TELNOV D., 2006. NOMENCLATURAL NOTES ON ANTHICIDAE AND PYROCHROIDAE (COLEOPTERA). 1.
- *Latvijas entomologs*, 43: 57-77.

Abstract: Taxonomic studies of the beetles of the families Anthicidae and Pyrochroidae by early authors were often not accurate. In the current work, some nomenclatural problems are solved, namely 29 new combinations, 7 new synonymies, one replacement name, 23 new statuses for subspecific names, and 16 lectotype designations. A type species for the genus *Anthicodes* WOLLASTON is designated. Twelve unavailable names of Anthicidae are listed. Two species new to science, *Tomoderus pseudotrimaculatus* sp. nov. from Papua New Guinea and *Derarimus erratus* sp. nov. from Sumatra (both Anthicidae Tomoderinae) are described and illustrated.

Key words: Coleoptera, Anthicidae, Pyrochroidae, nomenclature, new synonymy, new combinations, lectotype designation, new species.

Introduction

Twenty nine combinations, 7 new synonyms, one replacement name, 23 new statuses for subspecific names, and 16 Lectotype designations in Anthicidae (Tomoderinae, Anthicinae, Macratriinae, Eurygeniinae, Lemodinae) and Pyrochroidae (Pedilinae) are made. Type species for the genus *Anthicodes* WOLLASTON is designated. 12 unavailable names of Anthicidae are listed. Description of two new species of Anthicidae Tomoderinae, *Tomoderus pseudotrimaculatus* sp. nov. from Papua New Guinea and *Derarimus erratus* sp. nov. from Sumatra are published.

All label text is reproduced exactly, with no corrections or additions; labels (if more than one for the same specimen) are separated by slashes (/). Author's comments are placed in square brackets [].

Acronyms of the type material stores:

BMNH – The Natural History Museum (British Museum; Natural History), London (UK);
IRSN – Institut Royal des Sciences naturelles, Bruxelles (Belgium);
MNHN – Muséum National d'Histoire naturelle, Paris (France);

MNHB – Museum für Naturkunde der Humboldt-Universität, Zoologisches Museum, Berlin (Germany);

MNHG – Muséum d'histoire naturelle, Genève (Switzerland);

MRAC – Musée Royal de l'Afrique Centrale, Tervuren (Belgium);

MSNT – Museo Civico di Storia Naturale, Trieste (Italy);

MZUM – Museum of Zoology, Moscow State Lomonosov University (Russia);

HNHM – Hungarian Natural History Museum, Budapest (Hungary);

NHMW – Naturhistorisches Museum Wien (Austria);

NHRM – Naturhistoriska Riksmuseet, Stockholm (Sweden);

NNML – Nationaal natuurhistorisch Museum, Leiden (The Netherlands);

SMNS – Staatliches Museum für Naturkunde, Stuttgart (Germany);

ZISP – Zoological Institute Russian Academy of Sciences, St.-Petersburg (Russia);

ZMLU – Zoological Museum, University of Lund (Sweden);

ZMUH – Zoological Museum, University of Helsinki (Finland);

ZSSM – Zoologische Staatssammlung, München (Germany).

Nomenclatural Part

1. New Combinations, New Synonymy, Species Homonyms, Replacement Names

Familia Anthicidae

Anthicomorphus borneensis (PIC) comb. nov.

Original placement: ? [original] *Walesius borneensis* PIC, 1910: 47.

Based on study of 4 specimens (BMNH) and the original description: Ground Malaise 1B 260m alt. 16.VI.91 N.Mawdsley. NM292 / BRUNEI: E115 7'N4 34' Kuala Belalong FSC Dipterocarp forest BM(NH) 1991-173; Ground Malaise 12 260m alt. 8.II.92 N.Mawdsley. NM298 / BRUNEI: E115 7'N4 34' Kuala Belalong FSC Dipterocarp forest BM(NH) 1991-173; Ground Malaise 12 260m alt. 8.II.92 N.Mawdsley. NM298 / BRUNEI: E115 7'N4 34' Kuala Belalong FSC Dipterocarp forest BM(NH) 1991-173; SARAWAK: 1st Div., Semongoh For. Res., 1 25'N 110 17'E, 15-19.XI.1976, P.S.Cranston, B.M. 1977-19. / malaise over stream / 2836.

Note: Pic (1943: 8) placed this species in *Anthicus PAYKULL*, but gives the colour pattern differently from that given in the original description; (compare; “roux ... élytres ... foncés avec la base plus ou moins rousse” (Pic, 1910: 8) with “noir, élytres maculés de roux avant et après le milieu” (Pic, 1943: 8)). Possibly Pic's (1943) comment refers to a different species.

Anthicomorphus foveicollis (MOTSCHULSKY) comb. nov.

Original placement: *Anthicus foveicollis* MOTSCHULSKY, 1863: 493.

Based on study of the HOLOTYPE ♀, MZUM: [small red square with no text] / n. sp. [handwritten, label circular yellow] / type [handwritten] / *Anthicus foveicollis* Motsch I. or. Ceyl. Mt. N.E. [handwritten, label yellow] / [large red square label with no text].

Anthicomorphus serricornis (MARSEUL) comb. nov.

Original placement: *Anthicus serricornis* MARSEUL, 1882a: 59.

Based on study of the HOLOTYPE ♀, NNML: *Anthicus Serricornis* [handwritten] / Sum. Exp.

Koetoer 6/78. [handwritten, label circular] / Koetoer 6.78 [handwritten, black double border] / 13. [printed] / Holotype [printed, label red].

Anthicus basilewskyi PIC, 1955b and *Anthicus basilewskyi* BUCK, 1965

Pic (1955b: 130) first described *Anthicus basilewskyi* from Rwanda. Buck (1965: 276) followed with a new species *Anthicus basilewskyi* from Tanganyika (now Tanzania). Buck's species was placed to the genus *Cyclodinus* MULSANT & REY by Uhmann (1989) where the species still remains. The replacement name *Cyclodinus bucki* TELNOV, nom. nov., is here proposed for *Anthicus basilewskyi* BUCK. It is patronymic and based on the name of the original author of this species.

Cyclodinus sauteri (PIC) comb. nov.

Original placement: *Anthicus sauteri* PIC, 1913a: 131.

Based on study of the HOLOTYPE ♀, NHMW: Takao Formosa Sauter [printed] / T Y P E [printed, label red] / Sauteri Pic (det.) [handwritten] / Sauteri Pic Formosa [handwritten].

Note: This species does not have a pair of small tubercles near the basal margin of the pronotum, as it is typical for the external morphology of *Cyclodinus* MULSANT & REY.

Hirticollis busignyi (PIC) comb. nov.

Original placement: *Anthicus busignyi* PIC, 1901a: 44.

I have not studied the type of the nominate subspecies, the current new combination is based on study of another subspecies (see below).

Hirticollis busignyi subinnnotatus (PIC) comb. nov., stat. nov.

Original placement: *Anthicus busignyi* var. *subinnnotatus* PIC, 1902a: 408.

Based on study of the HOLOTYPE ♂, HNHM: Java. [handwritten] / Batavia Biró 1898 [printed] / Holotypus [printed, text red] 1902 *Anthicus Bussignyi* [sic!] Pic var. *subinnnotatus* Pic [handwritten, label border red] / A. Bussignyi [sic!] Pic v. *subinnnotatus* Pic [handwritten] / *Anthicus Bussignyi* [sic!] v.

subinnotatus [handwritten] det.M. Pic [printed]
Typus ! [handwritten, text red].

***Leptaleus postobliteratus* (PIC) comb. nov.,
stat. nov.**

Original placement: *Anthicus brevesignatus* [sic!] var. *postobliteratus* PIC, 1952a: 73.

Based on study of the HOLOTYPE ♂, MRAC: HOLOTYPE [printed, label red, black border] / MUSÉE DU CONGO MANYEMA NIEMBA-TENGO Dr. Gerard [printed, text partly italic] / R. DET. [printed] U. [handwritten] 5678 [printed] / *Anthicus brevesignatus* v. n. *postobliteratus* [handwritten] [on underside of same label:] A. *brevesignatus* v. n. *Gerardi* n.v [handwritten, corrected by hand].

Note: Male specimens of *Stricticollis brevisignatus* (PIC, 1901b: 33) do have the 6th antennomere distinctly enlarged, though does not much in the “var. *postobliteratus*”. Also the penis is different from that in *S. brevisignatus*. Pronotum is distinctly bilobate, the dorsal body surface is glossy and with few long suberect sensory setae as it is typical for *Leptaleus* LAF.

