GENERAL INFORMATION

DELIVERY

PLEASE CHECK YOUR GOODS CAREFULLY BEFORE SIGNING FOR THEM. Sometimes we make mistakes on your order by shipping paper of an incorrect size, weight, color, finish, etc. We sincerely regret these errors and are committed to correcting them when made aware.

Your signed receipt for shipment in good condition constitutes delivery and relieves us of further obligation. You accept full responsibility for a shipping error if you keep and use paper or other product sent in error. We cannot be held liable for stock which has been cut or printed by customer.

When dealing with transportation companies, you should require the transportation agent to note any shortage or damage on the freight bill or other delivery papers. If this is done, no difficulty should be experienced in collecting legitimate claims. If you give the transportation company a clear receipt for damaged goods or short shipments, you assume responsibility for damage or loss. We are willing at all times to assist our customers with collection of claims.

MERCHANDISE RETURNS

No items may be returned without our permission. Our drivers are instructed not to accept stock for return without a pick-up ticket. This is for your protection as well as ours. We will normally accept returns of reasonable quantities of stock items if not originally cut and in the same condition – unprinted, undamaged, unopened – as when delivered. Credit will be issued less a minimum re-handling charge of \$50.00 per line item. Re-handling charges for other returns, particularly items ordered expressly for you from a manufacturer will be negotiated. Any request for return of merchandise must be made within 30 days of the delivery.

Prices and Stock Items are subject to change without notice.

FORMULA FOR FINDING REAM WEIGHT OF SPECIAL SIZES

To find the approximate ream weight of any special size, multiply sheet length by width, thus determining the square inch area of the special size sheet. Multiply this area by the weight factor shown in the tables below.

BOOK PAPER

Ream of 500 sheets.

Substances (25 x 38 basis).

30	Multiply sq. in. area of special size by .03158
35	Multiply sq. in. area of special size by .03684
40	Multiply sq. in. area of special size by .04219
45	Multiply sq. in. area of special size by .04737
50	Multiply sq. in. area of special size by .05263
60	Multiply sq. in. area of special size by .06316
70	Multiply sq. in. area of special size by .07367
80	Multiply sq. in. area of special size by .08421
100	Multiply sq. in. area of special size by .10526
120	Multiply sq. in. area of special size by .12631

BOND AND WRITING

Ream of 500 sheets.

Substances (17 x 22 basis).

13	Multiply sq. in. area of special size by .0347
16	Multiply sq. in. area of special size by .0428
20	Multiply sq. in. area of special size by .0535
24	Multiply sq. in. area of special size by .0642
28	Multiply sq. in. area of special size by .0749
32	Multiply sq. in. area of special size by .0856

COVER PAPER

Ream of 500 sheets.

Substances (20 x 26 basis).

25	Multiply sq. in. area of special size by .0480
35	Multiply sq. in. area of special size by .0673
40	Multiply sq. in. area of special size by .0769
50	Multiply sq. in. area of special size by .0961
65	Multiply sq. in. area of special size by .1250
80	Multiply sq. in. area of special size by .1539
90	Multiply sq. in. area of special size by .1730

BRISTOL AND POSTCARD

Ream of 500 sheets.

Substances (22½ x 28½ basis).

91	Multiply sq. in. area of special size by .142
100	Multiply sq. in. area of special size by .156
105	Multiply sq. in. area of special size by .164
115	Multiply sq. in. area of special size by .180
120	Multiply sq. in. area of special size by .187
130	Multiply sq. in. area of special size by .203
140	Multiply sq. in. area of special size by .218

Index And General Information

ESTIMATING ROLL WEIGHTS

To find the approximate weight of a roll, multiply roll diameter squared minus core diameter squared by roll width and appropriate factor.

FORMULA

$(\text{Roll Diameter}^2 - \text{Core Diameter}^2) \times \text{Roll Width} \times \text{Factor} = \text{Approx. Weight of Roll}$

Example

Find weight of a roll of offset paper in a 40" diameter, 3" core, 35" width.
 $(40 \times 40 - 3 \times 3) \times 35 \times .022 = 1225 \text{ lbs.}$

Factors

Antique	.018
Vellum Offset	.020
Bond	.021
Standard Offset	.022
Vellum Bristol	.022
Tag and Index	.026
C1S Paper	.030
C2S Paper	.033

ESTIMATING LINEAR FOOTAGE PER ROLL

To find the approximate linear footage in a roll of paper, multiply roll weight by the square inches of basis size. Then divide by the sum representing the width of the roll multiplied by the substance of basis weight, times 12.

