

2018  
**Perennials  
& Grasses**  
byliny i trawy

The Perennial market is constantly developing and extending. Customers in many countries appreciate their ornamental value and growers learn more and more about how to achieve perfect quality products.

Its huge diversity makes this group really comprehensive. An abundance of flowers and a long flowering period makes them often comparable to bedding plants and annuals. But at the same time they carry the promise to repeat their beautiful performance in following years.

In the Vitroflora Trials we are testing every year hundreds of new selections and varieties which come to us from many regions all over the world. Our goals are to choose for our customers only the best varieties with big potential and excellent performance both in retail as in production.

Our new catalogue is dedicated to all our customers in Europe. Some specific features of the varieties, like hardiness, can vary in different countries. To minimize this problem we decided to create a new group of plants named as Tender Perennials which have already appeared in our catalogue last year. The group includes for example plants with shorter life cycle or with annual habit in Central and Eastern Europe. The best example is Rudbeckia with the two groups Sunbeckia and SmileyZ. Those two groups provide a tremendous range of colours and excellent performance from spring till the first frost.

As we wish to simplify things for you, we have categorized other groups of plants in the concept Colours of Nature. Take your time to check our Top Hits to find out about our best varieties.

We welcome you to visit our website [www.vitroflora.com](http://www.vitroflora.com), which complements our catalogue. There you will find more pictures and further information. Through our website you can also check our availability and place your order online. Please do not hesitate to contact our team or your sales representative if you have any questions or need further information.

Enjoy our new catalogue. We hope that you will find the variety you are looking for.

With horticultural greetings, Vitroflora Team.

Der Staudenmarkt entwickelt und erweitert sich fortwährend. Kunden in vielen verschiedenen Ländern schätzen zunehmend den dekorativen Wert der Stauden und die Produzenten lernen, wie perfekte Qualitätsprodukte erlangt werden können.

Die große Vielfalt der Sorten macht die Gruppe der Stauden sehr umfangreich. Durch das Reichtum verschiedener blühender Sorten und die lange Blütezeit lassen sich die Stauden oft mit Beet- und Balkon-, und auch einjährigen Pflanzen vergleichen. Gleichzeitig tragen sie das Versprechen, ihre Pracht in den folgenden Jahren erneut zu präsentieren.

Bei Vitroflora werden pro Jahr Hunderte von neuen Selektionen und Sorten getestet, die aus verschiedenen Regionen der Welt stammen. Unser Ziel ist es für unsere Kunden nur die besten Sorten zu wählen, die großes Potenzial und exzellente Ergebnisse sowohl im Einzelhandel als auch in der Produktion gewährleisten.

Unser neuer Katalog ist allen unseren Kunden in Europa gewidmet. Einige standortspezifische Merkmale der Sorten, wie z.B. Winterhärte, können in verschiedenen Ländern variieren. Um dieses Problem so gering wie möglich zu halten, haben wir uns entschlossen, eine neue Gruppe von Pflanzen zu schaffen, die als Tender Stauden bezeichnet werden. Diese Gruppe haben wir bereits im Katalog 2017 vorgestellt. Es handelt sich hierbei um Sorten, die kürzeren Lebenszyklus oder einjährigem Charakter in Mittel- und Osteuropa aufweisen. Das beste Beispiel ist Rudbeckia in zwei Gruppen: Sunbeckia und SmileyZ. Diese beiden Gruppen bieten eine enorme Farbpalette und eine hervorragende Performance vom Frühjahr bis zum ersten Frost.

Damit Sie leichter die Übersicht behalten, haben wir auch andere Pflanzen in Gruppen unter dem Namen Colours of Nature zusammengefasst. Nehmen Sie sich Zeit für unsere Top Hits und informieren Sie sich über unsere besten Sorten.

Als Ergänzung zu unserem Katalog heißen wir Sie auch herzlich willkommen auf unserer Website [www.vitroflora.pl](http://www.vitroflora.pl). Sie finden dort Bilder und weitere Informationen zu unseren Produkten. Sie haben die Möglichkeit unsere aktuellen Verfügbarkeiten zu prüfen und Ihre Bestellungen online zu buchen.

Wenn Sie Fragen haben oder weitere Informationen benötigen stehen das Vitroflora Team und Ihr Gebietsvertreter im Außendienst gern zu Ihrer Verfügung.

Genießen Sie unseren neuen Katalog und schöpfen aus der Vielfalt unseres Angebots.

Mit Grüßen, Ihr Vitroflora-Team.

Интерес к многолетним растениям постоянно растёт. Клиенты в Европе и не только распознали плюсы этой декоративной группы растений, а производители получают всё лучше и качественней материал.

Многолетники - это растения, которые уже много лет равняются с клумбовыми растениями своей зеленью, интенсивным цветением и его длительностью. Одновременно обеспечивают тот самый декоративный эффект на протяжении нескольких лет.

В Витрофлоре каждый год мы тестируем сотни новых клонов и разновидностей растений с разных уголков мира. Наблюдаем, сравниваем и выбираем самые интересные сорта, наиболее потенциальные и наименее сложные в выращивании.

Хотим обратить внимание что этот каталог создан для клиентов со всей Европы, поэтому некоторые сорта могут вызывать сомнения по поводу зимостойкости, например у клиентов из Литвы или Польши. В предыдущем каталоге уже появилась специальная группа многолетников под названием Tender Perennials. Она охватывает растения с меньшей жизнеспособностью или же тех, которые являются однолетниками для климата средне-восточной Европы. Решительной причиной почему их засчитали в каталог есть декоративные качества.

Самым лучшим примером является рудбекия. Предлагаем две группы с разных питомников Sunbeckia i Smilyz. Попробуете раз и всегда будете возвращаться к этим растениям. Интенсивность цветения и выдержка низких температур обеспечивает декоративный эффект к началу зимы.

Чтобы упростить работу с ассортиментом, предлагаем пользоваться нашей подборкой. Наиболее продающиеся виды отмечены Top Hit. Отдельно выбраны известные сорта в предложении New Vitroflora, а также те, которые на рынке впервые как New. Оставляем также известные группы Spring, Summer i Autumn Colours под совместным названием Colours of Nature.

В качестве специальной маркетинг помощи предлагаем возможность заказа разноцветных этикеток и фото для использования вместе со своими рекламными материалами.

Функциональным дополнением к каталогу есть веб страница [www.vitroflora.pl](http://www.vitroflora.pl), которая дает возможность сортировки соответственно индивидуальных критериев, а также онлайн заказа. Сотрудники Витрофлоры в офисе, региональные представители и дистрибьюторы в Европе всегда готовы помочь и проконсультировать.

Приглашаем к ознакомлению с каталогом и надеемся на плодотворное взаимосоотрудничество.

С наилучшими пожеланиями,

Vitroflora

Zainteresowanie rynku ogrodniczego roślinami wieloletnimi nieustannie wzrasta. Konsumenty w Europie i nie tylko poznali i docenili zalety tej grupy roślin ozdobnych, a producenci coraz lepiej radzą sobie z uprawą i przygotowaniem dobrego jakościowo materiału.

Byliny - wieloletnie rośliny zielone coraz częściej dorównują dekoracyjnością, obfitością i długotrwałością kwitnienia letnim jednorocznym roślinom rabatowym. Jednocześnie wnoszą ze sobą obietnicę powtórzenia tego dekoracyjnego efektu w kolejnych latach.

W Vitroflorze co roku testujemy setki nowych клонов i odmian pochodzących z różnych rejonów świata. Obserwujemy, porównujemy i dobieramy do oferty te najciekawsze, z największym potencjałem rynkowym i o stosunkowo bezproblemowej uprawie.

Pragniemy zaznaczyć, że niniejszy katalog dedykowany jest dla Klientów z całej Europy, stąd niektóre odmiany mogą budzić wątpliwości co do określonej zimotrwałości np. klientów na Litwie czy w Polsce. Już w poprzednim katalogu pojawia się zatem specjalna grupa bylin pod nazwą Tender Perennials. Obejmuje ona byliny o krótszej żywotności, lub wręcz w klimacie środkowej i wschodniej Europy jednorocznych. O ich włączeniu do katalogu bylin zdecydowały jednak ogólne charakter oraz ich walory ozdobne.

Najbardziej spektakularnym przykładem takich roślin są rudbekie. Proponujemy Państwu dwie grupy od różnych hodowców Sunbeckia i Smilyz. Kto raz spróbuje ich uprawy już zawsze będzie po nie wracał. Obfitość kwitnienia i odporność na niskie temperatury zapewniają efekt dekoracyjny do zimy.

Aby ułatwić Państwu poruszanie się po tak szerokim asortymencie, zachęcamy do korzystania z proponowanej przez nas selekcji. Najlepiej sprzedające się odmiany zaznaczyliśmy jako Top Hit. Osobno wyróżniono odmiany już znane, które włączyliśmy do oferty - New Vitroflora, oraz te które w katalogu Vitroflory mają swoją rynkową premierę - New. Zachowujemy również znane Państwu grupowania odmian: Spring, Summer i Autumn Colours, pod marką o wspólnej nazwie Colours of Nature.

Jako specjalną pomoc i wsparcie sprzedaży oferujemy możliwość zamówienia kolorowych etykiet do odmian, oraz wysokiej jakości zdjęć do wykorzystania we własnych materiałach reklamowych. Gorąco zachęcamy do korzystania z tych narzędzi!

Funkcjonalnym uzupełnieniem katalogu jest strona internetowa [www.vitroflora.pl](http://www.vitroflora.pl). Zawiera ona wiele dodatkowych informacji oraz zdjęć. Daje możliwość sortowania i grupowania odmian według indywidualnych kryteriów oraz kompletowania zamówienia sadzonek w czasie rzeczywistym on-line.

Cały czas do Państwa dyspozycji pozostają nasi sprzedawcy w biurze Vitroflory w Trzemeszynie, przedstawiciele regionalni, oraz dystrybutorzy na terenie całej Europy.

Zachęcamy zatem do lektury katalogu. Mamy nadzieję, że zaowocuje ona poszerzeniem Państwa asortymentu o nowe atrakcyjne odmiany!

Z ogrodniczymi pozdrowieniami,

Zespół Vitroflory.