***Macrotomoderus krekichi* (HEBERDEY) comb. nov.**

Original placement: *Tomoderus Krekichi* (HEBERDEY, 1936: 270)

Based on study of the HOLOTYPE ♀, NHMW: Borneo, Pengaron [handwritten] / T Y P E [printed, label red] / *borneensis* [handwritten] det.v.Krekich. [printed] / *Tomoderus Krekichi* Hbdy. n.nov. [handwritten] Dr. R. F. Heberdey [printed] / *Krekichi* Hbdy. [handwritten]. Additional specimens studied: 1♀ [NHMW]: Mt. Matang, W. Sarawak. G.E.Bryant. [printed] XII.1913 [handwritten] / *Krekichi* Hbdy. det.Dr.R.F.Heberdey [printed] / [red label with no text].

***Macrotomoderus magnus* (UHMANN) comb. nov.**

Original placement: *Tomoderus magnus* UHMANN, 1994b 214.

Based on study of the HOLOTYPE ♀, SMNS: MALAYSIA:Genting Highland; 12.4.1990 leg.A.RIEDEL [printed, label yellow] / Typus [printed, label red, black border] / *Tomoderus magnus* sp. n. det. G.Uhmann 1993 [printed].

***Macrotomoderus rotundipennis* (UHMANN) comb. nov.**

Original placement: *Tomoderus rotundipennis* UHMANN, 1994b 214,
Based on study of the HOLOTYPE ♀, SMNS: PHILIPPINES:LEYTE VISCA N Baybay, 1991 prim.forest,200-500m leg.SCHAWALLER & al. [printed, label yellow] / 2.3.91 [printed] / Typus [printed, label red, black border] / *Tomoderus rotundipennis* sp. n. det. G.Uhmann 1993 [printed].

***Microhoria lomii* (PIC) comb. nov.**

Original placement: *Anthicus Lomii* PIC, 1953: 97.

Based on study of the HOLOTYPE ♂, MSNT: OGADEN A OI Uarandab Lomi 5.1936 [printed] / TYPUS [printed, label red] / *Anthicus Lomii* n. sp [handwritten, by M.Pic] / *Anthicus Lomii* n.sp. “Mti XIXI. [handwritten].

***Omonadus gerardi* (PIC) comb. nov.**

Original placement: *Anthicus Gérardi* PIC, 1952a: 75.

Based on study of the HOLOTYPE ♀, MRAC: HOLOTYPE [printed, label red, black border] / MUSÉE DU CONGO ELISABETHVILLE PWETO 1918 Dr. Gérard [printed] / R. DET. [printed] GG [handwritten] 5678 [printed] / *Anthicus Gerardi* nsp [handwritten].

***Omonadus kivuensis* (PIC) comb. nov.**

Original placement: *Anthicus kivuensis* PIC, 1955a: 94.

Based on study of the HOLOTYPE ♀, MRAC: HOLOTYPE [printed, label red, black border] / Récolté dans terreau de bambous [printed, label greenish, black border] / I.R.S.A.C.-MUS.CONGO KIVU: Uvira Luvubu 2650 m. [printed] 25-[handwritten] XI-1950 N. Leleup [printed] / R. DET. [printed] CC. [handwritten] 6047 [printed] / *Anthicus leleupi* nsp [handwritten] / *Anthicus Kivuensis* Pic 1955 (n.n. pro Leleupi Pic [handwritten]).

Note: This species was originally described as *Anthicus Leleupi* PIC, 1952b: 257, non *A. leleupi* PIC, 1952c: 22. In one of newer papers, M. Pic (1955a:94) gives a nomen novum for the first species, by naming them “*kivuensis* n. nom. pro *Anthicus Leleupi* PIC”.

The systematic position of *A.anthicus leleupi* Pic,

1952b is unclear, as the type material was not yet studied.

***Sapintus austerus* (KREKICH-STRASSOLDO) comb. nov.**

Original placement: *Anthicus austerus* KREKICH-STRASSOLDO, 1931: 37.

Based on study of 1 SYNTYPUS, NHMW: *For Zool Coll.* [printed, italic, black underlined] from Padaufl wood Andamans [handwritten] / 727 B [handwritten] / TYPE [printed, label red] / A. austerus Kr. [handwritten] det.v.Krekich. [printed] / A. austerus Kr. [handwritten, label tan].

***Sapintus austrocaledonicus* (MONTROUSIER, in PERROUD et MONTROUSIER) comb. nov.**

Original placement: *Agra ? Austro-Caledonica* MONTROUSIER, in PERROUD et MONTROUSIER, 1865: 57.

Studied material: 1♂, BMNH: Pampai, New Caledonia. [printed] 14. [handwritten] IX.1914. P.D.Montague. 1918-87 [printed] / *Anthicus austrocaledonicus* [handwritten] det.K.G.Blair [printed].

Note: This species have been incorrectly placed in *Formicomus* LAF. (now synonym of *Anthelephila* HOPE) by Fauvel (1906: 31), later cited by M.Pic (1911c: 16).

The correct citation of the original description's source should be as follows: Perroud B.P., Montrousier [no initials are used in paper title], 1865. *Essai sur la Faune Entomologique de Kanala (Nouvelle-Calédonie) et description de quelques espèces nouvelles ou peu connues.* - *Annales de la Société Linneenne de Lyon* (n.s.) 11: 46-257, 1 plate. Also worth noting is that the title page of this paper has "Montrousier" as the junior author, but elsewhere in the same journal he is cited as "Montrouzier". Volume No. 11 of the new series of *Annales de la Société Linneenne de Lyon* corresponds to the year 1864, but the actual publication date is February of 1865 and the paper in question was read before the society on January 12th, 1863. The date of "1854" listed in Fauvel's paper (Fauvel, 1906: 31) is clearly a mistranscription of 1864.

***Sapintus benoiti* (PIC) comb. nov.**

Original placement: *Anthicus Benoiti* PIC, 1955a: 93.

Based on study of the HOLOTYPE ♂, MRAC: HOLOTYPE [printed, label red, black border] / MUS. CONGO **Rutshuru** [printed] I[handwritten] -1938 J. Ghesquière [printed] 5653. [handwritten] / R. DET. 6669 [printed] BB. [handwritten] / *Anthicus benoiti* nsp. [handwritten].

***Sapintus bredoi* (PIC) comb. nov.**

Original placement: *Anthicus Brédoi* PIC, 1952a: 74.

Based on study of the HOLOTYPE ♀, MRAC: HOLOTYPE [printed, label red, black border] / COLL. MUS. CONGO **Elisabethville** -II-1940 H. J. Brédo [printed, text partly bold] / R. DET. [printed] P [handwritten] 5678 [printed] / *Anthicus Bredoi* nsp [handwritten].

***Sapintus congoensis* (PIC) comb. nov.**

Original placement: *Anthicus congoensis* PIC, 1952a: 75.

Based on study of the HOLOTYPE ♂, MRAC: HOLOTYPE [printed, label red, black border] / MUSÉE DU CONGO [printed] Hanley Fool 5-III-1911. [handwritten] 1925 L. Burgeon [printed] / R. DET. [printed] FF [handwritten] 5678 [printed] / *Anthicus congoensis* nsp [handwritten].

***Sapintus cruciellus* (MARSEUL) comb. nov.**

Original placement: *Anthicus cruciellus* MARSEUL, 1882a: 60.

Based on study of the HOLOTYPE ♀, NNML: *Anthicus* 928. *bifasciatus cruciellus* Java [handwritten] / Hekmeyer Ardjoeno Java or. [handwritten, label circular] / Holotype [printed, label red].

***Sapintus ghesquierei* (PIC) comb. nov.**

Original placement: *Anthicus Ghesquierei* PIC, 1952a: 77.

Based on study of the HOLOTYPE ♀, MRAC: HOLOTYPE HOLOTYPE [printed, label red, black border] / MUSÉE DU CONGO **Eala** [printed, text partly bold] XI[handwritten] -193[printed] 54 [corrected by hand] J. Ghesquière [printed] / R. DET. [printed] O [handwritten] 5678 [printed] / *anthicus ghesquierei* n sp [handwritten].

***Sapintus luteobimaculatus* (PIC) comb. nov.**

Original placement: *Anthicus luteobimaculatus* PIC, 1955a: 92.

Based on study of the HOLOTYPE ♀, MRAC: HOLOTYPE [printed, label red, black border] / COLL. MUS. CONGO **Elisabethville (A la lumière)** [printed] X/ [handwritten] XI-1950 Ch. Seydel [printed] / R. DET. 6669 [printed] EE. [handwritten] / *Anthicus luteobimaculatus* nsp [handwritten].

***Sapintus paulosericeus* (PIC) comb. nov.**

Original placement: *Anthicus paulosericeus* PIC, 1952a: 73.

