(Received 5 April 2012 Accepted 20 April 2012)

ABSTRACT : The paper presents faunal account of a small collection of scarab beetles from Govind Wildlife Sanctuary, Uttarakhand, comprising 11 species belonging to 11 genera, 5 subfamilies and 2 families of superfamily Scarabaeoidea. All the species are recorded for the first time from the sanctuary while three species viz. *Anomala cantori* (Hope), *Mimela passerinii* Hope, and *Oryctes nasicornis* (Linnaeus) are new records to the fauna of Uttarakhand. An updated checklist of the scarab beetles under superfamily Scarabaeoidea of Uttarakhand comprising about 167 species belonging to 52 genera, 21 tribes, 9 subfamilies and 3 families is also provided.

Keywords : Scarabaeid beetles, Govind Wildlife Sanctuary, Uttarakhand, Updated checklist.

INTRODUCTION

Lamellicorn scarab beetles are the most diverse and widely distributed insects which belong to the largest order Coleoptera under superfamily Scarabaeoidea which includes approximately 31,000 species worldwide of which the family Scarabaeidae is composed of about 91% of all scarabaeoids and represented by 27,800 species worldwide (Jameson and Ratcliffe 2001). Unlike the other groups of insects, the members of the family Scarabaeidae contains both beneficial (coprophagous) and harmful (phytophagous) beetles. Among which coprophagous beetles, through their habitat of burrowing and burying of dung, perform a series of ecological functions such as nutrient cycling, soil aeration (Mittal, 1993), secondary seed dispersal (Estrada and Coates-Estrada, 1991 & Larsen, 2004) and regulation of enteric parasites and dung breeding dipterans pests (Borenmissza, 1970 & Fincher, 1981). On the other hand phytophagous ones or leaf-chafers are agricultural pests of various commercial crops, feeding mostly on leaves, flowers, fruits, roots and other parts of the plants.

The first comprehensive account on the scarabaeid beetles of the Indian region was published by Arrow (1910, 1917, and 1931) in three volumes of Fauna of British India where in 72 species were reported from Uttarakhand. Later Mittal (1998) published an annotated list of the scarab fauna of Western Uttar Pradesh and recorded 151 species of these beetles belonging to 41 genera and 12 subfamilies. Recently Mittal (2005) also gave the diversity and conservation status of 136 species of Laparostict Scarabaeidae belonging to 26 genera and 8 subfamilies from North India. Subsequently Chatterjee (2010) while studying the scarab beetle fauna of Uttarakhand reported 44 species belonging to 16 genera and 3 subfamilies.

The present study includes faunal account of a small collection of the scarab beetles of Govind Wildlife Sanctuary, Uttarakhand comprising 11 species belonging to 11 genera, 5 subfamilies and 2 families of superfamily Scarabaeoidea (Plate 1). These species are recorded for the first time from the sanctuary while three species viz. *Anomala cantori* (Hope), *Mimela passerinii* Hope, and *Oryctes nasicornis* (Linnaeus) are new record to the fauna of Uttarakhand. The paper also includes an updated checklist of the scarab beetles of Uttarakhand comprising 167 species belonging to 52 genera, 21 tribes, 9 subfamilies and 3 families of superfamily Scarabaeoidea.

MATERIAL AND METHODS

Study area. Govind Wildlife Sanctuary is located in Uttarakashi district of Garhwal in the state of Uttarakhand and lies in between 35°55 and 31°17.30 latitudes and 77°47.30 and 78°37.30 longitudes at Purola tehsil. The sanctuary was established on 1st of March 1955 and spreads over an area of 957.969 sq km.

The beetle specimens for the present study were collected using light trap and preserved dry pinned. The beetles were then identified with help of available literature (Arrow, 1910; 1917; 1931 and Kuijten, 1983) and matched with the reference collections present in Zoological Survey of India, Jabalpur. The details of material examined and distribution of the newly recorded scarab beetles from the sanctuary is provided along with the species photographs (Plate 1). The classification adopted in the article is after Smith (2006) Voucher specimens are deposited in Zoological Survey of India, Jabalpur, Madhya Pradesh.

