

Herbarium specimens of Upendra Nath Kanjilal at Cotton University

Chetia T., Mehmud S. & H. Roy*

Department of Botany, Cotton University, Panbazar, Guwahati, Assam – 781 001, India

*E-mail: dr.himuroy@gmail.com

Abstract: Upendra Nath Kanjilal, a renowned botanist authored the “Flora of Assam”. Here we examined and enlisted his 1104 herbarium specimens housed at the herbarium of the Department of Botany, Cotton University, which represent a total of ~815 taxa belonging to ~433 genera and tentatively 93 plant families. The gymnosperms and monocots were each represented by one family. The plants were collected from five states of Northeast India and a few from Sylhet of Bangladesh.

Keywords: Assam, Bangladesh, Collections, India.

Introduction

A floristic account on angiosperms and gymnosperms of the then undivided Assam is reflected in the “Flora of Assam” (Kanjilal *et al.*, 1934–1940) which covers Northeast India and Sylhet district of present Bangladesh (Barooah & Ahmed, 2014). The author of this Flora *i.e.* Upendra Nath Kanjilal (U.N. Kanjilal) was the Assistant Conservator of Forests who started plant collections from various parts of Assam (Barbhuiya & Gogoi, 2010). Unfortunately, he died in 1928 while working on the Flora and the unfinished work was completed by his son P.C. Kanjilal (Barbhuiya & Gogoi, 2010; Sikarwar, 2020) and others *viz.*, C.S. Purkayastha, N.L. Bor, A. Das, Dinanath Paul, B.B. Shyam, R.N. De, H.K. Dastider and S.R. Sharma (Barbhuiya & Gogoi, 2010). Upendra Nath Kanjilal made a fruitful contribution to the floristic studies of the region by publishing the “Flora of Assam” in

five volumes which comprises 131 dicotyledonous families, four gymnosperm families and one monocotyledon family. For arrangement of the families, Kanjilal *et al.* (1934–1940) followed mainly Bentham and Hooker’s system of classification with certain modifications.

In plant systematics, herbarium information plays an important role (Haridasan *et al.*, 2018) for research in fields like ethnobotany, monographic studies, conservation and other research (Arora, 1994). In the recent past, a number of herbarium studies have been carried out to incorporate significant collections (*e.g.* Barbhuiya & Gogoi, 2010; Espinosa & López, 2013; García-Sánchez & Cabezudo, 2013; Verma *et al.*, 2013; Nerlekar, 2016; Nualart *et al.*, 2017; Radji *et al.*, 2018; Márquez-García *et al.*, 2021). A good number of herbarium specimens collected by U.N. Kanjilal are well preserved at the herbarium of the Department of Botany, Cotton University. In this study, we prepared a database by enlisting these herbarium specimens which were collected from Arunachal Pradesh, Assam, Meghalaya, Mizoram and Nagaland of Northeast India and also from Sylhet of Bangladesh. The present study was undertaken to enlist the collections of this great Indian botanist which will help in the preparation of a complete database to ultimately incorporate all his scattered collections housed in different herbaria.

Materials and Methods

All the herbarium specimens collected by U.N. Kanjilal housed at the herbarium of the Department of Botany, Cotton University were examined. The

details of the specimens are provided in Appendix-1 including the name of the family, scientific name, place of collections, elevation (feet), date (dd.mm.yyyy) and collection number. In the present manuscript, the arrangement of the names of the families and other taxa is based on Kanjilal *et al.* (1934–1940). The correct name of the taxa are provided as per “The Plant List” (<https://www.theplantlist.org>) and/or “Plants of the World Online” (<https://powo.science.kew.org>). The names of the taxa as written on the voucher specimens are also provided, and where applicable, the accepted names are included in brackets.

Results and Discussion

A total of 1104 voucher specimens were examined which represented ~815 taxa belonging to ~433 genera and 93 families. The herbarium label titled as “Flora of Assam” and the collector’s name appeared as “Upendranath Kanjilal”. A total of 528 specimens were collected from Assam, 524 from Meghalaya; 28 from the N.E. Frontier representing places of both Arunachal Pradesh and Assam. Nagaland and Mizoram were represented by only four collections each respectively, while 14 collections were from Sylhet of Bangladesh and two collections were without locations. Kanjilal’s “Flora of Assam” represented the Gramineae among monocots (Kanjilal *et al.*, 1934–1940). But we examined four voucher specimens of Kanjilal belonging to the family Orchidaceae. It was interesting to note other collections of Kanjilal belonging to monocots were also examined and are reported here *e.g.* Araceae, Liliaceae (Barbhuiya & Gogoi, 2010), Arecaceae (Barbhuiya & Gogoi, 2010; Mehmud & Roy, 2021), Zingiberaceae (Rao & Verma, 1969). The families (genus: species/ infraspecific taxa) covered by U.K. Kanjilal are as follows, with the number of genera and species in brackets (genera : species).

Dicotyledons

Ranunculaceae (05:13); Dilleniaceae (02:03); Magnoliaceae (05:17); Annonaceae (10:17);

Menispermaceae (05:05); Cappariaceae (03:06); Flacourtiaceae (04:05); Pittosporaceae (01:01); Polygalaceae (03:03); Caryophyllaceae (01:01); Hypericaceae (01:02); Clusiaceae (03:06); Ternstroemiaceae (07:15); Dipterocarpaceae (03:04); Malvaceae (04:04); Sterculiaceae (06:12); Tiliaceae (03:09); Elaeocarpaceae (02:09); Linaceae (03:03); Malpighiaceae (02:05); Geraniaceae (01:01); Oxalidaceae (01:01); Balsaminaceae (01:01); Rutaceae (12:21); Simaroubaceae (02:03); Ochnaceae (01:01); Meliaceae (10:17); Olacaceae (05:05); Icacinaceae (03:03); Aquifoliaceae (01:07); Celastraceae (05:11); Hippocrateaceae (04:05); Rhamnaceae (07:10); Vitaceae (01:01); Staphyleaceae (01:01); Aceraceae (01:03); Sapindaceae (06:06); Sabiaceae (02:07); Anacardiaceae (08:10); Connaraceae (02:03);
