

**Zingiber collinsii
'Silver Streaks'**

A great foliage plant with dark green leaves streaked with silver, grows 0.5-1m high, dormant in winter, produces orange/red basal cones, prefers bright shade and rich well drained soil.

Zingiber fraser hill

Grows to 2.5-3m high, robust, prefers medium sun and well drained rich soil, produces large bronzed amber inflorescence on basal stems in summer. A vigorous grower.

**Zingiber macradenia
'Chocolate Beehive Ginger'**

Grows to 2m high in medium sun. Produces compact open-cupped bright chocolate inflorescence with white and black day flowers. Prefers rich well drained soil.

Zingiber newmanii

An outstanding plant for collectors depicting typical zingiber foliage to 1.8m high and eye-catching large red basal cones erupting from the ground. Prefers light shade, rich moist well drained soil.

**Zingiber olivaceum
'Champagne Ginger'**

A tall stemmed ginger with large deep green leaves and attractive long lasting apricot inflorescence in summer, likes warm part shade and rich well drained soil. Grows to 2m high. Great cut flower.

**Zingiber olivaceum
'Dark Apricot'**

A vigorous grower and a great landscaper. Prefers rich well drained soil and filtered light. Produces numerous apricot coloured inflorescence on basal stems in summer. An excellent cut flower. Grows to 2m high.

**Zingiber olivaceum
'Dwarf Apricot Ginger'**

A compact medium clumping plant, bracts appear early in summer on short basal stems, great cut flower, prefers morning sun to 50% shade and rich well drained soil, grows to 2m.

**Zingiber olivaceum
'Dwarf Orange Ginger'**

A compact medium clumping plant. Bracts appear late spring to early summer on short basal stems. Great cut flower. Prefers morning sun to 1.5-2m high in medium sun and well drained rich soil.

**Zingiber olivaceum
'Early Yellow'**

A robust species, produces small tight conical bright yellow inflorescence on basal stems in summer. A great cut flower. The plant grows to 1.5-2m high in medium sun and well drained rich soil.

**Zingiber olivaceum
'Long Apricot'**

A vigorous grower and a great landscaper. Grows 2-2.5m high. Prefers rich well drained soil and filtered light. Produces numerous elongated inflorescence on tall basal stems early summer. An excellent cut flower.

**Zingiber olivaceum
'Orange'**

A large plant producing numerous orange inflorescence on basal stems early summer. Grows 2-2.5m high. A compact plant, a great landscaper, good cut flower. Prefers well-drained rich soil and morning sun to part shade.

**Zingiber olivaceum
'Singapore Gold'**

Grows 2.5-3m high, a compact medium grower producing many light gold inflorescence on medium length basal stems early summer. A great landscaper with dark stems. Prefers medium sun to part shade and rich well drained soil.

**Zingiber peninsulare
'Red Hot Poker'**

A compact, hardy, free-flowering plant producing red basal cones primarily in summer. A good landscaping plant. Grows to 2m high in part shade and rich well drained soil.

**Zingiber sp.
'Apricot Blush'**

A medium to large grower with lush green foliage and apricot coloured inflorescence on tall basal stems in summer. A great cut flower. Plant grows to 2m high in filtered light. Prefers rich well drained soil.

**Zingiber sp.
'Blaze'**

A new beehive from the Darzing series. A compact medium grower to 2m high. Produces orange coloured inflorescence on short basal stems early summer. Prefers part sun to light shade and rich well drained soil. A great cut flower.

**Zingiber sp.
'Chai'**

A new beehive. A compact medium clumping plant, produces inflorescence on short basal stems early summer, great cut flower. Grows to 2m high in part sun to light shade. Prefers well drained rich soil.

**Zingiber sp.
'Coffee'**

This large beehive produces coffee coloured inflorescences on tall basal stems in summer. Prefers a warm sheltered position in light shade and rich well drained soils. Grows 3-3.5m high.

**Zingiber sp.
'Darzing'**

A compact medium clumping plant growing to 2m high. Flowers on short basal stems in summer. A great cut flower. Prefers part sun to light shade and rich well drained soil.

**Zingiber sp.
'Giant Amber'**

This is a striking plant produces bright orange, compact inflorescence on basal stems with maroon spotted flowers in summer. Grows to 2m high in medium sun, prefers rich well drained soil.

**Zingiber sp.
'Giant Orange'**

A striking beehive growing to 2.5m high. Prefers rich, well-drained soil and medium sun to part shade. Produces large orange inflorescence on tall basal stems in summer. Great cut flower.