OBSERVATIONS**Systematic account**

Order: Coleoptera Linnaeus, 1758

Suborder: Polyphaga Emery, 1886

Super family: Scarabaeoidea Latreille, 1802

Family: Hybosoridae Erichson, 1847

I. Subfamily: Hybosorinae Erichson, 1847

1. *Hybosorus orientalis* Westwood, 1845

1845. *Hybosorus orientalis* Westwood, *Trans. Ent. Soc. Lond.*, 6 : 159.

Material examined: Uttarakhand, Garhwal, (GWLS), 10.xii.2009 (1ex.), Coll. Manish Bharadwaj.

Distribution: India: Bihar, Haryana, Himachal Pradesh, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Sikkim, Tamil Nadu, Uttar Pradesh, Uttarakhand, and West Bengal. *Elsewhere:* England, Pakistan, Nepal, and U.S.A.

Family: Scarabaeidae Latreille, 1802

I. Subfamily: Scarabaeinae Latreille, 1802

2. Oniticellus (Oniticellus) cinctus (Fabricius, 1775)

1775. *Scarabaeus cinctus* Fabricius, *Syst. Ent.* : 30.

1931. *Oniticellus cinctus*, Arrow, *Faun. Brit. India*, (Lamellicornia : Coprinae) 3 : 379-380.

1963. *Oniticellus (Oniticellus) cinctus*, Balthasar, *Mon. der Scarabaeidae und Aphodiidae der Palaeark. und Orientalis. Region* (Coleoptera : Lamellicornia), Coprinae, II: 77.

Material examined: Uttarakhand, Garhwal, (GWLS), 10.xii.2009 (1ex.), Coll. Manish Bharadwaj.

Distribution: India: Haryana, Himachal Pradesh, Madhya Pradesh, Maharashtra, Tamil Nadu, Uttarakhand, Uttar Pradesh, and West Bengal.

3. Liatongus gagatinus Hope, 1831

1831. *Liatongus gagatinus* Hope, *Gray's Zool. Misc.* : 22.

1931. *Liatongus gagatinus*, Arrow, *Faun. Brit. India*, (Lamellicornia : Coprinae) 3 : 365-366.

1963. *Liatongus gagatinus*, Balthasar, *Mon. der Scarabaeidae und Aphodiidae der Palaeark. und Orientalis. Region* (Coleoptera : Lamellicornia), Coprinae, II: 104.

Material examined: Uttarakhand, Garhwal, (GWLS), 08.vii.2009 (1ex.), Coll. A. K. Sanyal.

Distribution: India: Arunachal Pradesh, Assam, Meghalaya, Nagaland, Sikkim, Uttarakhand and West Bengal.

Elsewhere: Myanmar and Nepal.

II. Subfamily: Rutelinae MacLeay, 1819

4. Anomala cantori (Hope, 1840)

1840. *Euchlora cantori* Hope, *Mag. Nat. Hist.* iv : 284.

1917. *Anomala cantori*: Arrow, *Faun. Brit. India* (Lamellicornia: Rutelinae), 2 : 220.

Material examined: Uttarakhand, Garhwal, (GWLS), 10.xii.2009 (1ex.), Coll. Manish Bharadwaj.

Distribution: India: Assam, Himachal Pradesh, Haryana, Madhya Pradesh, Uttarakhand and West Bengal. *Elsewhere:* Myanmar.

5. Popillia cyanea Hope, 1831

1831. *Popillia cyanea* Hope,* *Gray's Zool. Miscell.* : 23.

1917. *Popillia cyanea*: Arrow, *Faun. Brit. India* (Lamellicornia: Rutelinae), 2 : 62.

Material examined: Uttarakhand, Garhwal, (GWLS), 10.xii.2009 (1ex.), Coll. Manish Bharadwaj.

