National Park Service  
Natural Resource Program Center  
Fort Collins, Colorado

The National Park Service, Natural Resource Program Center publishes a range of reports that address natural resource topics of interest and applicability to a broad audience in the National Park Service and others in natural resource management, including scientists, conservation and environmental constituencies, and the public.

The Natural Resource Technical Report Series is used to disseminate results of scientific studies in the physical, biological, and social sciences for both the advancement of science and the achievement of the National Park Service mission. The series provides contributors with a forum for displaying comprehensive data that are often deleted from journals because of page limitations.

All manuscripts in the series receive the appropriate level of peer review to ensure that the information is scientifically credible, technically accurate, appropriately written for the intended audience, and designed and published in a professional manner. This report received informal peer review by subject-matter experts who were not directly involved in the collection, analysis, or reporting of the data.

Views, statements, findings, conclusions, recommendations, and data in this report are those of the author(s) and do not necessarily reflect views and policies of the National Park Service, U.S. Department of the Interior. Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the National Park Service.

This report is available from the Northern Colorado Plateau Network website, <http://www.nature.nps.gov/im/units/NCPN>, as well as at the Natural Resource Publications Management web site, <http://www.nature.nps.gov/publications/NRPM>.

# Abstract

In 2005–2006, the National Park Service’s Northern Colorado Plateau Network received funding to develop a revised checklist of the vascular plant flora of Curecanti National Recreation Area (NRA). This entailed a thorough review of existing literature, re-examination of specimens from the Curecanti NRA herbarium and other state and national museum collections, and additional field work to corroborate unverified species reports and locate new species. Based on this study, 679 vascular plant taxa have been confirmed or reliably reported as occurring in the unit (527 are known from validated herbarium specimens and 152 from literature reports). Another 85 species formerly considered part of the Curecanti NRA flora have now been shown to be falsely reported. The current flora of Curecanti NRA represents 21.6% of the known flora of Colorado and 35.8% of the flora of the Colorado Plateau ecoregion within Colorado. Although no plant taxa are listed as threatened or endangered, at least 15 were formerly candidates for federal listing or are currently considered species of concern by the state natural heritage program. Introduced plants make up 13.1% of the recreation area flora (89 species), of which 23 species are considered noxious weeds by the State of Colorado. Further surveys in Curecanti NRA are likely to find additional new species (at least 159 taxa are known from similar habitats outside the recreation area boundary), especially among late-flowering, weedy, or wetland taxa.

# Acknowledgements

We would like to thank the following individuals for their assistance with this project. Dr. Angela Evenden, botanist and former leader of the Northern Colorado Plateau Network (NCPN) program in Moab, Utah, was an active proponent of this project and helped secure funding for field work and herbarium studies in 2006. Libby Nance (former NCPN database specialist) and Margaret Beer (former NCPN database manager) assisted with development and quality control of the recreation area's NPSpecies database. Libby Nance, Janet Coles, and Helen Thomas also provided data from recent vegetation mapping and wetland inventories at Curecanti National Recreation Area (NRA). Researcher Larry Stevens shared his collection data from field work in 2005. Thanks to Curecanti NRA staff, especially Danguole Bockus and Paul Zaenger, for providing logistical help with the herbarium-review phase of the project and providing corrections to the draft manuscript. To any others whom we may have inadvertently forgotten, please accept our apologies (and thanks). Funding for this project was provided by the National Park Service.

# 1 Introduction

In 2006, the National Park Service (NPS) established a cooperative agreement with the University of Wyoming, through the Rocky Mountains Cooperative Ecosystem Studies Unit, to produce a series of technical reports summarizing the vascular plant flora of each of the 16 national park units of the Northern Colorado Plateau Network (NCPN). These reports are based on existing information in the park service's NPSpecies database system and augmented by further data mining, reviews of state and regional herbaria, and new field surveys to resolve the status of many reported and unconfirmed species. The objective of these reports is to summarize the current state of knowledge of the flora of each park for the benefit of NPS biologists and interpretive staff, outside researchers, and the general public. The following report addresses the vascular flora of Curecanti National Recreation Area, in west-central Colorado. Other NCPN park units are addressed in separate reports.

## 1.1 Background and justification

One of the primary missions of the NPS is "to conserve unimpaired the natural and cultural resources and values of the national park system for the enjoyment of this and future generations" (NPS 2000). Due to their high degree of protection and distribution across a wide variety of habitat types, the nation's national park units make a significant contribution to the protection of biological diversity (Noss and Cooperrider 1994). Unfortunately, the full contribution of the National Park System is not known, as many park units have traditionally lacked comprehensive biological inventories or monitoring programs to identify the composition and condition of their biota. Knowing the status of park flora and fauna is critical for effective park management and for systematically identifying and filling gaps in the nation's protected area network (Margules and Pressey 2000).

To rectify this shortcoming, Congress passed the National Parks Omnibus Management Act in 1998, to provide guidance and funding for an inventory and monitoring program across the entire National Park System. Since 2000, the NCPN Inventory and Monitoring Program has

been developing and verifying species lists of vertebrates and vascular plants for each park unit in the network (Evenden et al. 2002). This effort has entailed reviewing existing species checklists, corroborating the identification of specimens in park museum and herbarium collections, locating additional specimen records from other museums, mining relevant literature and datasets, and conducting field surveys to locate new taxa or confirm unsubstantiated reports.<sup>†</sup> All of these data have been synthesized in NPSpecies, the park service's standardized database for documenting park status (present, probably present, unconfirmed, falsely reported), abundance, residency, nativity, and rarity. With the production of a technical series of reports on the flora of each park, the NPSpecies data will now be available to a broader audience.

## 1.2 Objectives

The objectives of this project were to:

1. Document the current status (present, reported, potential, or falsely reported) of all vascular plant species that have been cited as occurring in Curecanti National Recreation Area, based on a review of herbarium collections and past literature.
2. Develop an annotated checklist of the flora of Curecanti National Recreation Area, with supplemental information on taxonomic synonyms, distribution, within-park abundance, flowering period, growth form, nativity, habitat, and sources for each record.