Based on study of the HOLOTYPE ♂, MRAC: HOLOTYPE HOLOTYPE [printed, label red, black border] / MUSÉE DU CONGO **Haut Uélé : Moto** 1920 L. Burgeon [printed, text partly bold] / R. DET. [printed] DD. [handwritten] 5678 [printed] / *Anthicus* n sp [handwritten, by M.Pic] / *paulosericeus* nsp [handwritten].

***Sapintus sudanicus* (PIC) comb. nov.**

Original placement: *Anthicus sudanicus* PIC, 1952a: 75.

Based on study of the HOLOTYPE ♀, MRAC: HOLOTYPE [printed, label red, black border] / MUSÉE DU CONGO **Soudan** : [printed, text partly bold] Ryaf 1923 [handwritten] L. Burgeon [printed] / R. DET. [printed] EE. [handwritten] 5678 [printed] / *Anthicus sudanicus* n sp [handwritten].

***Sapintus takaosus* (PIC) comb. nov.**

Original placement: *Anthicus (Stenidius) takaosus* PIC, 1913a: 130. Placed in *Stenidius* LAFERTÉ-SÉNECTÈRE by Uhmann (1983), and returned to *Anthicus* sensu lato by Kejval (2002).

Based on study of the type material (see chapter "2. Type Designations" below).

Note: In the type specimens, the posterolateral margins of mesepisterna are lacking the thick fringe of setae (a few scarce setae are present), as it is typical for the genus. Elytra lacking distinct undersetae. But the male genitalia have a distinct diverticulum off of the internal sac, as is *Sapintus* CASEY; the sculpture of forebody and form of the terminal antennomere are also typical for *Sapintus*. The species is probably

related to the Oriental species *S. bataviensis* (MARSEUL, 1882a: 63) & *S. barbei* BONADONA, 1978: 76.

***Sapintus tschoffeni* (PIC) comb. nov.**

Original placement: *Anthicus tschoffeni* PIC, 1900b: 429.

Based on study of the HOLOTYPE ♀, IRSN: Boma M. Tschoffen [printed] / *Anthicus Tschoffeni* Pic n sp. [handwritten] / *Anthicus Tschoffeni* Pic. [handwritten] dét. M. Pic [printed] / *Type* [printed, text italic & red, black border] / *Stricticomus tschoffeni* Pic. [handwritten] dét. [printed, corrected by hand] revis [handwritten] J. B. v. Krekich [printed] 1913 [handwritten] / sec. M.Pic, cat.col.Junk 1911 ANTHICUS [printed] *Tschoffeni* Pic [handwritten].

Note: Heberdey (1933: 138) erroneously attributed the current species to the "*A. ophthalmicus*" ROTTENBERG, 1871: 259 (now in *Stricticollis* MARSEUL) group, which is also indicated on one of labels (see above).

***Sapintus vrydaghi* (PIC) comb. nov.**

Original placement: *Anthicus Vrydaghi* PIC, 1955a: 92.

Based on study of the HOLOTYPE ♀, MRAC: HOLOTYPE [printed, label red, black border] / S Grumes [handwritten, label greenish] / COLL. MUS. CONGO **Boma** [printed] (quai) X [handwritten] -1945 J. Vrydagh [printed] / R. DET. 6669 [printed] CC. [handwritten] / *Anthicus Vrydaghi* nsp [handwritten].

***Stricticollis burgeoni* (PIC) comb. nov.**

Original placement: *Anthicus burgeoni* PIC, 1952a: 72.

Based on study of the HOLOTYPE ♀, MRAC: HOLOTYPE [printed, label red, black border] / MUSÉE DU CONGO **Soudan** : [printed, text partly bold] Rejaf 1923 [handwritten] L. Burgeon [printed] / R. DET. [printed] R. [handwritten] 5678 [printed] / *Anthicus Burgeoni* n sp [handwritten].

***Stricticollis mokuensis* (PIC) comb. nov., stat. nov.**

Original placement: *Anthicus boviei* var. *mokuensis* PIC, 1952a: 72.

Based on study of the HOLOTYPE ♀, MRAC:

HOLOTYPE [printed, label red, black border] / MUSÉE DU CONGO Haut-Uele: **Moku Moto** –III-1927 L. Burgeon [printed, text partly bold] / R. DET. [printed] h. [handwritten] 5678 [printed] / A. Boviei v. n. mokouensis [handwritten].

Note: “*Anthicus*” *boviei* was transferred to *Aulacoderus* LAF. by van Hille (1984: 116), where it remains to stay, while the type specimen of this species has been studied by van Hille. The “var. *mokouensis*” clearly does not closely resemble *Aulacoderus boviei* (PIC, 1920: 19), but is a member of the genus *Stricticollis* MARSEUL.

***Trichananca vinctus* (ERICHSON) comb. nov.**

Original placement: *Tomoderus vinctus* ERICHSON, 1842: 182.

Based on study of 1 SYNTYPE, MNHB: 47389 [printed] / Van. Diemens land Schayer. [handwritten, label violet] / Type [printed, label red] / *vinctus* Er.* (*Anthicus*) [handwritten] / Hist.-Coll. (Coleoptera) No. 47389 Tomoderus *vinctus* Er.x Terra v. diem. Schayer Zool. Mus. Berlin [printed, label violet] / SYNTYPE *Anthicus vinctus* Erichson, 1842 labelled by MNHB 2003 [printed, label red].

***Anthicomorphus serricornis* MARSEUL, 1882a: 59.**

= *Anthicomorphus permagnus* KREKICH-STRASSOLDO, 1914: 216 syn. nov.

Based on study of the type material of *A. serricornis* (MARSEUL) and on original description and identified specimens of *A. permagnus* KREKICH-STRASSOLDO.

Note: Also see notes on new combination of *A. serricornis* above.

***Anthicus robustus* PIC, 1902a: 408.**

= *Anthicus nigrobifasciatus* PIC, 1928: 18 syn. nov.

Based on study of the type material of both species.

A. robustus: HOLOTYPE ♀, HNHM: Java. [handwritten] / Batavia Biró 1898 [printed] / Mono-[handwritten] typus [printed, text red] 1902 *Anthicus robustus* Pic [handwritten, label border red] / n sp. pres bisbicinctus Mars [handwritten] / A robustus Pic n sp. [handwritten] / *Anthicus robustus* Pic

[handwritten] det.M. Pic [printed] Typus ! [handwritten, text red].

Note: *A. nigrobifasciatus*: see chapter “2. Type Designations” below.

***Macratria helperi* LAFERTÉ-SÉNECTÈRE, 1849a: 8**

= *Macratria helperi* LAFERTÉ-SÉNECTÈRE, 1849e: 18 [Homonym]

= *Macratria helperi* var. *bimaculata* PIC, 1900c: 138 syn. nov. Based on study of the type material.

Macratria helperi var. *bimaculata*: HOLOTYPE ♂, NHMW: Mulmeih Fieber 1871. [handwritten] / det. Pic helperi v. *bimaculata* [handwritten].

***Microhoria unicolor unicolor* SCHMIDT, 1842: 179**

= *Microhoria patagiata* (KIESENWETTER, 1861: 247) syn. nov. Based on study of the HOLOTYPE ♀, ZSSM: Kiesenwetter [printed] / Nauplia [handwritten] / Typus [printed, label red] / Patagiatus Kswtt / Sammlung Cl. Müller [printed] / Zool. Staatsslg. München [printed, label bluish].

COTYPUS ♀, ZSSM: Kiesenwetter [printed] / Nauplia [handwritten] / Cotype [printed, label red] / Sammlung Cl. Müller [printed] / Zool. Staatsslg. München [printed, label bluish].

***Notoxus lateniger* PIC, 1951a: 8 stat. nov.**

Original placement: *Notoxus francevilleus* var. *lateniger* PIC.

= *Notoxus lateniger* BONADONA, 1969: 318 syn. nov. [Homonym]. Based on type material of Bonadona’s species, original description and identified material.

Note: *N. francevilleus* PIC is a valid species.

***Sapintus dilensis* (PIC, 1900a: 607)**

= *Anthicus csikii* PIC, 1902a: 409 syn. nov.

Original placement: „*Anthicus Csikii* (var. de *dilensis* PIC?)”

Based on study of the type material of “*A. csikii*”: HOLOTYPE ♀, HNHM: N. Guinea Biró 96 [printed] / Erima Astrolabe B. [printed] / Holotypus [printed, text red] 1902 *Anthicus Csikii* Pic [handwritten, label border red] / *A. dilensis* Pic var [handwritten] / *Csikii* Pic

 with black border] / *taitensis* Boh.
 [handwritten].