Distribution: India: Arunachal Pradesh, Assam, Himachal Pradesh, Jammu & Kashmir, Punjab, Sikkim, Uttarakhand and West Bengal. *Elsewhere:* Nepal.

6. Mimela passerinii Hope, 1842

1842. *Mimela passerinii* Hope,* *Proc. Linn. Soc.* I : 128.

1917. *Mimela passerinii*, Arrow, *Faun. Brit. India* (Lamellicornia: Rutelinae), 2 : 105.

Material examined: Uttarakhand, Garhwal, (GWLS), 10.xii.2009 (1ex.), Coll. Abesh K. Sanyal.

Distribution: India: Himachal Pradesh, Kashmir, Meghalaya, Sikkim and Uttarakhand. *Elsewhere:* China and Tibet.

III. Subfamily: Melolonthinae MacLeay, 1819

7. Hilyotrogus holosericeus Redtenbacher, 1844

1844. *Hilyotrogus holosericeus* Redtenbacher, in *Hugel Reise Kaschmir* IV, 2 : 524.

Material examined: Uttarakhand, Garhwal, (GWLS), 07.xii.2009 (1ex. ♂), Coll. Manish Bhardwaj.

Distribution: India: Himachal Pradesh, Kashmir and Uttarakhand.

8. Holotrichia longipennis Blanchard, 1850

1850. *Holotrichia longipennis* Blanchard, *Cat. Coll. Ent.* I : 140.

Distribution: India: Himachal Pradesh, Kashmir and Uttarakhand. *Elsewhere:* Baluchistan, South West Asia and South & South East Europe.

RESULTS AND DISCUSSION

Specimens collected from Govind Wildlife Sanctuary, Garhwal, Uttarakhand resulted in the identification of eleven

species of the scarab beetles belonging to two families (Scarabaeidae and Hybosoridae) and five subfamilies (Hybosorinae, Scarabaeinae, Rutelinae, Melolonthinae and Dynastinae) of superfamily Scarabaeoidea (Coleoptera). All the species are reported for the first time from the sanctuary of which *Anomala cantori* (Hope), *Mimela passerinii* Hope and *Oryctes nasicornis* (Linnaeus) are new records to the scarab beetle fauna of Uttarakhand. Combining almost all the previously published information (Arrow, 1910, 1917; 1931, Mittal, 1998; 2005, Chatterjee, 2010) and current report regarding the scarab beetle diversity of Uttarakhand, an updated checklist of the scarab beetles under superfamily Scarabaeoidea has also been prepared which reports the occurrence 167 species belonging to 52 genera, 21 tribes, 9 subfamilies and 3 families of superfamily Scarabaeoidea from Uttarakhand (Table 1). The family Scarabaeidae (162 species) was dominating over Hybosoridae (3 species) and Geotrupidae (2 species). Of the family Scarabaeidae, the dominant subfamily Scarabaeinae includes 68 species followed by Rutelinae (33 species), Cetoniinae (20 species), Aphodiinae (18 species), Melolonthinae (15 species), Dynastinae (6 species) and Orphninae (2 species) (Fig. 1).

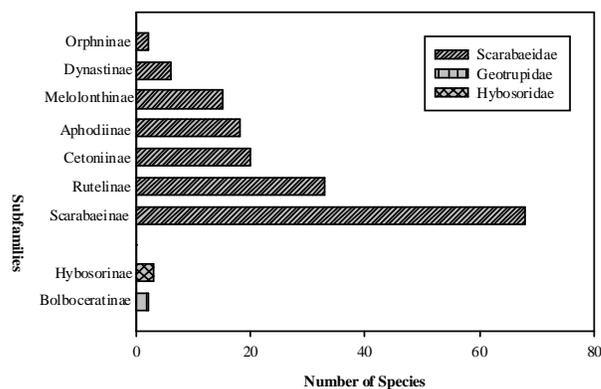

Fig. 1. Species diversity of the scarab beetles in different subfamilies and families of superfamily Scarabaeoidea.
