100 years ago 3 brothers decided to form soybean association: ASA was born

By Michele F. Mihaljevich Indiana Correspondent

CAMDEN, Ind. – The American Soybean Association (ASA) will celebrate its 100th anniversary next month at the Indiana farm where the organization was founded.

Originally called the National Soybean Growers' Association, the group was started by Taylor, Noah and Finis Fouts, brothers who farmed in Camden. It became the ASA in 1925.

The anniversary event is Aug. 4. ASA was formed Sept. 3, 1920, the same day as the first Corn Belt Soybean Field Day at the family's Soyland Farms. About 1,000 farmers from six states attended the field day. ASA and its affiliated state associations currently represent more than 300,000 soybean farmers.

"When they started it, it wasn't like, 'let's start this great organization'," said Elisha Modisett Kemp, great-great-granddaughter of Noah Fouts. "They were looking for a way to get more farmers interested in growing soybeans. At the time, soybeans were used for livestock feed. What they were able to start has grown exponentially. They'd be surprised and pleased by the uses for soybeans today and by the global markets."

Soybeans first came to this country in the 1800s, said Ron Heck, past ASA president and an Iowa farmer. They were used as ballast in empty boats returning from China after delivering goods from the United States.

"Soybeans were originally used in this country for hay or forage," he said. "We didn't really appreciate their value. China used them as human food then."

Eventually, American farmers came to understand the virtues of soybeans – they're 80 percent high quality complete protein and 20 percent oil, Heck said. They became more popular and widespread as soybean breeding got better and more uses were found.

Above: Brothers Taylor, Finis and Noah Fouts in 1920, the year they formed what's known today as the American Soybean Association. (Photo provided)

"The soybean association recognized the potential," he explained. "It showed farmers how to raise and use them. They took off around the 1960s; they became more than just another crop. An export market was developed. That's the funny thing. Soybeans are an Asian product brought here. We developed them and send them back to them in large quantities."

The look of soybeans has changed over the years, Heck noted. "When they were grown for hay, they were tall and viney. They were taller – as much as chest high – without as many pods. Today, they're bred as short as possible. A field is lush looking, like a carpet that's knee high. Over time, we've steadily added about a bushel in yield a year as breeding gets better."

The anniversary celebration's organizers are limiting the number of attendees to 180 due to the coronavirus pandemic. Indiana Gov. Eric Holcomb and USDA Deputy Secretary Steve Censky are expected to attend. The day – free for attendees – will also include self-guided tours, history displays and the unveiling of a historical marker. For more information and to register, visit https://soygrowers.com/registration-for-asa-events-aug-3-6-2020/. The event will be livestreamed.

The organization "started because a couple of farmers were passionate about something," said Charles Atkinson, chair of the 100th anniversary committee and a member of

U of I ag economist says corn and bean prices will be down

By TIM ALEXANDER Illinois Correspondent

URBANA, Ill. — Despite a recent price rally for corn, based on reduced USDA acreage projections and strong export numbers, concerns about demand weakness for corn ethanol will keep prices down. As for soybeans, large and healthy crops grown in Brazil and Argentina will help keep prices below \$9 per bushel. This is according to Todd Hubbs, University of Illinois agricultural economist, who addressed farmers during a July 22

In addition to concern about USDA's domestic soybean usage projection for the 2021 marketing year being too optimistic, "Brazil, Argentina, Uruguay and Paraguay are going to be up about 7 to 8 percent in production for the 2021 marketing year," said Hubbs. "By all accounts, Brazil's farmers have had a great couple of years."

Competition will be stiff for export

soybean sales in 2021, Hubbs noted, though the 2020 soybean crush offers reason for optimism. "Looking at the demand side, we've had an excellent year for crush. USDA raised the 2020 crush by 15 million bushels, and they've got 2021 crush at 2.16 billion. We definitely have the potential to crush that many beans," he said.

Though soybean meal sales have been steady since June, Hubbs said he wouldn't be surprised to see reduced demand for meal from the livestock sector if another stay-athome order is issued due to the recent resurgence of COVID-19 cases in some metropolitan areas.

"I don't see it growing much between 2020 and 2021. If restaurants shut down you will start seeing a shift in the supply chain in the livestock sector. I feel like we will see moderate meat demand with people dining more at home, and that could go all the way

IN THIS FARM WORLD:

- Tractors typically used for hobby farms seeing an increase in sales Page 2

Tractors typically used for hobby farms seeing an increase in sales

By Michele F. Mihaljevich Indiana Correspondent

ST. LOUIS, Mo. – Farm equipment dealers are finding alternative ways to help sell tractors and combines during the coronavirus pandemic, according to industry officials.

Dealers have used creative solutions for what they've had to deal with, said Kim Rominger, president and CEO of the Equipment Dealers Association. "They've done online demonstrations and have set up outdoor walk arounds, one customer at a time. Customers can pick up parts by driving up and by using drive-through service. Some dealers are setting up appointments to limit the number of people in the showroom."

Depending on their region of the country, dealers reported they had a good first half of the year, noted Rominger, also executive vice president and CEO of the United Equipment Dealers Association. Those in dairy areas are starting to report more sales after a slow start, he added.

Nationally, sales of two-wheel-drive tractors under 100 HP were up through June over the same period in 2019, while sales of larger tractors were down, the Association of Equipment Manufacturers (AEM) said in its mid-July sales report.

Specifically, two-wheel-drive tractors under 40 HP rose 13.3 percent, AEM said. Two-wheel-drive tractors of 40-100 HP were up 6.6 percent. Two-wheel-drive tractors with 100 HP or more fell 3.5 percent. Four-wheel-drive tractors dropped 11.5 percent. Self-propelled combine sales dipped 1.7 percent.

Sales have been so strong for some dealers that they've reported selling out of certain models, predominantly

those under 40 HP, Rominger said. "Those are generally for hobby farmers and large property owners. Some people have cash and decided to buy equipment."

The sales numbers are a bit surprising in some cases considering what's going on in the world, said Curt Blades, AEM senior vice president of agricultural services. "Overall tractor sales are not great, but not bad considering," he pointed out. "There were some

anomalies. The big one – so many tractors under 40 HP aren't farm tractors. They are acreage, lifestyle and small hobby farm tractors. That market has been hot for a long time. It's boosted the overall tractor market. If someone is deriving their income from farming, they're probably on the cusp of driving something bigger. Row crop tractors have started to find some stability. Combines were flat in year-to-date sales, but in June, started to see

some recovery."

Some dealers are taking a different approach to generating sales during the pandemic, Blades said. "Farmers and dealers are finding ways to get together to share equipment virtually. New communication tools provide an interesting opportunity to have access to some people they've never been able to access before."

The cancellation of some farm and equipment trade shows has taken away opportunities for dealers and manufacturers to show off new equipment and technologies, Rominger said. "Shows are a sales generator," he explained. "They're certainly a sales accelerator. There wouldn't be (ag-related) shows if they didn't help with sales."

Manufacturers are disappointed when shows are canceled, especially with all the new technologies on the market, Blades said. "Shows are important to showcase farm equipment. They're an important way for farmers to discover new equipment. Historically, they're very important to the ag market."

Officials with Ohio State University's Farm Science Review in London, Ohio, have announced they are switching their Sept. 22-24 event from in-person to virtual. The Farm Progress Show, scheduled for early September, has been canceled. Tradexpos, based in Austin, Minn., canceled its North American Farm & Power Show, scheduled for March in Owatonna, Minn. The company produces four trade shows annually.

As of press time, Tradexpos expects its shows in Mulvane, Kan. (Dec. 3-5), Topeka, Kan. (Jan. 5-7), and Fort Wayne, Ind. (Jan. 12-14), to go on as planned, said Fred Cline, a show director with the company. "It's very important that we're able to produce the shows," he said. "We're getting numerous comments from exhibitors and equipment dealers that this is how they start their year off. This is how they plan their year. You can find sales coming from shows as far as 11 months out. It's a real shot in the arm to get out there."

Cline doesn't expect to see Tradexpos try to present a show virtually. "It's important for us to have a place attendees can actually compare this tractor to that tractor, this seed to that seed, to see what will work for their home places. When we canceled the March show, the company's thinking was, Tradexpos would survive but what if one of our attendees didn't? We need to keep it clean and do it right. We're not blindly going in to produce a show at any

ASA

ASA's board of directors. "They knew they had a new product and they were developing a new industry. They needed to be known in Washington, D.C. Soybeans weren't listed on the CBOT (Chicago Board of Trade) then. They realized they needed to be a voice. You think of all the things we use soybeans for. They had a forward vision to think about all of this."

Atkinson said he's not sure that advocacy has changed that much over the last 100 years. "We're still talking with members of Congress about what's happening, what our concerns are," he said. "We're letting our legislators know what's going on. Today, they all know who soybean farmers are. There's also a united front with all commodities working together. We work with legislators and decision makers at the state and federal levels. We want to be proactive rather than reactive."

In addition to growing soybeans and forming the ASA, the Fouts brothers also created their own farm machinery and had their own elevator and seed company, Kemp said. "They loved brainstorming with other farmers. What it has evolved into today is just phenomenal. We're happy to see it grow. We're absolutely honored that the association has included us in the event. The historical marker is really meaningful."

FROM PAGE 1

through the 2021 marketing year," said Hubbs, adding that additional meat purchases by China or other key trade partners could improve meal demand in the coming marketing year.

COVID-19 will also help depress the corn market through the 2021 marketing year, Hubbs predicted, with reduced ethanol demand due to the pandemic playing a key role in keeping prices low. "Right now we are still about 10 to 11 percent below normal (U.S. motorist) gas consumption and ethanol production, and I don't see that picking up in the near term," he said. "After we came out of the June lockdown we saw weekly gas demand really take off, but in the last couple of weeks it's sort of flatlined as the COVID-19 issues in the south and west have picked up tremendously. I think you are seeing people stay away from restaurants and not going out as much, including in states that use a lot of gas like Texas and Florida with massive populations. I think this is going to stay sideways for a while."

