally rejected by the Lords,—the Archbishop of Canterbury, the Bishop of Oxford, and many noble lords, usually the supporters of Government, voting against the Bill, which was lost by a majority of 28.

Let not the advocates of religious toleration and liberty of conscience despair—"Magna est veritas et praevalabit."

Baron Rothschild was again returned

PREDICTIONS.

Failures in the mercantile world, from their importance, become alarming, and create a panic. Speculators, take warning!

Saturn is stationary, as if pondering on the woe and misery he is about to inflict.

Mars is again in the ruling sign of Ireland. Let the history of the last six months of 1847, and the first part of 1848, tell of the assassinations, acts of atrocity and savage brutality, committed indiscriminately by misguided men, whose uninstructed minds, while under the influence of this planet, may be compared to the inhabitants of uncivilized states. Again do we hear of acts of violence in the sister isle, but fortunately the stay of Mars in Taurus will be of short duration.

Cholera pursues a steady but fatal course towards its dreadful climax.

Some desperate rioting occurred with the Ribandmen in Armagh and other parts of Ireland, accompanied by much bloodshed and loss of life.

The fatal affray arose at Castlewellan, where a furious conflict took place between the Orangemen and the police and military, when several of the populace were shot.

Towards the end of the month the announcement of Her Majesty's gracious purpose to visit this distracted country came, like the sun bursting through the cloud and the storm.

Louis Napoleon, the head of the French Republic, is engaged in paying Presidential visits to the principal cities of France; the country generally appears tranquil; and presents as fair a prospect of settling down into a calm, as the versatile temperament of our volatile neighbours will reasonably permit us to hope for.

The Pope, on receiving the keys of the gates of Rome, sent a commission to arrange with the agents of France and Austria the mode of his return to the Eternal City.

The Belgian and Spanish ministers proceeded to Rome for the same purpose.

Radetzky issued a proclamation at Mantua, granting an amnesty for all political offences committed in 1848 and 1849.

AUGUST, 1849.

Mighty Jove progresses on, entering the sign Virgo on the 12th, and meets the conjunction of the Sun on the 26th, bringing prosperity in Turkey, Europe, Asia, and all the country between the Tigris and Euphrates, Jerusalem, Babylonia, Bagdad, and other places.

The flag of liberty waves over many cities. Tranquillity and prosperity reign in Paris and Lyons; but Mars quartiles Jupiter towards the middle of the month, which may have a tendency to check the benefic influence. The sidereal harbingers imply a dawning of more enlightened views in Turkey. A spirit of freedom and liberty is breathed through the land of Switzerland, and its brave inhabitants prosper.

The accounts from these countries generally favourable—Sir Moses Montefiore diffusing his gifts at Jerusalem to "Jew and Gentile" with princely munificence.

The singular spectacle of a "Peace Congress" was witnessed in Paris (perhaps the most warlike population of Europe); the members of the Congress were zealous, earnest, and, many of them, highly distinguished men, congregated from the "utmost ends" of the world, to bear witness to the blessings of peace, and to raise their voices against the folly and wickedness of war. All honour to their principles and high purposes, however impracticable, in the present state of society, it is to be feared, they may prove to be!

PREDICTIONS.

Mars enters Gemini, the ruling sign of London, on the 11th, presaging violence in the goodly metropolis during his stay in that sign; fires will be prevalent, and some conflagration of more than ordinary description will occur. The two superior planets, Saturn and Herschel, are retrograde in Aries, portending a continuation of the evils.

Mercury joins Jupiter on the 20th, bringing an increase of traffic to the town of Liverpool; merchants in that port will be busy and thriving, some important public meetings take place, and a magistrate or high person is elevated to honourable distinction.

On Prince Albert's birthday the Sun is in conjunction with Jupiter and Mercury—omens of no small import to his Royal Highness. During his 31st year he will be engaged in affairs which will bring him wealth, honour, and renown.

FULFILMENT.

In Switzerland all is peace—instead of the trumpet of war, the echo of the hunter and the herdsman's horn alone are heard amid its Alpine ranges.

