TELNOV D., MAZUR S., SKALE A., WEIGEL A. 2016. NEW NOTES ON FAUNISTICS OF THE HISTERIDAE (COLEOPTERA) FROM THE PAPUAN REGION. - *Latvijas Entomologs* 53: 14-32.

Abstract: New information on fauna and ecology of the family Histeridae from the Moluccas and New Guinea is presented. Numerous new records are published for the first time. 40 species and over 200 specimens were processed.

Key words: Coleoptera, Histeridae, Papuan region, New Guinea, Moluccas, fauna.

Introduction

The term “Papuan Region” (or in the strict zoogeographic sense - the Papuan subregion of the Australian Region) is often listed in zoological or zoogeographic literature. Few specialists clearly define its borders (Darlington 1962, 1971; Telnov 2011). The region comprises the Moluccas, New Guinea with all satellite islands, and the Solomon Islands, e.g. the region East from Weber’s Line and North from Australia (Map 1).

According to the only existing account of the Papuan Histeridae (Lackner 2008), there are 137 species of Histeridae known from New Guinea, of which 76 are endemic to this island and its near satellites. Until today, there is no detailed existing account of the Histeridae for the Moluccas.

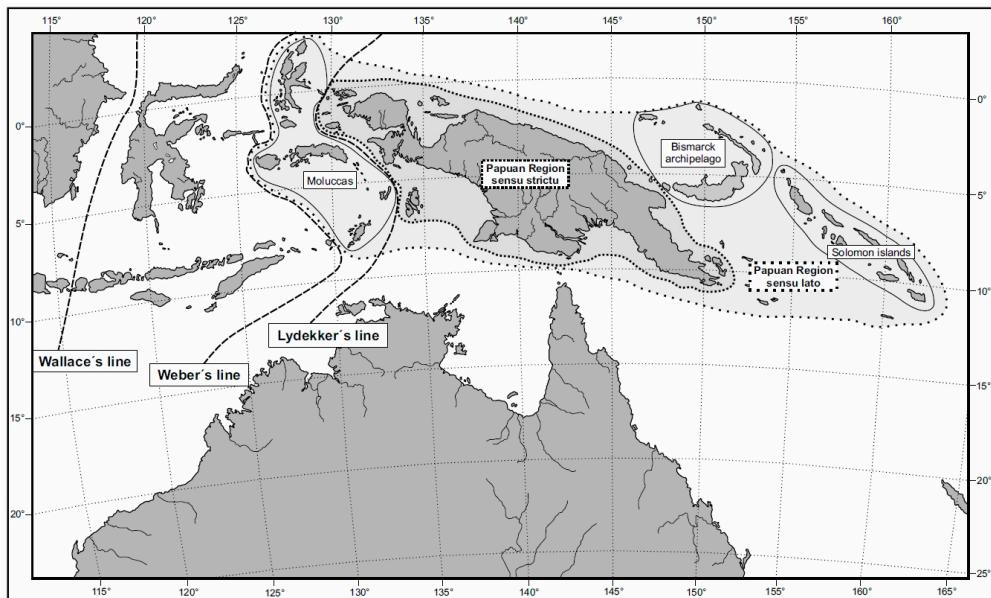

Material and methods

In total, 40 species were identified from over 200 specimens. Numerous species herewith recorded for the first time for the Papuan region, Indonesian part of New Guinea Island, Raja Ampat Islands, Transfly lowlands and the Moluccas.

Higher classification is based on Mazur (2011). Most specimens of *Eulomalus* COOMAN, 1937, *Eurylister* BICKHARDT, 1920, *Liopygus* LEWIS, 1981, *Platylomalus* COOMAN, 1948, *Paromalus* ERICHSON, 1834, and *Parepierus* BICKHARDT, 1913 were identified to genus level only. These incompletely identified taxa are not considered in the present paper.

Ecologically, most species listed below are subcorticol predators of soft-bodied invertebrates and were sampled under bark of fallen tree trunks.

All our sampling localities, with exception of New Ireland Island and Transfly

Map 1. Study area (the Papuan biogeographical region) is shaded dark grey. Main geographical and biogeographical objects are named (from Telnov 2011).

lowlands, are from western and central parts of the Papuan region - the Moluccas and West New Guinea (Map 2).

Specimens were studied using a Leica S6D stereomicroscope; images were captured with a Canon EOS 450D SLR camera attached to the microscope, and CombineZP software was used for image stacking. All label data are given as in originals.

The following acronyms and abbreviations are used:

Acronyms for collections:

ASC – Collection André Skale, Hof / Saale, Germany;

AWC – Collection Andreas Weigel, Wernburg, Germany;

DTG – Collection Dmitry Telnov, Dzidriņas (Rīga), Latvia;

NME – Collection Naturkundemuseum Erfurt, Germany.

Other common abbreviations from labels:

E – East, env. – environs, ex. / exx – specimen(s), Is. – island, KL – beaten (from German: klopfen), Mts. – mountains, S – South, UWP – primary rainforest (from German: Urwald primär), UWS – secondary rainforest (from German: Urwald sekundär), vill. – village or little settlement. Some of the abbreviations employed may be not standard English language abbreviations.

ASC]; INDONESIA E, West Papua, Tamarau mts, Fef vill. ~6 km E, $00^{\circ}49'24"S$, $132^{\circ}29'48"E$, 450-500 m, 12.II.2012, primary lowland rainforest on limestone, under rotten & wet bark of large fallen trunk, leg. D.Telnov [2 exx DTC].

Notes: First record from Tamarau Mts. of New Guinea.

Saprinus cyaneus cyaneus (FABRICIUS, 1775)

Material: INDONESIA E, S New Guinea, Merauke 24,5 km N, Salore vill env., Kumbe left riverbank, $8^{\circ}16'40"S$, $140^{\circ}23'11"E$, 17.IX.2015, 10 m, secondary lowland riverine rainforest, on freshly dead *Morelia amethystina*, leg. D.Telnov [3 exx DTC].

Notes: First record from Indonesian part of Transfly Lowlands.

Teretrius (Neotepetrius) novaeguineae (BICKHARDT, 1918)

Material: INDONESIA W-PAPUA, ca. 130km SE Kaimana, Omba (=Yamor) river, 10-20km from coast, $S4^{\circ}05'49"E134^{\circ}54'09"$, 10-20m, 09.-11.II.2011 leg. A. Weigel (008) [1 ex. AWC].

Notes: First record from Bird's Neck isthmus of New Guinea.

Acknowledgements

We thank our colleagues Dr. Piet Kanaar (Oegstgeest, The Netherlands) and Dr. Ludwig Erbeling (Plattenberg, Germany) for identification of certain specimens. Dr. Michael Balke (Zoologische Staatssammlung München, Germany) and Dr. Mārtiņš Kalniņš

(the Entomological Society of Latvia, Sigulda, Latvia) are thanked for sharing some of his collected specimens with us. We are grateful to our colleague Amoret Spooner (Oxford University Museum of Natural History, U.K.) for the English proof.

Map 2. Schematic map of sampling localities in the Papuan region. Each black dot represent one or several closely located sampling spots (for sampling locations see geographic coordinates in species list). Consider prevalence of sampling localities in the western part of the region. Map is prepared with ArcGIS 9.0.
