How to Use the ICD-10-CM

Structure of ICD-10-CM

The new structure will allow further expansion than was possible with ICD-9-CM as more positions in more chapters are left open and available for future modifications. This is the updated draft version of ICD-10-CM. However, the codes in this ICD-10-CM are not currently valid for any purpose or use. There is now an anticipated implementation date for the ICD-10-CM of October 1, 2013 and implementation will be based on the process for adoption of standard under the Health Insurance Portability and Accountability Act of 1996.

ICD-10-CM has an index and tabular list similar to ICD-9-CM; however, the alphabetic index is more in-depth. ICD-10-CM also uses an indented format for both the index and tabular list. The Tabular List is similar to the ICD-9-CM version of the Tabular List, containing categories, subcategories, codes and descriptors, arranged numerically within the 21 separate chapters. The coding guidelines outlining coding conventions for ICD-10-CM are in the index, which consists of two parts: the index to diseases and injury and the index to external causes of injury. The former 'V' and 'E' code classifications that were previously considered supplemental to ICD-9-CM are incorporated into the Tabular List in the ICD-10-CM code set as individual chapters. The Neoplasm Table and the Table of Drugs and Chemicals are located in the Alphabetic Index to Diseases and Injury. Additionally, the Index to External Causes has been included.

Alphabetic Index of Diseases and Injuries

The Alphabetic List contains terms in the ICD-10-CM code set and the corresponding code. This List is divided into two parts: 'Index to Diseases and Injuries' and 'Index to External Causes of Injuries'. Within the Index there is a Neoplasm Table and a Table of Drugs and Chemicals.

Alphabetic Index Instructional Notations

Abbreviations

NEC Not elsewhere classifiable – represents 'other specified.' When a specific code is not available for a condition, the Index directs the user to the 'other specified' code in the Tabular List.

Punctuation

() Parentheses – used in the Alphabetic Index to enclose supplementary words that may be present or absent in the statement of a disease/condition without affecting the code number to which is assigned. The terms within the parentheses are referred to as nonessential modifiers.

Fainting (fit) R55

Manifestation codes

Conditions/diseases that are considered manifestation codes have a specific entry structure. Both conditions/diseases are listed together with the etiology code sequenced first, followed by the manifestation code second.

Trichinellosis, trichiniasis, trichinelliasis, trichinosis B75
with muscle disorder B75 [M63.80]

Morphology Codes

Some neoplasms contained in the Alphabetic Index include the morphology code or the histologic type. These codes are derived from the second edition of the International Classification of Diseases for Oncology (ICD-O). The correct morphology code can be found under the main term and subterm for the type of neoplasm, adenocarcinoma, sarcoma, etc.

Melanoma (malignant) (M8720/3) C43.9

Default Code

A code that is listed next to a main term in the Index is referred to as a default code. The default code represents the condition/disease that is most commonly associated with the main term, or the unspecified code for that condition. If a condition is documented in the medical record without any additional information (e.g., acute or chronic), the default code should be assigned.

Appendicitis (pneumococcal) (retrocecal) K37

Tabular List of Diseases and Injuries

The Tabular List consists of categories, subcategories, and valid codes. Valid ICD-10-CM codes contain letters (alpha) and numbers (numeric) and may be 3-7 digits long. The following describes the content of the specific digits:

- First Digit – alpha. The only letter not used is the letter 'U', which is reserved for newly discovered diseases of unknown etiology.
- Second Digit – numeric
- Third Digit – numeric or alpha (not case sensitive)
- Fourth through Seventh Digits – numeric or alpha (not case sensitive). *Note: For some ICD-10-CM codes, an 'x' is used as a 4th-6th digit character place holder.*

The Letter 'x' as a Place Holder

If the code indicates there is a required 7th digit and there are less than six (6) characters in the code, a place holder of 'x' should be assigned for all missing characters, in order to keep the 7th character of a code always in position of the 7th digit. These placeholders have been included in the Tabular List to enable users to code more accurately, although they may appear to be out-of-order. The ✓ icon noted in front of a code indicates the code has a 7th character, such as an encounter, sequela, tophus, gestations for fetus unspecified, etc.

Example:

W11.xxxA Fall on and from ladder, initial encounter

The ICD-10-CM system also utilizes the 'x' as a 5th character place holder with certain 6-digit codes to allow for future expansion. An example of this is found in the poisoning, adverse effect, and underdosing codes, categories T36-T50. Where a placeholder exists, the 'x' must be used in order for the code to be considered valid.

Punctuation

[] Brackets – used in the Tabular List to enclose synonyms, alternative wording, or explanatory phrases.

E87.5 Hyperkalemia

Potassium [K] excess
Potassium [K] overload

() Parentheses – used in the Tabular List to enclose supplementary words that may be present or absent in the statement of a disease/condition without affecting the code number to which is assigned. The terms within the parentheses are referred to as nonessential modifiers.

G40.3 Generalized idiopathic epilepsy and epileptic syndromes

Benign neonatal convulsions (familial)

:

Colons – used in the Tabular List after an incomplete term, which needs one or more of the modifiers following the colon to make it assignable to a given category.

M89.7 Major osseous defect

Code first underlying disease, if known, such as:
aseptic necrosis of bone (M87.-)

Abbreviations

NEC Not elsewhere classifiable. This abbreviation represents 'other specified'. When a specific code is not available for a condition, the Tabular List includes an NEC entry under a code to identify it as an 'other specified' code.

NOS Not otherwise specified. This is equivalent to an unspecified code.

Includes

The word **includes** appears immediately under certain categories to add further definition, or give examples of the content of the category.

Example: **K27** Peptic ulcer, site unspecified

includes gastroduodenal ulcer NOS
peptic ulcer NOS

Inclusion Terms

A list of terms is included under some codes. These terms are the conditions for which that code number is to be used. The terms may be synonyms of the code title, or in the case of 'other specified' codes, the
