Shenandoah National Park

National Park Service
U.S. Department of the Interior

Full Species List of Fish

Forty-one species of fish have been recorded in park waters. The mountain streams of the park are one of the last protected strongholds of the native eastern brook trout (*Salvelinus fontinalis*) in Virginia. The cool forested slopes give rise to clear cold streams, providing excellent habitat for the species. Of the approximately 90 small streams in the park, most contain brook trout. Other common species known to occur in the park include blacknose and longnose dace (*Rhinichthys atratulus, Rhinichthys cataractae*), mottled sculpin (*Cottus bairdii*), bluehead chub (*Nocomis leptocephalus*), and fantail darter (*Etheostoma flabellare*).

suitable habitat for brook trout and possibly extirpate populations

in some smaller low elevation streams.

This checklist was compiled on March 10, 2015 using data exported from the National Park Service NPSpecies database. The database can be accessed at https://irma.nps.gov/NPSpecies/. Here you will find search tools that make it possible to create updated or customized lists. This checklist and others is found at https://irma.nps.gov/NPSpecies/Search/SpeciesList/SHEN. Lists are currently available for the following: mammals, birds, fish, reptiles, amphibians, butterflies, plants (complete list), trees and shrubs, wildflowers, ferns, and grasses. Please be advised that Latin scientific names often change as a result of new research; therefore, scientific names used here may not reflect the most current accepted nomenclature.

Rhinishthys atratulus

Salvelinus fontinalis

Key

	Code	Term	Definition			
Occurrence (Occ)		Present	Species occurs in park; current, reliable evidence available.			
PP	PP	Probably Present	High confidence species occurs in park but current, verified evidence needed.			
	Un	Unconfirmed	Species is attributed to park but evidence is weak or absent.			
	NP	Not In Park	Species is not known to occur in park.			
Occurrence Tags	А	Adjacent	Species is known to occur in areas near to or contiguous with park boundaries.			
FR False Report H Historical	FR	False Report	Species was reported to occur within the park, but current evidence indicates the report was based on misidentification, a taxonomic concept no longer accepted, or other similar problem of error or interpretation.			
	Historical	Species' historical occurrence in park is documented. Assigned based on judgment as opposed to determination based on age of the most recent evidence.				
Abundance (Abd)	A	Abundant	Animals: May be seen daily, in suitable habitat and season, and counted in relatively large numbers. Plants, Chromista, Protozoa, and Fungi: Large number of individuals; wide ecological amplitude or occurring in habitats covering a large portion of the park			

National Park Service U.S. Department of the Interior

Species List for Shenandoah National Park (SHEN)

This represents information currently in the NPSpecies data system at the date and time the list was generated. Records are continually being added or updated by National Park Service staff. There is a key with definitions at the bottom of the report. To report an error or make a suggestion, go to https://irma.nps.gov/npspecies/suggest.

Abundance (Abd)	С	Common	Animals: May be seen daily, in suitable habitat and season, but not in large numbers. Plants, Chromista, Protozoa, and Fungi: Large numbers of individuals predictably occurring in commonly encountered habitats but not those covering a large portion of the park			
	Uc	Uncommon	Animals: Likely to be seen monthly in appropriate habitat and season. May be locally common. Plants, Chromista, Protozoa, and Fungi: Few to moderate numbers of individuals; occurring either sporadically in commonly encountered habitats or in uncommon habitats			
	R	Rare	Animals: Present, but usually seen only a few times each year. Plants, Chromista, Protozoa, and Fungi: Few individuals, usually restricted to small areas of rare habitat			
	О	Occasional	Animals: Occurs in the park at least once every few years, varying in numbers, but not necessarily every year. Plants, Chromista, Protozoa, and Fungi: Abundance variable from year to year (e.g., desert plants)			
	U	Unknown	Abundance unknown			
Nativeness (Nat)	N	Native	Species naturally occurring in park or region.			
Nn Non-native		Non-native	Species occurring on park lands as a result of deliberate or accidental human activities.			
	U	Unknown	Nativeness status is unknown or ambiguous.			
Nativeness Tags	R	Restoration	Also refers to reintroductions. Native species that has been extirpated or substantially diminished from the park as a result of human-induced change, and that has been or is in the process of being restored.			
	С	Cultivated	Species has been introduced or is maintained as part of the park's mission, significance, or cultural landscape (e.g., orchards, crops, fields)			
	I	Invasive	Non-native species whose introduction is likely to cause economic or environmental harm.			
	N	Noxious	Designation by a governmental authority. Species grows aggressively and has broad environmental tolerance that allows it to establish in many locations.			
Management Tags EC		Exploitation Concern	Species is considered a target for collection, poaching, commercial harvesting, or other non-permitted or exploitative activities.			
	MP	Management Priority	Species warrants particular management attention as determined by park management staff.			
Seasonality Tags	В	Breeder	Population reproduces in the park.			
	R	Resident	A significant population is maintained in the park but does not breed within park boundaries.			
	M	Migratory	Species occurs in the park only while in transition between breeding and wintering grounds.			
	S	Summer	Typically spending only summer months in the park.			
	W	Winter	Typically spending only winter months in the park.			
	V	Vagrant	Park is outside of species' usual range.