## 1.3 Study area

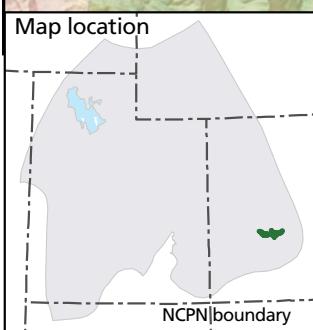

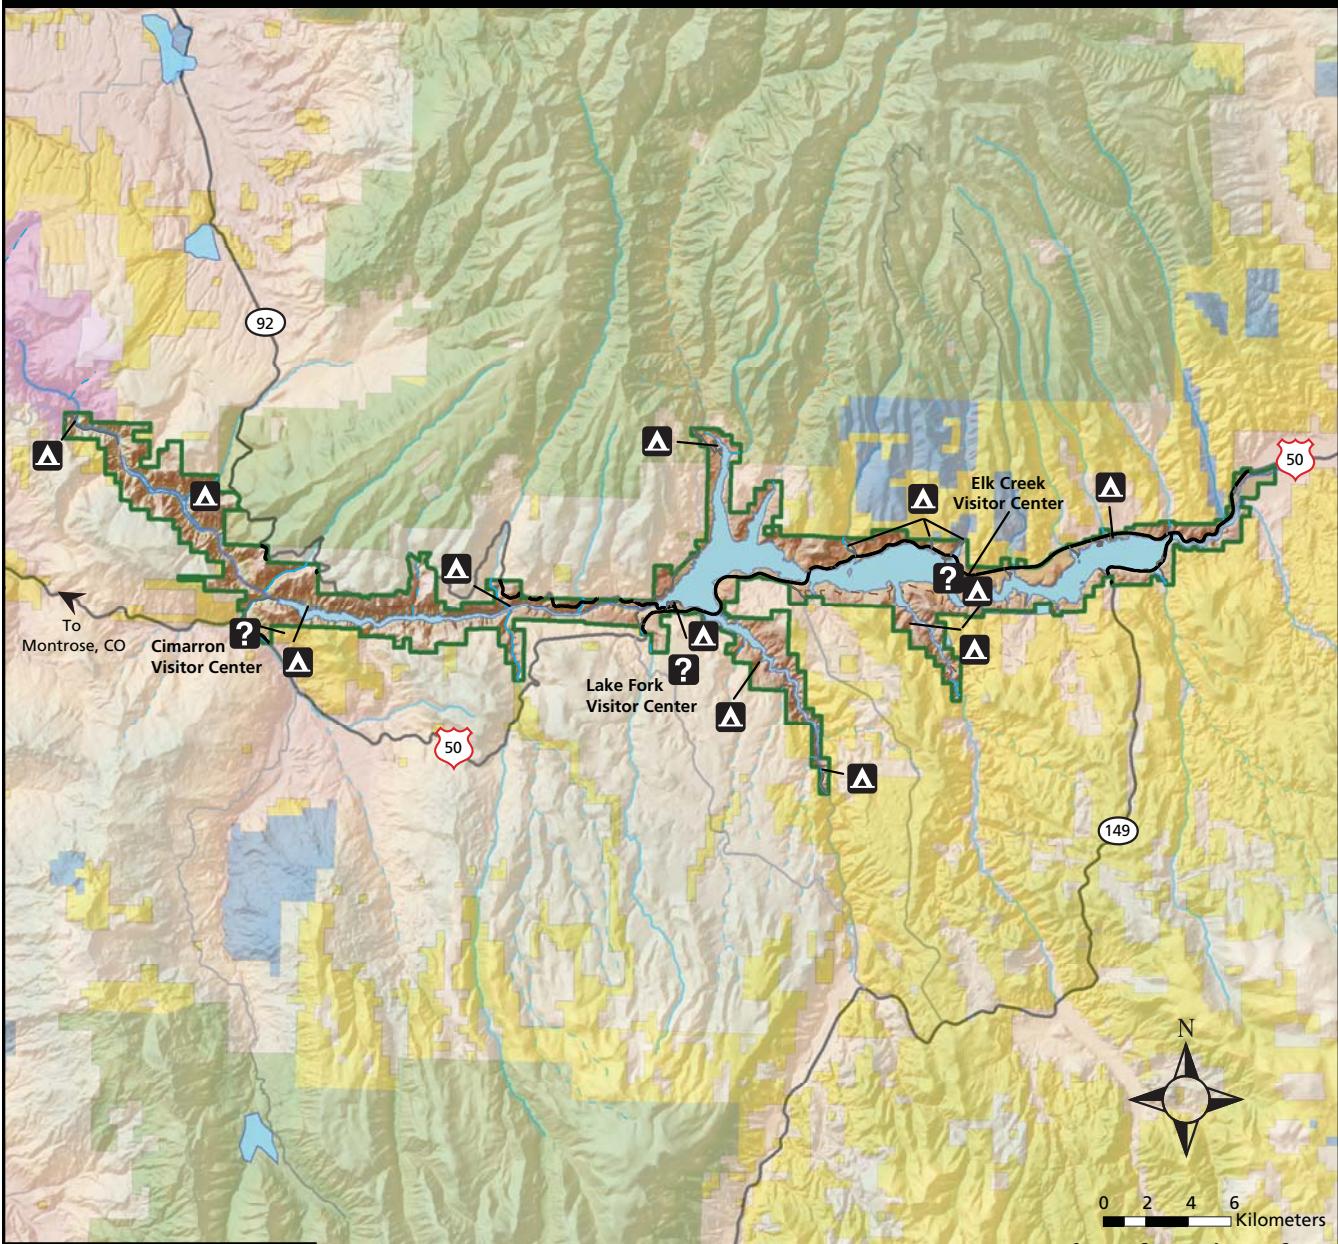

### 1.3.1 History and setting

The area that would eventually become Curecanti National Recreation Area (Figure 1.3.1) was explored as a possible railroad route by Captain John Gunnison in 1853. Gunnison advised against the route, but ultimately, the Denver and Rio Grande Railroad constructed a narrow-gauge rail line along the upper reach of the drainage (above the Black Canyon of the Gunnison) that operated from 1882 to 1949. Several small towns sprang up along the railroad and Gunnison's namesake river, including Iola, Cebolla, Sapinero, and Cimarron (NPS 1997).

<sup>†</sup>Taxa refer to all named species, subspecies, and varieties.

Figure 1.3.1. Location of Curecanti National Recreation Area, Gunnison and Montrose counties, Colorado.

Water development projects in the twentieth century forever altered the Curecanti region. From 1905 to 1909, the six-mile-long Gunnison Tunnel was blasted through bedrock to divert water from the Gunnison River to arid farmland in the Uncompahgre Valley. In 1956, Congress passed the Colorado River Storage Project Act, which constructed three dams along the Gunnison River to provide hydroelectric power, flood control, irrigation water, and reservoirs for recreational activity. The first dam was completed by the U.S. Bureau of Reclamation (BOR) in 1965, at the confluence of Soap Creek and the Gunnison River. This impoundment created Blue Mesa Reservoir, Colorado's largest body of water, but also flooded much of the valley floor and inundated the historic towns of Iola, Cebolla, and Sapinero. Two additional reservoirs were created by the Morrow Point Dam, completed in 1968, and the Crystal Dam, in 1976. The series of dams and reservoirs along the Gunnison River comprise the Wayne N. Aspinall storage unit, named to commemorate the Colorado congressman and longtime advocate of western water development (NPS 1997).

In February 1965, the BOR entered into a Memorandum of Agreement with the NPS to jointly manage the reservoirs and surrounding valley bottom as the Curecanti National Recreation Area. The BOR retained management authority for the dams, while the NPS became responsible for protecting the area's natural, historic, and archeological resources and providing recreational opportunities for the public (Evenden et al. 2002).

Curecanti National Recreation Area (NRA) is located approximately 15 miles west of Gunnison in Gunnison and Montrose counties, Colorado, and encompasses 41,972 acres (16,986 ha). The unit extends from the southeastern corner of Black Canyon of the Gunnison National Park to the east end of Blue Mesa Reservoir, a distance of nearly 36 air miles, but averages just over one mile wide. The unit ranges in elevation from 6,500 feet (1,981 m) at the East Portal to 9,500 feet (2,896 m) near Sheep Knob. Average annual precipitation is 11 inches (280 mm), the majority coming in spring and summer. Temperatures can range from -30° F in winter to 85° F in summer (Evenden et al. 2002).

### **1.3.2 Geology**

The Gunnison River became entrenched within its modern drainage 10–15 million years ago, following the last major volcanic eruptions of the ad-

jacent San Juan and West Elk Mountains and the most recent period of regional uplift of the Colorado Plateau and southern Rocky Mountains. In the Curecanti area, the river sliced through the uppermost blanket of Tertiary-age volcanic mud flows and ash of the West Elk Breccia to expose a series of Jurassic and Cretaceous sedimentary layers. In order of increasing age, these include deep marine clays of the Mancos Formation, beach and shoreline mudflats of the Dakota Sandstone, soft mudstones of the Morrison Formation (noted for its dinosaur fossils), and the Sahara-like dunes of the Entrada Sandstone. Older Mesozoic and Paleozoic sediments have long since eroded from the area. At the lowest reach of the canyon, the Gunnison River exposes Precambrian gneisses nearly two billion years old (Chronic 1988). These dark gneiss beds form the walls of the Black Canyon of the Gunnison, immediately downstream of Curecanti NRA.

### **1.3.3 Vegetation**

There are four general vegetation types present within Curecanti NRA (for a more detailed description of plant communities, consult NCPN in ed. and Van Pelt et al. 1991). The banks of the three main reservoirs and the Gunnison River are bordered by a narrow band of riparian vegetation dominated by woodlands of narrow-leaved cottonwood (*Populus angustifolia*) or box elder (*Negundo aceroides*). Backwater areas may be locally dominated by coyote willow (*Salix exigua*) or other willow species, panicle bulrush (*Scirpus microcarpus*), and beaked sedge (*Carex utriculata*). Moist, shady, north-facing, mossy cliffs within the canyon bottom may be locally inhabited by wax currant (*Ribes cereum*) and Purpus' sullivantia (*Sullivantia hapemanii* var. *purpusii*). Open, rocky areas and mudflats along the reservoirs are often dominated by weedy annuals adapted to disturbed or early successional sites.

South-facing rocky slopes and mesa tops above the river channel are typically dominated by big sagebrush (*Seriophidium tridentatum*)/needle-and-thread (*Hesperostipa comata*) grasslands interspersed with thickets of Gambel oak (*Quercus gambelii*). Rocky slopes are also frequently clothed by pygmy woodlands of two-needle pinyon (*Pinus edulis*), Utah juniper (*Sabina osteosperma*), and Rocky Mountain juniper (*S. scopulorum*). North-facing, upper slopes or more mesic side canyons are dominated by forests of ponderosa pine (*Pinus ponderosa*), Douglas-fir (*Pseudotsuga menziesii*), or aspen (*Populus tremuloides*).

### **1.3.4 Previous botanical studies**

Due to the easy access provided by the Denver and Rio Grande Railroad, the Gunnison River drainage attracted numerous field botanists to the Curecanti area in the late nineteenth and early twentieth centuries. Unfortunately, most specimen labels from the 1890s–1920s merely record the closest railroad stop (usually Cimarron or Sapinero), while the actual collection sites may have been anywhere in the Gunnison River valley or immediate vicinity. It is likely that many of these specimens were collected within the area that would ultimately become Curecanti NRA in 1965, but the exact number will probably never be fully known. In addition, many of the collecting sites (including some type localities) were probably inundated by the reservoirs built in the 1960s and 1970s. The following chronology (Table 1.3.4, Figure 1.3.4) highlights the major botanical figures known to have worked in the Curecanti area since construction of the railroad in the 1880s (Hogan 2006).

The earliest known collector was Marcus E. Jones, who collected the type specimen of Black Canyon gilia (*Gilia penstemonoides*) at Cimarron in 1890. Carl Albert Purpus followed in 1892, and collected specimens in the vicinity of Sapinero and in the Black Canyon of the Gunnison. Purpus's most significant find was the holotype of Purpus's sullivantia (*Sullivantia hapemanii* var. *purpusii*) from the Black Canyon. Noted California botanist E. L. Greene visited the valley in 1896, but the full extent of his collecting is not known.

Herbert Wheeler conducted the first thorough survey of the flora in the vicinity of Sapinero in 1898, as part of his master's thesis from the University of Colorado (Wheeler 1902). It is not known how many of Wheeler's 246 specimens were actually made within Curecanti NRA, though Weber and Wittmann (1992) cited at least seven that were types (all of which are considered synonyms today). Charles Crandall, Charles Baker, and Edwin Payson added at least seven new species to the flora of the local area from 1898 to 1913. Collecting dropped off considerably over the next four decades, with only a half-dozen new taxa being documented for the Curecanti area by Ruth Nelson and William Weber.

In 1961, the BOR contracted with the University of Utah to conduct baseline archeological and biological surveys of the Curecanti area to identify resources that would be flooded by the new dams

then under development. Seville Flowers, Heber Hall, Robert Reynolds, and colleagues spent that summer collecting more than 750 specimens of vascular plants, bryophytes, and algae from the area (Flowers et al. 1962; Woodbury 1962). Through their efforts, 372 vascular plant taxa were documented for Curecanti NRA (353 by modern count based on name changes, synonyms, and misidentifications). Although much of the area explored by the Flowers team has since been inundated, at least 260 of the taxa reported in 1961 have been relocated in the past two decades. An additional 93 species reported by Flowers and others (1962) still have not been rediscovered within the unit (Table 1.3.4, Appendix B).