**Zingiber sp
'Giant Chocolate'**

The ultimate beehive ginger producing large chocolate inflorescence on tall basal stems in summer. Grows to 2m high. Excellent cut flower and landscaper. Prefers medium sun and well drained rich soil.

**Zingiber sp.
'Giant New Guinea'**

A large beehive growing to 2.5-3m high, prefers medium sun to light shade and rich well drained soil. Produces many large bronze inflorescence on tall basal stems early summer. A good cut flower.

**Zingiber sp.
'Giant Yellow'**

A robust tall species growing to 2.5m high, producing large bright yellow inflorescence on tall basal stems early summer. Great cut flower. Prefers rich well drained soil and medium sun.

**Zingiber sp.
'Golden Beehive'**

Tall species producing large golden inflorescence on basal stems in summer. Grows to 2.5m high in medium sun and rich well drained soil. Great cut flower.

**Zingiber sp.
'Golden Glory'**

A great new large growing beehive plant, grows to 2m high producing numerous large gold cones on tall basal stems early summer. Prefers medium sun to part shade and well-drained rich soil. Excellent cut flower and landscaper.

**Zingiber sp.
'Grasshopper'**

Grows 2.5-3m high in medium sun to part shade and rich well drained soil. Produces green/yellow inflorescence on tall basal stems early summer. A good landscaper and great cut flowers.

**Zingiber sp.
'Malaysian Yellow'**

A medium compact grower producing a prolific number of light yellow inflorescence on tall basal stems early summer. Grows to 2.5-3m high. A good cut flower and landscaper.

**Zingiber sp.
'Green Yellow'**

This is an exciting ginger producing two toned bracts that make excellent cut flowers. A good landscaper preferring filtered light and rich soil

ZINGIBERS

Zingiber sp. 'Mocha'

A new attractive hybrid growing 2-2.5m high, producing a beautiful blend of coffee and chocolate coloured very open bract inflorescence on basal stems early summer. Prefers rich, well-drained soil and a warm position with morning sun only. A great cut flower.

**Zingiber sp.
'Mutton Fat'**

This new beehive is a compact medium grower from Darwin producing buttery yellow inflorescences on short basal stems early summer. Prefers light shade in a sheltered position and well drained rich soils. Grows 2-2.5m high. Great cut flower.

**Zingiber sp.
'Ochre'**

An exciting new beehive producing numerous closed conical inflorescence on short basal stems early summer. Nicknamed 'Little Red', this is a compact landscaper growing to 2m high. Prefers rich moist soil in a semi shaded position. Great cut flower.

**Zingiber sp.
'Pine Lime'**

A prolific grower 2.5-3m high, producing good strong medium sized inflorescence on basal stems early summer, great cut flower. Prefers medium sun to part shade, rich well drained soil.

**Zingiber sp.
'Red Rocket'**

A compact clumping plant growing to 2.5m high, inflorescence appear early in summer on short basal stems, prefers medium sun to part shade and rich moist well drained soil. Great landscaper and cut flower.

**Zingiber sp.
'Sunset'**

A hybrid from Darwin, a prolific grower to 2.5-3m high, produces good strong rounded head inflorescence on basal stems early summer, great. Prefers medium sun to part shade, rich well drained soil. Great cut flower.

**Zingiber sp.
'Thai Ruby'**

A medium compact grower to 2m high, produces small light green ageing to brilliant red inflorescence on basal stems in summer. Prefers filtered light and well drained rich soil. Dormant in winter.

Zingiber sp. 'Toffee'

This new beehive will make a great addition to any tropical garden. It is a large grower and produces an abundance of inflorescences on tall basal stems early summer. Prefers medium sun to part shade and rich well drained soil. Grows 2.5-3m high. Great landscaper and cut flower.

Zingiber vinosum

A compact, hardy, free-flowering plant, producing chocolate basal cones with creamy yellow flowers. A great foliage landscaping plant. Grows to 1.5m high in morning sun to part shade and rich well drained soil.

Zingiber wrayi

A must for collectors. Grows 0.5-1m high. A small fine leaved zingiber. Leaves have a distinct licorice scent. Prefers a warm sheltered shady position in rich well drained soil. Large conical inflorescence occur on short basal stems in summer.

**Zingiber zerumbet
'Darcey'**

A variegated shampoo ginger with outstanding foliage, grows 1.2-1.5m high. Prefers medium shade and well drained rich soil. Produces variegated green ageing to red inflorescence on basal stems in summer. Dormant in winter.

**Zingiber zerumbet
'Green Shampoo'**

Inflorescence is green when young, aging to bright red when old, with a pale yellow flower. A great cut flower. Grows 1.5-2.0m high in morning sun to part shade and rich well drained soil.