Note: Krekich-Strassoldo (1914b: 222) first transferred *A. taitiensis* into the genus *Sapintus* CASEY: "jedenfalls ist zu bemerken, daß *A. taitiensis* [sic!] der Untergattung *Sapintus* angehört...". He stated that Boheman had collected this and another species in Ecuador (Gulf of Guayaquil) and first mentioned a possible error in the labelling of the type series of the present species. Werner (1983: 423) placed *A. taitiensis* among the Neotropical species of *Sapintus*. He also suggested that the locality of the types is given erroneously and that a possible type locality was "somewhere in coastal Ecuador or Puna Island", despite Boheman's indication of Tahiti. Both Krekich-Strassoldo & Werner stated that one of the specimens from the type series is marked "California" (see list of paratypes) which probably correctly indicates the place of collecting of the type series of this species. Strangely, no scientist appears to have realised

the importance of this data.

Tomoderus trimaculatus PIC, 1902a: 407

= *Tomoderus trimaculatus* ab. *csikii* PIC,
 1902a: 407 [synonymy confirmation]

Original placement: „*Tomoderus csikii* (peut être variété de *trimaculatus*?)”

Heberdey (1936) first has notified that this is only aberration of *T. trimaculatus* PIC, 1902a.

Material: HOLOTYPE ♀, HNHM: N. Guinea Biró 1899. [printed] / Sattelberg Huon-Golf.
 [printed] / Monotypus [printed, text red] 1902
Tomoderus Csikii Pic [handwritten, label border
 red] / *Tomoderus* Csiki Pic (v. de *trimaculatus* ?)
) [handwritten] / *Tomoderus* Csikii Pic
 [handwritten] det.M. Pic [printed] Typus !
 [handwritten, text red].

Note: The Holotype of *T. csikii* is a teneral specimen, with elytra more globose than in typical *T. trimaculatus* only because they are defective.

2. Type Designations

Familia Anthicidae

Subfamilia Tomoderinae

Tomoderus reitteri HEBERDEY, 1938: 163

LECTOTYPUS, NHMW [herewith designated]: Nordwestl. China Chinkiang [printed] / Col. Reitter [printed] / TYPE [printed, label red] / Reitteri nov. [handwritten] det.Dr.R.F.Heberdey [printed] / Reitteri Hbdy. [handwritten].

PARALECTOTYPES, 4 specimens with identical labels data, NHMW [herewith designated]: Nordwestl. China Chinkiang [printed] / Col. Reitter [printed] / TYPE [printed, label red].

Subfamilia Anthicinae

Genus *Anthicodes* WOLLASTON

The genus *Anthicodes* was described by Wollaston in 1877 to hold two species, *A. maculatus* and *A. fragilis* without designation of a type species. Later Bonadona (1972) revised this group but also did not select any type species for this genus.

Herewith I designate *Anthicodes maculatus* WOLLASTON, 1877: 237 as the type species for the genus *Anthicodes* WOLLASTON, 1877.

HOLOTYPE, BMNH: *Anthicodes maculatus*

Woll. Typ: St. Helena [handwritten] / F. Bates 81°19 [printed] / TYPE [printed, label red].

***Acanthinus punctatus* (PIC, 1905: 491)**

LECTOTYPUS ♀, ZISP [herewith designated]: obispo Motch. [handwritten, label green] / K. Сольского. [printed] / Obisop. Etats Unis [handwritten] / gardiun [handwritten] / Formicilla punctata Pic [handwritten].

PARALECTOTYPUS ♂, ZISP [herewith designated]: one specimen mounted on another card on same pin with the Lectotype above them; both Lectotype and Paralectotypes have the same labels (as mounted on same pin).

Notes: The second specimen (underneath) is designated as the Lectotype. The paralectotype specimen is lacking the forebody.

Werner (1967: 1222), in his revision of the genus *Acanthinus* LAF., mentioned that the locality label of the type specimen is possibly erroneous, and the present species has never been collected North of Costa Rica.

***Anthicus dilatatus* KREKICH-STRASSOLDO, 1914a: 112**

LECTOTYPUS ♂, MNHB [herewith designated]: dilatatus [handwritten] det. V.Krekich. [printed] / TYPE [printed, label red] / 98004 [printed] / ♂ [printed] / Turkestan Gultscha 1200 m 12.10.90 Conradt S. [printed].

PARALECTOTYPUS ♀, MNHB [herewith designated]: dilatatus [handwritten] det. V.Krekich. [printed] / TYPE [printed, label red] / 98003 [printed] / ♀ [printed] / Turkestan Gultscha 1200 m 12.10.90 Conradt S. [printed].

***Anthicus floreus* LAFERTÉ-SÉNECTÈRE, 1849d: 112** (synonym of *Hirticollis biplagiatus* (LAFERTÉ-SÉNECTÈRE, 1849d: 111))

LECTOTYPUS ♂, MNHB [herewith designated]: 47491 [printed] / Type [printed, label red] / floreus (Waltl) Laf.* Aegypt. Waltl [handwritten, label blue] / Hist.-Coll. (Coleoptera) No. 47491 Anthicus floreus (Waltl) Laf.* Aegypt., Waltl Zool. Mus. Berlin [printed].

PARALECTOTYPUS ♀, MNHB [herewith designated]: 47491 [handwritten] / Type [printed, label red] / Hist.-Coll. (Coleoptera) No. 47491 Anthicus floreus (Waltl) Laf.* Aegypt., Waltl Zool. Mus. Berlin [printed].

***Anthicus maderi* HEBERDEY, 1938: 163**

LECTOTYPUS, NHMW [herewith designated]: Vallis flumin. Soling-ho, Yun. [printed] / TYPE [printed, label red] / coll. Heberdey [printed] / Maderi nov. [handwritten] det.Dr.R.F.Heberdey [printed].

PARALECTOTYPUS, NHMW [herewith designated]: Vallis flumin. Soling-ho, Yun. [printed] / TYPE [printed, label red] / coll. Heberdey [printed].

***Anthicus nigrobifasciatus* PIC, 1928: 18** (synonym of *A. robustus* PIC, 1902a: 408)

LECTOTYPUS ♂, MNHN [herewith designated]: Duchaine [handwritten] / MUSEUM PARIS, J. Duchaine 1928 [printed] / TYPE [printed, label red] / Anthicus nigrobifasciatus Pic [handwritten].

PARALECTOTYPUS ♀, specimen with identical label data as by Lectotype, MNHN [herewith designated].

***Anthicus setulosus* BOHEMAN, 1851: 220** (synonym of *A. umbrinus* LAFERTÉ-SÉNECTÈRE, 1849d: 115)

LECTOTYPUS ♂, NHRM [herewith designated]: Gl. [printed] / Bhn. [printed] / Naturhistoriska Riksmuseet Stockholm Loan no 702/02 [printed, label blue].

PARALECTOTYPUS, NHRM [herewith designated]: Gl. [printed] / Bhn. [printed] / Naturhistoriska Riksmuseet Stockholm Loan no 703/02 [printed, label blue].

PARALECTOTYPUS, NHRM [herewith designated]: Gl. [printed] / Bhn. [printed] / Naturhistoriska Riksmuseet Stockholm Loan no 701/02 [printed, label blue].

PARALECTOTYPUS, NHRM [herewith designated]: Gl. [printed] / Bhn. [printed] / Naturhistoriska Riksmuseet Stockholm Loan no 700/02 [printed, label blue].

***Ischyropalpus sericans* (ERICHSON, 1834: 250)**

LECTOTYPUS, MNHB [herewith designated]: 47468 [printed] / sericans Er.* Peru. Meyen. [handwritten, label green] / Type [printed, label red] / Hist.-Coll. (Coleoptera) No. 47468 Anthicus sericans Er.x Peru, Meyen Zool. Mus. Berlin [printed, label green] / SYNTYPUS Anthicus sericans Erichson, 1834 labelled by MNHB 2003 [printed, label red].

PARALECTOTYPES, 4 specimens with identical labels data, MNHB [herewith designated]: 47468 [handwritten] / Type [printed, label red] / Hist.-Coll. (Coleoptera) No. 47468 Anthicus sericans Er.x Peru, Meyen Zool. Mus. Berlin [printed, label green] / SYNTYPUS Anthicus sericans Erichson, 1834 labelled by MNHB 2003 [printed, label red].

***Mecynotarsus fasciatus* MOTSCHULSKY, 1863:**
490

LECTOTYPUS, MZUM [herewith designated]: [unreadable handwritten symbol on a small yellow circular label] / type [handwritten, label small & square] / *Mecynotarsus fasciatus* Motsch. I.or.Ceyl.Colom. [handwritten, label yellow].

PARALECTOTYPES, MZUM [herewith designated]: 2 specimens mounted together on one card on same pin with the Lectotype below them; both Lectotype and Paralectotypes have the same labels (as mounted on same pin).