Relatively few additions were made to the Curecanti NRA flora in the 30 years immediately following the work of Flowers and colleagues (Figure 1.3.4). Charles Clark and Dean Einwalter made collections for the Curecanti NRA herbarium (CURE) in 1970, and discovered four new taxa. Susan Engel collected more than 100 specimens in the unit in 1980, as part of an undergraduate independent study project at Western State College. In the process, she added 29 new species to the local flora. Individual researchers documented several new rare species for the area, including the type of Gunnison County rockcress (*Boechera pallidiflora*), from the hills above Sapinero (probably just outside the unit) (Table 1.3.4).

The pace of collecting and discovery has increased significantly since 1995. In that year, Alex Tonneson and Cheryl O'Brien collected more than 200 specimens for the CURE herbarium as part of a vegetation monitoring study they conducted as NPS seasonal employees. Tonneson and O'Brien relocated a large number of species originally reported by Flowers and others (1962) and documented 71 new species for the unit. In 2001, a vegetation-mapping crew working for the NCPN (in ed.) conducted sampling across the unit and reported (without vouchers) 96 new species. At least 59 of these taxa still need corroboration with herbarium specimens or photo vouchers. Researcher Larry Stevens sampled vegetation associated with seeps and springs in 2005, and discovered the first record of niterwort (*Nitrophila occidentalis*) for the state of Colorado within the unit (Springer et al. 2006).

The largest recent botanical survey of Curecanti NRA took place from 2003 to 2004, and was conducted by Tim Hogan, Nan Lederer, Dina Clark,

and associates from the University of Colorado Museum Herbarium. Hogan and others (2005) collected 570 specimens representing 459 vascular plant taxa from across the unit. At least 95 of

these species had not previously been recorded from Curecanti NRA, and 37 more had been reported but not vouchered (Table 1.3.4).

**Table 1.3.4. Chronology of plant-collecting efforts in Curecanti National Recreation Area.**

Year	Collector(s)	# of new taxa	Comments
1890	M. E. Jones	1	Marcus E. Jones collected the type specimen of Black Canyon gilia ( <i>Gilia penstemonoides</i> ) at Cimarron. The extent of Jones's collecting efforts in the surrounding area is not known.
1892	C. A. Purpus	1	Carl Albert Purpus collected the type specimen of brittle prickly-pear ( <i>Opuntia schwarziniana</i> , now considered a synonym of <i>O. fragilis</i> ) at Sapinero. Purpus also collected in the area of the future Black Canyon of the Gunnison National Park, where he took the type collection of Purpus' sullivantia ( <i>Sullivantia hapemannii</i> var. <i>purpusii</i> ).
1896	E. L. Greene	0	Edward L. Greene collected in the vicinity of Cimarron in 1896, but it is not known whether he documented species within the future Curecanti NRA.
1898	H. N. Wheeler and C. S. Crandall	8	Herbert Wheeler collected 246 specimens in the vicinity of Sapinero, as part of his master's thesis. It is not known how many of Wheeler's collections were taken from the future Curecanti NRA, but at least 7 are accepted here based on data from Weber and Wittmann (1992). Charles S. Crandall collected in the vicinity of Cimarron in 1898, and took the type of Crandall's rockcress ( <i>Arabis [Boechera] crandallii</i> ). The full extent of Crandall's collecting in the area is also not known.
1901	C. F. Baker	5	Charles Baker collected at least 5 new species in the Curecanti area, including the types of purple-flower lousewort ( <i>Pedicularis crenulata</i> forma <i>candida</i> ) and <i>Penstemon teucrioides</i> (now a synonym of mat penstemon [ <i>P. caespitosus</i> ]) from Sapinero.
1913	E. B. Payson	1	Edwin Payson made the first collection of mountain-lover ( <i>Paxistima myrsinites</i> ).
1950	R. A. Nelson	1	Ruth Nelson collected red elderberry ( <i>Sambucus microbotrys</i> ).
1952	W. A. Weber	5	William A. Weber, of the University of Colorado, collected 5 species in the Curecanti area.
1961	S. Flowers, R. Reynolds, and H. Hall	260 + 93 reported	Seville Flowers, Heber H. Hall, and Robert Reynolds led a team from the University of Utah conducting the first major floristic survey of the Gunnison River drainage in the area to be flooded by the Curecanti reservoirs. Flowers and others (1962) made 752 collections of 372 vascular plant taxa (353 based on modern names and misidentifications). At least 260 of these species have been relocated within Curecanti NRA since 1962, while the remaining 93 reported species were either extirpated by flood waters or remain undetected.
1970	C. Clark and D. Einwalter	4	Charles Clark and Dean Einwalter collected 25 specimens for the CURE herbarium, including 4 new species for the recreation area.
1979	J. Ratzloff	1	Jim Ratzloff discovered Glenwood Springs rockcress ( <i>Boechera oxylobula</i> ) in Curecanti NRA during a rare plant survey.
1980–1982	S. Engel and W. A. Weber	30	Susan Engel, an undergraduate from Western State College, collected 105 specimens from Curecanti NRA (including 29 new species) as part of an independent study in 1980. William Weber collected the first specimen of Canyonlands hymenoxys ( <i>Tetraneuris ivesiana</i> ) in 1982.
1983	R. Rollins	?	Reed Rollins, of Harvard's Gray Herbarium, collected the type of Gunnison County rockcress ( <i>Arabis [Boechera] pallidifolia</i> ) from "hill above Sapinero," probably just outside Curecanti NRA.

**Table 1.3.4 Chronology of plant-collecting efforts in Curecanti National Recreation Area.**

1995	A. Tonneson and C. O'Brien	71	Alex Tonneson and Cheryl O'Brien collected 227 specimens in Curecanti NRA as part of a vegetation monitoring study. Of these collections, 71 represented new taxa for the area.
2001	NCPN vegetation mapping team	96 reported	The NCPN (in ed.) vegetation-mapping crew reported 96 new vascular-plant species for the unit. Of these, 37 were later vouchered by Hogan and colleagues in 2003–2004, and 59 have not been relocated.
2003–2004	T. Hogan, N. Lederer, and D. Clark	132	Tim Hogan, Nan Lederer, and Dina Clark, of the University of Colorado Museum Herbarium, collected 570 specimens in a floristic survey funded by the NPS to fill gaps in the CURE collections and update the species list of Flowers and others (1962). Hogan et al. (2005) documented 459 vascular plant taxa for Curecanti NRA, of which at least 132 had not previously been vouchered.
2005	L. Stevens	1	Larry Stevens collected specimens for the NCPN springs and seeps inventory (Springer et al. 2006), including the first record of niterwort ( <i>Nitrophila occidentalis</i> ) for the state of Colorado (possibly an introduction).

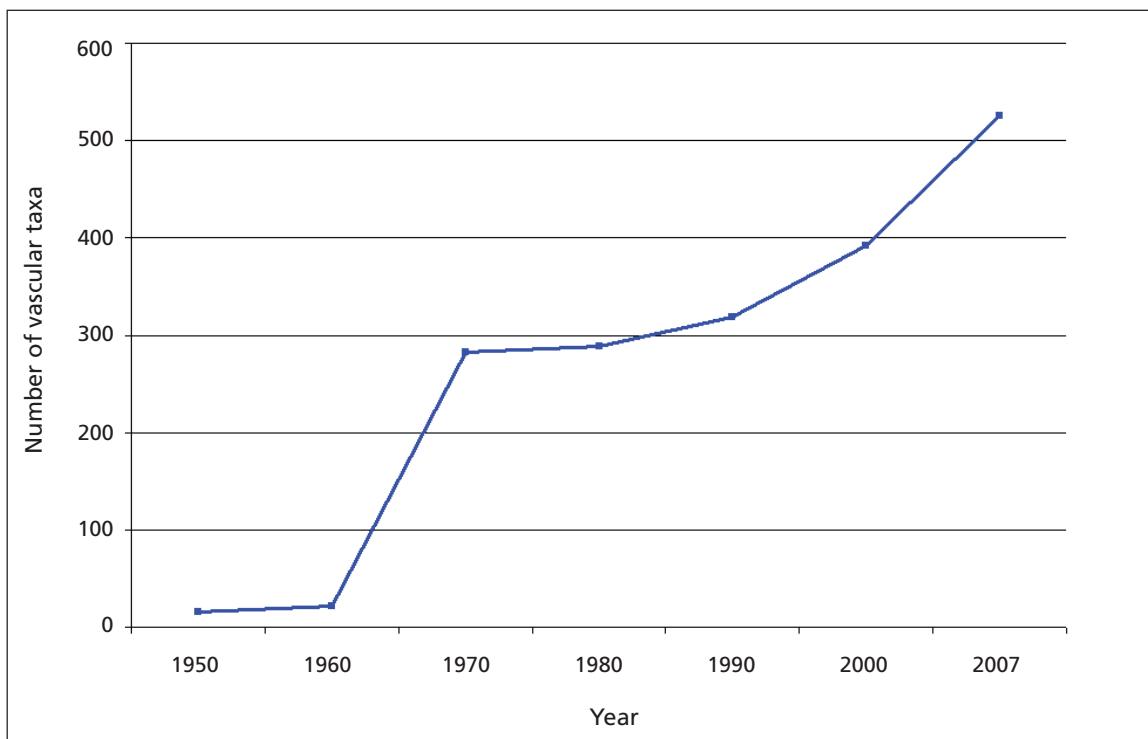

Figure 1.3.4. Increase in the number of plant taxa confirmed as present in Curecanti National Recreation Area by decade, 1950–2007.