That fearful visitation, the cholera, is too truly indicated in this and many preceding predictions. In the week preceding the date we are now writing (the 3rd September) 1470 deaths had taken place from this fatal complaint within the Bills of Mortality of London alone.

The daily papers announce many serious conflagrations at this time, which our limits do not allow us to particularize. They teem also with deeds of darkness and violence. The murder at Bermondsey, with which the Mannings (husband and wife) stand charged, has thrilled the whole kingdom with indignant horror.

Rebecca Smith was executed for the murder of her infant child, having previously made the horrible confession that she had poisoned *eight others* of her children in their infancy.

Humanity shudders, and asks, "Can such things be?"

"Liverpool, 21st Aug.—The weather has been brilliant, with settled appearance. Harvest generally in this circle of the country is progressing rapidly and favourably, exhibiting greater abundance than for many years past. Trade, foreign and domestic, is improving."

The new Philharmonic Concert Hall (a beautiful building) was opened on the 28th inst. with a splendid musical festival.

A grand banquet was given in the Town Hall on the 30th to the Lord Mayor of London, and to the Hon. Mr. Bancroft, the American minister, on his departure to his native country.

Prince Albert passed his 30th birthday (may he have many and happy ones in store!) in the peaceful retirement of the Highlands, after having acquired "golden opinions from all sorts of people" during his triumphal progress, with his illustrious Lady, through Ireland and Scotland. A princely act was performed by His Royal Highness, in directing a considerable sum of money to be sent to Mrs. Judge, to defray the law expenses incurred by her husband in the Chancery proceedings brought against him by Her Majesty and the Prince, and which have been formerly adverted to here. Let him persevere in his manly and honourable course, so *wealth, honour, and renown* will surely still attend him, as well as noble and ever-enduring renown in England's proud annals.

SEPTEMBER, 1849.

One of the most important of the configurations of this month is the quartile aspect of the Sun and Mars on the 10th. It will be remembered that in 1848, when that fiery planet passed through Gemini, the great Chartist meeting was appointed to take place, in consequence of which

"*Horatio*. Oh, day and night, but this is wondrous strange!"

Hamlet. There are more things in heaven and earth, *Horatio*, Than are dreamt of in our philosophy." We cannot better terminate our notice

PREDICTIONS.

London was filled with armed men, and the public mind highly excited, proving the power of the planets in influencing mundane affairs, and establishing the doctrines which have been maintained for centuries past by those versed in astral lore. It was from the stellar orbs afflicting this sign that the celebrated William Lilly was enabled clearly to predict the great plague and fire of London.

FULFILMENTS.

of the various fulfilments of the predictions for the present year (and our readers are requested to bear in mind that the Almanac is published on the 1st of October) than by calling attention to the remarkable result of our reasoning on the effect of the quartile aspect of the Sun and Mars at this period. If the general tone of the predictions throughout the year is carefully noted, it will be observed that the fatal prevalence of epidemic is clearly prognosticated—it has prevailed, and is still fearfully prevailing.

In the 'Times' of this day, the 12th September, one of its leading articles has the following passage—too plainly showing how true have been Raphael's prognostics:—

"The epidemic, that for the last three or four months has prevailed amongst us, has now assumed a more destructive character. We are deeply grieved to announce the result of yesterday's returns to the Board of Health. No less than 432 persons have fallen victims to the cholera within the limits of the Bills of Mortality for the metropolis in a single day. Why disguise the facts from ourselves, or endeavour to shut our eyes to the truth, when our only chance of safety consists in our looking the truth boldly in the face?"

The total number of deaths returned on the same day for England, Wales, and Scotland, was 916 by cholera, and 128 from diarrhoea.

A form of prayer and humiliation to Almighty God was directed by authority to be observed throughout the kingdom on Sunday the 16th of September. "De profundis clamavi ad te, Domine: Domine, exaudi vocem meam." "Fiant aures tuæ intendentes; in vocem deprecationis meæ."

Prayer.