Note: The first specimen above is designated as the Lectotype.

***Mecynotarsus quadrimaculatus* PIC, 1913a:**
129

LECTOTYPUS ♂, NHMW [herewith designated]: Anping Formosa Sauter [printed] / Auping [sic!] 7.IX 1906 [handwritten] / T Y P E [printed, label red] / coll. Heberdey [printed] / 4-maculat. Pic. [handwritten] / *quadrimaculatus* Pic [handwritten].

PARALECTOTYPUS ♂, NHMW [herewith designated]: Anping Formosa Sauter [printed] / Auping [sic!] 7.IX 1906 [handwritten] / T Y P E [printed, label red] / coll. Heberdey [printed] / 4-maculat. Pic. [handwritten].

***Sapintus formosanus* (PIC, 1911a: 11)**

LECTOTYPUS ♂, NHMW [herewith designated]: Taihorin Formosa H. Sauter, 1911 [printed] VII [handwritten on right corner] / Pic det. [printed] / ♂ [printed] / TYPE [printed, label red] / *formosanus* Pic det. [handwritten].

PARALECTOTYPUS ♀, NHMW [herewith designated]: Taihorin Formosa H. Sauter, 1911 [printed] VII [handwritten on right corner] / Pic det. [printed] / ♀ [printed] / TYPE [printed, label red] / *formosanus* Pic det. [handwritten] / *formosanus* Pic [handwritten].

***Sapintus takaosus* (PIC, 1913a: 130)**

LECTOTYPUS ♂, NHMW [herewith designated]: Takao Formosa Sauter [printed] / ♂ [printed] / T Y P E [printed, label red] / *takaosus* Pic [handwritten] / *takaosus* Pic Formosa [handwritten].

PARALECTOTYPUS ♂, NHMW [herewith designated]: Takao Formosa Sauter [printed] / ♂ [printed] / T Y P E [printed, label red] / *takaosus* Pic [handwritten].

PARALECTOTYPUS ♀, NHMW [herewith designated]: Takao Formosa Sauter [printed] / ♀ [printed] / T Y P E [printed, label red] / *takaosus* Pic [handwritten].

***Stricticollis transcaspicus* (PIC, 1898: 123)**

LECTOTYPUS ♂, ZMUH [herewith designated]: Aschabad [printed] / Ahnger [printed] / 637 [printed, label bluish] / *transcaspius* [sic!] [handwritten] det. v.Krekich [printed] / Mus. Zool. Helsinki Loan No. C 04 - 274 [printed, label yellow].

PARALECTOTYPUS ♀, ZMUH [herewith designated]: *Transcaspia* [printed] / Ahnger [printed] / 1059 [handwritten] / Pic det. [printed] / 11. [handwritten] / Mus. Zool. Helsinki Loan No. C 04 - 272 [printed, label yellow].

PARALECTOTYPUS ♀, ZMUH [herewith designated]: Aschabad [printed] / Ahnger [printed] / *transcaspius* [sic!] [handwritten] det. v.Krekich [printed] / Mus. Zool. Helsinki Loan No. C 04 - 275 [printed, label yellow].

Subfamilia Eurygeninae

***Macratriomima lobigera* CHAMPION, 1916: 197**

LECTOTYPUS ♂, BMNH: ♂ N.Guinea. Sayer. [handwritten on card with beetle] / LECTOTYPE [printed, label circular, border violet] / Sharp Coll. 1905-313. [printed] / 533. ♂. [handwritten] / Sp. figured. [printed] / *Macratriomima lobigera* Ch. [handwritten] / EURYGENIINI [printed] ♂ *Macratriomima lobigera* Champion [handwritten] det.M.Abdullah,1963. [printed] HOLOLECTOTYPE [handwritten, on reverse of same label].

PARALECTOTYPUS ♂, BMNH: ♂ N.Guinea. Sayer. [handwritten on card with beetle] / Sharp Coll. 1905-313. [printed] / *Macratriomima*

lobigera, Ch. [handwritten] / PARA-LECTOTYPE [printed, label circular, border light blue] / EURYGENIINI [printed] ♂ Macratriomima lobigera Champion [handwritten] det.M.Abdullah,1963. [printed].

Studied material: 1♂, 1♀, HNHM: Lake Seabrook W.Austr.VIII.1959 leg.H.Demarz.

Notes: M. Abdullah labelled the two type specimens as Lecto- and paralectotype, but did not publish the designation.

The species was described from the Island of New Guinea, without indicating the precise locality. Also, the type specimen labels do not have any additional information on the collecting locality except for "N.Guinea". The additional studied specimens and published material (Armstrong, 1948: 295, as "*Macrotriomima* [sic!] *lobigera* Champ.") is from Western Australia and New South Wales. There are two possibilities on the distribution area of this species: a.) the distribution range is large, covering New Guinea island and the main part of Australia, and the species is not connected with any special kind of the habitat; b.) type locality "New Guinea" is wrong and this species is native Australian.

The female specimen studied is broader and longer than all three males studied, and has the hind tibiae simple.

Familia Pyrochroidae
Subfamilia Pedilinae

Pedilus xanthopus SEMENOV, 1899: 654

LECTOTYPUS ♂, ZISP [herewith designated]: Окр.д.Шаболиной VI- 98. Клеменцъ [handwritten] / *Pedilus xanthopus* m. ♂ typ. II.99 [handwritten, by A.Semenov] A. Semenow det. [printed] / Zool. Inst St.Petersburg [printed, label yellow].

PARALECTOTYPUS ♀, ZISP [herewith designated]: Окр.д.Шаболиной VI- 98. Клеменцъ [handwritten] / *Pedilus xanthopus* m. ♀ typ. II.99. [handwritten, by A.Semenov] A. Semenow det. [printed] / Zool. Inst St.Petersburg [printed, label yellow].

3. Subspecific Status for Former Varieties

The International Code of Zoological

Nomenclature (ICZN, 1999) no longer recognises the use of variety names. If the names were validly described as varieties before 1961 and no changes have been made in their status, then they are available names that automatically become subspecies according the ICZN Article 45.6.4.

All following names were described as varieties. Author is not familiar with taxa mentioned below and is unable to comment their validity, until not extra notified.

Anthelephila spinifera gerardi (PIC, 1915a: 2) (*Formicomus*) **stat. nov.**

Anthicus stygius nitidicollis PIC, 1914e: 186 **stat. nov.**

Anthicus vassei devroyei PIC, 1952a: 76 **stat. nov.**

Cordicollis inanis longiterinalis (PIC, 1917: 8) (*Anthicus*) **stat. nov.**

Cyclodinus nigrobasalis subdecoloratus (PIC, 1932b: 17) (*Anthicus* subgenus *Cyclodinus*) **stat. nov.**

Macratria cariei emmerezi PIC, 1902b: 191 **stat. nov.**

Macratria cariei mauritiensis PIC, 1932a: 52 **stat. nov.**

Macratria diversimembris PIC, 1955b: 126 **stat. nov.** (*Macratria Severini* var. *diversimembris*)

Based on study of the Holotypus ♀, MRAC: HOLOTYPE [printed, label red, black border] / COLL. MUS. CONGO Ruanda: Mahembe, 1400 m. terr. Nyanza, P.Basilewsky 13/15-I-53 [printed] / R. DET. [printed] I. [handwritten] 6529 [printed] / M. Severini v. nouv. *diversimembris* [handwritten].

 (*Anthicus*) **stat. nov.**

4. Unavailable Names

The following names were attributed to Anthicidae species and are unavailable for diverse reasons based on the ICBN (1999). They are unavailable if: 1) they are described as an aberration (ab.) - Article 45.6.2, or if they were described as a form or variety after 1960 - Article 45.6.3; 2) they are clearly infrasubspecific based on examination of the work - Article 45.6.1; 3) they are nomina nuda, printing errors, or different concurrent spellings - Article 24.2.4.

Listing of these unavailable names is important in clarifying dates of publication, correct spellings of genera and of type species of genera, nude names in papers or catalogues.

Anthicus botswanaensis TELNOV, 1998: 65 – **nomen nudum** (Article 24.2.4.). Later described by Uhmann, 2002: 71.

Anthicus subinstabilis ab. *lateobscuripennis* PIC, 1938: 7 – **ab.** (Article 45.6.2)

Endomia dilaticornis BONADONA, 1960: 299; 323 (Article 24.2.4.). Incorrect spelling for *E. dilataticornis* PIC, 1931: 12)

Leptaleus barbieri UHMANN, 1989: 383 – **nomen nudum** (Article 24.2.4.)

Macratria angusticollis var. *wittei* PIC, 1955b: 126 – **nomen nudum** (Article 24.2.4.)