## 2 Methods

In 2005, Tim Hogan and Nan Lederer, of the University of Colorado Museum Herbarium, reviewed all mounted specimens in the Curecanti NRA herbarium to determine whether each was correctly identified to species, subspecies, or variety following the nomenclature of Weber and Wittmann (2001). Hogan and others (2005) also reviewed relevant herbarium collections from the University of Colorado (COLO). As necessary, they made corrections and annotations to each specimen and to the voucher records in the unit's Automated National Cataloging System (ANCS+) and NPSpecies database.

Based on this herbarium work and a review of Curecanti NRA references (Flowers et al. 1962; NCPN in ed.; Springer et al. 2006; Weber no date), we developed four lists:

1. A revised checklist of species that were present in the unit (confirmed by an authenticated voucher; included in Appendices A and D);
2. A list of species that were reported in the literature but not corroborated with a voucher (equivalent to “probably present” in NPSpecies terminology; included in Appendices A and D);
3. A list of potential species (“unconfirmed” in NPSpecies) known from the vicinity of Curecanti NRA based on Weber (no date) and Hogan and others (2005) (included in Appendix B); and
4. A list of species that are now known to be misidentified or highly questionable (Appendix C).

Each list was annotated with supplemental information on life form, geographic range (within the context of Colorado), population size in the unit (derived from Hogan et al. 2005, NCPN in ed., Springer et al. 2006, and field observations), flowering period, distribution across general vegetation types, nativity, data source (collector and collection number from a sample specimen or literature citation), year of earliest collection (from herbarium records), and relevant synonymy and taxonomic problems (based on review of Barkworth et al. 2003, 2007; Barneby 1989; Cronquist 1994; Cronquist et al. 1972, 1977, 1984, 1997; Dorn 2001; Flora of North America Editorial Committee 1993, 1997, 2000, 2002a, 2002b, 2003, 2005, 2006a, 2006b, 2006c; Holmgren et al. 2005; Kartesz 2003; Welsh et al. 2003; and the Integrated Taxonomic Information System (ITIS) website, <http://www.itis.gov/>). The annotations to these lists and label data from the CURE herbarium review were then incorporated into the NPSpecies database for the unit.

# 3 Results

## 3.1 Summary of the flora of Curecanti National Recreation Area

Based on a review of specimens in the CURE and COLO herbaria (correcting for misidentifications and collections from outside the unit) and results of the 2003–2005 University of Colorado floristic survey (Hogan et al. 2005) and 2005 NCPN springs and seeps inventory (Springer et al. 2006), the number of vascular plant taxa confirmed as occurring in Curecanti NRA with an authenticated voucher stands at 527 (Table 3.1, Appendices A, D). This number is slightly lower than the 531 reported by Hogan and others (2005) due to the elimination of some duplicate names. An addi-

tional 152 taxa have been reported for the unit but not corroborated with a voucher specimen (Table 3.1, Appendix A). Of these, 93 were reported by Flowers and others (1962) and 59 are based on observations by the NCPN vegetation-mapping crew (NCPN in ed.). Taken together, the number of confirmed and reported vascular plant taxa in Curecanti National Recreation Area is 679 (Table 3.1, Appendices A, D).

Based on a review of literature and herbarium specimens, we recognize 159 species that could still potentially be found within Curecanti NRA (Hogan and Lederer NPSpecies database) (Appendix B). Most of these species are known from comparable habitats elsewhere in Gunnison or Montrose counties (including Black Canyon of the Gunnison National Park), or have been collected from within a 5–7-mile radius of the unit.

**Table 3.1. Statistical summary of the flora of Curecanti National Recreation Area.**

Category	Number confirmed in park	Number additionally reported for park	Total

Sparse taxa	4	1	5
Widespread taxa	416	123	539
<i>Total native taxa</i>	<i>455</i>	<i>135</i>	<i>590</i>

The number of taxa and families is based on taxonomic concepts of Weber and Wittmann (2001). See appendices for an explanation of the various categories.

Of the pool of species documented or reported for Curecanti NRA, we found eight taxa that were falsely reported based on misidentified voucher specimens in the CURE and COLO herbaria. We consider an additional 77 species reported by Flowers and others (1962) and cited (but not vouchered) by the NCPN vegetation-mapping team (NCPN in ed.) to be questionable based on the absence of suitable habitat or the distance of Curecanti NRA to the known or expected range of each species (Appendix C).

The confirmed and reported flora of Curecanti NRA represents 21.6% of the 3,145 native and naturalized taxa documented for the state of Colorado by Weber and Wittmann (1992) and 59.4% of the state's 160 plant families (Table 3.1). The unit contains 46.6% of the 1,456 species reported for Montrose and Gunnison counties (Kartesz 2003). At the ecoregional scale, Curecanti NRA contains 35.8% of the 1,898 species reported for the Colorado portion of the Colorado Plateau (Kartesz 2003).

### 3.2 Life form and biogeographic diversity

Although ecologically dominant, tree and shrub species make up only 13.1% of the confirmed and reported plant taxa of Curecanti NRA (see Table 3.1). Perennial forbs are the most species-rich life form in the unit's flora, with 375 known and reported taxa (55.4% of the total flora). Annual forbs and grass-like plants comprise less than 15% of the flora. Like trees and shrubs, perennial graminoids are ecologically important but relatively species-poor, representing just 15.8% of the total flora. The diversity of ferns and fern-allies in Curecanti is especially low (1.5%) (see Table 3.1).

Of the unit's 590 native taxa, 332 (91.4%) are widespread across Colorado and western North America. Only 10 species (1.7% of the native flora) have extremely limited global distributions (local endemics found within an area of less than 1° of latitude × 2° of longitude; see appendices for complete definitions of biogeographic categories). Regional endemics (largely restricted to the Colorado Plateau) comprise an additional 4.7% of the native flora (see Table 3.1). Species at the extreme edge of their global range in Colorado (peripherals) and those found sparsely over a wide range make up 1.2% and 0.8% of the Curecanti's native flora, respectively (see Table 3.1). Graceful cinquefoil (*Potentilla flabelliformis*) is the only disjunct species presently known from the unit.

### 3.3 Plants of special concern

Curecanti NRA has no plants listed as threatened or endangered under the U.S. Endangered Species Act. Nodding rockcress (*Boechera demissa*) was formerly a category 3C candidate for listing under the act (Table 3.3). Crandall's rockcress (*B. crandallii*) and Gunnison milkvetch (*Astragalus anisus*) are the only species from the unit that are considered sensitive by other federal agencies (Spackman et al. 1997). The Colorado Natural Heritage Program (2007) tracks 13 taxa from Curecanti NRA as species of concern and 1 additional taxon on its watch list of potential species of concern (Table 3.3). Hogan and others (2005) relocated and mapped populations of four sensitive plant species: Gunnison milkvetch, Brandegee's corydalis (*Corydalis caseana* ssp. *brandegeei*), Black Canyon gilia, and Purpus' sullivantia.

### 3.4 Non-native species and noxious weeds

Introduced plant species (not historically native to Colorado or North America) make up 13.1% of the confirmed and reported flora of Curecanti NRA (see Table 3.1). This figure is lower than the statewide average of 15.6% for non-native species (Rejmanek and Randall 1994). Of the unit's 89 introduced plant species, 23 are listed as noxious by the State of Colorado (Table 3.4) (CDA 2007). Plants on the Colorado state noxious weed list fall into three categories with differing management objectives and requirements (Colorado Noxious Weed Act of 1996 Title 35 Article 5.5). Weeds on List A are designated for full eradication wherever they occur. Containment of infestations is the goal for species on List B, and voluntary control, education, and research is the objective for species on List C. Currently, 18 species from Curecanti NRA are on List B, and 5 are on List C; none is on List A (Table 3.4).

Hogan and others (2005) mapped occurrences of 16 noxious weed species in 2003–2004. These species were found primarily in association with reservoirs, marinas, roads, and campgrounds.

**Table 3.3. Plant species of conservation concern from Curecanti National Recreation Area.**

Family	Species	Common name	TNC global rank	Legal status	CNHP status
Apiaceae (Umbelliferae)	<i>Cymopterus planosus</i> *	Rocky Mountain spring-parsley	G3		SOC, S3S4
Asclepiadaceae	<i>Asclepias hallii</i>	Hall's milkweed	G3		SOC, S3
Brassicaceae (Cruciferae)	<i>Boechera crandallii</i>	Crandall's rockcress	G2	CO BLM: Sensitive	SOC, S2
Brassicaceae (Cruciferae)	<i>Boechera demissa</i> var. <i>demissa</i>	nodding rockcress	G5T4	USFWS: 3C	
Brassicaceae (Cruciferae)	<i>Boechera gunnisoniana</i>	Gunnison's rockcress	G3		SOC, S3
Brassicaceae (Cruciferae)	<i>Boechera oxylobula</i>	Glenwood Springs rockcress	G3		SOC, S3
Brassicaceae (Cruciferae)	<i>Draba rectiflucta</i>	mountain draba	G3?		SOC, S2
Brassicaceae (Cruciferae)	<i>Physaria rollinsii</i>	Rollins' twinpod	G2		SOC, S2
Fabaceae (Leguminosae)	<i>Astragalus anisus</i>	Gunnison milkvetch	G2G3	CO BLM: Sensitive	SOC, S2S3
Fabaceae (Leguminosae)	<i>Astragalus iodopetalus</i> *	violet milkvetch	G2		SOC, S1
Fumariaceae	<i>Corydalis caseana</i> ssp. <i>brandegeei</i>	Brandegee's corydalis	G5T3		Watch, S3S4
Lamiaceae (Labiatae)	<i>Monardella odoratissima</i>	stinking horsemint	G4G5 T3T5		SOC, S2
Polemoniaceae	<i>Gilia penstemonoides</i>	Black Canyon gilia	G3		SOC, S3
Rosaceae	<i>Crataegus saligna</i>	willow hawthorn	G2		SOC, S2
Saxifragaceae	<i>Sullivantia hapemanii</i> var. <i>purpusii</i>	Purpus' sullivantia	G3T3		SOC, S3

This list was derived from the Colorado Natural Heritage Program (CNHP 2007). All species are confirmed as present in Curecanti NRA unless indicated by a "\*" (reported).