FORMULA

$\frac{\text{Roll Wgt.} \times \text{Area of Basic Size} \times 500}{\text{Basis Wgt.} \times \text{Roll Width} \times 12} = \text{Approx. Linear Footage}$

Example

Find the footage of a roll of basis 50 lb. Offset Paper, 26" wide and weighing 100 lbs.
 $\frac{100 \times 25 \times 38 \times 500}{50 \times 26 \times 12} = 3044 \text{ Linear Feet}$

FRACTION-DECIMAL EQUIVALENTS

STRATHMORE WATERMARK CONFIGURATIONS

Head-to-Head

In this configuration, the head of one watermark reads to the head of the watermark above, which is upside down, on the master sheet. Therefore, on the master sheet half of the watermarks are readable while the other half appear upside down. The watermark dies run *around* the dandy roll, imprinting the watermark along the paper grain, as you can see in the diagram. The result: master sheets watermarked in the head-to-head configuration will be watermarked along the grain direction of the paper (lg,hh).

Long Grain (lg/hh)

← Grain Direction →

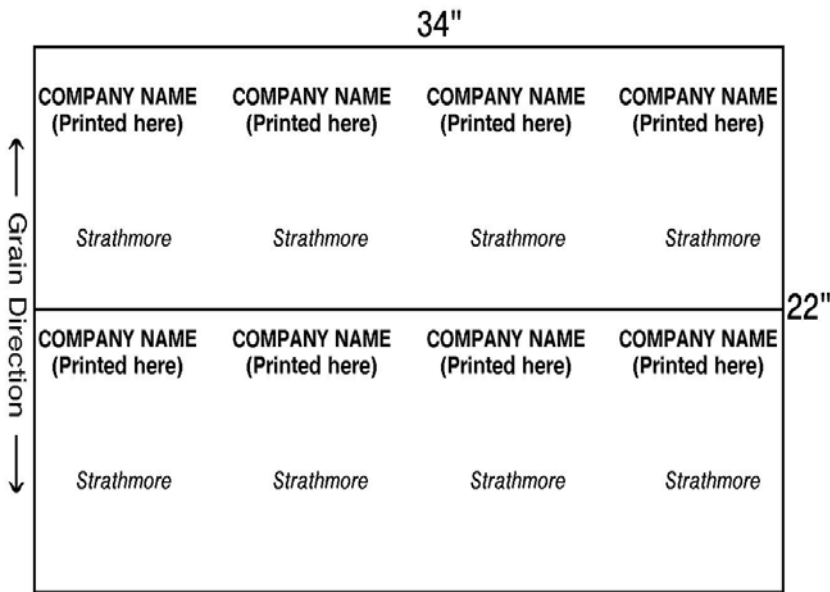

STRATHMORE WATERMARK CONFIGURATIONS

Head-to-Foot

The term head-to-foot configuration, means that on the master sheet the head, or top of the watermark, reads to the bottom, or foot, of the watermark above. Therefore, on the master sheet all watermarks read correctly from one side of the sheet. As you can see in the diagram, the watermark dies run across the dandy roll, imprinting the watermark perpendicular to the paper grain. The result: master sheets watermarked in the head-to-foot configuration will be watermarked along the grain direction of the paper (cg,hf).

Cross Grain (cg/hf)

ENVELOPE STYLES

ANATOMY OF AN ENVELOPE

A standard diagonal seam envelope is the most common style envelope in use today. Its parts are basically the same regardless of its size or name. The corners, flaps, shoulders, throat, seal and seams may vary slightly in size, curvature or shape in different makes and models.

To help you understand the terms used by envelope manufactures, we have illustrated a basic diagonal seam envelope showing the most common terms applied to its parts, these terms are used regardless of its style — diagonal, side, or center seam — open end or open side.

Back view of standard commercial diagonal seam envelope.