Macratria intricata UHMANN, 1989: 390 – **nomen nudum**. (Article 24.2.4.). A specimen of this undescribed species, labelled as the Holotype by G.C. Champion, is housed in the BMNH.

Notoxus ardoini var. *rufithorax* BONADONA, 1984: 476 (Article 45.6.3; 2)

Notoxus crenulatus TELNOV, 1998: 61 – **nomen nudum** (Article 24.2.4.)

Notoxus quadrilobatus TELNOV, 1998: 62 – **nomen nudum** (Article 24.2.4.). Manuscript with description of this species was submitted by Uhmann and van Hille (deceased) to the

“Annals of the Cape Provincial Museum of Natural History” in 1996 but the paper is still not published (G. Uhmann, pers. comm.).

Pseudoleptaleus arisentensis UHMANN, 1981: 195 – **nomen nudum** (Article 24.2.4.)

Pseudoleptaleus arisentensis UHMANN, 1989: 383 – **nomen nudum** (Article 24.2.4.)

Pseudoleptaleus mollis UHMANN, 1983: 196 – **nomen nudum** (Article 24.2.4.)

5. Homonyms

Tomoderus hirtulus LAFERTÉ-SÉNECTÈRE, 1849b: 5

= *Tomoderus hirtulus* LAFERTÉ-SÉNECTÈRE, 1849e: 98 [Homonym]

Three syntype specimens of this species are stored in MNHB, another one – in the National Museum in Prague (Czech Republic).

Tomoderus kolbei kolbei PIC, 1911b: 157

= *Tomoderus kolbei* PIC, 1913b: 378

new homonymy

Material: HOLOTYPE ♂, MNHB: e.coll.Dr. C.Schröder Magamba-Bge. bei Masinde 6.I.05 1600-2000mD.O.Afr. [printed, label white, black border] / 18 [handwritten] / Pic det. [printed] / Type [printed, label red] / Tomoderus Kolbei n. sp. Pic [handwritten] / HOLOTYPE Tomoderus kolbei Pic, 1913 labelled by MNHB 2005 [printed, label red].

S.-A. de Marseul (1882a, b) published descriptions of several species of Anthicidae first in French, later in English (translated descriptions). Below the homonymic names made by Marseul are listed:

Anthicomorphus serricornis MARSEUL, 1882a: 59

= *Anthicus serricornis* MARSEUL, 1882b: 119 [Homonym]

Anthicus bizonellus MARSEUL, 1882a: 63

= *Anthicus bizonellus* MARSEUL, 1882b: 122 [Homonym]

Anthicus cruciellus MARSEUL, 1882a: 60

= *Anthicus cruciellus* MARSEUL, 1882b: 119 [Homonym]

Macratria bicincta MARSEUL, 1882a: 56

= *Macratria bicincta* MARSEUL, 1882b:

115 [Homonym]

Macratria lineella MARSEUL, 1882a: 55

= *Macratria lineella* MARSEUL, 1882b:

113 [Homonym]

Macratria soricina MARSEUL, 1882a: 56

= *Macratria soricina* MARSEUL, 1882b:

114 [Homonym]

Mecynotarsus obliquemaculatus MARSEUL, 1882a: 59

= *Mecynotarsus obliquemaculatus*

MARSEUL, 1882b: 117 [Homonym]

Sapintus cruciellus (MARSEUL, 1882a: 60)

= *Anthicus cruciellus* MARSEUL, 1882b:

119 [Homonym]

Sapintus javanus (MARSEUL, 1882a: 62)

= *Anthicus javanus* MARSEUL, 1882b:

121 [Homonym]

Sapintus subrubrocinctus (MARSEUL, 1882a: 61)

= *Anthicus subrubrocinctus* MARSEUL,

1882b: 120 [Homonym]

Tomoderus fuscicornis MARSEUL, 1882a: 57

= *Tomoderus fuscicornis* MARSEUL,

1882b: 116 [Homonym]

6. Other Notes

Uhmann (1989: 380) described *Tomoderus palmi* from peninsular Malaysia, and indicated that the Holotype was a female (“Holotypus ♀”). Examination of the Holotype (ZMLU) reveals that it is a male. An aedeagus is present, and the male secondary sexual features include distinctly angulate humeri and well developed hind wings.

Uhmann (1994a: 658) described *Derarimus burckhardti* from Sumatra and designated the holotype and 7 paratypes. After study of the type serie (MHNG) it was clarified, that paratypes belong to 3 different species of the genus *Derarimus*. The type serie should be observed as follows (description of a new species originated from this serie of specimens see below in the chapter “New Species Descriptions of Anthicidae”):

Derarimus burckhardti UHMANN:

HOLOTYPE ♂: SUMATRA: Jambi km 15 Sungai penuh to Tapan, 1450 m 9.XI.1989,

Agosti Löbl, Burckh. #10 [printed] / Typus [printed, label red, black border] / Derarimus burckhardti sp. n. det. G.Uhmann 1993 [printed].

PARATYPES (3 specimens with identical labels): SUMATRA: Jambi km 15 Sungaipenuh to Tapan, 1450 m 9.XI.1989, Agosti Löbl, Burckh. #10 [printed] / PARATYPUS [printed, label red, black border] / Derarimus burckhardti sp. n. det. G.Uhmann 1993 [printed].

Derarimus sp.1 (undescribed species, related to *D. burckhardti* Uhmann, 1 ♂ specimen):

SUMATRA: W Sum. Padangpanjan 600 m, 17.XI.1989 Agosti, Löbl Burckhardt # 20 / PARATYPUS [printed, label red, black border] / Derarimus burckhardti sp. n. det. G.Uhmann 1993 [printed].

Derarimus sp.2 (3 ♂♂ specimens, described below as *D. erratus*):

1 specimen: SUMATRA: Aceh # 27 Mt Leuser N.P. Ketambe, 1000 m 28-29.XI.1989, Löbl Agosti, Burckhardt / PARATYPUS [printed, label red, black border] / Derarimus burckhardti sp. n. det. G.Uhmann 1993 [printed].

1 specimen: SUMATRA: N Sum. 7 km N Brastagi 1500 m, 2.XII.1989 Agosti, Löbl Burckhardt # 28a / PARATYPUS [printed, label red, black border] / Derarimus burckhardti sp. n. det. G.Uhmann 1993 [printed].

1 specimen: SUMATRA: W Sum. #21 Palopo Nat. Res. N Bukittinggi, 900 m 18-20.XI.1989, Löbl Agosti, Burckhardt / PARATYPUS [printed, label red, black border] / Derarimus burckhardti sp. n. det. G.Uhmann 1993 [printed].

Uhmann (1994a: 662) described ***Derarimus loebli*** from Sumatra and designated the holotypus and 5 paratypes. After study of the type serie (MHNG) it was clarified, that paratypes belong to 2 different species of the genus *Derarimus*. The type serie should be observed as follow:

Derarimus loebli UHMANN:

HOLOTYPE ♀: SUMATRA: Jambi km 8 Sungaipenuh to Tapan, 1200 m 9.XI.1989, Agosti Löbl, Burckh. #8 [printed] / Typus [printed, label red, black border] / Derarimus loebli sp. n. det. G.Uhmann 1993 [printed].

PARATYPES (4 specimens): 1 ♀: SUMATRA: Jambi km 8 Sungaipenuh to Tapan, 1200 m

9.XI.1989, Agosti Löbl, Burckh. #8 [printed] / PARATYPUS [printed, label red, black border] / Derarimus loebli sp. n. det. G.Uhmann 1993 [printed].

2 ♀♀: SUMATRA: N Sum. #29a 5 km W Brastagi Tongkoh, 1450 m 3.XII.1989, Löbl, Agosti, Burckhardt [printed] / PARATYPUS [printed, label red, black border] / Derarimus loebli sp. n. det. G.Uhmann 1993 [printed].

Taxonomical Part

New Species Descriptions of Anthicidae

During the study of the type series of *Tomoderus trimaculatus* PIC, 1902a, one male specimen labelled as paratype of this species has been found, which is quite different from *T. trimaculatus* PIC (compared with the holotypus of this species) and also from all other known species of *Tomoderus* LAF. In general, there are 1 holotypus and 3 paratypes included into the type serie of this species. One of the specimens labelled as "paratype" is described as new to science in the current chapter.

Type material studied of *T. trimaculatus* PIC: HOLOTYPE ♀, HNHM: N. Guinea Biró 1899. [printed] / Sattelberg Huon-Golf. [printed] / Holotypus [printed, text red] 1902. Tomoderus trimaculatus Pic [handwritten, label border red] / Tomoderus trimaculatus Pic n sp N var . [handwritten] / Tomoderus trimaculatus Pic [handwritten] det.M. Pic [printed] Typus ! [handwritten, text red].