Codes: **TNC global rank** assesses abundance and conservation priority on a scale of 1–5 (1 being extremely vulnerable and 5 being secure) for full species (G) and varieties or subspecies (T) across their entire range. A "?" indicates uncertainty in the rank, Q = taxonomic questions, and NR = not ranked. A comparable scoring system is used to measure state abundance (S) in Colorado under the column CNHP status. TNC = The Nature Conservancy. Under **legal status**, USFWS = U.S. Fish and Wildlife Service. CO BLM = U.S. Bureau of Land Management, Colorado Office. 3C = Category 3 candidates (species dropped from consideration for listing). Under **CNHP status**, SOC denotes plants on the state "Species of Concern" list and Watch indicates species on the watch list that may ultimately warrant listing as species of concern (CNHP 2007).

**Table 3.4. Noxious weed species of Curecanti National Recreation Area.**

Family	Species	Common name	Park status	CO noxious weed list
Apiaceae (Umbelliferae)	<i>Carum carvi</i>	caraway	Present	List B
Asteraceae (Compositae)	<i>Acosta diffusa</i> ( <i>Centaurea diffusa</i> )	diffuse knapweed	Present	List B
Asteraceae (Compositae)	<i>Acosta maculosa</i> ( <i>Centaurea maculosa</i> )	spotted knapweed	Present	List B
Asteraceae (Compositae)	<i>Acroptilon repens</i> ( <i>Centaurea repens</i> )	Russian knapweed	Present	List B
Asteraceae (Compositae)	<i>Arctium minus</i>	burdock	Present	List C
Asteraceae (Compositae)	<i>Breva arvensis</i> ( <i>Cirsium arvense</i> )	Canada thistle	Reported	List B
Asteraceae (Compositae)	<i>Carduus nutans</i> var. <i>macrolepis</i>	musk thistle	Present	List B
Asteraceae (Compositae)	<i>Cirsium vulgare</i>	bull thistle	Present	List B
Asteraceae (Compositae)	<i>Leucanthemum vulgare</i> ( <i>Chrysanthemum leucanthemum</i> )	ox-eye daisy	Present	List B
Asteraceae (Compositae)	<i>Matricaria perforata</i>	scentless chamomile	Present	List B
Boraginaceae	<i>Cynoglossum officinale</i>	common hound's-tongue	Reported	List B
Brassicaceae (Cruciferae)	<i>Cardaria draba</i>	whitetop	Present	List B
Convolvulaceae	<i>Convolvulus arvensis</i>	field bindweed	Present	List C
Elaeagnaceae	<i>Elaeagnus angustifolia</i>	Russian olive	Reported	List B
Geraniaceae	<i>Erodium cicutarium</i>	stork's-bill	Present	List B
Poaceae (Gramineae)	<i>Anisantha tectorum</i> ( <i>Bromus tectorum</i> )	cheatgrass	Present	List C
Poaceae (Gramineae)	<i>Elytrigia repens</i> ( <i>Agropyron repens</i> , <i>Elymus repens</i> )	quackgrass	Present	List B
Ranunculaceae	<i>Viticella orientalis</i> ( <i>Clematis orientalis</i> )	Oriental clematis	Present	List B
Scrophulariaceae	<i>Linaria vulgaris</i>	butter-and-eggs	Present	List B
Scrophulariaceae	<i>Verbascum thapsus</i>	woolly mullein	Present	List C
Solanaceae	<i>Hyoscyamus niger</i>	black henbane	Present	List B
Tamaricaceae	<i>Tamarix ramosissima</i> ( <i>T. chinensis</i> )	five-stamen tamarisk	Present	List B
Zygophyllaceae	<i>Tribulus terrestris</i>	puncture vine	Present	List C

This list was derived from the Colorado Department of Agriculture (2007).

## 4 Discussion

Since 1961, the documented flora of Curecanti National Recreation Area has increased by nearly 30%, to the current tally of 525 taxa (see Table 3.1, Figure 1.3.4). The majority of these new taxa were discovered in just the last decade, largely through the efforts of Tim Hogan, Nan Lederer, Dina Clark, and colleagues from the University of Colorado herbarium (Hogan et al. 2005). An additional 151 species have been reported for Curecanti (without vouchers) by Flowers and others (1962) and the NCPN (in ed.), and 159 other taxa are known from neighboring Black Canyon of the Gunnison National Park or adjacent areas of Montrose and Gunnison counties (Appendix A, B). Should all of these potential species be found, the flora of Curecanti NRA would increase by

37%. Many of the “missing” potential or reported taxa consist of cryptic species that flower late in the growing season, or occur in undersampled wetland or weedy habitats. Hogan and others (2005) noted that additional survey work is needed along the Cebolla Arm of Blue Mesa Reservoir and on Blue Creek and Myers Gulch along Morrow Point Reservoir. Confirmation of reported species, especially those cited by Flowers and others (1962) that have not been relocated since construction of the three reservoirs, should remain a high priority, as some of these taxa may ultimately prove to be extirpated or erroneous. Additional studies would also be useful to better refine the abundance and distribution of species of high management interest (especially rare plants and invasive non-natives).

# Appendices

The following appendices contain annotated checklists of the vascular flora of Curecanti National Recreation Area.

Appendix A lists all species that have been confirmed for the flora with an authenticated voucher specimen (including extant and historical records) or that have been reliably reported for the unit in the literature (Flowers et al. 1962; Hogan et al. 2005; Springer et al. 2006; Weber no date). Vouchers were examined from the Curecanti NRA (CURE) and University of Colorado (COLO) herbaria. Species entries in Appendix A are organized alphabetically by family and genus.

Appendix B includes species that may potentially occur within Curecanti NRA, based on the proximity of the unit to other populations or the presence of suitable habitat.

Appendix C lists species that have been previously reported for Curecanti NRA, but are now considered erroneous because they are based on misidentified specimens or questionable literature records.

Appendix D contains the same confirmed, historical, and reported taxa as in Appendix A, but organized by life form rather than by family in order to better meet the needs of NPS interpretive specialists.

The codes and references for each field in the appropriate appendices are summarized below.

## Family (Appendices A, B, C, and D)

Family concepts and nomenclature follow *Colorado Flora: Western Slope, third edition* (Weber and Wittmann 2001). Alternative family names and treatments from other regional floras (Dorn 2001; Flora of North America Editorial Committee 1993, 2002b; Holmgren et al. 2005; Welsh et al. 2003) are listed in parentheses.

## Species name (Appendices A, B, C, and D)

Nomenclature for scientific names and taxonomic concepts are derived from Weber and Wittmann (2001). Scientific names are listed in alphabetical rather than phylogenetic order.

## Synonyms/Taxonomic notes (Appendices A, B, and C)

Pertinent synonyms are included for species with alternative scientific names in other recent state and regional floras (Barkworth et al. 2003, 2007; Barneby 1989; Cronquist 1994; Cronquist et al. 1972, 1977, 1984, 1997; Dorn 2001; Flora of North America Editorial Committee 1993, 1997, 2000, 2002a, 2002b, 2003, 2005, 2006a, 2006b, 2006c; Flowers et al. 1962; Holmgren et al. 2005; Welsh et al. 2003). No effort has been made to identify additional synonyms from

monographs and floras preceding the early 1970s.

## Common name (Appendices A, B, C, and D)

Common names are derived primarily from Welsh and others (2003) and the *Intermountain Flora* (Barneby 1989; Cronquist 1994; Cronquist et al. 1972, 1977, 1984, 1997; Holmgren et al. 2005).

## Life form (Appendices A, B, C, and D)

Life form is based on the stature and growth habit of typical members of a species at reproductive maturity. **Trees** are woody perennials with a single stem or trunk and are typically over 3.5 m tall. **Shrubs** are woody perennials with one to many trunks arising from near the base of the plant and are usually less than 3.5 m tall. **Perennial Forbs (PerF)** are broad-leaved dicots or monocots with non-woody stems (at least above ground level) that live for multiple years. **Annual Forbs (AnnF)** are broad-leaved dicots or monocots with non-woody stems that complete their life cycle (mature, flower, and die) in one year. **Perennial Graminoids (PerG)** are linear-leaved, grass-like monocots that live for multiple years. **Annual Graminoids (AnnG)** are linear-leaved, grass-like monocots that complete their life cycle (mature, flower, and die) in one year. **Ferns and fern-allies (Fern)** are non-flowering vascular plants that reproduce by spores.

## Range (Appendices A, B, and C)

Range represents the distribution of a species within Colorado and the state's contribution to the plant's overall global range. **Disjunct (Disj)** taxa have their Colorado distribution separated from the main, contiguous portion of their range by a gap of more than 800 km (ca 500 miles). **Introduced (Intro)** taxa are those that are not native to Colorado or North America but which have become naturalized (breeding on their own without human assistance). **Local Endemics (LocEn)** are taxa whose entire global range is restricted to an area of less than 16,500 km<sup>2</sup> (ca 6,370 mi<sup>2</sup>, or 1° of latitude × 2° of longitude). **Peripheral (Periph)** taxa have a widespread global distribution but occur at the margin of their contiguous range in Colorado and occupy less than 5% of the state's area (usually only within a few miles of the state border). **Regional Endemics (RegEn)** are taxa with a global range of 16,500–250,000 km<sup>2</sup> (an area about the size of the state of Wyoming). **Sparse** taxa occur widely across Colorado or North America but their range within Colorado is small and patchy, with populations restricted to specialized or uncommon habitats. **Widespread (Wide)** taxa have global ranges exceeding 250,000 km<sup>2</sup> and occur over at least 10% of the state.

