## ACKNOWLEDGEMENTS

The ASC is one of the largest professional meetings anywhere that is organized by an all-volunteer team of individuals. There isn't a single paid person, excluding those non-scientists we hire *ad hoc* for various managerial duties, e.g., registration, exhibits, Website and editing. The ASC Board of Directors, the program committee, the technical editors, session chairs and manuscript referees all donate anywhere from a few hours to several hundred hours each of their time to help make the ASC and the publication of its proceedings a successful reality. To each and every person who has contributed time and effort to this monumental task, I offer my sincere gratitude.

While I hesitate to single out only a few individuals for special recognition for fear of appearing to slight so many others who have and are working so diligently, I nevertheless would like to cite the following 3 key people:

**Mike Osofsky**, who as Program Chair had the most challenging and time-consuming job of all, and who carried out that difficult assignment with imagination, common sense and good humor;

**Bruce Strauss**, while his title is that of Treasurer, he serves selflessly as the corporate memory and conscience of the ASC, and without whose wise counsel I could not have functioned as effectively;

**Wendy Lozano**, as an employee of SAI she has been directly responsible for creation and maintenance of the ASC Website; her responsiveness to our every suggestion and request has been nothing short of spectacular, and her calm demeanor in the face of many crises has been most reassuring.

Last, but far from least, I extend my appreciation to all the exhibitors, registrants and presenters at the ASC 2000, because without your continued support, there would be no ASC.

Harold Weinstock  
Chairman, ASC 2000

## GREETINGS FROM THE CHAIRMAN

It is a pleasure to welcome you to the Applied Superconductivity Conference, ASC 2000, and to Virginia Beach. While this biennial conference has a distinguished history of over 3 decades and is the world's largest meeting in superconductivity, the organizers are proud to offer several innovations as we hold our first ASC of the 21<sup>st</sup> century.

On Sunday, September 17, we have organized a set of 3 short-course tutorials (Electronics Applications, HTS Power Applications and Cryogenic Systems), and we are pleased with your preliminary response to these offerings. Other new features include an employment service via the ASC Web site, a morning of lecture demonstrations for area high-school students, and an evening program of public lectures by Paul Chu and Paul Grant designed primarily to attract the local community. However, these lectures are certainly open to ASC registrants and their families as well.

For the first time, in cooperation with the IEEE Council on Superconductivity, the ASC has offered the award of complimentary full registration to over 40 student authors. Also sponsored by this same IEEE Council, a set of distinguished service awards in applied superconductivity has just been established. We hope you will join the award ceremony to help honor some of our most distinguished colleagues at 8 pm on Sunday, September 17, during the welcome reception at the Cavalier Hotel.

We meet at an exciting time in the history of applied superconductivity. It is a time of progress for applications in every segment of our community, and this progress is reflected in the conference theme – **Technology for the 21<sup>st</sup> Century**. Beyond this main theme is the recurring one, namely that every 2 years the entire applied superconductivity community comes together for a **CELEBRATION OF SUPERCONDUCTIVITY**. It is a time not only to hear current R&D results, but also the best time for attendees to commune informally, to hold both planned and impromptu informal discussions and to get the latest “buzz” in the field. So please join us starting September 17, 2000 for an exciting week of science and technology, for communion with your peers from around the world, for recreation in a beautiful and historic part of the United States, for musical interludes, and most of all, for a **CELEBRATION OF SUPERCONDUCTIVITY**.