The resurgence in virus incidences threatens ethanol production in the short run — current production levels have fallen to around 931,000 barrels per day, or 88 percent capacity — and injects uncertainty into long term prospects as well, Hubbs said in an essay he published on the U of I Department of ACES website.

'Gasoline demand recovered to almost 89 percent of pre-coronavirus lockdown levels in early July," Hubbs said in the essay, Revisiting Corn Use for Ethanol, dated July 20. "Despite this positive development, the recovery in demand flattened out over the last few weeks. Gasoline stocks began to recede but still sit substantially above levels usually seen at this time of the year. "Attempts to reopen the economy hit a snag as the virus spread rapidly around the country after initial hopes saw a rapid opening in many areas. At 8.648 million barrels per day, demand recovered substantially from the low point of 5.311 million barrels per day seen in early April. The path back to normal gasoline demand levels appears stalled. Ethanol production followed this recovery and will feel the implications of flattening gasoline use."

Hubbs brought a level of stoic humor to the webinar by admitting that given the rapidly changing socioeconomic conditions, even the most accomplished economist is currently speculating upon the unknown.

We all know about the uncertainties surrounding the coronavirus, the elections, our relationship with China and all the trade deals in general. These kinds of uncertainties are almost impossible to forecast. Any economist who tells you he knows what is going to happen is flat out lying to you," said Hubbs.

A Note from Rick: Markets at TLA on Tuesday were unchanged. The Dairy Cattle market is really the only market that has had any significant changes over the last month. This market has made a steady move upward, but was not tested on Tuesday. Feeder cattle prices along with Dairy Replacements have been very solid for quite some time now and the fact that cattle numbers are imited leads me to believe it will stay that way or even strengthen as we get closer to Fall and new feed. The Slaughter cattle market has seen dragging along at a slow pace. Cows have slipped back off of some very strong prices 4-6 weeks ago, but seem to have settled in or now. Holstein steers have remained in the mid 80s and low 90s and fat cattle are in the mid 90s. We hosted the Seymour Draft Sale and fat cattle are in the mid 90s. We hosted the Seymour Draft Sale last Friday & Saturday for the first time and it was a dandy! We had an excellent lineup of horses to offer and a great turnout. Prices were very strong throughout the sale. In addition to our regular supporters, we were excited to welcome some new faces. We entered a lot of new customers into our system and that is a great feeling. Thanks to Dewayne for helping TLA grow and to the crew here for once again doing what it takes to host a sale of this size and make it a success! See you at TLA!

VIEWS AND OPINIONS

Landowners rejoice as they say goodbye to WOTUS

If there's one upside that this challenging year has brought us, it has been that our elected officials are more visible to the American people than ever before.

During the peak of the COVID-19 pandemic earlier this spring, I was able to tune into press conferences broadcast live on Facebook and listen to speakers from the White House, from the governor of South Dakota's office, and even on a local level from the mayor of a nearby South Dakota city that was facing a breakout of cases.

So each day, I could listen to the experts, hear testimonies from people and catch a glimpse of how our politicians are making day-to-day decisions and how they are reacting to new things that have come

during this crazy 2020.

BRIDGING THE GAP

Bv Amanda Radke

Good or bad, thanks to social media, I've been able to watch protests, riots, debates, roundtables and the daily White House briefings. And although I work in media with a great deal of things coming at me each day, because I'm largely focused on agricultural topics, I'll admit that I didn't used to pay as much attention to other areas of interest, but now I can listen to a wide range of topics and have information delivered to me directly.

Let me share a great example of this.

I was tuning into another White House live session on Facebook on July 16, and imagine my surprise and delight when a cattleman in a cowboy hat walked up to the podium. On that day, an Arizona rancher named Jim Chilton joined President Donald Trump on the South Lawn of the White House to provide testimony about the burdensome and now deregulated Waters of the United States (WOTUS) rule.

Stepping up to the podium and speaking in front of Trump and EPA Administrator Andrew Wheeler, Chilton said, "Cutting the red tape set us free as private property owners. Our ranch has approximately 100 dry washes - these are washes with no water. The Corps of Engineers and EPA, who wrote the Obama 2015 regulations, ruled that any dry wash that had more than 12 inches of sand in the bottom became a water of the United States. It was outrageous.

"The 2015 rules and regulations were overreaching red tape and threatened me and other farmers, ranchers, businessmen and land owners with the possibility of going to jail and facing huge fines. Thank vou, Mr. President, for the Navigable Water Protection Rule that you promulgated. It set us free. The heavy hand of government is no longer on our shoul-

Chilton was speaking on behalf of the National Cattlemen's Beef Association and the Public Lands Council as they celebrated the modernization of environmental regulations, including the Navigable Waters Protection Rule that replaces the 2015 WOTUS.

Chilton is certainly an effective speaker. His honest testimony brought tears to my eyes and reminded me of the many stories I wrote in the last several years highlighting the struggles of so many landowners who faced unimaginable oversight, overreach, fines, legal fees and even jail time once the Army Corps of Engineers started knocking on their doors.

At times, it feels like we haven't have a ton of victories in the beef cattle businesses lately; however, in my mind, this is a huge win worth celebrating. We can still care about the environment - our natural resources, our land, our water and our food supply - but private landowners can and should also be able to enjoy their freedoms without the EPA breathing down their neck.

According to an NCBA press release, "President Trump was also joined at the White House by Idaho Gov. Brad Little, Alaska Gov. Mike Dunleavy, Joe Cambria of Cambria Truck Center, and Amy Johnson, a physician in Bedford, Va. Like Chilton, each of the attendees highlighted various regulatory improvements the Trump administration has made since 2015, including the replacement of WOTUS with the Navigable Waters Protection Rule, streamlining transportation requirements, and improving technology and access to telehealth."

We don't even choose 'herd immunity' for livestock

Two generations ago, no one in the cattle business ever thought "herd immunity" was a solution to bovine brucellosis. Instead, farmers and ranchers, often with the help of USDA veterinarians, blood-tested every animal they could find to discover, trace and isolate the disease's source and spread. It was hard, dirty work but it was the best science available until a vaccine vir-FARM AND FOOD FILE tually eliminated the costly dis-By Alan Guebert

Today, more than a few politicians suggest herd immunity as an effective way to fight America's again-raging COVID-19 pandemic. These folks can't be farmers or ranchers because, if they were, they'd know rural people aren't as cavalier about the lives of their animals as some politicians seem to be about the lives of their constituents.

Besides, herd immunity, according to experts at the University of Minnesota's Center for Infectious Disease Research and Policy, often is deadly to acquire. An adequate level of herd immunity against COVID-19 requires 60-70 percent of the world to become infected and - here's the hard part - survive coronavirus over a period of 18 to 24 months. During that time, they estimate, 800,000 Americans would die before our herd - you and me - would become modestly immune.

So, who wants to go first?

I don't remember one cow ever dying

before, during or after "bangs" testing. I do remember, though, that everyone - we, our neighbors and the nation - benefited from our safe, collective efforts.

> Today's collective COVID effort has been anything but collective and now millions of Americans face years of untold hardship. Even rural America, that vast sea of cultural tranquility, is shaking at its financial roots.

For example, on July 14, the ag economists at the University of Illinois'

farmdoc daily published an eye-popping report on how our toxic omelet of declining crop insurance benefits, terrible export policy and COVID-19 has smashed Illinois farm income.

According to Illinois farm records, 'Overall, incomes averaged \$189,000 per farm per year for the years 2006 to 2013. From 2014 to 2019, incomes... [were] \$100,000 less per farm, with a \$78,000 yearly average.'

But now, "trade disputes" - a phrase that softens our woodenheaded tariff fights with key American ag customers - and a continuation of ever-declining crop insurance coverage, 2020 farm income pre-COVID is projected at a puny \$44,330.

Post-COVID 2020 farm income is worse: a knee-buckling -\$25,033. That estimate, the economists quickly add, "does not include other forms of assistance... [includ-

Direct food sales come with strict guidelines

By Doug Graves Ohio Correspondent

COLUMBUS, Ohio - The past few years, Marla Green and her husband, Tom, have taken their produce to sell at the Lebanon Farmer's Market or the West Chester Farmer's Market in Ohio. COVID-19 is still putting a crimp on the local food supply chain and even farmers' markets are feeling that

"From our small farm in Butler County we've resorted to direct sales of our produce as a source of supplemental income," Marla said. "Now, with the gaps created by closed processing facilities, thinning grocery shelves and the unwillingness of some people to shop inside the stores, we dwelled on the idea of direct food sales, and that included baked goods from our kitchen."

The Greens contemplated entering the direct food sales arena and wanted to go above and beyond the normal sale of fresh corn, tomatoes and cucumbers - that is, until they weighed the risks and potential of legal liabili-

"This time of year many producers consider selling produce, meats, cottage foods and baked goods directly to consumers at the farm property," said Peggy Kirk Hall, director of agriculture law at The Ohio State University. "A question we often hear from farmers thinking about these types of farm food sales is, 'do I need some type of license or inspection to sell food from the farm?' The answer depends on the type of food offered for sale."

According to Hall, certain sales of foods such as fresh produce or cottage foods do not require a license. Cottage foods include non-potentially hazardous bakery products, jams, jellies, certain candies, certain flavored honeys, fruit chutneys, fruit butters, granola, granola bars, popcorn, unfilled baked donuts, waffle cones, pizzelles, roasted coffee, dry herbs or herb blends and dry soup mixes.