## Colours of Nature

Colours of Nature to marka pod którą Vitroflora oferuje byliny, trawy i paprocie w bardzo szerokiej ofercie produktowej. Te grupy roślin, jak żadne inne zasługują na to wyróżnienie. Całe piękno przyrody znajduje swój obraz w tych roślinach, które barwą liści, bogactwem kwiatów oraz różnymi terminami kwitnienia ożywiają ogród przez niemalże cały rok. Dla ogrodników producentów oznacza to również całoroczne możliwości uprawy i sprzedaży. W celu ułatwienia poruszania się po tej obfitości i różnorodności odmian zaproponowaliśmy podział na grupy, którym jednocześnie przypisano własne nazwy - marki. W zamyśle twórców oferty było ułatwienie wyboru odmian producentom i pomoc w sprzedaży całych grup roślin zgromadzonych pod wspólnym logo, dla którego planujemy tworzenie materiałów promocyjnych dla rynku konsumenckiego.

## Colours of Nature

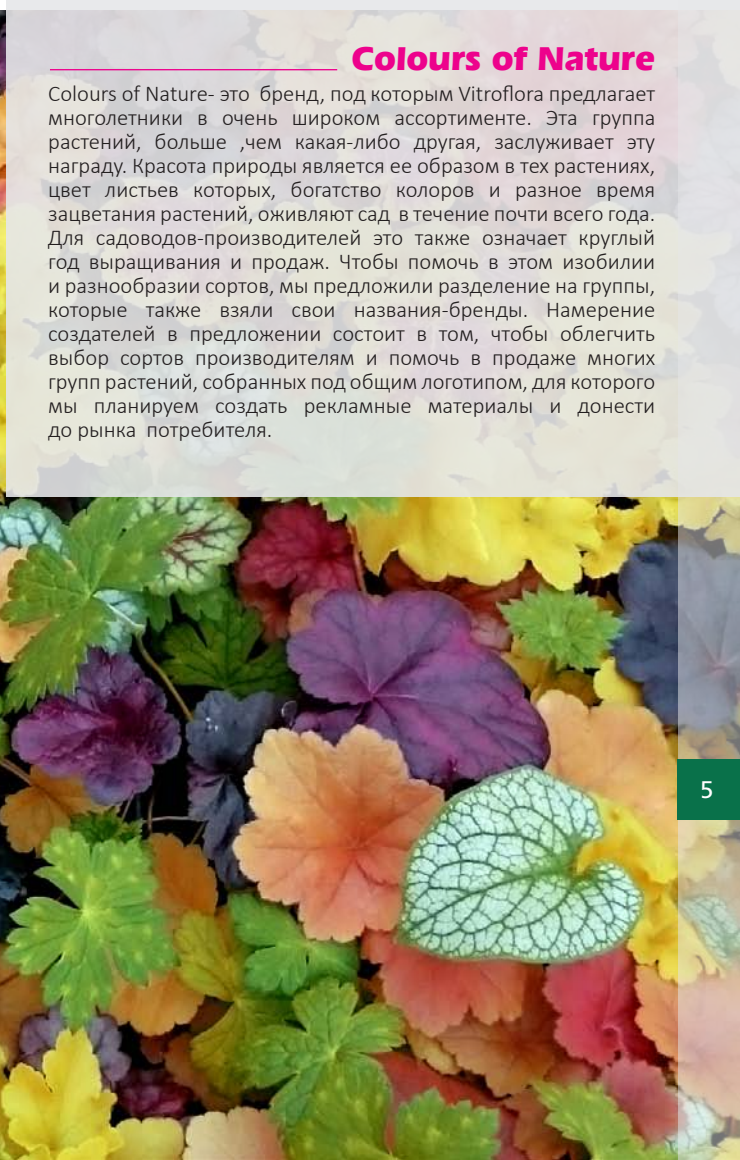

All perennials offered by Vitroflora will be sold under a common brand named 'Colours of Nature'. This group of plants deserves this distinction like no other. The whole beauty of nature is presented by these plants which, thanks to their leaves' colours, wealth of flowers and different flowering time, give life to your garden for almost whole year. For gardeners-producers it gives also a possibility to crop and sell them all over the year. To help you find the path through the abundance and diversity of varieties we divided them into groups with their own unique brand names. The idea of the offer creators was to make the choice easier for the producers and to help in sales of whole groups of plants marked with common logo, for which we are planning to prepare marketing materials for customers' market.

## Colours of Nature

Colours of Nature ist ein Markenname, unter dem Vitroflora ein breit gefächertes Produktangebot an Stauden, Gräsern und Farnen anbietet. Diese Pflanzengruppen verdienen solch eine Auszeichnung wie keine anderen. Die ganze Schönheit der Natur wird in diesen Pflanzen vereint, die durch ihre Laubfärbung, Blütenvielfalt und unterschiedliche Blühphasen den Garten das ganze Jahr über schmücken werden. Für Gärtner stellt das ebenfalls die Möglichkeit dar, das ganze Jahr über zu kultivieren und zu verkaufen. Um das breitgefächerte Angebot übersichtlicher zu machen, schlagen wir die Aufteilung in Gruppen vor, denen wir Eigennamen zugeschrieben haben. Die Idee ist, den Produzenten die Sortenwahl zu vereinfachen und den Verkauf ganzer Pflanzengruppen unter einem Logo zu fördern, für welches die Vorbereitung von Marketingmaterial für den Kundenmarkt geplant ist.

## Colours of Nature

Colours of Nature- это бренд, под которым Vitroflora предлагает многолетники в очень широком ассортименте. Эта группа растений, больше, чем какая-либо другая, заслуживает эту награду. Красота природы является ее образом в тех растениях, цвет листьев которых, богатство цветов и разное время зацветания растений, оживляют сад в течение почти всего года. Для садоводов-производителей это также означает круглый год выращивания и продаж. Чтобы помочь в этом изобилии и разнообразии сортов, мы предложили разделение на группы, которые также взяли свои названия-бренды. Намерение создателей в предложении состоит в том, чтобы облегчить выбор сортов производителям и помочь в продаже многих групп растений, собранных под общим логотипом, для которого мы планируем создать рекламные материалы и донести до рынка потребителя.

## Spring Colours

Early spring is a very good time for selling perennials, especially those blooming and with new shoots. Customers weary with the winter are looking for anything bringing life and freshness. Winter is not a time of optimal growth, so we recommend planting these items already in autumn (weeks 32 – 36) or alternatively encouraging the growth and blooming in cold greenhouses/tunnels. We encourage you to try Heuchera for its beautiful, colourful spring leaves and Tiarella for its abundant flowering. The effort will certainly pay off!

## Frühlingsfarben

Die Monate Februar bis Anfang April sind eine sehr gute Zeit für den Verkauf von blühenden Stauden. Im Winter findet kein ausgeprägtes Wachstum statt, aus diesem Grund empfehlen wir, die Sorten aus dieser Gruppe bereits im Herbst zu pflanzen (Woche 32 bis 36) oder eventuell die Blüte und das Wachstum im kalten Gewächshaus zu fördern. Wir empfehlen Heuchera mit wunderschönen farbigen jungen Trieben im Frühjahr und Tiarella mit üppiger Blüte. Die Mühe wird sich lohnen!

## Весенние цвета

Ранняя весна очень хорошее время для продажи многолетников, особенно цветущих и с новыми побегами. Мы понимаем, что Вы устали от зимы и ищите что-нибудь, несущее жизнь и свежесть. Зима не время оптимального роста, поэтому мы рекомендуем посадку этих позиций уже осенью (32-36 неделя) или, как альтернатива, путем стимулирования роста и цветения в холодных теплицах-туннелях. Мы рекомендуем Вам Heuchera со своими красивыми, красочными, весенними листьями и Tiarella с ее обильным цветением! Усилия, конечно, окупятся!

## Kolory wiosny

Wczesna wiosna to bardzo dobra pora sprzedaży bylin, szczególnie kwitnących i z młodymi przyrostami. Znużeni zimą klienci szukają wszystkiego co wnosi życie i świeżość. Zima nie jest czasem optymalnego wzrostu, dlatego rośliny z tej grupy polecamy sadzić już jesienią (tygodnie 32 do 36) ewentualnie przyspieszać kwitnienie i wzrost w zimnych obiektach. Polecamy by spróbować żurawek (Heuchera) dla pięknych barwnych wiosennych przyrostów i tiarelli (Tiarella) ze względu na obfite kwitnienie. Trud z pewnością się opłaci!

TIARELLA VERONICA

## Kolory lata

Odmiany w tej grupie to nasza propozycja doboru gatunków i odmian, które wartość handlową i związaną z tym pełnię kwitnienia osiągają od końca maja do początku lipca. Stanowią naturalne przedłużenie sezonu po sprzedawanej wcześniej „rabatówce”. Ze względu na porę roku optymalną do produkcji wydaje się doniczka minimum 2l choć niektóre mniejsze rośliny z powodzeniem można uprawiać w doniczkach 1l (więcej na naszej stronie internetowej [www.vitroflora.pl](http://www.vitroflora.pl)). Ze względu na szybki wzrost i obfite kwitnienie wiele z nich wymaga bardzo dobrego nawożenia i regularnego podlewania. Niektóre najlepiej kwitną po okresie jaryzacji (*Campanula glomerata*). W większości należą do grupy bylin kwitnących kupowanych pod wpływem impulsu.

## Summer Colours

Varieties presented in this group gain their commercial value due to the natural flowering period - from the end of May till the beginning of July. They are a natural continuation of the 'bedding season'. 2l pot seems to be the optimum size for the production, although some smaller plants can be freely grown in 1l pots (more on our website [www.vitroflora.com](http://www.vitroflora.com)). Because of quick growth and abundant flowering many of them need really good fertilization and regular watering. Some bloom better after vernalization (*Campanula glomerata*). Most of them are plants with a 'wow' effect (Impulse "That's nice, let's buy!").

## Sommerfarben

Die Sorten, die wir in dieser Gruppe präsentieren, entfalten ihre volle Blütenkraft und somit den größten Verkaufswert im Zeitraum ab Ende Mai bis Anfang Juli. Sie stellen eine Verlängerung der Beet- und Balkonpflanzensaison dar. In Anbetracht der Jahreszeit erscheint die Produktion im 2-Litertopf optimal, allerdings können kleinere Pflanzen mit Erfolg auch im 1-Litertopf kultiviert werden (mehr Details finden Sie auf unserer Webseite [www.vitroflora.com](http://www.vitroflora.com)). Durch schnelles Wachstum und üppige Blüte erfordern diese Sorten reichhaltiges Düngen und regelmäßiges Gießen. Bei einigen Sorten, wie z.B. *Campanula glomerata*, wird die Blüte am besten durch Vernalisation gefördert.