O ALMIGHTY God and Father, whose power no creature is able to resist, and in whose hand are the issues of life and death: look down, we beseech Thee, from Heaven Thy dwelling-place, upon us Thine unworthy servants, who turn to Thee, their only refuge, in this season of sickness and great mortality. We confess, O Lord, that we have not deserved to be free from that visitation of Thy wrath, which has afflicted other nations of the earth. We acknowledge with shame and contrition that we have shown ourselves unthankful for many special mercies vouchsafed to us, and have not made that return for our national blessings which Thou mightest justly require at our hands. We have departed from Thy commandments; we have followed too much the things of this present world; and in our prosperity we have not sufficiently honoured Thee, the Author and Giver of it all. If Thou wert to deal with us after our sins, or reward us according to our iniquities, we could not stand in Thy sight.

But thou hast revealed Thyself unto us as a God of mercy and forgiveness, towards those who confess their unworthiness, and turn to Thee in repentance and prayer. When Israel had provoked Thee to wrath, and thousands fell by the destroying pestilence, Thou didst stay the sword of the avenging angel, when the purpose of Thy judgment was fulfilled. When the men of Nineveh repented of their iniquity, Thou didst lay aside the fierceness of thine anger, and sparedst the guilty city, when Thou sawest that they turned from their evil way.

And now, O Lord, we entreat Thee after thy rich mercy to grant unto us Thine afflicted servants the like spirit of repentance, that Thou mayest withdraw Thy chastisements from our land, and stay the plague and grievous sickness which is abroad, making many desolate. May the judgments which Thou hast sent work in us a more lively faith, a more entire obedience, a more earnest endeavour to conform to Thy will, and to advance Thy glory. Make us duly sensible of Thy goodness, in maintaining the domestic tranquillity of our land, in preserving us from intestine commotions, and in granting a plentiful return to the labours of our husbandmen. Teach us to show our thankfulness for these mercies, by an increasing desire to relieve distress, to remove all occasions of discontent and murmurings, and to promote goodwill and concord amongst ourselves. And may the frequent instances of mortality which we have beheld, remind us all of the nearness of death, and dispose us so to number our days that we may apply our hearts unto wisdom: that, whether living or dying, we may be found faithful disciples of Him who has taken away the sting of death, and opened the gate of everlasting life to all believers.

Hear us, O Lord, for Thy goodness is great; and according to the multitude of Thy mercies receive these our petitions, through Jesus Christ our Lord. Amen.

Explanation of the Scenes in the Hieroglyphic for the Year 1849.

— let reason mitigate our care :
To mourn avails not ; man is born to bear.
Such is, alas ! the gods' severe decree :
They, only they, are blest, and only free.
Two urns by Jove's high throne have ever stood—
The source of evil one, and one of good :
From thence the cup of mortal man he fills,
Blessings to these, to those distributes ill ;
To most he mingles both ; the wretch decreed
To taste the bad, unmix'd, is curs'd indeed :
The happiest taste not happiness sincere,
But find the cordial draught is dash'd with care.

TIME, changing or destroying all sublunary things, "the cloud-capp'd towers, the gorgeous palaces, the solemn temples, the great globe itself, yea, all which it inherit," yet himself immutable and immortal, has impelled us on through another eventful year, towards the boundless ocean of Eternity.

Our readers will have little difficulty in tracing the progress of human events, in the various prophetic illustrations shown forth in the Hieroglyphic for the year 1849.

In the centre, stern **Death** raises his dart towards Britannia, who mourns, surrounded with military funereal emblems. Above is the figure of the Heavens, set for the time of the conjunction of Saturn and Mars, indicating the severe loss of 93 British officers and 2500 men by the Indian war, plunging Great Britain into grief throughout the length and breadth of the land.

The commencement of this year evidenced, in a most startling manner, the evanescence of human existence. Heroic warriors, distinguished legislators, illustrious writers, individuals remarkable for the generosity of their disposition or the untutored vigour of their intellect, have been summoned to that land "whence no traveller returns." Lord Auckland, Sir Guy Campbell, Sir Robert Wilson, Sir Jasper Nicholls, Sir Adam Drummond, Sir Edward Paget, distinguished in war by sea or land; in literature, science, and philanthropy, S. Maunder, Horace Twiss, William Nicholson, the Galloway poet; the public-spirited and benevolent John Fielden; Robert Vernon, the munificent patron of art, and many others of high mark and standing, have paid great Nature's debt. Well may Britannia mourn!!