## Park status (Appendices A, C, and D)

Park status identifies whether a species is **Present (Pres)**, **Historical (Hist)**, or **Reported (Rep)** for Curecanti NRA. Species are considered Present if a confirmed voucher or

documented observation has been made within Curecanti NRA boundaries since 1970. Historical species have been confirmed with a voucher from the unit but have not been relocated since before 1970. Reported species are listed for the unit in the literature (Flowers et al. 1962; NCPN in ed.; Weber no date), but have not been corroborated with a voucher specimen. Species that may potentially occur in Curecanti NRA are listed in Appendix B. Rejected taxa (listed in Appendix C) have either been falsely reported (**FalsRep**) in the literature based on misidentified herbarium specimens or are considered Questionable (**Ques?**) because park reports are from well outside their known or expected range.

#### **Pop. size (Appendix A)**

Population size refers to the abundance and frequency with which a species occurs within Curecanti NRA. Abundance data are derived from Hogan and others (2005) and NCPN (in ed.). Abundant (**Abun**) taxa have large populations, a broad ecological amplitude (often being dominant in one to several vegetation types), or occur extensively across the unit. Common (**Com**) taxa have large local populations but may be restricted to a single vegetation type or do not occur across the entire recreation area. Uncommon (**Unc**) taxa have low to medium-sized populations, typically have a narrow ecological amplitude (or at least contribute relatively little to total vegetative cover), or have a small range across the unit. Rare taxa usually have low population numbers and are restricted to a single location within the unit. A "?" indicates that population size is unknown.

#### **Source (Appendix A)**

Sources are the evidence for the assigned park status. In the case of Present and Historical taxa, sources are herbarium records (with collector, collection number, and repository) that were corroborated during this study. For reported taxa, the source is a published or unpublished reference citing the species within the unit. Specimen repositories include the Curecanti NRA herbarium (**CURE**) and University of Colorado (**COLO**).

#### **Year doc. (Appendix A)**

Year documented indicates the first year in which a species was confirmed or reported to occur in Curecanti NRA. This year does not necessarily correspond with the date of the voucher specimen cited under Source.

#### **Comments (Appendices A, B, C, and D)**

This column includes additional comments on the status of a particular species in the unit, the place of origin for introduced species, legal status, and other data.

#### **Nativity (Appendix D)**

Nativity indicates whether a species is native to Colorado or Introduced (Intro) based on Weber and Wittmann (2001) and the Flora of North America Editorial Committee (1993, 1997, 2000, 2002a, 2002b, 2003, 2005, 2006a, 2006b, 2006c).

#### **Flower time (Appendix D)**

Flower time refers to the months in which a species is most likely to be in flower. NA indicates a species that is a non-flowering fern or gymnosperm.

#### **Habitat (Appendix D)**

The distribution of species across generalized habitats in Curecanti NRA is indicated by an "X" in the columns Sage through Wet, and is derived from Evenden and others (2002) and NCPN (in ed.). **Sage** = sagebrush/grasslands dominated by big sagebrush, rabbitbrush (*Chrysothamnus* spp.) and various perennial grasses. **PJ-Oak** = woodlands of two-needle pinyon, Utah juniper, and Gambel oak. **Mont For** = montane forests dominated by ponderosa pine and Douglas-fir, **Wet** = Wetlands (including seeps and springs). Additional comments are included for species that are restricted to a particular soil/geologic type or are found mostly in disturbed sites.

**Appendix A. Confirmed, historical, and reported vascular plant taxa of Curecanti National Recreation Area, organized by family and scientific name with taxonomic and biogeographic notes.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Park status	Pop. size	Source	Year doc.	Comments

Onagraceae	<i>Oenothera coronopifolia</i>	hairy-throat evening-prime rose	PerF	Wide	Known from BLCA	
Orobanchaceae	<i>Aphyllon uniflorum</i>	<i>Orobanche uniflora</i> var. <i>occidentalis</i>	naked broomrape	PerF	Wide	Known from BLCA
Plantaginaceae	<i>Plantago patagonica</i>	<i>P. patagonica</i> var. <i>patagonica</i>	woolly plantain	AnnF	Wide	
Poaceae (Gramineae)	<i>Agropyron pectiniforme</i>	<i>A. cristatum</i> var. <i>pectiniforme</i> ; included within <i>A. cristatum</i> (without var.) in <i>Flora of North America</i> vol 24 (2007)	crested wheatgrass	PerG	Intro	Native to Eurasia
Poaceae (Gramineae)	<i>Blepharoneuron tricholepis</i>	pine dropseed	PerG	Wide	Known from BLCA	
Poaceae (Gramineae)	<i>Calamagrostis scopulorum</i>	Jones' reedgrass	PerG	Wide		
Poaceae (Gramineae)	<i>Eremopyrum triticeum</i>	<i>Agropyron triticeum</i>	annual wheatgrass	AnnG	Intro	Native to Asia. Known from BLCA.
Poaceae (Gramineae)	<i>Festuca arundinacea</i>	<i>Schedonorus phoenix</i> , <i>S. arundinaceus</i> , <i>Lolium arundinaceum</i>	tall fescue	PerG	Intro	Native to Europe. Known from BLCA.
Poaceae (Gramineae)	<i>Festuca idahoensis</i>	<i>F. ovina</i> var. <i>ingrata</i>	Idaho fescue	PerG	Wide	Known from BLCA
Poaceae (Gramineae)	<i>Poa bulbosa</i>	bulbous bluegrass	PerG	Intro	Native to Eurasia and Africa. Known from BLCA.	
Poaceae (Gramineae)	<i>Poa glauca</i>	Included in <i>P. arida</i> by some authors	pale-leaf bluegrass	PerG	Wide	Known from BLCA
Poaceae (Gramineae)	<i>Puccinellia airoides</i>	<i>P. nuttalliana</i>	Nuttall's alkali grass	PerG	Wide	
Poaceae (Gramineae)	<i>Thinopyrum ponticum</i>	<i>Elymus elongatus</i> , <i>E. elongatus</i> var. <i>ponticus</i> , <i>Agropyron elongatum</i>	tall wheatgrass	PerG	Intro	Native to Eurasia. Known from BLCA
Polemoniaceae	<i>Microsteris gracilis</i>	<i>M. gracilis</i> var. <i>humilior</i> , <i>Phlox gracilis</i> ssp. <i>humilis</i>	slender phlox	AnnF	Wide	Known from BLCA

**Appendix B. Potential (unconfirmed) taxa of Curecanti National Recreation Area, cont.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Comments
Polemoniaceae	<i>Navarretia breweri</i>	yellow navarretia	AnnF	Wide	Known from BLCA	
Polygonaceae	<i>Acetosella vulgaris</i>	<i>Rumex acetosella</i> <i>Aacetosella vulgaris</i>	sheep sorrel	PerF	Intro	Native to Eurasia. Known from BLCA.
Polygonaceae	<i>Polygonum polycaloides</i> ssp. <i>Kelloggii</i>	<i>P. kelloggii</i> var. <i>kelloggii</i>	Kellogg's knotweed	AnnF	Wide	Known from BLCA
Polygonaceae	<i>Pterogonum alatum</i>	<i>Eriogonum alatum</i>	winged wild buckwheat	PerF	Wide	Known from BLCA
Portulacaceae	<i>Claytonia lanceolata</i>	<i>C. lanceolata</i> var. <i>lanceolata</i> . Some authors include <i>C. rosea</i>	lanceleaf springbeauty	PerF	Wide	Known from BLCA
Ranunculaceae	<i>Myosurus cupulatus</i>		horseshoe mousetail	AnnF	Periph	Known from BLCA
Rosaceae	<i>Petrosphyton caespitosum</i>	<i>Spiraea caespitosa</i>	rock spiraea	PerF	Wide	Known from BLCA
Rubiaceae	<i>Galium bifolium</i>		twin-leaf bedstraw	AnnF	Wide	Known from BLCA
Rubiaceae	<i>Galium spurium</i>	<i>G. aparine</i> var. <i>echinospermum</i>	cleavers	AnnF	Wide	Known from BLCA
Saxifragaceae	<i>Lithophragma glabrum</i>	<i>L. bulbifera</i> , <i>L. glabra</i> , <i>L. glabrum</i> var. <i>ramulosum</i>	fringe-cup woodlandstar	PerF	Wide	Known from BLCA
Scrophulariaceae	<i>Besseya ritteriana</i>		Ritter's coraldrops	PerF	RegEn	
Scrophulariaceae	<i>Pedicularis centranthera</i>		dwarf lousewort	PerF	Wide	Known from BLCA
Scrophulariaceae	<i>Poecilia biloba</i>	<i>Veronica biloba</i>	two-lobe speedwell	AnnF	Intro	Native to Asia. Known from BLCA.
Selaginellaceae	<i>Selaginella mutica</i>	<i>S. mutica</i> var. <i>mutica</i>	blunt-leaf spike-moss	fern	Wide	Known from BLCA
Solanaceae	<i>Lycium barbarum</i>	<i>L. halmifolium</i>	matrimony-vine	Shrub	Intro	Native to Eurasia. Known from BLCA
Ulmaceae (Celtidaceae)	<i>Celtis reticulata</i>	<i>C. laevigata</i> var. <i>reticulata</i>	netleaf hackberry	Tree	Wide	Known from BLCA
Valerianaceae	<i>Valeriana capitata</i> var. <i>acutiloba</i>	<i>V. acutiloba</i> var. <i>acutiloba</i> ; some authors include var. <i>pubicarpa</i>	mountain valerian	PerF	Wide	Type locality of <i>V. acutiloba</i> is Sangre de Cristo Range, CO (Ryderberg & Vreeland 5576 NY). Known from BLCA.
Violaceae	<i>Viola bibernata</i>	<i>V. sheltonii</i>	Shelton's violet	PerF	Disj	Known from BLCA
Violaceae	<i>Viola vallicola</i>	<i>V. nuttallii</i> var. <i>vallicola</i> , <i>V. vallicola</i> var. <i>vallicola</i>	valley violet	PerF	Wide	Known from BLCA

**Appendix B. Potential (unconfirmed) taxa of Curecanti National Recreation Area, cont.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Comments
Viscaceae	<i>Phoradendron juniperinum</i>		juniper mistletoe	PerF	Wide	Typically parasitic on <i>Juniperus osteosperma</i> . Known from BLCA.
Zannichelliaceae	<i>Zannichellia palustris</i>		horned pondweed	PerF	Wide	Known from BLCA

The vascular plant species shown in this table are known from the vicinity of Curecanti National Recreation Area in Gunnison and Montrose counties, Colorado, but have not previously been reported or confirmed for the recreation area. Species on this list are derived from a checklist of potential species developed by Hogan et al. (2005) and Weber (no date) for Curecanti National Recreation Area's NPSpecies database.