## Летние цвета

Сорта, представленные в этой группе, получают их коммерческую ценность с конца мая до начала июля, в разгар периода цветения растений. Они являются естественным продолжением «клумбовых принадлежностей сезона». 2л. горшок, кажется, оптимальный размер для продукции, хотя некоторые небольшие растения можно свободно выращивать в 1л. горшках. Больше информации читайте на нашем сайте [www.vitroflora.com.pl](http://www.vitroflora.com.pl). Из-за быстрого роста и обильного цветения многие из них нуждаются в действительно хорошей подкормке и регулярном поливе. Некоторые цветут лучше после яровизации (*Campanula glomerata*). Большинство из них - это растения «вау» эффекта («как красиво, давайте купим!»).

## Autumn Colours

Autumn is the most colourful of the four seasons. Have you ever thought this way? It is worth trying to join this natural stream and promote any vivid perennial plantings which, thanks to their hardiness to ground frost and even frost, decorate our surroundings often until spring and for sure until Christmas. Obligatory within this assortment are Heuchera, Sedum and grasses but you should not forget also about Ajuga and Brunnera. Please, read the below list carefully!

## Herbstfarben

Der Herbst ist die bunte Jahreszeit. Es lohnt sich der Natur zu folgen und farbenfrohe Stauden anzubieten, die durch dekoratives Laub und natürliche Frostbeständigkeit die Umgebung mit Sicherheit bis zur Weihnachtszeit, manche auch bis ins Frühjahr, schmücken. Unumgänglich sind hier das Heucherasortiment, Gräser - und Sedumsorten, aber auch die Ajuga und Brunnerasorten sollten hier nicht vergessen werden. Es gibt auch weitere interessante Pflanzen, die im Folgenden präsentiert werden.

## Осенние цвета

Осень-самая красочная пора из четырех времен года. Рекомендуем присоединиться к этому естественному потоку и рекламируем многолетние растения, которые, благодаря их выносливости к заморозкам и, даже к морозу, украсят все вокруг, зачастую, до весны, и, наверняка, до Рождества. Обязательно ассортимент включает Heuchera, Sedum и травы, но Вы не должны забывать и о Ajuga и Brunnera. Пожалуйста, прочтите тщательно список, напечатанный ниже!

## Kolory jesieni

Jesień to najbardziej kolorowa pora roku. Czy kiedyś tak Państwo myśleli? Warto się włączyć w ten nurt natury i promować wszelkie kolorowe nasadzenia bylinowe, które dzięki barwom liści i strukturze roślin oraz naturalnej odporności na przymrozki, a nawet mrozy, dekorują nasze otoczenie często do wiosny, a z pewnością do Bożego Narodzenia. Obowiązkowy asortyment to żurawki (*Heuchera*), trawy i rozchodniki (*Sedum*). Nie powinno się jednak zapominać o dąbrowkach (*Ajuga*) i brunerach. Są i inne ciekawe rośliny, warto przestudiować poniższą listę!

# Patio & Premium

## Rośliny ekskluzywne

Grupa obejmuje kilkanaście gatunków, zazwyczaj większych roślin, które udostępni Państwu w większych paletach przez cały sezon sprzedaży. Skróci to okres uprawy, a wartość jednostkowa tych roślin zrekompensuje wyższy koszt zakupu. Są to klasyczne rośliny, których wartość wraz z upływem czasu wzrasta!

## Patio & Premium plants

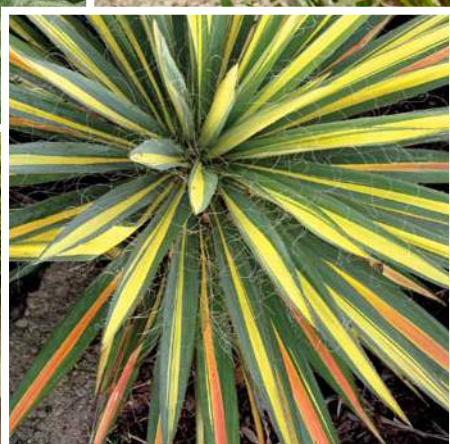

This group contains several, mostly bigger items, which will be available in bigger plugs during the whole sales season. It will shorten the growing time and the final value of the product will compensate against the higher cost of the young plant. These are classical plants which only increase their value with time.

## Terassen und Premium Pflanzen

In dieser Gruppe haben wir hauptsächlich größere Pflanzen zusammengefasst, die wir für Sie in größeren Platten von Woche 14-36 bereitstellen. Dies verkürzt die Kulturzeit, und der Verkaufswert kompensiert den höheren Einkaufspreis. Es sind klassische Pflanzen, deren Wert mit der Zeit zunimmt!

## Премиум растения

Эта группа содержит несколько, преимущественно крупных позиций, которые появятся в более крупных цилиндрах для проращивания на протяжении всего сезона продаж. Это позволит сократить время роста, компенсируя высокую конечную стоимость молодого растения. Это классические растения, которые только увеличивают свою ценность со временем.

## Landscape

Many of the perennials in our offer are very valuable varieties for use in parks, landscaping and even bigger gardens. Besides well known *Geranium macrorrhizum*, every year cleaned from pathogens in our vitro laboratory, you will find here more or less popular items but you can be sure of all of them. From *Heuchera* and *Tiarella* we chose only these varieties which survived for several years in extreme conditions, e.g. in full sun.

## Landschaft

Viele Stauden in unserem Angebot sind wertvolle Gattungen zur Anwendung auf öffentlichen Grünanlagen, Parkanlagen oder großen Gärten. Neben bekannten Artikeln wie *Geranium macrorrhizum*, bei der wir durch den sauberen und jährlich erneuten Aufbau aus Vitropflanzen Ausfälle der Fertigware vermeiden helfen, präsentieren wir viele andere mehr oder weniger bekannte, aber verlässliche Sorten für die Anwendung auf Grünanlagen. Es ist eine Auswahl an Sorten, die wir selbst auch auf extremen Standorten prüfen konnten.