On the right hand of the Hieroglyphic, the Church with numerous funerals, both of the great and lowly, *too surely has indicated* the ravages of that dreadful scourge the Cholera, which, commencing amongst the infant paupers at Tooting, and spreading with fearful rapidity through various parts of Great Britain, Ireland, and other European nations, has swept off thousands of the human race.

The coroneted female figure represents Europe, in a deprecating attitude, turning towards Mars, who points a spear against her, and is typical of his fatal influence, as exemplified in the frightful scenes of war and bloodshed which will render the year 1849 ever memorable in European annals.

In the left-hand corner the deadly encounter "of man to man and horse to horse" illustrates the state of affairs in Hungary, and the struggle of her sons with the Russians and Austrians; also the disgraceful aggressive war of the French Republic against the Roman people. Rome's imperial eagle is displayed upon the flag.

The reader will remember that Ireland is under the dominion of the sign Taurus. In the lower right-hand corner the Bull is seen opposed in vain fury to the well-armed ranks of England's soldiery, who stand prepared to protect the fair fields and homes of Ireland from the insensate assaults of her own children. We will hope fairer days are dawning on the land.

The fleet of shipping sailing in gallant show before the wind is emblematic of the visit of our gracious Queen to Ireland with "healing on her wings," and promising the happiest results.

Rich is the freight, oh! vessel, that thou bearest!
 Beauty and virtue,
 Fatherly cares and filial veneration,
 Hearts which are proved and strengthen'd by affliction,
 Womanly goodness!
 All with which Nature halloweth her daughters,
 Tenderness, truth, and purity, and meekness,
 Piety, patience, faith, and resignation,
 Love and devotement.
 SHIP OF THE GODS, HOW RICHLY ART THOU LADEN!
 PROUD OF THE CHARGE, THOU VOYAGEST REJOICING;
 CLOUDS FLOAT ABOUND TO HONOUR THEE, AND EVENING
 LINGERS IN HEAVEN!

The reception of her Majesty by her warm-hearted Irish subjects must be fresh in our readers' recollection. May the generous spirit of the sons of Erin at length be usefully directed to the promotion of the permanent peace and prosperity of Ireland!

The most beneficial effects are anticipated to the maritime interests from the amelioration of the Navigation Laws, and other measures of the legislature affecting them, during this session.

Some unnoticed portions of the Hieroglyphic still remain in the shadows of futurity.

Amidst the throes and struggles of political dissention and revolution,—through the cloud, the earthquake, the darkness, and the storm,—the philanthropist and the philosopher hopefully watch the rainbow's glory bursting; it spreads its gorgeous colours from pole to pole, like a banner displayed—an emblem of light and life—

"While Hope enchanting smiles, and waves her golden hair."

He who has "set His bow in the cloud" has declared that "wars shall cease in all the earth." The time will surely come when virtue and truth shall prevail, when the cultivation of the arts of peace, and of that knowledge which tends to sweeten and adorn our brief state of being here below, shall be acknowledged to constitute the real glory and happiness of nations.

"Then shall the reign of mind commence on earth,
 And, starting fresh, as from a second birth,
 Man, in the sunshine of the world's new spring
 Shall walk transparent, like some holy thing.

The lambs with wolves shall graze the verdant mead,
 And boys in flowery bands the tiger lead;
 The steer and lion at one crib shall meet,
 And harmless serpents lick the pilgrim's feet;
 The smiling infant in his hand shall take
 The crested basilisk and speckled snake;
 Pleased, the green lustre of his scales survey,
 And with his forky tongue shall innocently play."

January XXXI Days.

Spoiled Stamps.

The days for claiming the allowance at Somerset House are Tuesdays and Thursdays, from 12 to 2 o'clock. Persons residing within 10 miles of London must apply within six months from the time when the stamps became spoiled. Persons not residing within ten miles of London are required, within 12 months after the stamps are spoiled, to make an affidavit before a Master Extraordinary in Chancery, which affidavit must be stamped, and the same left at the Allowance Office on Monday or Wednesday, and called for on the Monday following, when an Allowance Ticket will be given for the same description of Stamps.