**Appendix C. Rejected (falsely reported or questionable) vascular plant taxa of Curecanti National Recreation Area.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Park status	Comments
Agavaceae	<i>Yucca angustissima</i>	<i>Y. angustissima</i> var. <i>angustissima</i>	narrowleaved yucca	Shrub	RegEn	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.
Alsinaceae (Caryophyllaceae)	<i>Stellaria crassifolia</i>		thick-leaved starwort	PerF	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Apiaceae (Umbelliferae)	<i>Cymopterus multinervatus</i>		purple-nerved spring-parsley	PerF	Wide	FalsRep	Reports from CURE based on misidentified specimens of <i>C. constancei</i> . Also cited by NCPN (in ed.).
Apiaceae (Umbelliferae)	<i>Cymopterus purpurascens</i>		basin white-cup spring-parsley	PerF	Wide	FalsRep	Reports from CURE based on misidentified specimens of <i>C. constancei</i> .
Aspleniaceae	<i>Asplenium trichomanes</i>	<i>A. trichomanes</i> var. <i>trichomanes</i>	maidenhair spleenwort	fern	Periph	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Asteraceae (Compositae)	<i>Agoseris heterophylla</i>	<i>A. heterophylla</i> var. <i>heterophylla</i>	annual agoseris	AnnF	Periph	Ques?	Reported by NCPN (in ed.), but CURE is well outside the expected range of this species.
Asteraceae (Compositae)	<i>Arnica fulgens</i>		orange arnica	PerF	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.
Asteraceae (Compositae)	<i>Artemisia michauxiana</i>		Michaux's wormwood	PerF	Wide	Ques?	Reported by Flowers et al. (1962) and NCPN (in ed.), but CURE lacks likely habitat.
Asteraceae (Compositae)	<i>Chrysothamnus nauseosus</i> ssp. <i>leiispernum</i>	<i>Ericameria nauseosa</i> var. <i>leiisperma</i>	smoothseed rabbitbrush	Shrub	RegEn	FalsRep	Based on Weber (no date) previous reports from CURE are all ssp. <i>graveolens</i> .
Asteraceae (Compositae)	<i>Chrysothamnus nauseosus</i> ssp. <i>nauseosus</i>	<i>Ericameria nauseosa</i> var. <i>nauseosa</i> . Includes var. <i>hololeucus</i>	rubber rabbitbrush	Shrub	Wide	FalsRep	Based on Weber (no date) previous reports from CURE are all ssp. <i>graveolens</i> .
Asteraceae (Compositae)	<i>Erigeron nematophyllum</i>		needle-leaf fleabane	PerF	RegEn	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Asteraceae (Compositae)	<i>Erigeron philadelphicus</i>		Philadelphia fleabane	PerF	Periph	FalsRep	Report from Flowers et al. (1962) based on a misidentified specimen of <i>E. glabellus</i> .

**Appendix C. Rejected (falsely reported or questionable) taxa of Curecanti National Recreation Area, cont.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Park status	Comments
Asteraceae (Compositae)	<i>Grindelia arizonica</i> var. <i>stenophylla</i>		Arizona gumweed	PerF	Wide	Ques?	Reported by NCPN (in ed.), but CURE is outside the expected range of this species.
Asteraceae (Compositae)	<i>Gutierrezia microcephala</i>		thread snakeweed	Shrub	Periph	FalsRep	Reports from CURE based on misidentified specimens of <i>G. sarothrae</i> .
Asteraceae (Compositae)	<i>Packera tridenticulata</i>	<i>Senecio tridenticulatus</i>	three-tooth groundsel	PerF	Wide	Ques?	Reported by NCPN (in ed.), but CURE specimens are probably <i>P. neomexicana</i> .
Asteraceae (Compositae)	<i>Solidago nana</i>		baby goldenrod	PerF	Wide	Ques?	Reported by NCPN (in ed.), but CURE is outside the expected range of this species.
Asteraceae (Compositae)	<i>Solidago nemoralis</i>		gray goldenrod	PerF	Periph	Ques?	Reported by NCPN (in ed.), but CURE specimens are probably <i>S. velutina</i> .
Asteraceae (Compositae)	<i>Stenotus acaulis</i>	<i>Haplopappus acaulis</i> var. <i>acaulis</i> , <i>S. acaulis</i> var. <i>acaulis</i>	stemless goldenweed	PerF	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.
Asteraceae (Compositae)	<i>Townsendia strigosa</i>	<i>T. strigosa</i> var. <i>strigosa</i>	hairy townsendia	PerF	RegEn	Ques?	Reported by NCPN (in ed.), but CURE specimens are probably <i>T. incana</i> .
Boraginaceae	<i>Amsinckia menziesii</i>	<i>A. rugosa</i>	Menzies' fiddleneck	AnnF	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.
Boraginaceae	<i>Oreocarya sericea</i>	<i>Cryptantha sericea</i>	silky cryptanth	PerF	RegEn	Ques?	Reported by NCPN (in ed.), but CURE is outside the expected range of this species.
Brassicaceae (Cruciferae)	<i>Lepidium virginicum</i>	<i>L. virginicum</i> var. <i>medium</i>	poor-man's pepperwort	AnnF	Sparse	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>L. densiflorum</i> .
Brassicaceae (Cruciferae)	<i>Rorippa curvisiliqua</i>	<i>Radicula lyra</i>	curve-pod yellowcress	AnnF	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is well outside the expected range of this species (not reported for Colorado).
Brassicaceae (Cruciferae)	<i>Schoenocrambe linearifolia</i>	<i>Hesperidanthus linearifolius</i>	slim-leaf plains- mustard	PerF	Wide	Ques?	Reported by NCPN (in ed.), but CURE specimens are probably <i>S. linearifolia</i> .
Cactaceae	<i>Coryphantha</i> sp.	pincushion cactus	PerF	Wide	FalsRep		Based on Weber (no date) previous reports from CURE are probably <i>Pediocactus simpsonii</i> .

**Appendix C. Rejected (falsely reported or questionable) taxa of Curecanti National/Recreation Area, cont.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Park status	Comments
Cactaceae	<i>Echinocereus coccineus</i>	scarlet hedgehog cactus		PerF	Periph	Ques?	Reported for CURE, but recreation area is well outside the expected range of this species (Weber, no date).
Caprifoliaceae	<i>Lonicera fragrantissima</i>	fragrant honeysuckle		Shrub	Intro	Ques?	Reported by Flowers et al. (1962) but not otherwise documented in Colorado according to Weber and Wittmann (2001).
Caprifoliaceae	<i>Symporicarpos albus</i>	common snowberry		Shrub	Sparse	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>S. rotundifolius</i> .
Caprifoliaceae	<i>Symporicarpos longiflorus</i>	long-flower snowberry		Shrub	Periph	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>S. rotundifolius</i> .
Chenopodiaceae	<i>Atriplex prostrata</i>	<i>A. hastata</i>	hastate orache	AnnF	Sparse	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.
Crassulaceae	<i>Sedum acre</i>		mossy stonecrop	PerF	Intro	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date). Native to Eurasia.
Crassulaceae	<i>Sedum stenopetalum</i>	worm-leaf stonecrop		PerF	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>Amerosedum lanceolatum</i> .
Cyperaceae	<i>Carex bebbii</i>	Bebb's sedge	PerG	Wide	Ques?	Reported by NCPN (in ed.), but CURE lacks likely habitat.	
Cyperaceae	<i>Carex egglesonii</i>	Eggleton's sedge	PerG	RegEn	Ques?	Reported by NCPN (in ed.), but CURE lacks likely habitat.	
Cyperaceae	<i>Carex paysonis</i>	Payson's sedge	PerG	Wide	Ques?	Reported for CURE, but this species is not known to occur in Colorado (Weber, no date).	
Cyperaceae	<i>Carex sartwellii</i>	<i>C. sartwellii</i> var. <i>sartwellii</i>	Sartwell's sedge	PerG	Sparse	Ques?	Reported by Flowers et al. (1962) but suitable habitat is not present in CURE.