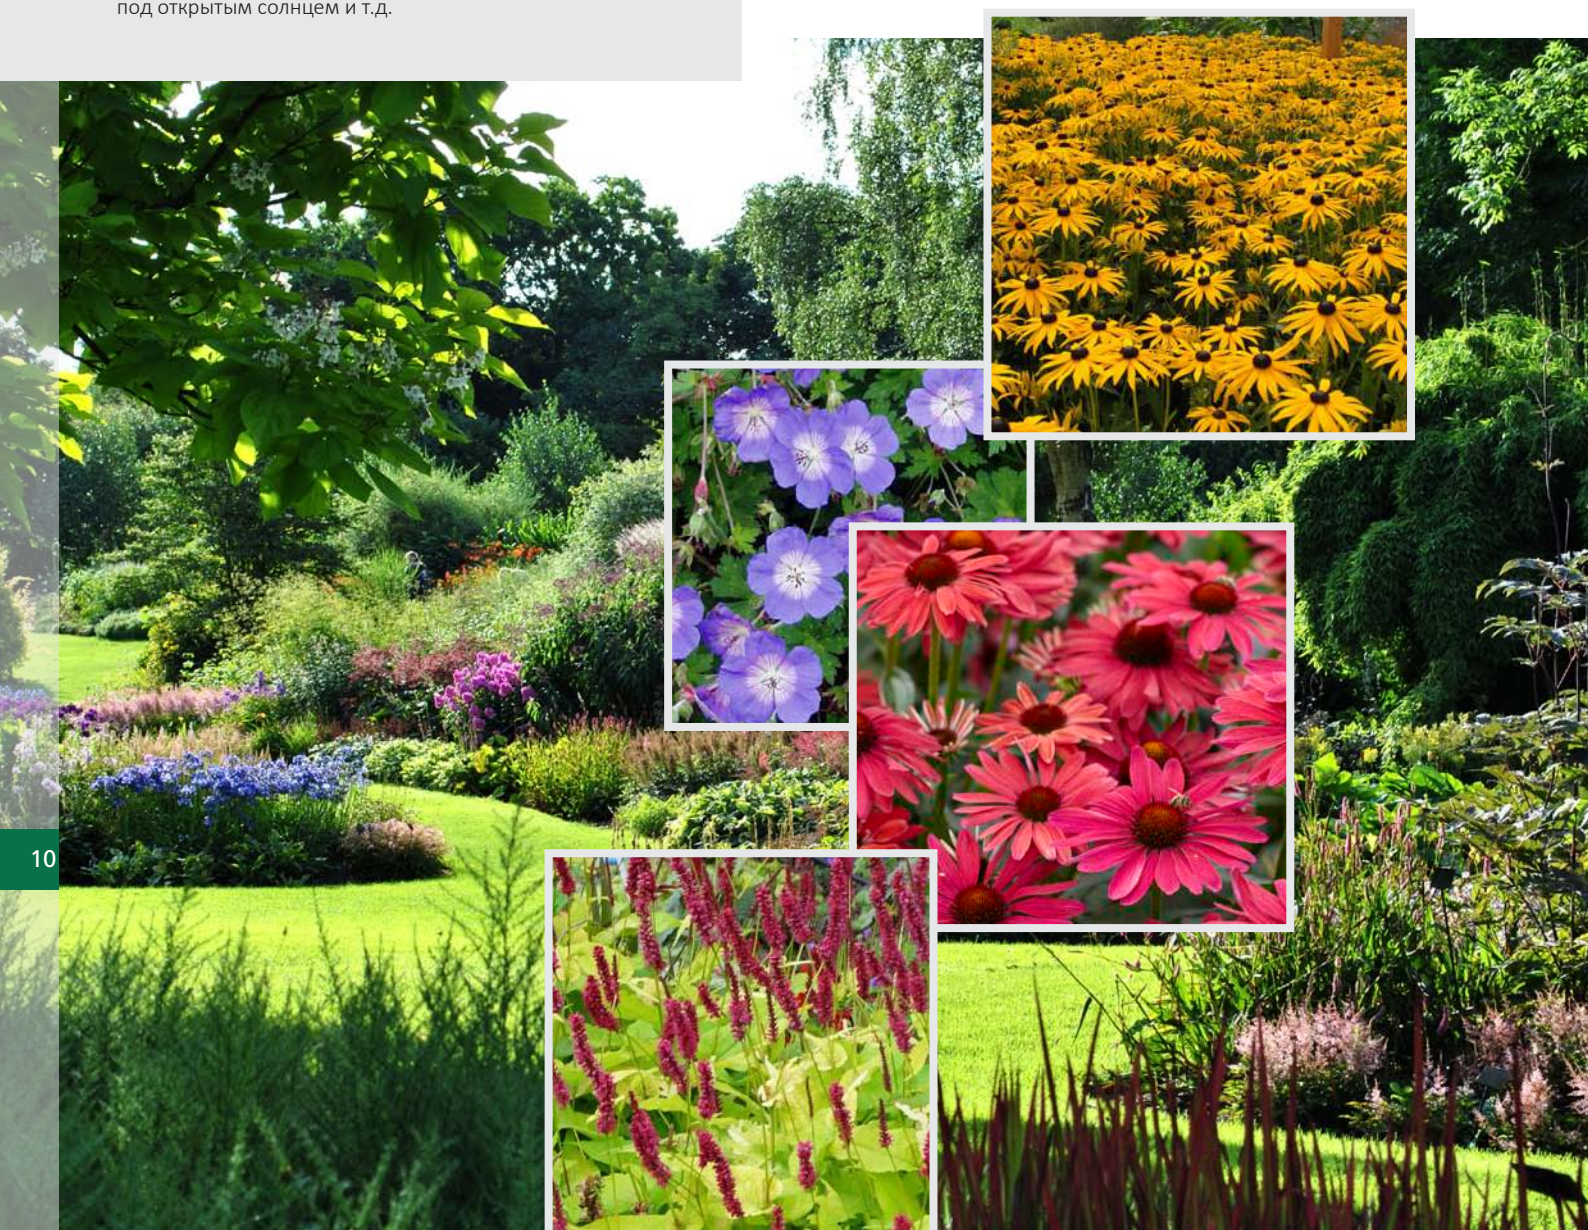

## Зеленые зоны и парки

Много многолетников в нашем предложении являются очень ценными разновидностями для использования в парках, для озеленения участков и в больших садах. Кроме того, хорошо известная герань (*Geranium macrorrhizum*), е каждый год очищают от патогенных микроорганизмов в лаборатории в пробирке. Вы найдете здесь более или менее популярные позиции, и можете быть уверены в них. От *Heuchera* и *Tiarella* мы выбрали только эти сорта, которые выжили на протяжении нескольких лет в экстремальных условиях, например, под открытым солнцем и т.д.

## Tereny zieleni i parki

Wiele bylin z naszej oferty to niezwykle cenne gatunki i odmiany do zastosowania w publicznych terenach zieleni, parkach i większych ogrodach. Poza znanymi mocnymi pozycjami jak bodziszkci korzeniaste (*Geranium macrorrhizum*) corocznie oczyszczane z patogenów w laboratorium In vitro, proponujemy Państwu wiele innych mniej lub bardziej znanych ale wszystkie o sprawdzonej przydatności w terenach zieleni. Żurawki (*Heuchera*) i Tiarelle dobraliśmy tylko takie, które w naszych nasadzeniach w okolicach Bydgoszczy i w Polsce sprawdziły się przez kilka kolejnych zim na ekstremalnych stanowiskach np. w pełnym słońcu. Zapraszamy do sprawdzenia tego osobiście.

# Mat Forming Habit

## Rośliny kobiercowe o pokroju pokładającym się

Aby ułatwić Państwu wybór oraz dostosowanie planów produkcyjnych do charakteru uprawianych roślin, zebraliśmy wszystkie niskie, okrywowe i kobiercowe w jedną grupę. Mają one różne zastosowania i pory sadzenia, ale warto pamiętać by nie sadzić ich pomiędzy innymi o silnym wzroście. Zaoszczędzi to Państwu problemów uprawowych. Nasze nasadzenia kolecyjne dostępne są w dni robocze od 7:00 do 15:00, w inne dni po wcześniejszym ustaleniu terminu wizyty.

## Mat forming habit

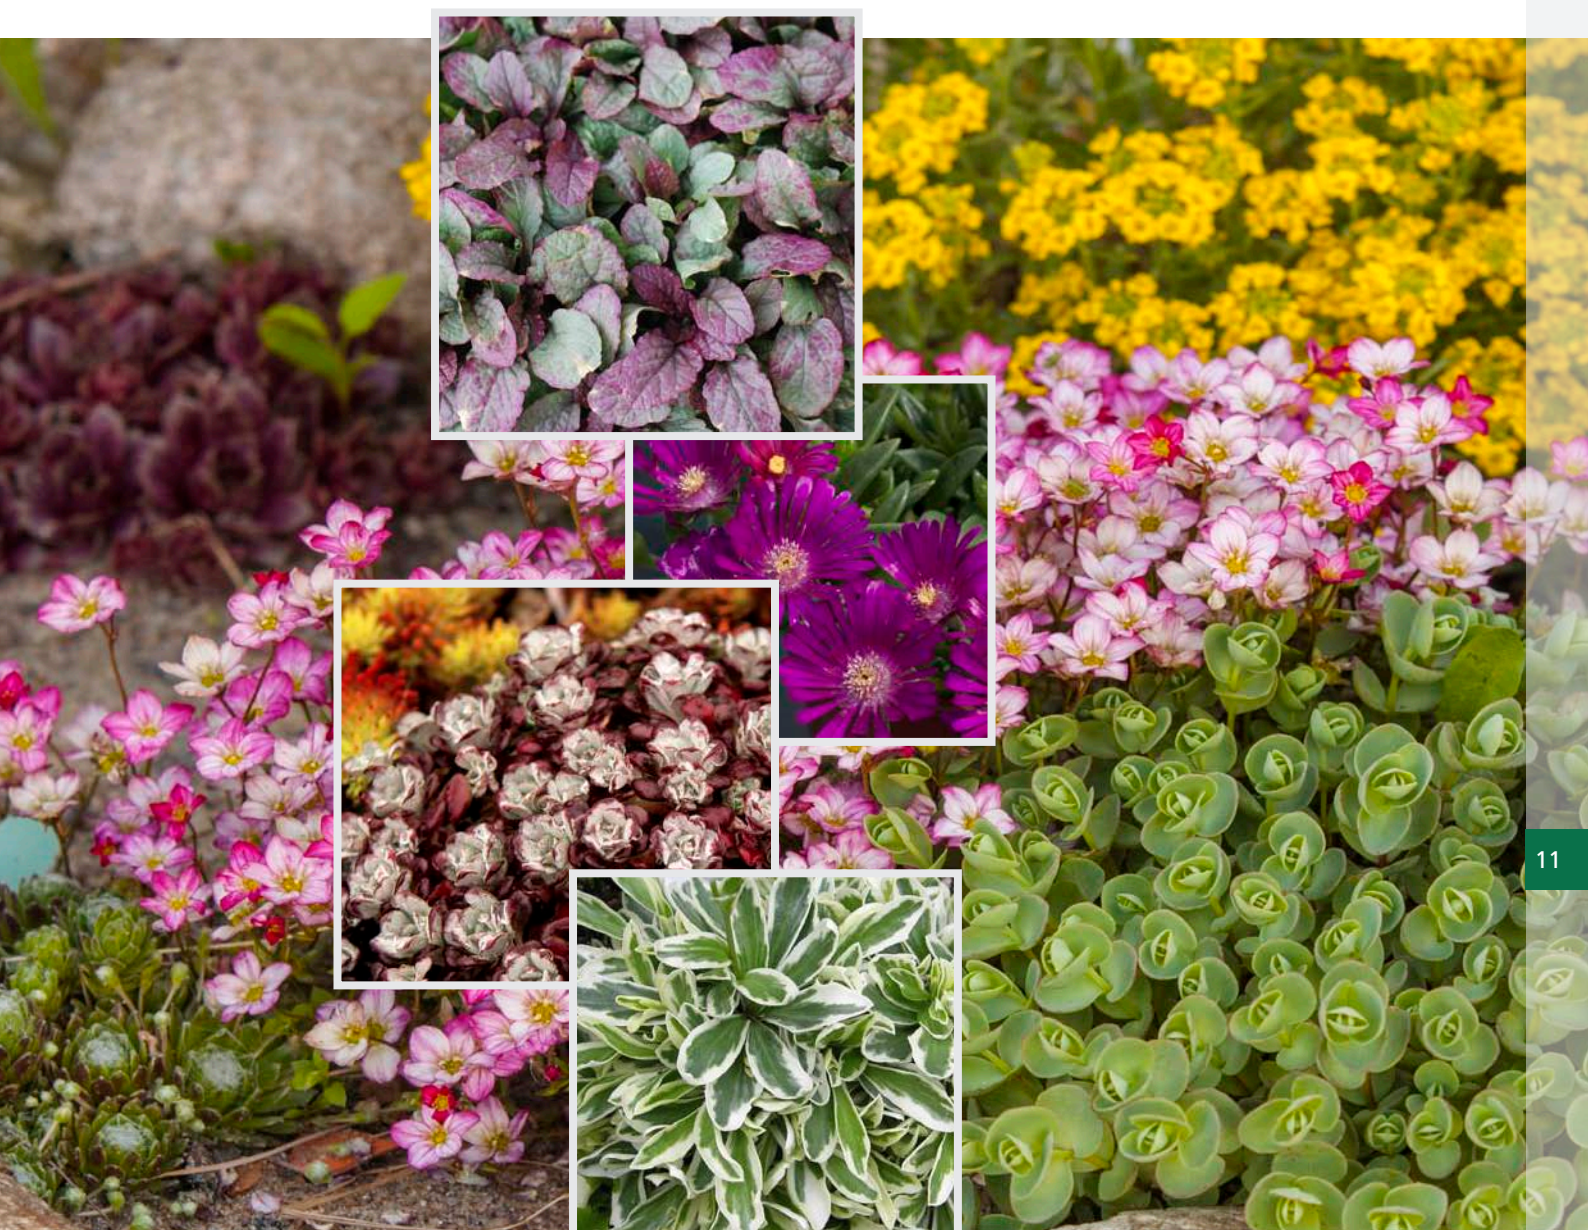

To help you make a choice we have put all short and ground covering plants into this group. They are of different use and potting time but you should avoid planting them next to others with strong growth. This rule will save you from cropping problems!