PARATYPUS ♀: N. Guinea Biró 1899. [printed] / Sattelberg Huon-Golf. [printed] / Paratypus [printed, text red] 1902 Tomoderus trimaculatus Pic [handwritten, label border red].

PARATYPUS ♀: N. Guinea Biró 1899. [printed] /

Sattelberg Huon-Golf. [printed] / PARATYPUS [printed, text red] 1902 Tomoderus trimaculatus Pic [handwritten, label border red] / Tomoderus trimaculatus Pic [handwritten] det.M. Pic [printed] Typus ! [handwritten, text red].

Additional specimen studied: 1♂, HNHM: N. Guinea Biró 1899. [printed] / Sattelberg Huon-Golf. [printed] / Tomoderus trimaculatus Pic [handwritten] det. M. Pic, 1955 [printed]. The additional specimen is a single male of this species I have studied before. It was collected from the same place as the type specimens, but was not included in the type series (overlooked?) by M. Pic.

Tomoderus pseudotrimaculatus sp. nov.

(Figs. 1-3).

HOLOTYPE ♂, HNHM: N. Guinea Biró 96 [printed] / Erima Astrolabe B. [printed] / Paratypus [printed, text red] 1902 Tomoderus trimaculatus Pic [handwritten, label border red].

Derivatio nominis: The given name derives from the name *Tomoderus trimaculatus* PIC, with which the new species has been confused.

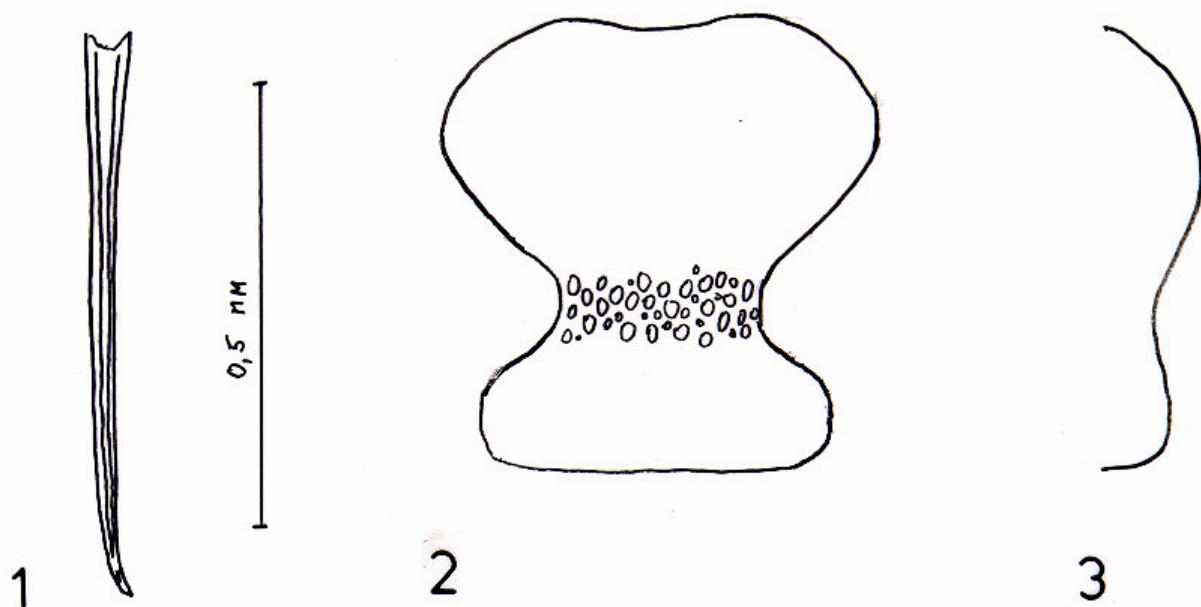

Description: Body length 2.38 mm, maximum width at middle of elytra 0.93 mm. Head 0.57 mm long, through eyes 0.51 mm broad, pronotum 0.49 mm long, on frontal lobe 0.51 mm broad, in median transverse depression 0.22

mm broad. Elytra along suture 1.32 mm long, at middle together 0.93 mm broad.

Body yellow-orange, labrum, palps and four terminal antennomeres lighter (yellow to yellow-white), legs yellow. Elytra with the base and transverse median band black.

In general, similar to *T. trimaculatus*, but larger, elytra more elongated and less globulose, with distinct humeri (as is typical for New Guinean and Sulawesian *Tomoderus*: females wingless or with strongly reduced hind wings and rounded humeri, but males with hind wings fully developed and distinct humeri). Head glossy, with indistinct but visible, straight frontoclypeal sulcus. Pronotum glossy, dorsally prominent, median transverse impression flat in lateral view (compared to *T. trimaculatus*, figs. 3, 5). Elytra glossy, with deep dense punctures becoming flat and smaller toward the apex. Sutural striae thin, developed from the middle of elytra towards the apex. The whole body except for the long pubescence, with numerous long erect sensory setae, especially on elytra. Hind wings fully developed. Penis different from that of *T. trimaculatus* – thin and very long. In *T. pseudotrimaculatus*, the penis is 0.62 mm long and slightly curved in apex (fig. 1). In *T. trimaculatus* the penis is 0.45 mm long and straight (fig. 4).

Female unknown.

Figures 1-3: *Tomoderus pseudotrimaculatus* sp. nov. (Holotype):
1 – aedeagus; 2 – pronotum, dorsally; 3 – pronotum, laterally.

Differential diagnosis: The new species is easily distinguished from *Tomoderus trimaculatus* PIC, 1902a (New Guinea) by the form / proportions of the pronotum and elytra, and also the different structure of the penis. *T. horvathi* PIC, 1902a: 406 (New Guinea Island) is also similar to *T. pseudotrimaculatus*, but

differs in being larger (Holotype of that species (HNHM) is 2.83 mm long and 1.15 mm broad at elytra), in having a more slender pronotum with a narrower frontal lobe, the hind wings are strongly reduced to long, narrow, very fine strips, and the humeri are less developed.

Figures 4-5: *Tomoderus trimaculatus* PIC, 1902a (non-type ♂ specimen from the locus typicus):
4 – aedeagus; 5 - pronotum, laterally.

During the study of the type series of *Derarimus burckhardti* UHMANN, 1994a: 658, three specimens labelled as paratypes differ from the holotype and also from other known species of the genus *Derarimus* BONADONA were discovered.

Derarimus erratus sp. nov.

(Figs. 6-9).

HOLOTYPE ♂, MNHG: SUMATRA: Aceh # 27 Mt Leuser N.P. Ketambe, 1000 m 28-29.XI.1989, Löbl Agosti, Burckhardt / PARATYPE [printed, label red, black border] / *Derarimus burckhardti* sp. n. det. G.Uhmann 1993 [printed].