ASSESSED TAXES.

[The following Tables are drawn up in conformity to the late Act of Parliament, 3 Vic., cap. 17; the operation of which commenced April 6th, 1840.]

CARRIAGES WITH FOUR WHEELS.

10 ..	34 18 6	20 ..	72 12 0

and an additional 3*l.* 19*s.* 7*d.* for every other horse.

Horses let for less than one year, so that

the Stamp-office duty payable on horses let to hire shall not be payable, the sum of 1*l.* 8*s.* 9*d.*; race-horses, 3*l.* 17*s.* each.

Waggoners' and carriers' horses, 11*s.* 6*d.* Butcher, for one horse used wholly in his trade, 1*l.* 11*s.* 7*d.* But for a second horse, 11*s.* 6*d.*

Horses not exceeding 13 hands high, 1*l.* 3*s.* 1*d.* Horses or mules for labour, 13 hands high, 11*s.* 6*d.*

EXEMPTIONS.

One horse, male, gelding, or mule, kept for riding or drawing any carriage not chargeable with duty, by any person occupying a farm or estate at rack-rent under 500*l.* a-year; or kept for the like purpose by the owner, or by any tenant not at rack-rent of any farm or estate, the value of which shall be under 250*l.* a-year; provided the occupier shall not keep more than one such horse, which, but for this exemption, would be chargeable with duty, and shall obtain his livelihood principally by husbandry on such farm. One horse kept by any clergyman or dissenting minister, the latter not following any secular occupation except that of a schoolmaster; provided neither derive any profit or income above 120*l.* a-year, whether from their ecclesiastical preferment or otherwise. One horse kept for the use of any bailiff, shepherd, or herdsman, on any farm, and horses used in trade by market gardeners. Horses employed in husbandry, although occasionally used in drawing burdens, or let for hire or profit. Horses used by any postmaster, duly licensed; he may use the same for purposes of hus-

andry, or drawing fuel and any description of fodder.

SERVANTS IN OR OUT OF LIVERY.

No.	Total per Year.			No.	Total per Year.		
	l.	s.	d.		l.	s.	d.
1	1	6	4	7	20	4	3

4	9	11	4	10	36	11	6
5	13	9	6	11	46	5	7
6	16	19	10				

and an additional 4l. 4s. 1d. for every other servant.

Bachelor's servant, the further sum of 1l. 2s.

For every coachman, groom, postilion, or helper, kept to be let for hire, for any period exceeding 28 days (being the period for which the Stamp-office duty on horses let to hire is payable), and less than one year, each 1l. 7s. 6d. Also for stage coachmen and guards, 1l. 7s. 6d.

Every person employed in any of the above-mentioned capacities, and not being a servant of his employer or employers, where such employer shall be chargeable to the higher duties on servants and carriages, or for more than one horse, 1l. 6s. 4d. And whereas such employer or employers shall not be chargeable to the last-mentioned duties, 10s. 6d.

EXEMPTIONS.

Male servants retained solely for the purposes of husbandry, manufacture, or trade, and not employed in any of the capacities before mentioned; and parish apprentices, not exceeding two; or any apprentice bound for the term of 7 years, without premium.

Servants under 18 years of age, having a settlement in the parish where occupied.

Roman Catholic clergymen are exempt from the additional 1l. 2s. chargeable on bachelors for each servant.

and for every window or light exceeding 180, 1s. 7d. per window.

Windows made since April 5th, 1835, and exempt under 4 & 5 Wm. IV., c. 73, not chargeable under the new Act.

Windows of out-houses to be reckoned.

A window lighting two rooms, or in two frames, to pay as two windows.

Glass doors, or lights over doors, to be considered as windows.

No windows deemed stopped, unless with stone, brick, or plaster.

EXEMPTIONS.

Farm-houses occupied by a tenant at a rack-rent less than 200l. per year, or in any dwelling-house, being a farm-house, occupied and used as aforesaid by the owner or by any tenant of a farm or estate at rack-rent, the value of which shall be under 100l. a-year, provided he does not derive an income exceeding 100l. a year from any other source. Hospitals, charity-schools, and poor-houses (excepting the apartments for officers or servants); places for divine worship; one window in a dairy or cheese-room, if "Dairy" or "Cheese-room" is over the door. Three windows in the shop, or warehouse, if on the basement story. The windows of a room used solely for a manufactory, if not communicating with the dwelling-house.