## Bodendecker

In dieser Gruppe möchten wir Ihnen unsere Bodendecker vorstellen. Die Pflanzen haben unterschiedliche Anwendungsmöglichkeiten und verschiedene Pflanztermine. Beachtet werden sollte, dass diese Bodendecker nicht zwischen anderen, stark wachsenden Sorten gepflanzt werden sollten.

## Покровные растения

Чтобы помочь Вам сделать выбор, мы помещаем все короткие и покровные растения в эту группу. У них разное применение и время высадки в горшки. Вы никогда не должны посадить их рядом с другими растениями с более сильным ростом! Это правило спасет Вас от проблем с обрезанием растений!

## Tender Perennials

Our perennial offer includes also some species and varieties which are not fully winter hardy in some conditions (e.g. in Poland). They could be though successfully used for seasonal decoration from spring till autumn and for containers which are kept frost-free during winter. Because of kinship with classical perennials and extraordinary decorative value they deserve your attention!

## Nicht winterharte Pflanzen zur einjährigen Kultur

Unser Angebot umfasst ebenfalls Gattungen und Sorten, die in unserer Klimazone, so z. B. in Polen, nicht ganz winterhart sind. Diese finden aber sehr gut Anwendung als einjährige, dekorative Pflanzen ab dem Frühjahr bis in den Herbst. Sie sind auch gut zur Topfproduktion geeignet, müssen allerdings vor Frost geschützt werden. Da sie mit den Stauden in naher Verwandtschaft stehen und sehr dekorativ sind, stellen sie eine wertvolle Ergänzung unseres Angebots dar.

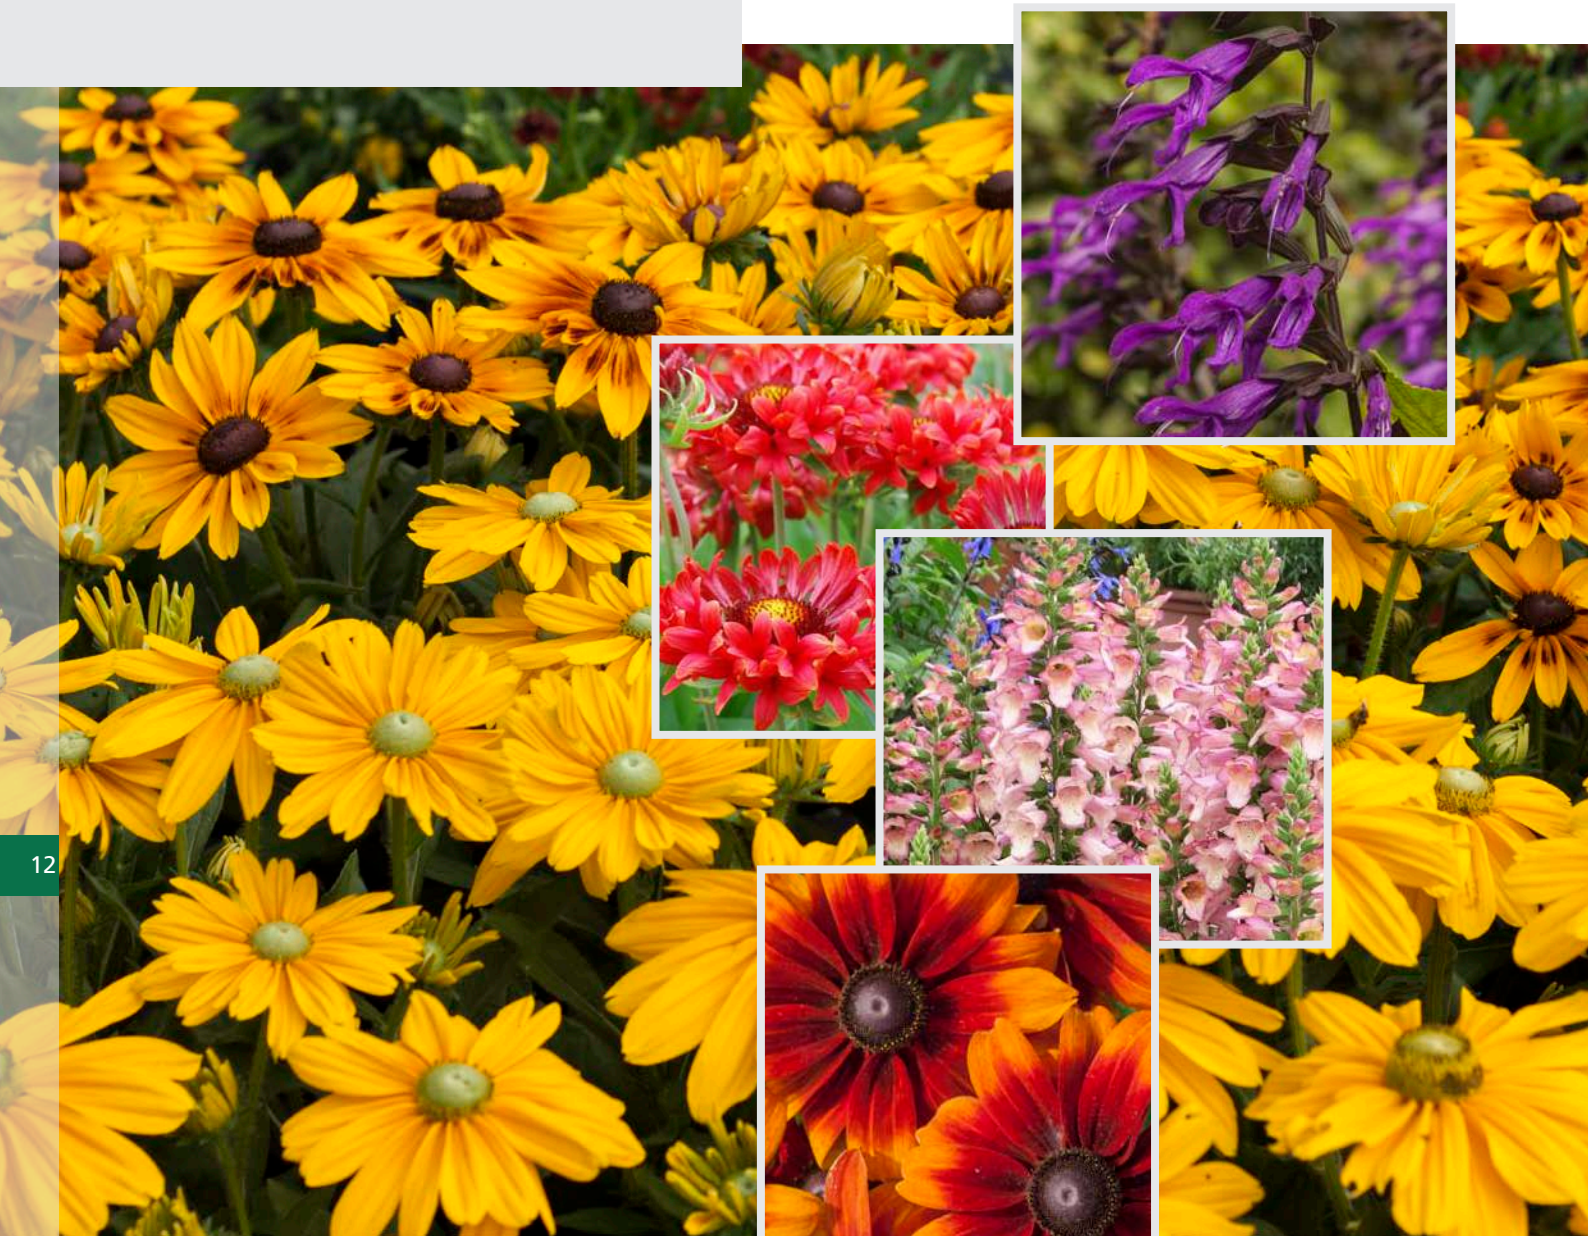

## Не холодостойкое

Наше предложение также включает в себя виды и сорта, которые в польских условиях не полностью холодостойкие. Тем не менее, они могут быть успешно использованы для сезонного украшения с весны до осени, а также как растения для контейнеров, защищенных от мороза зимой. Из-за сходства с классическими многолетниками и благодаря выдающимся декоративным свойствам, заслуживают внимания и выращивания.

# Tender Perennials

## Rośliny niezimotrwałe do uprawy sezonowej

Nasza oferta obejmuje również gatunki i odmiany, które w warunkach np. Polski nie są w pełni zimotrwałe. Mogą być jednak z powodzeniem wykorzystywane do sezonowej dekoracji od wiosny do jesieni oraz jako rośliny do pojemników, zimą zabezpieczanych przed mrozem. Ze względu na pokrewieństwo z klasycznymi bylinami oraz wybitne właściwości dekoracyjne zasługują na uwagę i uprawę.

# Top for Pot

## Top for Pot

Grupa obejmuje odmiany szczególnie przydatne i godne polecenia do uprawy i sprzedaży jako rośliny "akcyjne" w pojemnikach. Produkcja jest łatwa do zaplanowania, uzyskane rośliny doskonale się krzewią, szybko zapędniają doniczkę i dają produkt finalny efektowny już w momencie sprzedaży. Sugerowana wielkość doniczek to minimum 1,5 l pojemności, dla większości jednak optymalne są doniczki 2-3 l. Zebrane tu odmiany to autorska propozycja Vitroflory, mamy jednak świadomość, że dobrzy ogrodnicy ze wszystkich proponowanych przez nas roślin potrafią wyprodukować rewelacyjne rośliny!