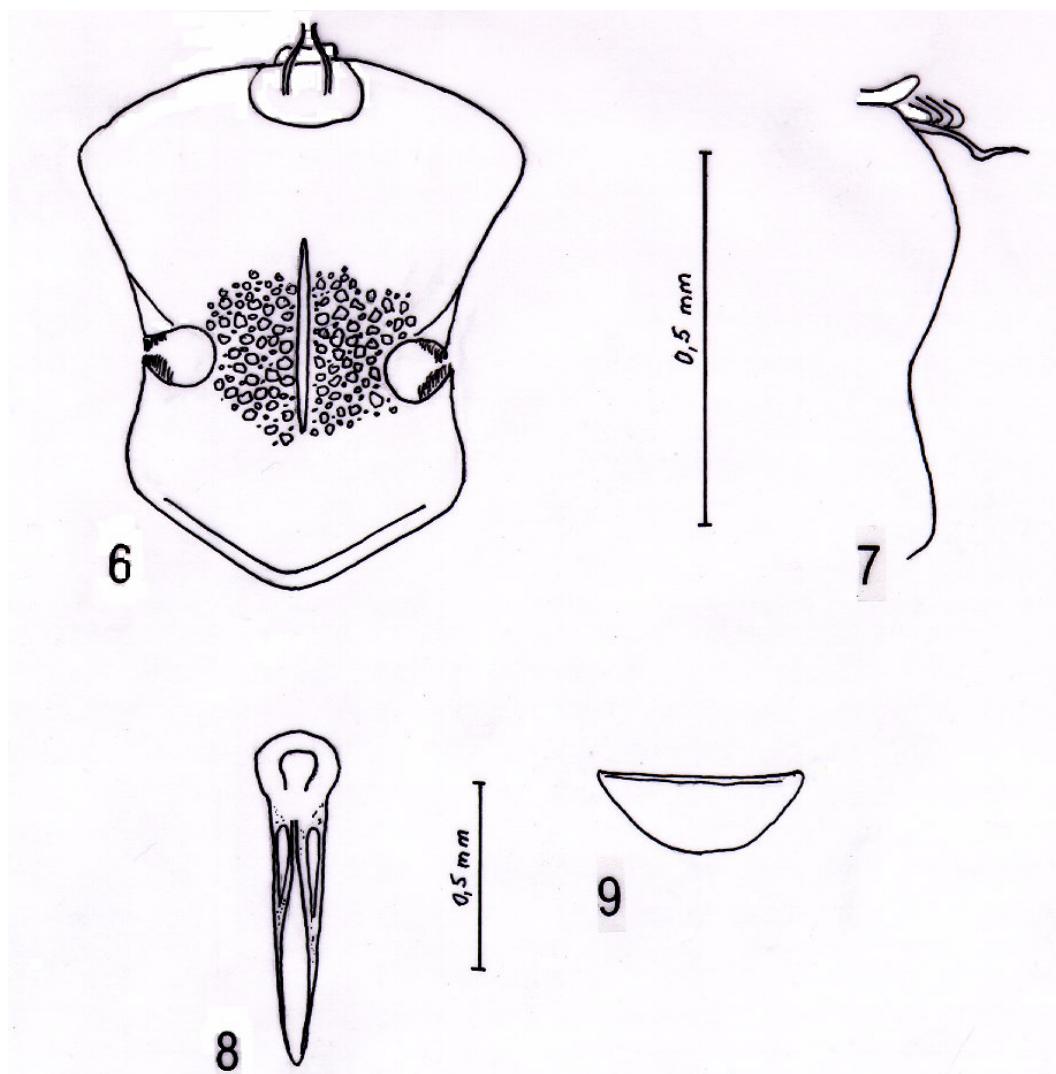

PARATYPES 2♂♂, MNHG: SUMATRA: N Sum. 7 km N Brastagi 1500 m, 2.XII.1989 Agosti, Löbl Burckhardt # 28a / PARATYPE [printed, label red, black border] / *Derarimus burckhardti* sp. n. det. G.Uhmann 1993 [printed];

SUMATRA: W Sum. #21 Palopo Nat. Res. N Bukittinggi, 900 m 18-20.XI.1989, Löbl Agosti, Burckhardt / PARATYPE [printed, label red, black border] / *Derarimus burckhardti* sp. n. det. G.Uhmann 1993 [printed].

Derivatio nominis: The given name derives from the Latin “erratum” – delusion, mistake, error. This name reflects the numerous identification errors in the labelling of the type series of species *D. burckhardti* UHMANN to which the specimens were erroneously arranged.

Description: Measurements of the holotype: body length 3.01 mm, maximum width at middle of elytra 1.07 mm. Head 0.63 mm long, through eyes 0.68 mm broad, pronotum 0.68 mm long, on frontal lobe 0.59 mm broad, in median transverse depression 0.25 mm broad. Elytra along suture 1.70 mm long, at middle together 1.07 mm broad.

Brown, head slightly darker, labrum, palps, antennae and legs yellow-brown.

Figures 6-9: *Derarimus erratus* sp. nov. (Holotypus): 6 – pronotum, dorsally; 7 – pronotum, laterally; 8 – aedeagus, dorsally; 9 – last visible abdominal sternit (dorsally).

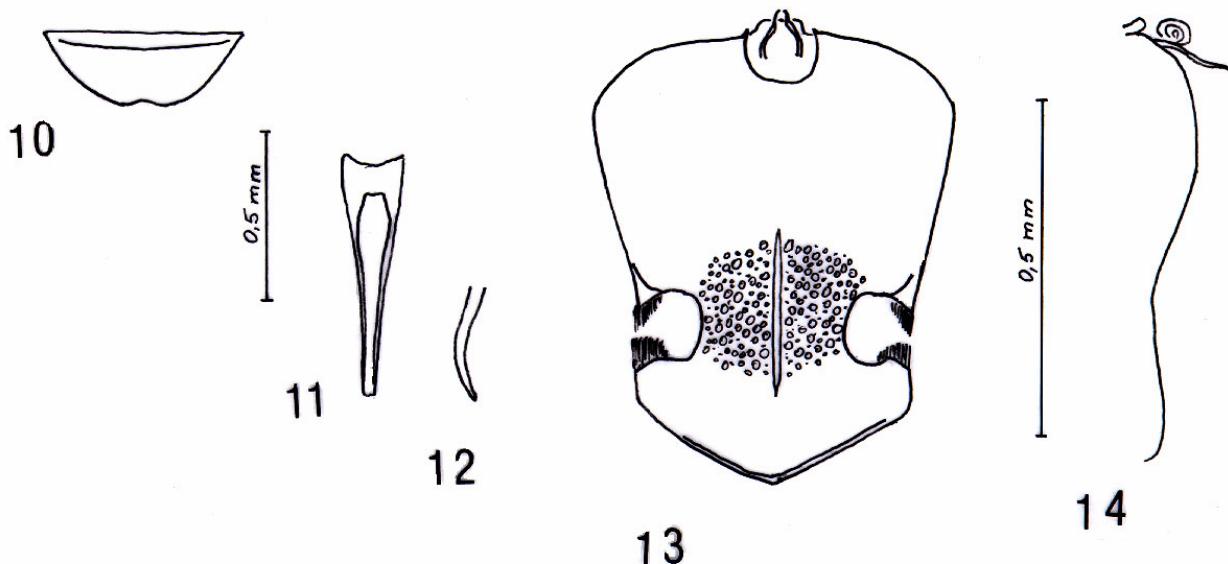

Head glossy, dorsally slightly convex, with extreme fine and sparse punctures. Eyes large and prominent, tempora short (~1/3 of eye's length) and rounded. Base flattened, nearly straight. Antennae quite long and indistinctly widened toward the apex. Pronotum glossy, dorsally convex, fine and sparse punctured for exception of dorsally in lateral constriction and before, where the punctures are very large and dense and different in size and form. From the lateral constriction towards nearly the middle of the frontal lobe with fine median longitudinal keel. Anterior margin of pronotum in the middle with deep cavity glossy on the ground (fig. 6). Two long and fine "horns" in the middle of cavity, convergated to their apexes (figs. 6-7). On the base of each "horn" with group of 2-4 strongly curved (to the head) setae. Anterior

collar of pronotum gibbose in the area of anterior pronotal cavity (fig. 7). Elytra dorsally slightly convex with relatively dense punctures in basal half, becoming smaller and shallow toward the apex. Shoulder weakly developed. Sutural striae very fine, visible only in apical fourth. Elytra and pronotum with dense adpressed long setae. Hind wing fully developed. Legs thin and short, with very small preapical segments. Penis short, thick, sword-like (fig. 8), 0,85 mm long and maximum 0,22 mm long (in *D. burckhardti* UHMANN penis measurements are 0,60 x 0,13 mm). Female unknown.

Differential diagnosis: *Derarimus burckhardti* UHMANN, 1994a is closely related to a new species but has similar structures on the anterior margin of pronotum (this is not mentioned in he

species' original description!). It also has comparatively smaller eyes and longer tempore, antennae are distinctly clavate, pronotum is thinner and finely punctured in region of lateral constriction, elytra are more elongated and finely punctured. Penis is slender and curved in

apical half, as also the last visible sternit of this species is shallowly excavated in the middle (figs. 10-12) (simply broadly rounded in *D. erratus*). Anterior pronotal cavity is distinctly deeper in *D. burckhardti* UHMANN.

Figures 10-12: *Derarimus burckhardti* UHMANN, 1994a (Holotypus): 10 – last visible abdominal sternite (dorsally); 11 – aedeagus, dorsally; 12 – apex of the aedeagus, laterally; 13 – pronotum, dorsally; 14 – pronotum, laterally.

Acknowledgements

For loans of type material I am deeply grateful to my dear colleagues A. van Assen (NNML), Nicole Berti (MNHN), Nicola Bressi (MSNT), Giulio Cuccodoro (MNHG), Roy Danielsson (ZMLU), Bernd Jäger and Manfred Uhlig (MNHB), Pol Limbourg (IRSN), Otto Merkl (HNHM), Nikolai B. Nikitsky (MZUM), Alexander G. Kirejtshuk (ZISP), Marc De Meyer (MRAC), Wolfgang Schawaller (SMNS), Heinrich Schönmann (NHMW), Hans Silfverberg (ZMUH), and Bert Viklund (NHRM). I thank my friends Maxwell V.L. Barclay (BMNH), Donald S. Chandler (University of New Hampshire, Durham, U.S.A.) and Stephen G. Compton (Leeds University, UK) for numerous consultations and help in preparing the final version of the manuscript.