DOGS.

For every greyhound kept by any person, 1l. 2s.—For every hound, pointer, setting dog, spaniel, lurcher, or terrier, and for every dog, of whatever denomination the same may be, except greyhounds, where any person shall keep two or more dogs for his own use, or the use of any other person, the annual sum of 15s. 4d.—For every dog not being such as aforesaid, kept by any person having one such dog and no more, whether the same be kept for his own use, or the use of any other person, the annual sum of 8s. 9d.

EXEMPTIONS.

Dogs not six months old, and dogs *bond fide* kept for the care of sheep or cattle.

INCOME TAX.

From and after April 5th, 1842, the duties mentioned in the following Schedules are to be levied:—

Schedule A. For all lands, tenements, and hereditaments in Great Britain, in respect of the *property* thereof, for every 20s. of annual value the sum of 7d. By annual value is to be understood, except in certain cases specified in the Act, the annual rack-rent.

Schedule B. For all lands, &c., in England, in respect of the *occupation* thereof, for every 20s. of annual value the sum of 3d. In Scotland, 2d.

Schedule C. Upon all profits arising from annuities or dividends, payable out of any public revenue, for every 20s. of the amount thereof the sum of 7d.

Schedule D. Upon the annual profits accruing to any person residing in Great Britain, from any kind of property whatever, or from any profession, trade, employment, or vocation, whether in Great Britain or elsewhere, for every 20s. the sum of 7d. The same is to be levied upon the annual profits arising to any person not residing in Great Britain, whether a subject of Her Majesty or not, from any property situated in Great Britain, or from

any trade, &c., carried on therein. The duty to be computed upon an average of the profits in the three years preceding the year of assessment.

Schedule E. Upon every public office or employment of profit, and upon every annuity, pension, or stipend payable by Her

Majesty, or out of the public revenue (except annuities charged in Schedule C), for every 20s. the sum of 7d.

The duties are to be under the management of the Commissioners of Stamps and Taxes, and to be assessed and raised under the regulations of the Assessed Taxes Act.

If the Wages be Guineas instead of Pounds, for each Guinea add One Penny to each Month, or One Farthing to each Week.

RAPHAEL TO HIS READERS.

17, Warwick Square, Paternoster Row, London, 13th March, 1848.

Twenty-eighth Year. [1848.] Twenty-eighth Year.

“What, if amidst the shining stars serene
 Man's fate be written? What, if each circling sphere
 Disclose to mental view the far and dark unscene!
 This seemeth strange, yet BOTH TO SOME appear.”

RAPHAEL with becoming pride refers to the following recent fulfilments of his predictions. I. As to the abdication of LOUIS PHILIPPE and the total fall of the ORLEANS dynasty. II. The futility of the PARIS CITADELS, and the French Armies, when opposed to the public will. III. The French Revolution and the establishment of a Republican Government. IV. The omnipotence of popular opinion, as seen in the withdrawal by Ministers of the attempted increase to the Income-tax. V. The master mind of Sir Robert Peel. VI. Railway improvements. VII. More equal taxation; together with numerous other instances, in course of accomplishment.

THE FOLLOWING TALENTED CRITIQUE from the DAILY NEWS OF THE 8TH MARCH, 1848, is worthy of an attentive perusal:—

RAPHAEL'S *Prophetic Almanac* for 1848.

“The ‘Times’ and ‘Morning Chronicle’ have been propounding with most exquisite self-complacency theories explanatory of the causes which have restored the Comte de Neully to the calm shades of private life. With all due deference to these sages, we may be allowed to remark that they are, like the Scotchman, ‘wise ahin’ han’,’ while a philosopher, whose political wisdom is about equal to theirs, foretold the event, besides detecting its causation. Yes, Raphael, the astrologer of the nineteenth century, predicted in October last the overthrow of the late King of the French, and accounted for it by a theory at least as tenable as that maintained by either of the authorities we have named. According to Raphael, the stars have done it all, and the Ulysses of the great modern revolutionary epic may put in the same plea in mitigation of his errors, which the poet has assigned to certain fair sinners—

‘When weak women go astray,
 Their stars are more in fault than they.’