## Top for Pot

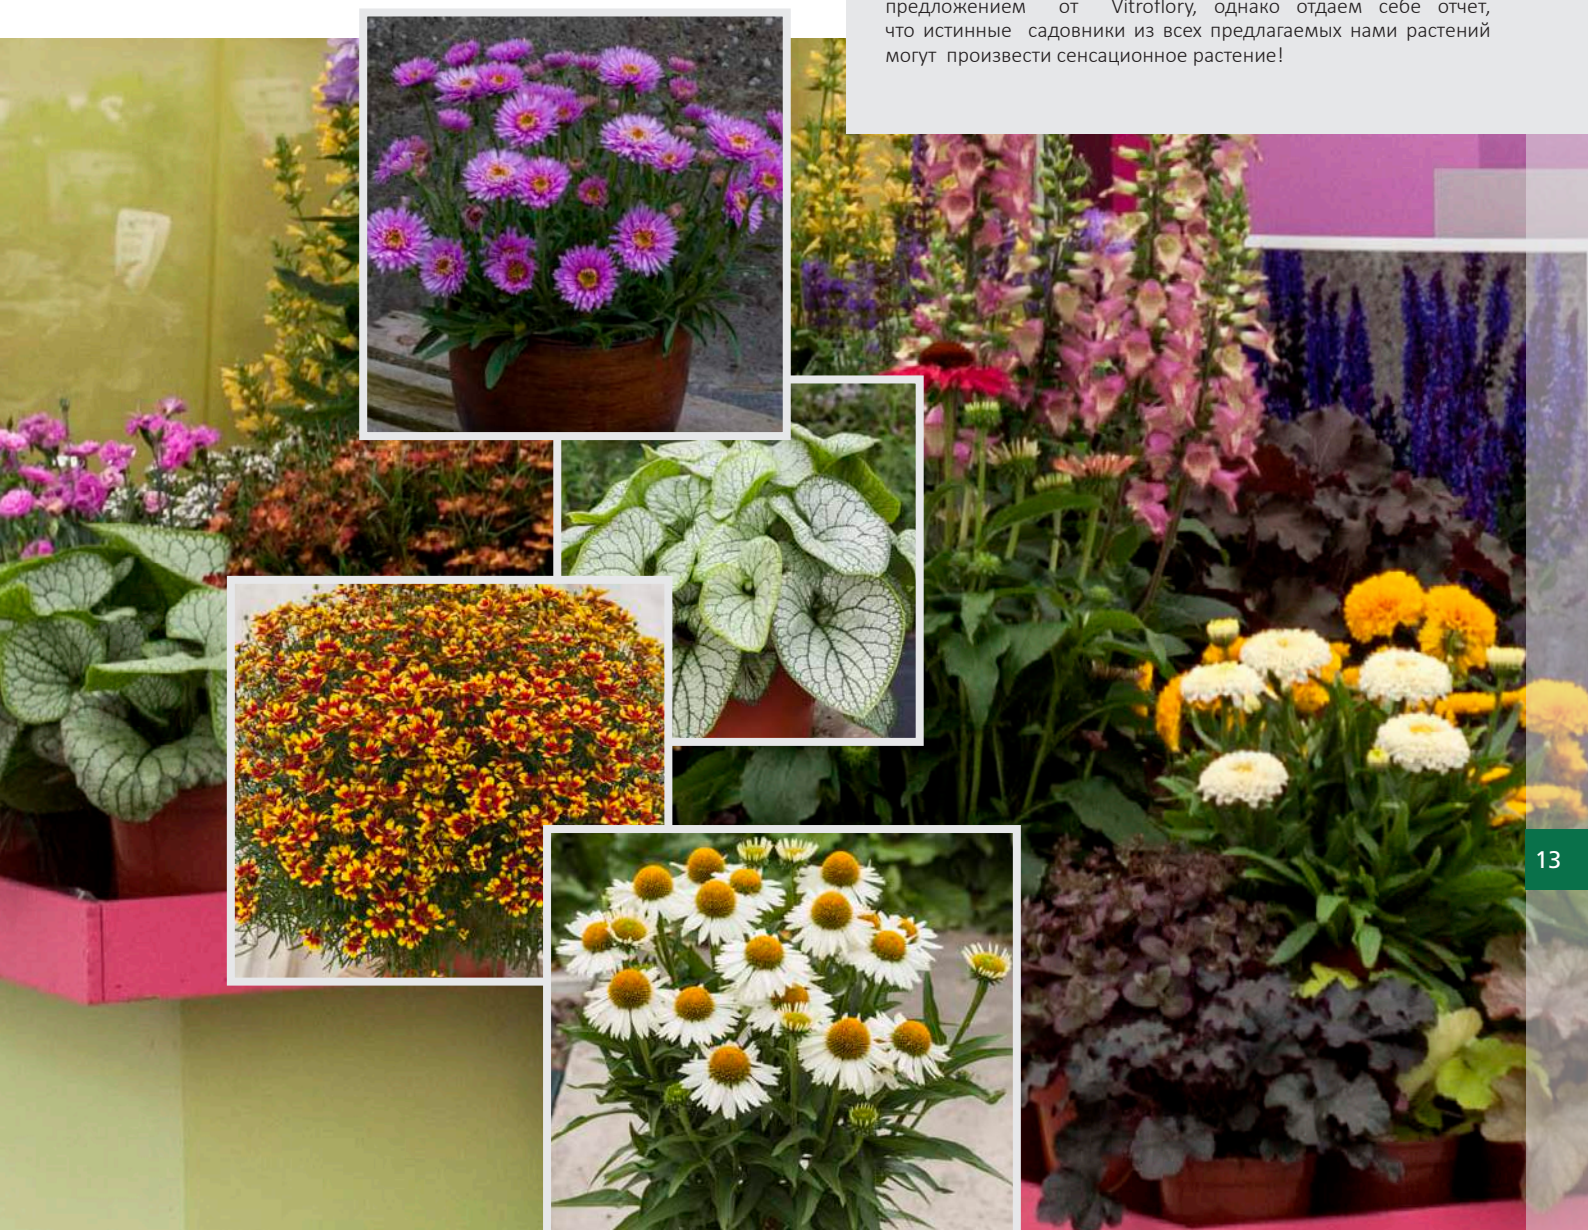

The group consists of varieties especially useful for pot production and sale in containers. The production is easy to plan, the plants are branching very well, they quickly fill the pot and give an impressive final product. Suggested pot size is at least 1,5 l but for most of these items 2-3 l pots would be more suitable. We picked the plants which, in our opinion, fit the best into this group but we are sure that good growers will be able to make a great product out of any variety from our offer.

## Top for Pot

In dieser Gruppe empfehlen wir Sorten, die besonders gut zum Verkauf im Topf geeignet sind. Die Kultur lässt sich einfach planen, die Pflanzen verzweigen sehr gut, befüllen den Topf sehr schnell. Sie erreichen ein eindrucksvolles Endprodukt bereits zum Zeitpunkt des Verkaufs. Für diese Sorten empfehlen wir mindestens den 1,5 L Topf, für die Meisten ist allerdings der 2-3 L Topf optimal. Die unter dieser Gruppe zusammengefassten Sorten sind eine individuelle Zusammenstellung von Vitroflora, wir sind aber überzeugt davon, dass gute Gärtner aus all unseren Jungpflanzen ein hervorragendes Endprodukt machen können!

## Top for Pot

В эту группу входят сорта, особенно полезные и достойные, рекомендованные для выращивания и продажи, как «акционные» растения в контейнерах. Производство легко планировать, полученные растения идеально разрастаются, быстро заполняют горшки и делают окончательный продукт привлекательным в момент продажи. Рекомендованный размер горшков составляет минимум 1,5 л, но оптимальными для роста являются 2-3 л. Собранные здесь разновидности являются авторским предложением от Vitroflory, однако отдаем себе отчет, что истинные садовники из всех предлагаемых нами растений могут произвести сенсационное растение!

## Ferns

Ferns of one genus – *Athyrium*, are coming back to the catalogue because of many requests from our clients. These are only selected varieties, multiplied in vitro, with lively colours, so much different from the standards offered by the market. Completely unique!

## Farne

Die Farngattung *Athyrium* haben wir auf zahlreiche Anfragen unserer Kunden erneut in das Angebot aufgenommen. Es sind ausschließlich ausgewählte Sorten aus der In Vitro Vermehrung mit frischer intensiver Färbung, die definitiv interessanter sind als die Standardsorten, die zur Zeit auf dem Markt erhältlich sind. Das Angebot ist mit Sicherheit etwas Besonderes.

## Папоротники

Папоротники одного рода- *Athyrium* возвращаются в каталог благодаря запросам наших клиентов. Это только селекционные сорта, умноженные в пробирке в ярких тонах, так сильно отличающихся от предлагаемых на рынке! Совершенно уникален!

# FERNS PAPROCIE

## Paprocie

Paprocie z jednego rodzaju wietlica (*Athyrium*) wracają do naszego katalogu ze względu na liczne zapytania klientów. Są to wyłącznie wyselekcjonowane odmiany rozmnażane In vitro o żywszych barwach, intensywniejszym przebarwieniu zdecydowanie ciekawsze od standardów obecnych na rynku. Zdecydowanie wyjątkowa oferta.

## Trawy

Trawy stały się w ostatnich latach niezbędną częścią każdej oferty bylinowej. Nasza propozycja obejmuje zarówno typowe trawy bylinowe jak np. Miscanthus czy Pennisetum niezastąpione w terenach zieleni jak i trwale zielone turzyce (*Carex*) i tataraki (*Acorus*) doskonałe rośliny do mieszanych kompozycji o każdej porze roku. Wiele z nich nadaje się do uprawy zimowej wraz z np. bratkiem (*Viola*) i prymulą (*Primula*). Do grupy tej należą również inne cenne trawy podobne rośliny jak np. konwalnik (*Ophiopogon*). Założyliśmy, że nasza sadzonka jest silna i rozkrzewiona, a matczniki prowadzone są w pojemnikach bez ryzyka porażenia patogenami odglebowymi. Założenia realizujemy konsekwentnie czego dowodem są coraz liczniejsi zadowoleni klienci. Naprawdę warto korzystać z naszych sadzonek.

## Grasses

In the last few years grasses have become a necessary part of every perennial offer. Our proposition includes typical perennial species, like Miscanthus or Pennisetum, irreplaceable in landscaping but also evergreen sedge (*Carex*) and sweet flag (*Acorus*) – ideal for mixed compositions in all seasons. Many of them can be grown in winter together with Viola and Primula. We put here also some other worthy grass-like plants, e.g. Ophiopogon. Our mother stocks are kept in pots without a risk of getting infected by soil pathogens and the young plants are strong and branched which can be proved by many satisfied customers. It is really worth trying!

