Abstract: Records of 22 species of Conopidae from mainland Portugal are presented. 11 species are new for Portugal. The theca of the only known European specimen of *Leopoldius anatolii* ZIMINA is illustrated. A list of the 25 species of Conopidae recorded so far from mainland Portugal is provided, together with a complete bibliography.

Key words: Diptera, Conopidae, faunistics, mainland Portugal, bibliography.

Los Conopidae (Diptera) de Portugal peninsular

Resumen: Se presentan citas de 22 especies de Conopidae de Portugal peninsular. 11 especies son nuevas para Portugal. Se muestra la teca del único ejemplar conocido de Europa de *Leopoldius anatolii* Zimina. Se listan las 25 especies de Conopidae citadas hasta ahora de Portugal peninsular, así como una bibliografía completa.

Palabras clave: Diptera, Conopidae, faunística, Portugal peninsular, bibliografía.

Introduction

The conopid fauna of Portuguese mainland has hardly been investigated. Only eight recent publications with faunistic information from Portugal are known, and there are only 14 Conopidae species recorded so far (Table I). The fauna of Madeira has recently been revised by Stuke *et al.* (2007), however. Three of the authors have had the opportunity to collect in Portugal and although this has only resulted in a small collection of Conopidae there are several first records. Therefore we decided to present these data and give an overview of the published records of Conopidae known so far from mainland Portugal.

Material and Methods

The studied material consists of a total of 85 specimens. All of these were collected by hand-netting (a) by Gerard Pennards during 5-21.ix.2011, (b) by André van Eck 13-24.iv.2006, 14-17.iv.2007, 13.viii.2007, 7.vii.2008, 27.ii.2009, 17.vii-1.viii.2010, 12-18.v.2011, 16-27.iv.2012, (c) by Jorge Mota Almeida and (d) by Rui Andrade. Supplementary photos of Conopidae taken recently in Portugal are also identified (Figures 1-7). The identified specimens are deposited in the private collections of Jorge Mota Almeida, Gerard Pennards, André van Eck and Jens-Hermann Stuke respectively. The identifications are based on the works of Clements (2000), Chvála (1961, 1965), Mei & Stuke (2008), Stuke (2002, 2006) and Stuke & Clements (2008). Males of the *Thecophora atra* group cannot be identified to species level at the present time.

Results

We found some 22 different Conopidae species in mainland Portugal. A total of 25 species are therefore known from mainland Portugal to date. 11 species are reported from Portugal for the first time: *Dalmannia dorsalis* (Fabricius, 1794),

Dalmannia punctata (Fabricius, 1794), *Myopa buccata* (Linnaeus, 1758), *Myopa fasciata* Meigen, 1804, *Myopa morio* Meigen, 1804, *Myopa occulta* Wiedemann, 1824, *Myopa palliceps* (Bigot, 1887), *Physocephala rufipes* (Fabricius, 1781), *Physocephala vittata* (Fabricius, 1794), *Thecophora fulvipes* (Robineau-Desvoidy, 1830) and *Zodion cinereum* (Fabricius, 1794).

• *Conops silaceus* Wiedemann, 1824

1 ♂ Póvoa Dão, Silgueiros, Viseu, 21.viii.2008, photographed by Mota Almeida (Figure 1); 1 ♀ Póvoa Dão Silgueiros, Viseu, 5.-21.viii.2009, leg. et coll. Mota Almeida.

• *Conops vesicularis* Linnaeus, 1761

1 ♀ Gouveia, SE of town, UTM 29T 620 4483, 680 m, 12.v.2011, leg. et coll. Van Eck; 1 ♂ Guarda, Chãos, UTM 29T 642 4489, 800 m, 17.iv.2007, leg. et coll. Van Eck.

• *Dalmannia aculeata* (Linnaeus, 1761)

1 ♂ Seixezelo (V. N. de Gaia), UTM 29T 537 4542, 26.iv.2012, 200 m, leg. et coll. Van Eck.

• *Dalmannia dorsalis* (Fabricius, 1794)

1 ♂ Figueira de Castelo Rodrigo, UTM 29T 671 4529, 640 m, 19.iv.2006, leg. et coll. Van Eck; 1 ♀ ditto, 20.iv.2006.

• *Dalmannia punctata* (Fabricius, 1794)

1 ♂ Póvoa Dão, Silgueiros, Viseu, 5.iv.2008, photographed by Mota Almeida (Figure 2); 1 ♂ Seixezelo (V. N. de Gaia), UTM 29T 537 4542, 200 m, 26.iv.2012, leg. et coll. Van Eck.

• *Leopoldius anatolii* Zimina, 1963

The only European record of this extremely rare species was caught in an emergence trap at Évora (Carles-Tolrá & Rosado 2009). The theca of this remarkable specimen is illustrated at Figure 3.

• *Myopa buccata* (Linnaeus, 1758)

1 ♂ Batalha, Casal da Amieira, Vale de Calvaria, UTM 29S 513 4389, 120 m, 27.ii.2009, leg. et coll. Van Eck; 1 ♂ Famalicão, Carapita, UTM 29T 637 4476, 660 m, 13.v.2011, leg. et coll. Van Eck; 1 ♂ Figueira de Castelo Rodrigo, UTM 29T 671 4529, 640 m,

Acknowledgements

Rui Andrade (Barcelos) sent us Conopidae for identification, the records from which are included in this paper with kind permission. Miguel Carles-Tolrá (Barcelona) loaned the specimen of *Leopoldius anatolii* and gave valuable comments on earlier drafts of the manuscript. David Clements (Cardiff) checked the English.