Eggs can be sold if sold directly from the location where the hens are raised and if the producer annually maintains 500 or fewer birds. Maple syrup sales are permitted provided at least 75 percent of the sap, sorghum juice or honey appears in the final product and that the goods are sold directly from the processing site.

Dressed chickens can be sold if offered directly to the consumer from the location where the chickens are raised and slaughtered and if the producer annually 1,000 or fewer chickens.

Selling more than one type of low risk food removes a producer from the roadside stand or cottage foods categories. A producer who sells multiple types of low risk foods must obtain a retail food establishment license, or an RFE. In Ohio, though, one can opt to register as a 'farm market' with the Ohio Department of Agriculture.

"Sales of certain types of baked goods require a home "These baked goods fall into ted) the higher risk 'potentially

hazardous' category because they require temperature controls such as refrigeration to ensure that they do not create a food safety risk."

Higher risk baked goods include cream pies, cheesecakes, cream filled donuts, custard pies, pumpkin pies and any other potentially hazardous baked goods. Ohio law requires a home bakery license for these types of higher risk home baked goods.

Indiana's laws are restrictive in that sales are only allowed at farmers mar-

Above: Direct Sales 1 - Depending on what state you reside, the sales of cut flowers and honey as shown here may or may not be permitted. Laws involving direct bakery license," Hall adds. food sales can vary from state to state. (photo submit-

kets and roadside stands. No sales from the home are permitted. A vendor may take pre-orders via the internet for example, but they can only deliver them to a farmers market or roadside

In Illinois, all sales must be in-person and can only be sold at farmers markets. No roadside or home sales are permitted by the state's laws. Iowa laws are similar to those in Ohio. Iowa permits pick-up services but roadside stands and restaurants are out, as is catering of any kind.

Kentucky may have the more lenient laws pertaining to goodies from the farm and elsewhere. Homemade goods in this state can be sold from home, at farmers markets and roadside stands. Delivery and pick-up is permitted, but no sales in restaurants or retail stores

Michigan's key restriction is limited to sales of \$25,000 annually, and products may only be sold directly to the consumer. Michigan prohibits fruit butters, pickles, sauces, mustards, ketchup and pet food. Those in Tennessee can sell an unlimited amount of non-potentially hazardous baked goods, candies, jams, jellies or other similar items. Tennessee producers can sell from home, at farmers markets, events and allow for pickup,

but roadside sales are prohibited. For more detailed information about producer food sales in any state, visit www.forrager.com.

"And there's more than just the food involved here," Hall said. "If you're within a municipality, you may have zoning regulations that apply to your production and sales activities. One may have to seek a 'conditional use' permit. And some municipal zoning regulations regulate 'home business-

If outside a municipality, Ohio's agricultural exemption from county and township zoning applies to one's production and sales activities.

Sales tax comes into play, Hall said. Most takeaway food items to be consumed off-site, such as meat and produce, aren't subject to Ohio's sales tax. Ready-to-eat items, beverages, flowers or container plants require sales taxes. This would require producers to obtain a vendor's license in order to submit the taxes to the state.

Hall advised producers that direct food sales may not be adequately covered by one's insurance policy. For instance, coverage is needed if a customer is harmed on the farm and product liability coverage would be needed if someone claims illness from consuming your food.

MGLI Draft Horse Show canceled

LANSING, Mich. — The 44th annual Michigan Great Lakes International (MGLI) Draft Horse Show and Pull will not occur in 2020 due to COVID 19 and restrictions on social distancing. It is not possible to conduct the show in the usual manner and guarantee social distancing and safety for all participants

This event draws competitors from across North America and is the largest equine event in Mid-Michigan. MGLI's attendance tops 35,000 people, making it the fourth largest trade show in the Greater Lansing area, and the 10th larg-

Since 1978, MGLI has annually honored draft horse breeders and pullers who have made an impact on the draft horse industry and Michigan's agriculture community. This world class event is made possible by supportive sponsors, industry participants and fans from across the world. While we will deeply miss hosting all our draft horse supporters, sponsors, friends and family - we look forward to seeing you in 2021.

For complete details you can visit www.mgli.org.

FROM PAGE 6

ingl additional federal aid currently being discussed in Congress..."

True, but "more worrisome is 2021, which likely will have lower levels of federal aid. Given recent setbacks in Coronavirus control, it seems reasonable [that]... 2021 could be a very low-income year for Illinois grain farm-

Not everyone in American ag, however, is getting plucked. Take the chicken kings, for example.

On late Friday, July 17, USDA's "Food Safety Inspection Service (FSIS) announced its approval of a petition filed by the National Chicken Council," reported Food & Water Watch, "to permit chicken that is infected with the avian disease Leukosis to be fit for human consumption."

Prior to the rule change, chicken "carcasses found to have this disease

were to be condemned and removed from further processing."

Who, other than the owners and shareholders of chicken processors, thinks allowing formerly condemned chicken carcasses into the American and export food chains is a good idea anytime let alone during a global pandemic?

But it's doubtful many will ever know because that day FSIS also approved an industry request to increase chicken kill line speeds from "140 birds per minute to 175 birds." At three birds per second, it's hard to "inspect" any chicken for the right number of body parts, let alone for Leukosis, "a tumor-causing (neoplastic) viral infection of young chickens."

But hey, as awful but lawful as the FSIS's actions are, in 18 to 24 months we should develop herd immunity to any new pathogen we're dining on,

Well, some of us anyway. © 2020 ag comm

Heat could affect dairy cattle offspring milk production

By Jordan Strickler Kentucky Correspondent

The offspring of dairy cattle exposed to heat stress could produce less milk, according to a new report published in the *Journal of Dairy Science* by the University of Florida (UL) and University of California, Davis (UCD). According to the 10-year study, heifers born to cows that are heat-stressed during late gestation grow to be smaller and produce on average five kilograms per day less milk in their first lactation, compared with heifers born to dams that were cooled during the hottest days of the year.

"(The study) suggests a permanent effect of fetal environment on genetic expression in adulthood," said senior author Dr. Jimena Laporta, of the Department of Animal Sciences at UF. "We hypothesized that exposure of pregnant cows to heat stress during late gestation will impair daughters' and granddaughters' lifetime performances."

The economic impact of this could be great. It is estimated that in the United States alone, environmental heat stress costs the dairy industry more than \$1.5 billion in annual losses due to decreased productive and reproductive performance and increased morbidity and mortality of lactating cows. The UF/UCD study calculated that these impairments translate to annual costs to dairy producers across the nation of up to \$595 million a year based on the average milk price from 2010 to 2015.

According to the University of Nebraska-Lincoln, the ideal temperature range for dairy cattle is 25-65 degrees Fahrenheit. Once the temperature exceeds 80 degrees, cattle reduce feed intake, which has a negative impact on production. At 90 degrees Fahrenheit or above, one can usually notice a dramatic decrease in milk production ranging from 3-20 percent.

Humidity also plays a significant part in heat stress for dairy cattle. There are three temperature-humidity ranges of concern. A temperature of 100 degrees and 20 percent humidity is the range at which serious measures to ease the stress on the cattle begin.

The danger occurs as the temperature nears 100 degrees and 50 percent humidity. The lethal range for cattle is 100 degrees and 80 percent humidity.

The first objective of the authors of the UF/UCD study was to measure the carryover effects of maternal exposure to heat stress during late gestation on milk yield, reproductive performance survival rates of daughters granddaughters. The second objective was to estimate the economic losses related to those outcomes across the country. Laporta and her colleagues pooled and analyzed data collected over a 10-year period on performance of Holstein cows in Florida, the state with the greatest number of heat stress days per year. This data gave the team information on the lifespans, productivity and reproductive performance of two successive generations of cows born to dams exposed to heat stress during pregnancy and those born to dams that were provided active cooling during heat stress periods.

The report found that, as expected, daughters and granddaughters of heatstressed cows showed negative effects in rates of survival from birth to first calving, length of productive lifespan, and milk performance, including milk yields and nutrient contents through the first three lactations.

Laporta noted that lactating cows tend to be the focus of heat reduction strategies, possibly because the effects of overheating are more immediately evident among them than among nonlactating pregnant cows, for which the damage may become apparent only later, when they resume milking. But the report suggests that considering the hidden costs which carry over to future generations of cows as well as the likelihood of increased heat stress due to ongoing climate change, producers should consider cooling techniques for dry cows - such as the use of fans and sprinkler systems - as they could be crucial to the continued success of the U.S. dairy industry.

Sunflowers offer benefits to the soil

By Doug Graves Ohio Correspondent

KENTON, Ohio - Small gardens everywhere are dotted with a few rows of sunflowers. The benefits of sunflowers are many, so they're not just pretty faces. They're great for their cut flowers and their edible seeds. They attract pest-patrolling birds and bees to improve the harvest and even help detox contaminated soil.

These plants can shoot up just like Jack's beanstalk to attain a full height in short order, usually rising to 5-12 feet. This height can serve a grower as some veggies prefer dappled shade. Sunflower seeds limit weeds as their seed contains a chemical that weeds don't like.

A few farmers in the state have given thought to sunflowers as a cover crop. And some have found success in doing

Jay Burton, of Kenton, has what seems like an endless field of soybeans on his farm. A large portion of his land is devoted to tall, giant-headed sunflowers. They'll bloom toward late summer and last for two to three weeks. His neighbors are enthralled by the vivid yellow flower with a green backdrop. Burton is happier about the benefits his sunflowers bestow into the soil below.

"I grow sunflowers for the soil health benefits," he said. "Corn crops leave an excess of nitrogen in the soil and sunflowers can be planted as a followup to take advantage of that. They like the nitrogen-rich soil. I used to double with corn and soybeans, but soybeans as a pairing have various problems that sunflowers to not have. Sunflowers are a soil conditioner. That root system, when allowed to die in place, increases the organic content of the soil and also increases its water holding capacity."