## Gräser

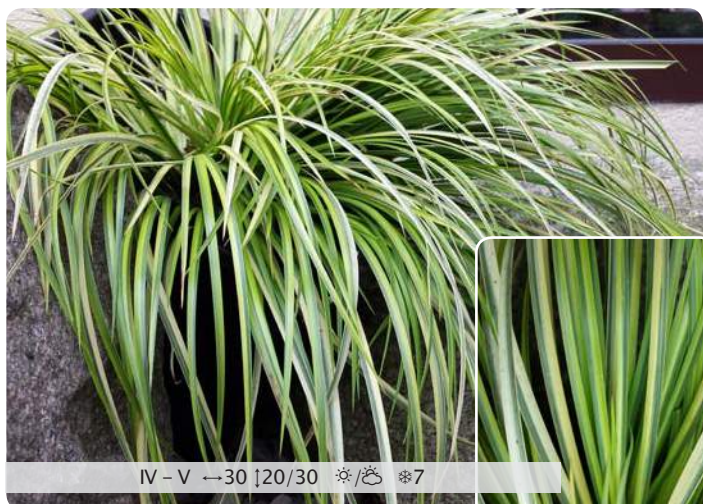

Gräser haben sich in den letzten Jahren zu einem unentbehrlichen Teil eines jeden Staudenangebots entwickelt. Unser Angebot beinhaltet sowohl bewährte Gräser wie z.B. Miscanthus und Pennisetum, die in Grünanlagen unersetzlich sind, aber auch beständige grüne Seggen (*Carex*) und Kalmusse (*Acorus*), die sich zu jeder Jahreszeit ausgezeichnet in gemischten Kompositionen präsentieren. Viele Gräser können im Winter zusammen mit Viola und Primula kultiviert werden. Zu dieser Gruppe gehören auch andere kostbare Pflanzen, wie z.B. Ophiopogon, die den Gräsern sehr ähnlich sind. Wir haben uns zum Ziel gemacht, kräftige und reife Jungpflanzen zu produzieren. Die Mutterpflanzen werden auf Tischen gehalten, was den Befall von Krankheitserregern aus dem Boden ausschließt. Der Kauf unserer Jungpflanzen lohnt sich wirklich. Als Beweis dafür dient die ständig wachsende Anzahl zufriedener Kunden.

## Травы

В последние несколько лет травы стали неотъемлемой частью каждого предложения по многолетникам. Наше предложение включает в себя типичные многолетние виды, такие как Miscanthus или Pennisetum, незаменимые в озеленении, но и осока (*Carex*) и сладкий флаг (*Acorus*) – идеальный для микс-композиций в любое время года. Многие из них можно выращивать зимой совместно с Viola и Primula. Мы также ставим здесь некоторые другие травянистые растения, например Ophiopogon. Наши материнские материалы (сырье) сохраняются в горшках без риска заражения почвенными патогенами. Наши молодые растения сильные и хорошо разветвлены, в чем можно убедиться наличием многих довольных клиентов. Это действительно стоит попробовать!

 Blütezeit Kwitnienie	 Breite Szerokość	 Höhe Wysokość	 Standort Stanowisko	 Winterhärtezone Strefa USDA
VII-IX	80cm	80cm	sonnig słoneczne	4

#### CHARAKTERISTIK:

Interessante Sorte, die Dank ihrer intensiv roten Blüten, langen Blütezeit und außergewöhnlicher Beständigkeit geschätzt wird. Die Sorte hat einen attraktiven aufrechten Wuchstyp, sie legt sich nicht und benötigt kein Stützen. Für sonnigen Standort. In fruchtbares und durchlässiges Substrat topfen.

#### CHARAKTERYSTYKA:

Ciekawa odmiana ceniona za intensywnie czerwone kwiaty, długi okres kwitnienia i wyjątkową odporność na warunki zewnętrzne. Ma atrakcyjny, wzniesiony pokrój, dzięki czemu nie ma tendencji do pokładania się i nie wymaga podpierania. Wymaga słonecznego stanowiska. Najlepiej sadzić ją do żyznego, przepuszczalnego podłoża.

# VIRTOFLORA GENERAL TERMS AND CONDITIONS

## Article 1

**a. General Terms and Conditions: these general terms and conditions.**

**b. Parties: Vitroflora and the Customer.**

**c. Vitroflora: Vitroflora Grupa Producentów sp z o.o.**

## Article 2

### Applicability

1. These General Terms and Conditions apply to any and all offers, sales or deliveries by Vitroflora to a Customer or any other agreements among Vitroflora and a Customer.
2. Any provisions contrary to the General Terms and Conditions must be agreed upon in writing and insofar they do not replace the relevant provisions of the General Terms and Conditions, they are deemed to be supplementary to the General Terms and Conditions.
3. A copy of the General Terms and Conditions shall be available on the website of Vitroflora.

## Article 3

### Offers and prices

1. All offers of Vitroflora are non-binding unless otherwise agreed in writing. An offer shall be valid for a maximum of 30 days.
2. An agreement is deemed to be concluded by the written confirmation of the offer by the Customer, unless Vitroflora objects the confirmation in writing within five days after Vitroflora has received the confirmation from the Customer.
3. If an agreement is concluded by an agent, representative or other intermediary on behalf of Vitroflora, the agreement shall only be deemed to be concluded once it has been accepted in writing by Vitroflora.
4. Prices are excluding VAT and additional expenses, such as transport charges, packaging costs, cost of quality control and/or phytosanitary inspection, import duties, government and other official levies, and fees under breeders' rights and any other fees, unless explicitly otherwise agreed in writing.
5. If Vitroflora's expenses for a sale or delivery increase significantly since the price for this sale or delivery was set, Vitroflora is entitled to adjust the price to a reasonable level.
6. Unless otherwise indicated, all prices are in euro (€).
7. If the Customer cancels the agreement, the Customer shall immediately owe to Vitroflora, without prior notice being required, a cancellation charge of 25% of the gross sale value of the products to be delivered. In the event the relevant products prove to be unsaleable, or only saleable at a lower price, as a result of said cancellation, the Customer shall be liable for any price difference and other damages incurred by Vitroflora. The Parties are obliged to limit any damages resulting from a cancellation as much as possible.

## Article 4

### Conditions of sale

1. Orders for plants and/or cultivation material that is not yet fully grown at the time of purchase shall be accepted subject to the normal cultivation average of good plant material with a good appearance.
2. Partial or complete failure of the cultivation or harvest of starting material or partial spoilage during storage for any reason shall release Vitroflora from the obligation to deliver and his other obligations, unless attributable to gross negligence on the part of Vitroflora.
3. Vitroflora is also entitled to assure a replacement delivery, which shall occur on the same terms as originally agreed.
4. If the delivery of a type that has been ordered is not possible for any reason, Vitroflora shall be entitled to deliver a type that is equivalent as much as possible or to cancel the order if the type ordered cannot be delivered, or the Customer does not accept a different type; Vitroflora shall endeavour to deliver a different type.

## Article 5

### Delivery and transport

1. Delivery is ex works unless explicitly otherwise agreed. On delivery, the risk of the relevant products is transferred to the Customer with everything that is connected thereto.
2. After consultation with the Customer, Vitroflora shall determine the delivery date or the delivery period. If a delivery date or a delivery period is agreed on, Vitroflora shall endeavour to maintain that date or period for delivery. If Vitroflora cannot deliver on the agreed delivery date or within the agreed delivery period, he shall inform the Customer as quickly as possible. After consultation with the Customer, Vitroflora shall determine the new delivery date or the new delivery period.
3. If the Customer receives the relevant products before the agreed delivery date or delivery period as referred to in paragraph 2, the resulting risk is entirely for the Customer.
4. If the Customer receives or wishes to receive the relevant products after the agreed delivery date or delivery period, the risk of any loss of quality resulting from longer storage shall be entirely for the Customer. If, after a certain storage period that may be considered reasonable in view of the type of product, the Customer has not received the product and the risk of loss of quality and/or spoilage of the products leaves no other option, the order shall be deemed to have been cancelled by the Customer, in which case the Customer is obliged to pay the damage incurred by Vitroflora as a result.

## Article 6

### Packaging/carts/pallets

1. Single-use packaging shall be charged at cost price and returns shall not be accepted.
2. All packaging except single-use packaging remains the property of Vitroflora.
3. Vitroflora is entitled to charge the Customer an agreed user fee for re-usable packaging and other durable material, to be specified separately on the invoice.
4. The Customer is obliged to return the packaging to Vitroflora at his own expense and in good condition, within 30 days from delivery or immediately after planting. If it has been agreed that Vitroflora is to collect the packaging, the Customer must ensure that the packaging remains in good condition until the date indicated by Vitroflora and store it so that Vitroflora may collect it in a normal manner.
5. The Customer may not keep the packaging in use or allow it to be used by third parties.
6. Carts, rolling containers, re-usable pallets must be returned immediately unless agreed otherwise. It is not permitted for the Customer to use them for his own purposes or give them to third parties.
7. In the event of damage to re-usable packaging, carts, rolling containers, pallets, etc., the Customer is obliged to pay the cost of repairs or replacement and any additional rental charges resulting from late returns.

## Article 7

### Payment

1. Vitroflora is entitled to request an advance payment of 50% of the invoice amount from the Customer.
2. Payment must occur within thirty days after the invoice date.
3. The Customer is not entitled to set off any counterclaim the Customer may have against Vitroflora with the purchase price he is to pay.
4. The Customer is not entitled to suspend the fulfilment of its payment obligation in the event of a complaint he has submitted to Vitroflora regarding the products delivered, unless Vitroflora explicitly agrees with such suspension under the conditions to be set by Vitroflora.
5. All payments shall be made at the offices of Vitroflora or by deposit on or wire transfer into a bank account to be indicated by Vitroflora.
6. Payments must be made in euro (€) unless otherwise indicated on the relevant invoice. In case the invoice indicates that a payment may be made in another currency, Vitroflora is entitled to charge the Customer for any exchange rate fluctuations.
7. If the Customer does not fulfil his payment obligation in time, he shall be deemed to be legally in default. Vitroflora shall then be entitled to charge interest at 1% monthly from the date that the Customer is in default of fulfilling the payment obligation as mentioned in paragraph 2, with a partial month being counted as a whole month. In addition, in case the second sentence of paragraph 6 applies, Vitroflora is also entitled to charge the Customer for any (further) exchange rate fluctuations incurred by the Customer's default.
8. If the Customer is in default or otherwise fails in fulfilling one of his obligations, all reasonable charges in obtaining satisfaction, both legal and extralegal, shall be at the Customer's expense.
9. Vitroflora reserves the right not, or no longer, to carry out, orders or agreements if previous deliveries have not been paid for by the Customer or the Customer has not fulfilled, or is at risk of not fulfilling, his obligations to Vitroflora. Vitroflora is not responsible for any damage to the Customer as a result of not carrying out orders.