**Appendix C. Rejected (falsely reported or questionable) taxa of Curecanti National Recreation Area, cont.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Park status	Comments
Cyperaceae	<i>Schoenoplectus americanus</i>	<i>Scirpus americanus</i>	Chairmaker's clubrush	PerG	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>Schoenoplectus pungens</i> .
Elaeagnaceae	<i>Elaeagnus commutatus</i>		silverberry	Shrub	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.
Fabaceae (Leguminosae)	<i>Astragalus parryi</i>		Parry's milkvetch	PerF	RegEn	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Fabaceae (Leguminosae)	<i>Astragalus purshii</i>	<i>A. purshii</i> var. <i>purshii</i>	Pursh's milkvetch	PerF	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Fabaceae (Leguminosae)	<i>Lathyrus brachycalyx</i> var. <i>zionis</i>		Zion milkvetch	PerF	RegEn	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>L. eucosmus</i> .
Fabaceae (Leguminosae)	<i>Lupinus formosus</i> var. <i>robustus</i>	<i>L. greenei</i>	summer lupine	PerF	RegEn	Ques?	Reported by Flowers et al. (1962) as <i>L. greenei</i> , but CURE is well outside the expected range of this species (endemic to California).
Grossulariaceae (Saxifragaceae)	<i>Ribes coloradense</i>		Colorado currant	Shrub	RegEn	FalsRep	Reported for CURE based on a misidentified specimen of <i>R. wolfii</i> .
Iridaceae	<i>Sisyrinchium demissum</i>		blue-eyed grass	PerG	Sparse	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>S. montanum</i> .
Juncaceae	<i>Juncus ensifolius</i>		mountain rush	PerG	Wide	Ques?	Reported by NCPN (in ed.), but CURE is outside the expected range of this species.
Juncaceae	<i>Juncus parryi</i>		Parry's rush	PerG	Wide	Ques?	Reported by NCPN (in ed.), but CURE lacks likely habitat.
Liliaceae	<i>Fritillaria lanceolata</i>		lanceolate checker-lily	PerF	Wide	Ques?	Reported for CURE, but this species is not known to occur in Colorado (Weber, no date).
Liliaceae	<i>Lilium philadelphicum</i>		wood lily	PerF	Sparse	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).

**Appendix C. Rejected (falsely reported or questionable) taxa of Curecanti National/Recreation Area, cont.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Park status	Comments
Loasaceae	<i>Menzelia pumila</i>	golden blazing-star	PerF	RegEn	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>Nuttallia rusbyi</i> .	
Onagraceae	<i>Chamerion subdentatum</i>	<i>Epilobium latifolium</i> , <i>C. latifolium</i>	broad-leaf fireweed	PerF	Wide	Ques?	Reported by Flowers et al. (1962), but CURE lacks likely habitat.
Orchidaceae	<i>Coeloglossum viride</i> ssp. <i>bracteatum</i>	<i>Coeloglossum viride</i> var. <i>virescens</i> , <i>Habenaria viridis</i> var. <i>braceata</i> , <i>Dactylorhiza viridis</i>	long-bract bog- orchid	PerF	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Orobanchaceae	<i>Orobanche ludoviciana</i>	<i>O. ludoviciana</i> var. <i>ludoviciana</i> , <i>O. cooperi</i>	Cooper's broomrape	PerF	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Papaveraceae	<i>Argemone polyanthemos</i>	<i>A. intermedia</i>	white prickly- poppy	PerF	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.
Poaceae (Gramineae)	<i>Achnatherum robustum</i>	<i>Stipa robusta</i>	sleepy needlegrass	PerG	Wide	Ques?	Reported by NCPN (in ed.), but CURE is outside the expected range of this species.
Poaceae (Gramineae)	<i>Bromopsis pumpelliana</i>	<i>Bromus inermis</i> var. <i>pumpellianus</i> , <i>Bromus inermis</i> var. <i>purpurascens</i>	pumpelly brome	PerG	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Poaceae (Gramineae)	<i>Leymus condensatus</i>	<i>Elymus condensatus</i>	giant ryegrass	PerG	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Record probably based on <i>L. cinereus</i> .
Poaceae (Gramineae)	<i>Muhlenbergia filiformis</i>		pullup muhly	AnnG	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.
Polemoniaceae	<i>Gilia haydenii</i>	<i>Aliciella haydenii</i>	San Juan gilia	PerF	RegEn	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date). Type locality is "plains of the San Juan River in S Colorado or adjacent Utah" (Brandegee s.n.).

**Appendix C. Rejected (falsely reported or questionable) taxa of Curecanti National Recreation Area, cont.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Park status	Comments
Polemoniaceae	<i>Ipomopsis gunnisonii</i>	<i>Gilia gunnisonii</i>	Gunnison's gilia	AnnF	RegEn	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Polemoniaceae	<i>Phlox caespitosa</i>		clustered phlox	PerF	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is well outside the expected range of this species (known from the Pacific Northwest). Report probably based on <i>P. hoodii</i> .
Polemoniaceae	<i>Phlox condensata</i>		dwarf phlox	PerF	RegEn	Ques?	Reported by NCPN (in ed.), but CURE lacks likely habitat.
Polygonaceae	<i>Eriogonum acule</i>		single-stemmed wild buckwheat	PerF	RegEn	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date), CO BLM: Sensitive
Polygonaceae	<i>Eriogonum brevicaule</i>	<i>E. campanulatum</i>	shortstem wild buckwheat	PerF	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.
Polygonaceae	<i>Eriogonum coloradense</i>		Colorado wild buckwheat	PerF	LocEn	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date), CO BLM: Sensitive
Polygonaceae	<i>Eriogonum hookeri</i>		Hooker's wild buckwheat	AnnF	Wide	Ques?	Reported by NCPN (in ed.), but CURE is outside the expected range of this species.
Polygonaceae	<i>Eriogonum leptocladon</i>		sand wild buckwheat	Shrub	RegEn	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Polygonaceae	<i>Eriogonum umbellatum</i> var. <i>subaridum</i>		arid wild buckwheat	PerF	Periph	Ques?	Reported by NCPN (in ed.), but CURE is outside the expected range of this species.
Polygonaceae	<i>Polygonum minimum</i>		broadleaf knotweed	AnnF	Sparse	Ques?	Reported by NCPN (in ed.), but CURE is outside the expected range of this species.
Rosaceae	<i>Drymocallis glandulosa</i>	<i>Potentilla glandulosa</i>	sticky cinquefoil	PerF	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>D. arguta</i> .

**Appendix C. Rejected (falsely reported or questionable) taxa of Curecanti National/Recreation Area, cont.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Park status	Comments
Rosaceae	<i>Physocarpus alternans</i>	dwarf ninebark	Shrub	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report may be based on <i>P. monogynus</i> .	
Rosaceae	<i>Physocarpus malvaceus</i>	mallow-leaved ninebark	Shrub	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report may be based on <i>P. monogynus</i> .	
Rosaceae	<i>Potentilla diversifolia</i>	wedgeleaf cinquefoil	PerF	Wide	Ques?	Reported by Flowers et al. (1962) and NCPN (in ed.), but CURE lacks likely habitat.	
Salicaceae	<i>Salix irrorata</i>	bluestem willow	Shrub	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).	
Salicaceae	<i>Salix lutea</i>	<i>S. eriocephala</i> var. <i>watsonii</i> , <i>S. rigida</i> var. <i>watsonii</i>	yellow willow	Shrub	Wide	Ques?	Report by Flowers et al. (1962), but specimen has not been confirmed and is considered unlikely by Weber (no date).
Salicaceae	<i>Salix planifolia</i>	<i>S. phyllicifolia</i> , includes vars. <i>monica</i> and <i>planifolia</i>	planeleaf willow	Shrub	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Salicaceae	<i>Salix wolffii</i>	Includes vars. <i>idahoensis</i> and <i>wolffii</i>	wolf willow	Shrub	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).
Scrophulariaceae	<i>Castilleja hispida</i>	harsh paintbrush	PerF	Wide	Ques?	Report by Flowers et al. (1962) but CURE is well outside the expected range of this species (not known from CO).	
Scrophulariaceae	<i>Castilleja integrifolia</i>	entire-leaved paintbrush	PerF	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).	
Scrophulariaceae	<i>Castilleja lineata</i>	marsh-meadow paintbrush	PerF	RegEn	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.	
Scrophulariaceae	<i>Castilleja rhexifolia</i>	rhexia-leaved paintbrush	PerF	Wide	Ques?	Reported by NCPN (in ed.), but CURE lacks likely habitat.	

**Appendix C. Rejected (falsely reported or questionable) taxa of Curecanti National Recreation Area, cont.**

Family	Species name	Synonyms/ Taxonomic notes	Common name	Life Form	Range	Park status	Comments
Scrophulariaceae	<i>Penstemon comarrhenus</i>	dusty penstemmon	PerF	RegEn	Ques?	Report for CURE by Flowers et al. (1962) but specimen has not been confirmed and is considered unlikely (Weber, no date).	
Scrophulariaceae	<i>Penstemon linarioides</i> ssp. <i>coloradoensis</i>	Colorado penstemmon	PerF	RegEn	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species.	
Scrophulariaceae	<i>Veronica scutellata</i>	grass-leaved speedwell	PerF	Periph	Ques?	Reported by NCPN (in ed.), but CURE is well outside the expected range of this species.	
Solanaceae	<i>Nicotiana attenuata</i>	coyote tobacco	PerF	Wide	Ques?	Report from CURE has not been confirmed and is considered unlikely (Weber, no date).	
Typhaceae	<i>Typha angustifolia</i>	narrowleaf cattail	PerG	Wide	Ques?	Reported by Flowers et al. (1962) but CURE is outside the expected range of this species. Report probably based on <i>T. domingensis</i> .	

The vascular plant species shown in this table have been reported for Curecanti National Recreation Area from published and unpublished literature (Flowers et al. 1962; NCPN, in ed.; Weber no date) or from herbarium specimens, but are now believed to be erroneous because of misidentifications (False Reports or FalsRep) or because the recreation area is well outside the known or expected range of the species (Questionable or Ques?).

**Appendix D. Confirmed, historical, and reported vascular plant taxa of Curecanti National Recreation Area, organized by life form with ecological notes.**