It's the third year with experimenting with sunflowers for Burton. Last year he had a mix of barley, mustard, buckwheat, radishes and various beans. This year it was strictly sunflowers. Next planting season he'll sideline the sunflowers in lieu or traditional crops.

"After planting into the harvested sunflower fields, the fields were easy to plant into and the soil appeared smooth," Burton said. "That's because the sunflower foots have a deep taproot and help bring in more different kinds of beneficial bacteria, fungi and microbes.

"I've tried to grow potatoes, but the selling price was low and the window for sales was narrow. I wanted to grow something natural and healthy for

human consumption."

his own sunflowers for health benefits. Burton shrugs his shoulders at that idea and instead may sell the sunflower

seeds to sunflower oil processors. His Neighbors tell Burton he should eat main concern is soil health and the use of natural methods to manage

Sunflowers

FROM PAGE 10

weeds and pests.

"Again, the typical corn-bean rotation leaves my ground barren six to eight months a year," he said. "I'm into soil health. I truly believe sunflowers increase organic matter in my soil."

Indeed. According to the USDA's Natural Resources Conservation Service, cover crops reduce erosion, increase soil organic matter content, improve air and water movement through soil and reduce soil compaction.

In 2017, Carrie Vollmer-Sanders and her husband partnered with two other farmers to plant sunflowers on their farms in Edon, Ohio, after wheat harvest in July.

"The sunflowers we grew have small black seeds and are sold for bird seed, not the large striped kind baseball players eat," she said. "We planted the first field, about 140 acres. By September, it was a beautiful field of four-foot-tall little sunshines staring back at us with unbelievable radiance."

The group planted sunflowers to add revenue to their farms' wheat acres.

"Having a second crop during a growing season can make the year more profitable, if the growing conditions are right," she said. "But we found the sunflowers brought other benefits when we added them to our crop rotation. Wheat keeps our soil covered through the winter, then we harvest it in the middle of the summer when there's less farm work, and it breaks up the corn-soy rotation and adds more diversity of roots and microbes to the soil.

"When we bring sunflowers to the rotation, they do all of those same positive things, and they're in the field from July to January, still allowing us to plant soybeans the next spring."

The Best of Spaulding Outdoors is the best of Jack Spaulding's columns over 30+ years. Enjoy his humorous trials in the outdoors, and colorful stories of his rural Indiana childhood. Available through Amazon.com in paperback for \$14.95, and for Kindle at \$3.99.

She points out that they do harvest in the winter. "We initially tried sunflowers because we hoped for financial gain. We have not experienced that gain, but we now have healthier soil and many happy neighbors. Although we planned them as a cash crop, the sunflowers functioned essentially as a cover crop for us, improving the soil as well as looking gorgeous for everyone in our corner of the world."

Where to see sunflowers

South Dakota (831,600 pounds) and North Dakota (740,700 pounds) produce the most sunflowers in the United States. Texas, Kansas, California, Minnesota, Colorado, Nebraska and Oklahoma round out the top nine.

Late July into early September is the best time to take in the spectacular show presented by sunflowers. There are many farms in the *Farm World* readership area offering displays of their colorful sunflowers to the general public. We've listed just a few of these farms:

оню

Readers ask about sugar-loving orioles and scorpions

Almost every week, I get feedback from often, readers and some very insightful questions and personal observations. Last week provided a couple of interesting inquiries.

Dee Wallace, of St. Maurice, Ind., emailed: What's with all the

woodpeckers and orioles eating I'd love to have orioles! my hummingbird food this year? This is the first time I've is a source of water nearby encountered this behavior. I have to leave off the plastic flowers on the feeder or they pull them out. I like them, but it scares the hummers. Any advice?

I replied to Dee: Have you tried putting out some suet cakes for

SPAULDING OUTDOORS By Jack Spaulding

maybe putting up an oriole feeding station with oranges and grape jelly? Ordinarily, woodpeckers and orioles don't bother hummingbird sugar water feeders. Sounds like your yard is really alive with bird activity!

I meant to ask Dee if there for the birds. I can't speak professionally, but thirst might be a factor in the woodpeckers and orioles drinking hummingbird's sugar water. Then again, it might just be a sweet tooth!

Michael Hall emailed the

the wood peckers and following inquiry: Just a quick attention with the first words question, so, do scorpions really live in Indiana?

> Yes, they do live here in Indiana. But before you go putting on your snake boots and shaking out your clothes in the morning, the scorpions we have in Indiana are very tiny and pose no threat to humans. I reported on Indiana's library loving scorpions back in September 2015.

I got a call from Jason Knueven of the Batesville area. Jason is a grandson of Roman Nobbe, and like his grandfather, takes a great deal of interest in the outdoors. He had my undivided

out of his mouth when he said, "I've got a scorpion I caught in my house... would you like to see it?" I am no stranger to scorpions. I spent the summer following my high school graduation

Uncle Bob Bolton. In the desert (Spaulding continued on page 13)

roaming the West with my

Above: Indiana does have scorpions, but they are very small.

FROM PAGE 12

country, there are scorpions. Uncle Bob was a mercantile salesman for the Henry Hillson Company. His territory was the Indian reservations in Colorado, Utah, New Mexico and Arizona. I spent the summer and fall of 1968 seeing the last of the Old West, traveling with Uncle Bob to the various Indian reservation trading posts across the four states.

The most desolate location Uncle Bob called on was the trading post at Navajo Mountain. It was considered to be the most isolated place in the United States as it was 250 miles from the nearest post office. It was a long, full day's drive, one-way on unmarked desert sand roads.

The trading post was run by Madelyn and her husband Harvey who were our hosts for our overnight stay. After supper, we would be sleeping in the old bunk house. I planned on draping my clothes over a chair to help keep out any pesky critters... especially scorpions. For sure come morning, my duds and boots would be getting a good shaking before I put them back on!

During supper under the bright glow of an Aladdin kerosene light, Ι noticed something scurrying across the

floor. As it got closer, I could see it was a scorpion the size of a half grown crawdad headed right toward the kitchen table.

I jumped out of the chair, lunged, and on the third step mashed the poisonous varmint on the kitchen floor. I squashed it and I squashed it good. Thinking I was to be praised for my quick actions, I was surprised to see everyone looking at me in disbelief and shocked silence.

Madelyn sternly said, "That wasn't scorpion hurting anything! Who's going to clean up that mess?" As Uncle Bob was trying to stifle a snicker, I quickly volunteered!

It had been 47 years since I had my last wild scorpion encounter, and I couldn't wait to see what Jason had. I looked a little puzzled as he handed me a clear, plastic Ziploc bag and simply said, "It's in there... it's not very big."

At first glance, the bag appeared to be empty. Then I saw a little crumb-like object in the corner of the bag, and it moved! Sure enough, I was looking at a prime example of Chelifer cancroides, or as commonly known, a "book scorpion." It was smaller than the tip of a pencil eraser. It looked as if it would take three or more of the hughes.net

tiny rascals joining outstretched pinchers to reach from side-toside across a Lincoln penny.

Unlike its much larger-sized, various poisoned-tipped tailed cousins roaming the desert country, the book scorpion is known as a Pseudoscorpion since it doesn't have the upturned stinger tail. Its venom is delivered by its tiny pinchers.

It comes from a large family as there are 3,300 species of psuedoscorpions, and they are found all the way from Ontario and above the timberline in Wyoming to the Jenolan caves in Australia. In short, they are almost everywhere.

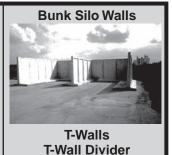

The book scorpion is the species most commonly found in homes where they are often observed in rooms with dusty books. There the tiny animals find their food like booklice and house dust mites. To travel from place to place, they are ingenious, uninvited hitch hikers as they will cling to the underside of a larger flying insect like a beetle or a fly and "hitch a ride." Most wind up in homes when they come in with the firewood.

Milk production increased in June

Mielke Market Weekly By Lee Mielke

U.S. milk production is headed back up after a short-lived dip in May due to falling milk prices, a result of to the COVID pandemic, as well as reduction programs mandated by milk handlers. Preliminary data in the USDA's latest Milk Production report showed June

output at 18.3 billion pounds, up 0.5 percent from June 2019, as soaring milk prices surely entices higher milk output at the farm.

Milk output for the quarter totaled 55.9 billion pounds, up just 0.4 percent from 2019. Cow numbers averaged 9.36 million head, down 12,000 from first quarter, but 31,000 head more than the same period a year ago.

June milk output in the top 24 producing states hit 17.4 billion pounds, also up 0.5 percent from 2019. Revisions raised the original May 50-state total by 115 million pounds, now put at 18.96 billion pounds, down just 0.5 percent from May 2019, instead of the originally reported 1.1 percent drop.

June cow numbers totaled 9.35 million head in the 50 states, down 10,000 from April but 23,000 above a year ago. May cow numbers were revised down 10,000 head. June output per cow averaged 1,958 pounds, up just 4 pounds from a year ago or 0.2 percent, likely due to production cutting measures by producers.

California output was up 1.0 percent from a year ago, thanks to a 25 pound gain per cow offsetting 4,000 fewer cows milked. Wisconsin production was down 35 million pounds, or 1.4 percent, on 11,000 fewer cows and a 10 pound drop per cow.

Idaho was up 3.5 percent on 23,000 more

cows, though output per cow was off 5 pounds. Michigan was off 0.6 percent, on a 25 pound loss per cow, but had 2,000 more cows than a year ago. Minnesota was down 1.4 percent on a 5 pound loss per cow and 5,000 fewer cows. New Mexico, again with the biggest decrease, was down 6.2 percent, due to a 150 pound per cow plunge, though cow numbers were up 3,000.