## Article 8

### Force majeure

1. Force majeure refers to any circumstance outside the direct sphere of influence of Vitroflora in which fulfilment of the agreement can no longer reasonably be expected. This may include strikes, fire, extreme weather conditions or government measures and disease and plagues, or faults in the material supplied to Vitroflora.
2. If Vitroflora cannot carry out the delivery because of force majeure, Vitroflora must inform the Customer of the circumstances in writing as soon as possible.
3. In the event of force majeure, the Parties shall agree a change to the agreement or a (partial) dissolution of the agreement.
4. If the Parties cannot agree on a change or dissolution within 10 days after the written notice of the circumstances in question, either of the Parties may then turn to a judge.

## Article 9

### Unforeseen circumstances for the Customer

1. In the event of unforeseen circumstances that are so serious that Vitroflora may not reasonably expect that the purchase agreement concluded shall remain in effect unchanged, the Parties shall agree a change to the purchase agreement or complete or partial dissolution of the purchase agreement.
2. If the Parties cannot agree on a change or (partial) dissolution within 10 days after the written notice of the unforeseen circumstances, either of the Parties may then turn to a judge.

## Article 10

### Guarantees and complaints

1. Vitroflora does not guarantee the genuineness of the products that are generally known to branch back.
2. Vitroflora does not guarantee the growth and blossoming of the products delivered.
3. The Customer shall at all times be provided with all requested cultivation information to the best of Vitroflora's knowledge and abilities, by or on behalf of Vitroflora, but without any liability of Vitroflora arising therefrom.
4. Complaints regarding visible defects, including those regarding the quantity, size or weight of the products delivered, must be indicated to Vitroflora within two days after delivery and Vitroflora must be informed in writing within eight days.
5. Complaints regarding non-visible defects must be indicated to Vitroflora immediately after detection (within two days at the latest) and Vitroflora must be informed in writing within eight days.
6. Complaints must also be indicated to Vitroflora at such time that Vitroflora can check the plant material.
7. A complaint must at least include (i) an extensive and precise description of the defect, (ii) the storage location of the cultivation material to which the complaint relates, and (iii) a listing of the facts on the basis of which it can be determined that the products delivered by Vitroflora and those rejected by the Customer are the same.
8. If the products delivered are rejected by the Customer under the terms of this article and the Customer and Vitroflora do not immediately agree on an amicable settlement, the Customer must then appeal to an independent, officially accredited expert who shall draw up an expertise report. The costs of the expertise report shall be for Vitroflora if the rejection is justified and for the Customer if the rejection is not justified. The costs of the expertise report must be prepaid by the Customer in any event.
9. Complaints regarding a portion of the products delivered cannot give rise to a rejection by the Customer of the entire delivery.
10. The Customer is obliged to check the quantity of the shipment delivered, or have it checked, on receipt and to report a deviation in the quantity to Vitroflora.
11. Issuing a complaint does not suspend the Customer's obligation to pay, regardless of any justification of a complaint.

## Article 11

### Liability

1. All liability regarding non-timely delivery is hereby excluded, unless the ultimate agreed delivery date or the final date of the delivery period is exceeded by more than seven days.
2. If the delivery date or the final date of the delivery period is exceeded by more than seven days, Vitroflora must be given written notice, whereby the Customer shall set a reasonable period for Vitroflora to fulfil his obligations nonetheless.
3. Vitroflora is not liable for damage caused by force majeure as indicated in article 8 paragraph 1.
4. Compensation by Vitroflora of any damage incurred by the Customer in the event of a complaint submitted under article 10 shall not be higher than the invoice value of the products delivered referred to by the complaint that proves to be justified, provided there is culpability or conscious negligence on the part of Vitroflora.
5. In the event of a partial failure of the harvest as a result of the products delivered for the Customer, the compensation owed by Vitroflora for the damage incurred by the Customer shall not exceed a percentage of the purchase price of the products delivered, which is at most equal to that portion of the harvest that has failed for the Customer. If, when damage is reported, Vitroflora and the Customer jointly or a third party determines the percentage of deviating, diseased or weak plants, this percentage shall determine Vitroflora's maximum liability. The Customer is obliged to ensure that the damage as a result of deviating, diseased or weak plants is limited as much as possible.
6. Damage compensation may not be deducted by the Customer from any outstanding account payable to Vitroflora and does not entitle the Customer not to pay the invoice amount, or not to do so by the invoice payment date.

## Article 12

### Transfer of ownership, retention of ownership and surety

1. Notwithstanding the provisions of paragraph 2, ownership of the products is transferred to the Customer at the time of delivery as referred to in article 5.
2. Vitroflora shall retain ownership of the products he has delivered and shall retain or acquire ownership of the products arising from them until the agreed price has been paid in full by the Customer and the Customer has completely fulfilled any and all of his other obligations to Vitroflora.
3. If there is any doubt in the mind of Vitroflora regarding the ability of the Customer to pay, Vitroflora shall be entitled to defer performances until Vitroflora has stood surety for payment or to terminate the agreement by cancellation, if the Customer has not provided surety for payment within fourteen days after being ordered to do so, notwithstanding the terms of article 4 paragraph 1. In both cases, the Customer shall be liable for the expenses incurred by Vitroflora.

## Article 13

### Contractual protection or protection under breeders' rights of original species

1. Starting material and plant material of species protected by a breeders' right applied for or granted in the Netherlands or any other country or by a contractual transfer provision may not be (i) used to produce or further reproduce the species, (ii) treated for the purpose of reproduction, (iii) brought into the realm of commerce, (iv) traded further, (v) exported, (vi) imported, or (vii) kept in stock for one of these purposes.
2. The starting material delivered may be used by the Customer only to cultivate end products at the Customer's business and may be used by the Customer only under the relevant species name and brand name if applicable.
3. Vitroflora is entitled to access to the business of the Customer or lots under the Customer's control where the starting or plant material delivered by Vitroflora is located to view and/or assess said material. Vitroflora shall inform the Customer of his arrival in a timely manner.
4. The Customer is obliged to provide immediate access to his business and the crops to inspection authorities carrying out inspections on behalf of the owner of a protected species delivered to him. The Customer must also provide immediate access to his records (e.g. invoices) that are relevant to such inspection.
5. If the Customer finds a mutant in the protected species, he must immediately inform the holder of the breeders' right by registered letter.
6. At the written request of the holder of the breeders' right, the Customer shall provide the holder of the breeders' right, within two months of receiving the request, with test material of the mutant, free of charge.
7. The Customer is aware that the finder of a mutant, being a significant derived species, in the protected species, requires the permission of the holder(s) of the breeders' right regarding the 'parent species' to exploit the mutant.
8. In particular, the Customer is aware that the finder of a mutant requires the permission of the holder of the breeders' right regarding the 'parent species' to carry out the actions mentioned in paragraph 1 regarding all material of the species, including harvested material (hence also flowers, plants and/or plant parts).
9. The Customer is obliged to provide all co-operation desired by Vitroflora, including co-operating in collecting evidence, in the event that Vitroflora becomes involved in proceedings regarding breeders' rights or other industrial property rights.

## Article 14

### Dispute settlement

1. These General Terms and Conditions and any dispute or claim arising out of or in connection with it, its subject matter or formation (including non-contractual disputes or claims) shall be governed by and construed in accordance with Polish law.
2. All disputes (even those deemed as such by only one party) regarding or arising from the agreements concluded between Vitroflora and a Customer established abroad to which these General Terms and Conditions apply may exclusively be settled by the Polish judge who is competent in the area in which Vitroflora is established.

## Article 15

### Applicability of the appendix

The Parties may declare the 'regulations on supplement percentages to be charged in the event of divergent germination percentages' appended to these General Terms and Conditions to be applicable by agreement. The appendix shall then be part of the agreement to which these General Terms and Conditions also apply.

Examples presented in the catalogue show only suggested ways of using the varieties offered for the growers - producers of the final material, and they apply to the periods when the plants are the most attractive. All the offered perennials can be grown and sold all year round, irrespective of their stage of development. Selection of the assortment depends only on the knowledge, invention and needs of the grower. Vitroflora does not take responsibility for production failure resulting from improper use of the presented information.

Die im Katalog angeführten Beispiele sind Vorschläge zur Nutzung der Unterarten aus dem Angebot für Gärtner - Produzenten des fertigen Materials und präsentieren die Pflanzen im Zeitraum der vollen Vegetationsphase. Alle angebotenen Stauden können, unabhängig von der Entwicklungsphase, das ganze Jahr über angebaut und verkauft werden. Die Wahl des Sortiments hängt allein vom Wissen, Kreativität und Bedarf des Anbauers ab. Mängel im Ergebnis, die sich aus unfachlicher Handhabung ergeben, liegen im Verantwortungsbereich des Anbauers.

Wymienione w katalogu propozycje są jedynie sugerowanym sposobem wykorzystania odmian z oferty dla ogrodników - producentów gotowego materiału i uwzględniają te okresy w których rośliny są najefektowniejsze. Wszystkie oferowane byliny mogą być uprawiane i sprzedawane przez cały rok niezależnie od fazy rozwoju. Dobór asortymentu zależy jedynie od wiedzy, inwencji i potrzeb uprawiającego. Niepowodzenia w uprawie, wynikające z niefachowego zastosowania podanych informacji, leżą w zakresie odpowiedzialności uprawiającego.

Перечисленные в каталоге предложения рекомендуется применять только предложенным способом использования сортов для садоводов - производителей готового материала, учитывая те периоды, в которых растения наиболее эффективны. Все наши многолетники можно выращивать и продавать в течение всего года, независимо от стадии развития растения. Выбор ассортимента зависит только от знаний, творчества и потребностей садовода. За неудачу при выращивании, в результате неправильного использования представленной информации, ответственность несет садовод.