“‘The Sun suffers eclipse,’ says the mystic sage, ‘while joined with Saturn, and Jupiter halts in his celestial career through Cancer, as if to ponder on impending woes. These highly-fraught configurations are tokens of *the vacation of a throne, and, it may be, the annihilation of power in a family.*’ The prophecy, it is true, indicates the month of March as the time of these catastrophes; but perhaps the stars, like mortals, have invented an electric telegraph for communicating the decrees of destiny, and astrologers have not yet learned to make allowance for the increased celerity with which

their celestial messages reach our earth. The warning voice was repeated more than once. What we have quoted relates to the month of March. Among the vaticinations of the brumal quarter (21st December to 20th March) we read: 'There are symptoms of an outburst of the general voice in favour of some alteration or innovation, and an embroilment no way beneficial to those classes whose advantage lies in the maintenance of things as they are.' And in 'the Nativity of Louis Philippe' we are told that this year 'Evil will manifest itself among the family of Louis Philippe, and derangement in the rich fortunes of the house of Orleans.' Nay, more, 'The figure before me is of a martial cast, showing a determined reliance upon armed forces for accomplishing his (Louis Philippe's) plans.' And, finally, 'Paris, with its many citadels, may witness struggles as violent as those that in destroying the kingly office opened a vista wherein we may trace successive phases and usurpations of power, and of which Louis Philippe is the terminating point or figure.'

"And all this the ex-King and his minister might have known in October last 'for the small charge of half-a-crown,' whereas ignorance of it has cost the former a whole one. Let it not be said that the foreknowledge would have been of no avail against destiny. The sage Raphael assures us, on the contrary, that 'The heavens invite or dispose to good or evil, but do not compel to either.' Surely since events have set their seal of corroboration upon Raphael's prescience, his 'Prophetic Messenger' will be ordered for every Government office: bound up in the Foreign-office with the 'Almanac de Gotha'; at the Admiralty, with the 'Nautical Magazine'; and at the board over which Mr. Strutt presides, with the 'Railway Guide.' *A propos* of this latter department, we learn from Raphael with mingled pleasure and regret that, in the autumn quarter, 'the moon applying to Jupiter' prognosticates that 'the prospects for the great interests involved in railways are more favourable; improved management and fewer casualties are among the desiderata which will become evident during the interval under notice.' Not to flatter Jupiter and the Moon, we expect at least as much assistance in these matters from their conjunction as from the conjunction of the wise men in Whitehall.

"To put Downing-street on the alert, we need only hint that in the month of June 'Jupiter quartiles Herschel,' and 'the Sun and Saturn bear the same hostile relation,' foreboding that 'a great politician, or magistrate, suffers in person, or vacates his official seat.' Our first fear was for Lord Palmerston: in our mind's eye we saw him prostrate before Chisholm Anstey. But, on second thoughts, the personal suffering appears to point to Lord John's influenza; and this view is corroborated by the concluding sentence of Sir Robert Peel's nativity: 'In my judgment he will be found leading public opinion in financial matters; shining forth when crises arrive, which less experienced and far-seeing statesmen will fail to combat successfully, and thus, in all probability, again be called to assume the helm of state.'

"Our readers will believe us that our very first dip into futurity, after our faith in Raphael had been confirmed by the late events in

France, was to inquire after the prospects of financial reform. During the summer quarter, we are happy to learn—"unexpected propositions tending to a more equal system of taxation will emanate from the ruling powers." The summer quarter does not commence before Lady-day, but as the French revolution broke out before it was due, so may this reform of taxation. Mr. Bright had better be on the alert with his motion about legacy and probate duties, or the Ministers, who so quickly gave up the main feature of their budget, may forestal him, and grant his request before he makes it."