New York was up 0.3 percent on a 10 pound gain per cow but had 1,000 fewer cows. Oregon was unchanged with 1,000 more cows offsetting a 10 pound drop per cow. Pennsylvania was up 1.5 percent on a 55 pound gain per cow but cow numbers still lag, down 8,000 from a year ago. Texas was up 4.4 percent on 25,000 more cows, though output per cow was unchanged. Vermont was down 5.3 percent, on a 55 pound drop per cow and 3,000 fewer cows. Washington State was down 1.1 percent, on a 20 pound drop per cow but cow numbers were unchanged.

Meanwhile, dairy cow culling remains below a year ago as farmers try to keep their milk tanks full considering where milk prices are right now. The latest Livestock Slaughter report shows an estimated 227,000 head were sent to slaughter under federal inspection in June, down 6,300 head or 2.7 percent from May and 4,200 or 1.8 percent below June 2019. A total of 1.59 million head have been culled in the first half of 2020, down 45,200 head or 2.8 percent from 2019.

StoneX states, "When you account for the increase of imported Canadian cows for slaughter, actual domestic dairy cow slaughter was about 12 percent lower than year ago levels. That level of slaughter compared to replacement heifer numbers suggests the herd should have at least been steady in those months, if not increasing. It certainly does not line up with the large declines that the USDA is showing in the Milk Production Report."

The USDA's June Cold Storage report shows America's dairy appetite was strong.

Matt Gould, analyst and editor of the Dairy and Food Market Analyst newsletter, said the report was indicative of the country reopening in the July 27 'Dairy Radio Now' broadcast and showed faster than normal drawdowns.

June 30 butter stocks fell to 361.6 million pounds, down an impressive 14.2 million pounds or 3.8 percent from May, highest June drawdown since 2012, according to HighGround Dairy, but were 35.3 million pounds or 10.8 percent above a year ago, topping the previous year for the 12th consecutive month.

American type cheese storage totaled 793.3 million pounds, down 26.7 million pounds or 3.3 percent from May but 8.9 million or 1.1 percent above a year ago. The five-year average drawdown is typically flat from May to June, according to Gould. The "other" cheese category slipped to 599.0 million pounds, down 10.9 million pounds or 1.8 percent from May but was 30 million or 5.3 percent above a year ago.

The total cheese inventory fell to 1.416 billion pounds, down 38.1 million pounds or 2.6 percent from May, steepest June decline on record, but still 35.6 million or 2.6 percent above June 2019, third consecutive month total stocks topped prior year levels.

Gould said that people ask how prices can be so high with inventories being above a year ago and the answer is, "The supply chain has to carry more inventory just because of all the uncertainty, just trying to keep up with the changes, you have to be prepared for what if."

One other note on demand, the July 20 Daily Dairy Report (DDR) says "Recent pandemic lockdowns sent shoppers scrambling to secure one of their favorite comfort foods, ice cream. That behavior sent retail sales of ice cream spiking in March and April. During the height of the lockdowns, consumers turned heavily to three products for comfort, pizza, ice cream, and booze, says Food Navigator."

The DDR adds that Nielsen data shows

total ice cream sales at retail for the eight weeks ending April 18 were nearly 25 percent stronger than the prior year but that second-quarter sales of ice cream were not strong enough to offset losses at foodservice, and the 2020 summer ice cream season got off to a slow start."

Dairy farm margins showed "significant improvement in nearby marketing periods over the first half of July following persistent strength in milk and renewed pressure in feed markets," according to the latest Margin Watch (MW) from Chicago-based Commodity & Ingredient Hedging LLC.

But the MW warned that "While Class III prices have surged due to strength in cheese, dairy producers unfortunately have not been able to take full advantage as milk checks from processors are reflecting extremely negative Producer Price Differential (PPD) values due to the low price of the Class I Mover which will likely continue to generate negative PPD's in upcoming months as well."

The USDA announced additional cheese purchases under Section 32 authority this week of \$24.7 million for 8.22 million pounds for delivery August 16 thru November 30. It equates to \$3.01 per pound but that includes costs to convert 40-pound blocks into chunks and shreds as well as freight. It was also noted there was a 240 truckload shortfall in the last announcement due to no offers.

USDA's Dairy, World Markets, and Trade report issued this week says the outlook for U.S. dairy exports has "brightened considerably." "Exports through May reached \$2.7 billion, an increase of 12 percent over the same period in 2019," the report stated. "U.S. shipments of skim milk powder (SMP), dried whey and whey products, and lactose through May were up 17 percent, 16 percent and 10 percent, respectively year-over-year (YOY). On a value basis, exports of SMP through May were up 38 percent YOY and accounted for nearly a third of total dairy exports."

Beware of text & phone solicitors. Don't be a victim. ALERT! If you get a TXT message from anyone about your equipment, especially from Texas, it's most likely a fraud. BEWARE OF JOSHUA BROWN!!!

They will send you a check that appears to be good, but overpays to the amount of what it costs to pick up equipment, and later wants a wire sent to them through Walmart because they now will pay the pick up company. Their check comes back bad after a few days, and the Walmart wire cannot be reversed. They have been reported to the Federal Trade Commission (FTC) and the Federal Bureau of Investigation (FBI). ALERT!

If you are contacted by a company called National Marketing or Ultimate Market Place from Omaha, Nebraska and others, please be careful. Farm World has been alerted about representatives of Boese Media Marketing, Heartland Media Group LLC, National Marketing & Ultimate Market Place, Sqt. Christopher (TX), Ryan (IA) anyone requesting transaction with PAYPAL account and others claiming that they will work for a brokerage or leasing company that matches buyers and sellers together and offers financing to buyers. For \$99-\$400 dollars they claim they have already brokered a buyer for the equipment, and want a credit card over the phone to begin the process. As time goes on, nothing happens, phone calls are not returned, and the equipment is not sold. We have heard from over 400 people, and have filed a complaint with both the Secretary of State and the Attorney General in Nebraska. If you have any experience with this company, please contact Consumer Protection Mediation Center 800-727-6432. Also we would like to hear from you. Please call 1-800-876-5133 x 302 and ask for Gary.

> A scammer will often try to pressure you into making a quick decision and to pay up front. These are warning signs that should not be ignored!

REMEMBER: If a deal is too good to be true, pass. Do not be influenced by a sense of urgency.

DO NOT GIVE YOUR CREDIT CARD OVER THE PHONE.

Cereal rye ranks first in 2019 Cover Crop Planting Report

By DOUG GRAVES Ohio Correspondent

ST. LOUIS, Mo. — "Cover crop usage is at a low level across the nation and we want to help farmers get cover crops established."

That was the main message given by farmer and Soil Health Partnership (SHP) field manager Jim Isermann during a recent Webinar dealing with cover crops. Isermann was joined by SHP lead scientist Maria Bowman during SHP's 2019 Cover Crop Planting Report. The two addressed several hundred non-users of cover crops who wanted to know more about the practice of using cover crops, the desired species and planting methods.

SHP, the flagship sustainability program of the National Corn Growers Association, gathered data on cover crops from 2019 to create baseline data for future analysis to further evaluate how cover crops impact soil health, agronomic outcomes and farmer profitability.

"Cover crops; farmers know about them. They know how to utilize them. But most farmers prefer to concentrate on cash crops, oftentimes ignoring

Above: Cereal Rye was the preferred cover crop of 85 farmers across 11 states in a survey conducted by Soil Health Partnership. (photo submitted)

Right: Rapeseed ranked second among farmers when asked about their choice of reliable cover crops. (photo submitted)

the importance of the relatively inexpensive cover crops," Isermann said.

Isermann and Bowman shared data from the 2019 growing season that involved 85 farmers across 11 states (including those in Ohio, Indiana, Illinois, Iowa and Michigan) who utilized cover crops in their rotations. Participants included mediumto average-size farms that used no-till or reduced tillage methods.

"Cover crops are becoming more popular,"

Left: Jim Isermann (right) and his father, David, work 900 acres in Livingston and LaSalle Counties in Illinois and found that cover crops have improved their soil quality and increased yields of agricultural commodity crops. (photo submitted)

Isermann said. "Farmers are looking at soil health and most begin with no-till methods and see some benefits to this method. The next logical step is to incorporate a cover crop into the system to improve things even more. With cover crops you get better water infiltration and build organic matter."

Fifty percent of the farmers used cereal rye as their cover crop. Others used oats (42 percent), rapeseed (45), radish (37), clover (29), peas (21), barley (13) and annual ryegrass (11).

Results of seeding methods were shared to those tuning in to this one-hour Webinar. Forty-five percent of participants utilized seed drilled planting, 32 percent used broadcast planting while about 14 percent used aerial seeding. Another seven percent had other means of planting seeds.

Making hay with mule power

By Terence Corrigan **Tennessee correspondent**

A rhythmic clatter synchs nicely with the pace of the mules, Alice and Amos, as they pull a 115-yearold sickle bar mower guided by Tony

Most people would call Hutson a muleskinner but he refers to himself as a horseman. "People try to make a big difference between the two horseman or mule skinner - but really the only thing different is when you cross a mare (horse) with a jack (male donkey) they get the long ears," he said. "Everything else about the animal is horse."

As Hutson and his mule team "hit a lick" in the field in back of his home, Honcho, a red heeler, circles wide around them, his attention glued to Hutson. "He's pretty much my fulltime companion," Hutson said.

Hutson compares working with mules to others' passion for playing golf. "The mules/horses lifestyle has become my golf game," he said. "This is my outlet. To walk 18 holes swinging clubs and having to pay to do it? I can't see that. I'd rather be mowing hay or raking or plowing a garden or something productive."

Hutson was born and raised up to his teen years in Tucker, Ga., then a small farm town outside of Atlanta. "In the early '70s, just about all Southerners raised tobacco on a two-to-three acre allotment," he said. "That's where the mules come in. My grandfather worked for other people ... they were horsemen, by necessity. They had no tractors. Most people would keep a horse or a mule to work the tobacco patches. Everyone had

Mules were intertwined with tobacco.

And, whenever and wherever men would gather, the conversations

OT BATWING. **CUTTER**

- fully baffled deck to ensure excellent distribution of cut material
- Easy hook-up reduces preparation time and frustration
- Low tongue weight
- Standard chain shielding
- Six-year gearbox warranty including
- 90-inch cutting width, Rear Discharge
- Three-point hitch: Cat 1 and 2
- Tractor HP range: 45-75 hp
- Versatile enough to move from rough, weedy farmland to commercial lawns and landscapes, leaving behind a high-grade

WOODS

Features a quick change blade system, an extra-strong double B-section belt, and anti-wrap bars that prevent damage caused by material wrapped around lower spindle

- Deep deck and swinging blades ideal for rough grass
- Standard chain shielding
- ASABE quick-hitch compatibility ensures faster, easier and safer hook-ups
- Six-year gearbox limited warranty
- Three-year spindle limited warranty

Rotary Cutters | BB72.30 BrushBull™ Single-spindle Cutters

Rugged and reliable, the Woods BrushBull™ is built to tackle your toughest brush cutting chores

- 72-inch wide cutter for 30-75 hp tractors cuts brush up to 2
- Quick-hitch compatibility and a drive lift hanger make it
- Exclusive, greasable Quick-change pins and a large access window on top of the deck make it quick and easy to change blades
- Rugged bumper has Z-channel frame and is up to twice as thick as competitive models (.30 series), for added durability when backing over brush
- Large .5 x 4-inch blade increases suction and lifts material, resulting in excellent cut quality
- Smooth, sloped, clutter-free

Crop Cover

FROM PAGE 1B

"We found that it costs roughly \$15 per acre for the cover crop itself and \$12 per acre in planting costs," Bowman said. "We found out that 53 percent of farmers used two species of cover crop while 22 percent mixed even more species.

"Farmers are understanding the value of biodiversity out there in their fields," Isermann said. "When you utilize a mix of species you spread the risks, so we believe that mixing gives you the best of both worlds."

"The most popular, and perhaps the most successful species, was that of cereal rye and 80 percent of the farmers chose this species. Cereal rye is very reliable and can be seeded late and does well. Cereal rye gives you some kind of benefits and it's not very expensive."

When surveyed, participants across the 11 states said cereal rye was the preferred cover crop, followed (in ranking order) by oats, rapeseed, radish and clover.

"Cereal rye is quite popular and there's not many issues when using it," Isermann said.

Isermann and Bowman fielded questions about the timing of planting cover crops, adding that participants in the survey planted in both spring and fall.

"There is a big range of strategies working here," Bowman said. "Some planted in early spring, others in late fall."

"Time, labor and availability are constraints when utilizing cover crops," Isermann added.

Isermann practices what he preaches. He, and his father, David, work 900 acres in Livingston and LaSalle Counties in Illinois. One hundred twenty of those acres are in permanent forage and the rest are in ag production using a corn-soybeanwheat rotation. They use fall forage cover crops with radishes, turnips and oats for grazing after a wheat crop and he's used cereal rye grass as early spring grazing ahead of his soybean crop. He drills all crops and manages the farm using minimum tillage.

Typically, Isermann plants cover crops with a spinner planter after wheat. He recently started using aerial cover crop applications in to corn-soybean rotations as part of an experiment for additional fall and winter grazing options.

According to Isermann, cover crops have improved his soil quality and increased yields of agricultural commodity crops. Cover crops also add diverse and beneficial forage options for his livestock operation.

For a printout of the dates planted, species used and other information go to www.bit.ly/covercropreport.

Virtual meeting planned on housing for food, ag workers

By Kevin Walker Michigan Correspondent

LANSING, Mich. – State officials have scheduled a virtual meeting for those interested in the subject of housing for food and agricultural workers.

The Michigan Department of Agriculture and Rural Development (MDARD) will host the virtual town hall discussion regarding housing challenges in northern Michigan and the Upper Peninsula. It will be Aug. 13 from 2-4 p.m. via Microsoft Teams. It was originally slated to be held in-person at the end of March but was canceled due to the COVID-19 pandemic. MDARD has already had four such in-person meetings around the state.

Michigan's food and agriculture workforce traditionally consisted of the self-employed and family members, but the trend has been showing a sharp increase in the need to hire additional labor within the food and agriculture communities. According to a USDA survey, hired labor for food and agriculture in Michigan nearly doubled from 2003 to 2016.

The current labor situation is underscored by the increasing use of the U.S. Department of Labor's H-2A program. The temporary agricultural program helps employers who anticipate a lack of available domestic workers bring foreign workers to the United States to perform temporary or seasonal agricultural work including, but not limited to planting, cultivating or harvesting crops. In 2005 there were 48,000 H-2A applications, while in 2018 there were 243,000, according to the USDA survey.

"Housing has become a major issue in Michigan," said MDARD spokeswoman Jennifer Holton. "Since 2003 there's been a sharp increase in the demand for food and agriculture worker housing in the state. But we need to know what the local needs are exactly and that's what these listening sessions are about."

Sarah Black, of the Michigan Farm Bureau (MFB), recently became manager of MFB's Great Lakes Ag Labor Services (GLALS), a company dedicated to using the H-2A program. According to the MFB, GLALS, formed in 2015, now services nearly 60 farms and facilitates employment of more than 1,700 foreign workers each year. It is now the largest H-2A guestworker agent filer in the state, with Michigan now ranked seventh nationally in utilization of the visa program. Black sits on the Great Lakes Ag Labor Task force, a committee set up specifically to deal with the housing issue. Last week Black said the committee has been having meetings for about a year.

"We're supportive of this effort to address the housing needs of those who work in agriculture," she said. "Anyone who's interested can sign up for the virtual meeting and provide comment on the issue."

To register for this remote meeting, individuals should contact Brenda Smith no later than Aug. 6 at smithbl9@michigan.gov and provide their name, organization they represent, email address and telephone number. Individuals may participate via Microsoft Teams or by telephone at 248-509-0316 and enter the conference I.D., which is 591 266 140#. An agenda and other meeting materials will be provided in advance of the meeting.

Results of the town hall meetings, along with a survey the state has already conducted, will be used to develop a final report later this year to identify solutions and work out an implementation plan.

Indiana farm ready to become nation's first GMO salmon producer

By Stan Maddux Indiana Correspondent

ALBANY, Ind. – The first harvest of salmon genetically modified to grow faster for human consumption in the United States is scheduled to happen this year at an Indiana farm.

AquaBounty Technologies, viewed as a pioneer in the industry, has just laid the groundwork for reaching consumers with GMO salmon by harvesting the first batch of non-GMO Atlantic salmon at its farm in Albany between Indianapolis and Fort Wayne.

"This harvest is the result of AquaBounty's almost 30-years of experience in aquaculture and demonstrates our expertise in raising Atlantic salmon," said Sylvia Wulf, CEO of of the company.

Clutch

She said the harvest of conventional farm-raised salmon helps make sure the systems for reaching consumers are in place and working properly for the GMO salmon to be harvested in the fourth quarter of 2020.

"So those fish are coming to market and what that allows us to do is make sure that we've got our supply chains, our processing all in place in advance of harvesting," Wulf said.

AquaBounty Technologies imported the GMO salmon eggs to the facility last year while continuing to grow the conventional fish in separate tanks, company officials said. The firm, headquartered in Massachusetts, is also planning its first harvest of GMO salmon at its Canada-based, Prince Edward Island farm early in 2021, company officials said.

AquaBounty Technologies has produced GMO salmon in Canada since 2017. It is the first and only provider of genetically engineered Atlantic salmon approved by the U.S Food and Drug Administration (FDA) and Health Canada.

FDA approval came in 2015 but final clearance to produce the GMO salmon by FDA didn't come until last year due to legal challenges over matters such as labeling.

The GMO salmon are produced by injecting a growth hormone gene from a chinook salmon and DNA material from the eel-like ocean pout into the fertilized eggs of wild Atlantic salmon. The GMO salmon grow twice as fast, reaching maturity in 18 months.

FDA ruled GMO salmon are safe for humans and animals to eat because there are no substantial changes in the protein and fat, including omega-3 fatty acids, in the salmon.

According to AquaBounty, raising conventional and GMO salmon in tanks outfitted with elaborate water filtration systems is more environmentally friendly than harvesting traditional salmon from the ocean. Less of a carbon footprint is left because the

farms are close to major metropolitan areas, requiring less traveling to reach consumers, unlike salmon brought in from overseas, company officials said.

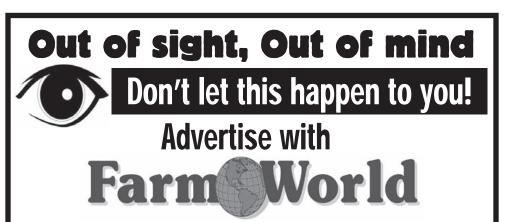

Other advantages cited by the company include farm-raised salmon consuming 25 percent less feed than traditional Atlantic salmon and being more efficient in the use of feed consumed than traditional farm animals.

For example, farm raised salmon add one kilogram of body weight for every one kilogram of feed consumed. Chickens have to eat twice as much feed for every pound gained while cows must consume eight times as much feed for every one pound added to their body weight, according to company.

The fish in tanks filtering out waste and recycling more than 99 percent of the water are also free of antibiotics and disease, company officials said.