RAPHAEL cannot but feel highly gratified at the trouble and care shown in the above article, and the pains taken to peruse his little work, and to draw such correct inferences. Yet Raphael, in common with all true believers in the Celestial science, could have wished the subject to have been treated with the great solemnity its truthful character warrants. However, it is refreshing to find that great political writers can find time, amidst the whirlwind of change, to consult his humble pages, and have relish to descant thereon, founded as they are upon the unerring indications of the heavenly monitors.

MORE THAN ONE HUNDRED OF THE PROVINCIAL PAPERS CONCUR IN EULOGIZING OUR LITTLE ANNUAL.

For example:—

THE FIRST TO DRAW PUBLIC ATTENTION TO THE EXTRAORDINARY FULFILMENT WAS

The Liverpool Journal, March 4, 1848.

"TRUE PROPHECY.—In 'Raphael's Almanac for 1848' a prediction is put forth that a revolution would take place in February, in one of the continental countries, resulting in the overthrow of a royal family. At the same time the title-page had an engraving representing an attack on the Tuileries."

Then followed the *Liverpool Albion*, March 6, 1848.

"SINGULAR FULFILMENT OF A PROPHECY.—In 'Raphael's Prophetic Messenger for 1848' a prediction is put forth that a revolution would take place in February, in one of the continental countries, resulting in the overthrow of a royal family. At the same time the title-page has an engraving representing an attack on the Tuileries. The singular passage alluded to is—"Jupiter halts in his celestial career through Cancer, as if to ponder upon impending woes. These highly-fraught configurations are *tokens of the vacation of a throne*," and, it may be, the annihilation of sovereign power in a family.' Some interesting foreshadowings of the events that have just occurred appear also in the remarks on the scheme of Louis Philippe's nativity in the same work."

Liverpool Chronicle, March 11, 1848.

"THE PROPHET RAPHAEL.—An eminent astrologer, who passes under the name of Raphael, has astonished the world by his predictions relative to recent events in France, the leading incidents of which have all been foretold in his *Prophetic Messenger for 1848*; in which work also will be found some interesting matter on the tenure of office of some of the big-wigs at Downing-street. Within the last few years this study has revived, and assumed a certain degree of the attention given to it a couple of centuries ago. A few fortunate predictions on subjects of such eminent importance as those alluded to here, would certainly re-establish it amongst the sciences. However this may be, the *Prophetic Messenger* is a curious and interesting work."

—
Preston Chronicle.

"RAPHAEL'S PROPHETIC ALMANAC.—In this curious production for the present year, the occurrences of the past are clearly shown as having been foretold, no doubt to the satisfaction of all the purchasers of this extraordinary work. Readers, curious in ascertaining future events, will find plenty of amusement in this little volume."

—
Liverpool Mercury, March 7, 1848.

"RAPHAEL'S PROPHETIC MESSENGER.—Except for amusement we rarely dip into prognostications of weather or dynasty convulsions, but in this *Messenger for 1848*, at page 43, there is a passage too striking to be overlooked. It is as follows:—'The King of the French, notwithstanding far-reaching visions of the greatness and permanence of his dynasty, has been an instrument in the hands of Providence for realising to us that momentous petition contained in the Liturgy of the Church of England, "Give peace in our time, O Lord," and in that light has been a benefactor to the world. Yet the elements of other changes await but the moment that shall awaken them to action; and Paris, with its many citadels, may witness struggles as violent as those that in destroying the kingly office opened a vista wherein we may trace successive phases and usurpations of power, and of which Louis Philippe is the terminating point or object.'"

—
Athenæum, Dec. 12, 1846.

"And lastly we have (the 28th year of) Raphael's *Prophetic Almanac*, *Weather-Guide*, and *Ephemeris*; with its portentous hieroglyphic frontispiece, astrological predictions and nativities, and talismanic diagrams, that make the other publications coming under the same generic name look mere tame and matter-of-fact affairs."

RAPHAEL'S PROPHETIC ALMANAC is published by *William Charlton Wright*, London, and sold by all Booksellers.

N.B.—There is a RE-ISSUE of the numbers for 1846, 1847, and 1848, singly, at half-a-crown each; which at the same time are formed into a handsome pocket volume, price 8s. in cloth, containing three coloured hieroglyphics, three woodcuts, and 394 pages of letter-press.