Critics of what some have dubbed "Frankenfish" question the safety of eating GMO salmon and whether there's a strong enough market for the product. Wulf said research shows a majority of consumers are open to the product. "They are confident in safety. They're willing to try," she said.

Australian tractor said g'day to a new home at \$283,500

By Cindy Ladage Illinois Correspondent

NOKOMIS, Ill. — With tractor shows mainly cancelled for June and auctions pretty much online, collectors took advantage of the opportunity to go to the Pre'30 Auction Preview to get a chance to check out the rare items that were auctioned June 12-13 by Aumann Auction. A handful of collectors socially distanced from others and checked out the items that sold online.

The opportunity to see these rare beauties and see tractors and other collectors was a celebration in itself. In the Pre'30 Auction catalog, Kurt Aumann outlined some of the highlights of the tractors. "The 1912 McDonald is such a rarity that it rivals last year's Marshall Colonial as the scarcity and worldwide appeal. Its smaller size, unique configuration and impeccable provenance make it a gem marveled over the entire international hobby.'

The 1912 McDonald Imperial EB was built by A.H. McDonald & Co. This company was Australia's first tractor manufacturer and was founded in 1903 after two brothers Alfred and Ernest went into partnership, thus the A.E. They started out making electrical appliances in Melbourne, but by 1905, they had introduced a line of "Imperial" gasoline/kerosene engines. They expanded to include a twincylinder engine in a four-wheel chassis and the Imperial Oil tractor was born. The Imperial Model EB is one of just four known surviving tractors. In the catalog it states, "It was supplied new in 1912 to a farmer from Phillip Island, off Australia's southern coast. This 1912 tractor has a 2-cylinder vertical gasoline/kerosene engine with a 6.25 inch bore rated at 20 horsepower. It has a 3 forward speeds and one reverse speed, weighing in at 10,090 pounds."

This extremely rare tractor ended up selling for a whopping \$283,500.

Aumann also mentioned, "The Twin City 15 cross motor and International Type A are both one of a kind American built tractors that share something in common."

Chris Hudson from Grass Lakes, Mich., was the owner of the Twin City 15. Chris was on hand to share a bit of the tractor's history. "The first Twin City's were heavy weights because of the primitive design," he said. "This Twin City 15 is the first of 25 15's built. It has 15 horses on the drawbar and

Above: Chris Hudson from Grand Lakes, Mich., was the owner of this Twin City 15. The tractor sold for \$320,250.

> **Right:** This 1912 Mcdonald Imperial EB tractor built by the AH McDonald & company was Australia's first tractor manufacturer. This tractor sold for \$283,500.

30 horses on the belt. What is unique is the cross motor lies on the frame. This tractor spent its life in Macomb County Michigan. "

The tractor was bought by the Denewith family. The tractor was contracted by the Government during World War I to build Selfridge Air Base.

"The tractor was used to grade and build runways and maintain them. Then it was returned to the family and it did custom farming. The demise of the tractor was when it threw a rod, and then it was abandoned and sat until the early 90's. It ended its service life around 1930," Chris said.

The tractor was sold to a collector in Indiana, who didn't restore it, then it went to another individual who did the restoration, then the tractor went to the Hudson family who has had it for the past two years. Chris said he

FROM PAGE 6B

wanted to sell it to buy something bigger! At the auction he took a last ride on this beauty before parting with her. Chris should be able to find something special because his Twin City sold for \$320,250.

One of the Aumann staff drove the Emerson Brantingham Model L, serial #20400, a beautifully restored red tractor. This beauty sold for \$115.500.

Another head turner that Aumann staffer Brent Adkins pointed out was the 1916 Kardell tractor. This is the only known example of a Kardell tractor to exist. The tractor is powered by a 4-cylinder Midwest engine. The powerful tractor has a unique set of spring loaded lugs that are detachable

without tools. "This model K was made in St. Louis," Brent explained. The Kardell tractor sold for \$99,750.

While there were unusual vehicles on hand, perhaps the most fun was the Motuer Millot car, a French vehicle that started its life as mobil saw benches for traveling between work and farms. The catalog states, "This 'car' is believed to have started its life as such and later turned into an automobile with the addition of wooden church pews. It's powered by a Millot 1-cylinder vertical engine, which has a cone clutch connected to a three speed with reverse gear box. It has hard rubber tires over wood spoke wheels that are driven by a chain." It looks like something that would be on a railroad track. This sold for \$56,700.

The strangest looking farm contraption by far at the auction was

the International Motor Cultivator. This was the first production tractor specifically for row crops for the International Harvester Company. Aumann shared that this is just one of a few known to exist out of 300 built. They were produced from 1917 until 1919 when IHC began producing the Farmall Regular. The Motor Cultivator runs and drives! This rare piece of farm equipment sold for \$36,750.

There are so many rare tractors at this auction like the General Ordinance GO tractor which sold for \$44,100 and the extremely cool R&P 12-20 Republic tractor (that sold for \$16,275) that Kurt Aumann said was made by the same company that built the Republic trucks. The catalog states that there are only two of these models in the US.

Above: This Emmerson Brantingham model L serial number 20400 sold for \$115,500.

Below: Brent Adkins of Aumann Auctions pointed out details of this 1916 Kardell four-cylinder tractor made in St. Louis that sold for \$99,750.

Indiana barns will be showcased in new book

By Michele F. Mihaljevich **Indiana Correspondent**

FORT WAYNE, Ind. - A Fort Wayne artist will publish a book showcasing 185 paintings she's done of historic barns across the Hoosier state.

Gwen Gutwein began painting Indiana barns in 2004. Her book, Heritage Barns of Indiana, is scheduled for release later this year or in early 2021. Each of the state's 92 counties is represented by at least one painting. In addition, the book will have information on each barn and in some cases, historic photos of the barns. The book is an Indiana Bicentennial Legacy Project.

"A barn is a heritage barn based on longevity," she explained. "The amount of time the barn has been a functioning part of the main hub of a farm. You think of time and the lives that have come and gone and influenced that structure."

Gutwein, who has a bachelor's degree in fine arts from Indiana University, practices en plein air French for outside – painting. Bringing awareness to that style of painting is one reason she wanted to create a book. "I also wanted to bring awareness to art in general and to these fantastic structures that we are letting disappear. Think of the stories that barns could tell. They're all falling into the ground."

She had hoped to paint two barns from each county in order to have a good representation of heritage barns across the state. Gutwein ended up with a few counties with only one barn painted; some counties have more than two. She searched for barns by driving country roads until she found examples she liked.

"A lot of it has to do with how I feel about (a barn) when I see it," Gutwein noted. "It's how I feel about what I see. Even if I find a barn that's not been taken care of for a while, I imagine a long time ago, when it was built, someone really loved it. They were reliable, well-built and also beautiful."

Before painting, she would seek permission from the barn's owner. While a few said no, most said yes.

Depending on the complexity of a barn, a painting may be done - or mostly finished - in a session or two. She may go at various times of day

Above: Gwen Gutwein's completed painting of the Burcham barn in Jackson County, with the barn in the background. The barn was destroyed several years ago.

in order to capture the light that best showcases a barn. If she's unable to finish a painting on-site, Gutwein said she completes the barn and makes notes on her canvas about the colors for the scenery around the barn.

She grew up on a farm in Pulaski County in northwestern Indiana. "I always loved the barn on the farm. I spent many years playing with my siblings and cousins in it. It was really a part of me that I treasured." The barn was destroyed by a fire when she was about 12. Gutwein started painting barns because she saw so many disappear over the years.

"Painting barns is perfect because I love them. I've been able to hone my skills and spotlight the demise facing barns. I have this gift and I want to be able to give back to my community with this gift."

Since her childhood, Gutwein has had a knack for painting and drawing. "I just did it. It wasn't anything I purposely thought about. It was just a natural part of me."

When asked about some memorable experiences while searching for or painting a barn, she laughingly recollected a time in Miami County when she encountered a skunk. "I really couldn't move. I really couldn't even turn around to look at it. Fortunately, it didn't blast me. It didn't fire at me."

Once her book is published, Gutwein plans to take a break before she starts her next project - a children's book. She said she has some ideas and said the stories will be about the paintings featured in the book.

The heritage barn book will be published by M.T. Publishing Co.,

Evansville, Ind. Various editions are available. For more information or to order, visit www. mtpublishing.com or call 888-263-4702. A limited number of books will be published. The pre-order deadline is Aug. 14. To view the paintings in the book, gwengutwein.com.

By Stan Maddux **Indiana Correspondent**

THREE RIVERS, Mich. - Thousands of dollars in stolen fruit picked from a Michigan farm has growers worried a rash of similar thefts last fall was just the beginning.

"This may be a one-time thing. Hopefully, that will be that but it seems like there's a pattern emerging and farmers should be aware," said Ben Smith, executive secretary of the Michigan State Horticultural Society.

An estimated \$6,000 in cherries, blueberries and strawberries were taken from the trees and bushes at Corey Lake Orchards near Three Rivers in the southwest part of the state.

Beth Hubbard, owner and operator of the 250-acre fruit and vegetable farm, told the Michigan Farm Bureau the mid-July theft happened during the night.

An early May freeze killed much of her cherry crop this year but her heirloom yellow cherry trees were full of fruit. She discovered the thefts after staff members she sent to harvest the vellow cherries returned empty handed.

"They came back and said well, there aren't any. I said, no, you're missing the trees. Go back and look again. That was pretty shocking," Hubbard said.

At least two other southwest Michigan farms and one in northern Indiana were hit by fresh fruit bandits in October.

More than three acres of apple trees at Spicer Farms in Fenton were picked clean and 350 pumpkins were taken from McCallum's Orchard & Cider Mill in Jaddo.

About 20,000 pounds of apples were picked from the trees at Williams Orchard near LaPorte the previous month. No suspects have been reported in any of the cases.

Smith and others in the fresh produce trade agree with authorities who suspect the thefts are the work of fast working professionals with quick access to buyers of the stolen fruit.

"This isn't just somebody coming in to pick for their own consumption," said Audrey Sebolt, associate horticulturalist and industry relations specialist with Michigan Farm Bureau.

the fruit is taken but feels it might be offered at farmers markets or roadside stands in more populated areas like Chicago and Detroit. He doubts if any grocery store is winding up with it because of the connections between retailers and reputable suppliers.

"With a retailer, you kind of got to have a relationship so that makes it tough to have a relationship based on theft," Smith said.

Smith said it's tough for growers to protect themselves against such thefts given the amount of acreage eyes alone can't watch over around the clock. He said video cameras are an option but the footage isn't always of high enough quality to identity suspects captured by the lens.

Smith said deer fencing around the crop might be more effective because it would impede the movement thieves rely on to quickly steal large volumes of product.

Deer fencing might be too costly, though, depending on the acreage and value of the crop.

Smith said another potential theft prevent tool is noise producing motion sensors to scare off intruders. He said the best and more cost effective option could be hiring a security guard to patrol the grounds during harvest season.

Smith also works at Hinkelman Farms, which has about 500 acres of grapes along with corn and soybeans near Watervliet.

He hopes the light shed on the cases will discourage thieves from striking

"The whole point of getting the word out is we knew they happened last fall and to have it start up again so soon in the summer was concerning that maybe this is going to become a bigger thing," he said.

Smith said he has no idea where

FARM AUCTION

APPROX. 112 ACRES, FARM HOUSE & NICE BUILDINGS

Tractors, Truck, Farm Equip., Tools

Location: 7912 Everman Rd. Nabb, In. (New Washington) just off Hwy. 62

Sustainable Agriculture Partnership (ISAP), with additional industry agency, conservation and research partners, will be holding a virtual meeting series, On the Leading Edge, that explores opportunities to harness and build on available resources and expertise in order to scale up conservation drainage practice implementation throughout

Installing edge of field conservation practices that address nitrate losses from tile drainage is critical for meeting the water quality goals outlined in the Illinois Nutrient Loss Reduction Strategy. Sessions will be held on July 30, August 6 and August 13, from 11AM-12:15PM.

"As Illinois continues to focus on water quality practices that help meet its nutrient loss reduction goals for 2025, conservation drainage knowledge and implementation vary across the state," said Ryan Arch, executive director of the IL Chapter of the Land Improvement Contractors of America, ISAP member. "The 'On the Leading Edge' meeting series is geared to the why, where and how of conservation drainage; answering these questions in three separate sessions that anyone can view individually or collectively, based on their familiarity and experience with conservation drainage practices."

The conservation drainage virtual series kicks off with a session on altered hydrology and the role conservation drainage practices can play in meeting the goals of the Illinois Nutrient Loss Reduction Strategy.

"Tile drainage is necessary for improved crop production in many Midwestern agricultural landscapes," noted Jane Frankenberger, extension agricultural engineer with Purdue

DEKALB, Ill. - Members of the Illinois University and series speaker, "but its widespread implementation can contribute to nitrate losses even when growers are carefully managing the rate and timing of their fertilizer applications. Conservation practices that provide opportunities for in field and edge of field water storage allow farmers to better manage their drainage systems and to contribute downstream water improvements."

> The second session in the threepart series will drill down to individual practices and provide a "what to look for in the field" look at practice requirements for controlled drainage, bioreactors, saturated buffers and constructed wetlands. A panel representinglandowner, contractor and conservation professional perspectives will discuss their experiences and take audience questions on topics related to conservation drainage practice adoption and implementation.

> The third and final session will focus on applying the Ag Conservation Planning Framework, a free watershed modeling tool, to demonstrate how model outputs can be used to improve watershed outreach and education, evaluate nutrient loss reduction scenarios and advance adoption and implementation of conservation drainage practices.

> The full agenda can be found at https://ilsustainableag.org/, along with registration information and additional event details. If you have questions or need assistance with registering, please send email inquiries to adrienne.marino@tnc.org.

Last year our Dairy Service Unit Board tried something different for our annual meeting. Instead of the usual selection of pies, they did a sundae bar, featuring ice cream and all kinds of toppings to go with the ice cream. And while some of the board members had some reservations, the new dessert item proved to be popular with those in attendance at the meeting. We did serve a selection of cookies to go with the ice cream, but nobody seemed to miss the pie. My nephew said he likes vanilla ice cream because you can put anything on it and have a great dessert. I have to say based on the selection of toppings we had and the combinations the attendees put together, he is correct. Although anything chocolate is always a first choice for me, I have to say that I have found some pretty good toppings in other flavors. So the next time you are looking for something different to top off a special meal, think about a sundae bar. It might be just the special treat your guests are hungry for. Until next time, simply cook.

Butterscotch Topping

- 1 ½ cups brown sugar
- ½ cup light corn syrup
- ½ cup butter
- ½ cup whipping cream
- 1 teaspoon vanilla

In a medium saucepan combine sugar, corn syrup and butter and cook over low heat, stirring

constantly.

Remove from heat and add whipping cream and vanilla. Cool and serve over ice cream.

Hot Fudge Sundae Sauce

- ½ cup butter
- 2 ¼ cup powdered sugar
- 2/3 cup evaporated milk
- 3 squares unsweetened baking chocolate
 - 1 teaspoon vanilla

Combine butter, powdered sugar, evaporated milk and chocolate in the top of a double boiler, mixing slightly. Cook over hot water (do not let water come to a boil) for 30 minutes, without stirring. Remove from heat and add vanilla, mixing thoroughly.

Marshmallow topping

Mixture 1

2 cups sugar

2 ½ cups light corn syrup

1 cup water

Mixture 2

7/8 cup egg whites

½ cup light corn syrup

1 teaspoon vanilla

(Cook Simply continued on page 13B)

Cook Simply

FROM PAGE 12B

Heat mixture 1 ingredients sugar, water and corn syrup together until they reach 250 degrees. Cool for five minutes. Mix eggs and corn syrup and heat until warm. Beat them hard until well mixed. Add the eggs and corn syrup slowly back into mixture 1 and mix well until fluffy. Add vanilla.

Strawberry Topping

- 1 quart strawberries, cleaned, hulled and sliced
 - 1/4 cup sugar
 - 1/4 cup water
 - 1 lemon, juiced and zested
 - 1Tablespoon of cornstarch

In a small pot over medium heat, combine the strawberries, sugar, water, lemon zest, lemon juice and cornstarch. Bring to a simmer and whisk gently until mixture thickens

Mule

FROM PAGE 2B

were about horses and mules. "At the country store, at the feed store, at church, at a ballgame," he said, "it was a constant conversation."

"granddaddy" Hutson's not a wealthy man; he died in a sharecropper's shack on a tobacco farm. He did not have money but he was revered. "Even though he never owned any ground he was a craftsman, he was looked up to," he said. "The wealthier men in our area used him a lot. He had wisdom, country wisdom by the volumes in his mind."

Hutson went to visit his granddaddy a month before he died and his granddaddy passed along the tools of tradition, giving him his blacksmith equipment: hammers

Tony's father, Curtis Hutson, was also "multi vocational." He hauled produce and worked as a postman before he "answered the call to preach" as a Missionary Baptist. Curtis brought his family north to Tennessee when Tony was a teen.

When he got to Tennessee there was no looking back. Tony knew immediately he was a Tennessean. "From the day I crossed over Monteagle and dropped into Coffee County I never looked back," he said. "I'm a Tennessean. Everything I growed up around - coon hunting, the mules, the horses - it was on steroids up here. I felt very at home."

As the Hutson family established themselves in Middle Tennessee, they owned several farms. His father's first farm was Ransom Hill, 200 acres in Deason. Tony later bought a farm in the Liberty Gap in Bell Buckle, the site of the June 1863 Civil War Battle of Liberty Gap.

When asked why he got into mules, Tony's first word was "respect."

"I've always had respect for the elderly. I guess it was driven into us as children," he said. "When grownups talked we didn't. I listened a lot and watched. I watched my grandparents' enthusiasm for it. It was like a young man with a muscle car or a young man about his football team. It was a constant conversation. They weren't as interested in the color of the team as they were in the pace, like Amos and Alice, whether they would step right together. That was a big deal, how broke the mule was."

Hutson talks enthusiastically about the qualities of a well broke mule. "A one-line mule," he said, is greatly revered. A one-line mule can be worked with just one rein, not two. A well-trained mule will respond to voice commands. As he harnessed Alice and Amos, in a calm low pitch tone, Hutson convinced them: "Back up. Back up. Back up." When you want mules to turn left, say "haw," he explained. When you want them to go right, say "yee" or "gee." In Middle and eastern Tennessee, Hutson explained, horsemen say "yee." "Northerners say 'gee' southerners say 'yee,'" he explained.

Over the years, Hutson has made a name for himself in the world of mules. Most his clients are either Amish or Mennonite. "They buy 'em as fast as we can produce them," he said. "They have to have them." A team of yearling mules will sell for more than \$6,000 at auction.

Could he make a living breeding mules? "Probably," he said. "I do good." The mule business, he said, works out good for his family. The big sale in this region, he said, comes around Christmas time in Trenton, Ky. "It's good for my wife," he said.

LARGE PUBLIC AUCTION FRIDAY, AUGUST 7TH, 2020

Twenty Miles West of INDIANAPOLIS, INDIANA, on Interstate 70 To State Road 39, (Exit 59)-Then ½ Mile South To Sale Site At: Ted Everett Farm Equipment
