В зависимости от конфигурации серверов вы можете выбрать один из трех блоков питания необходимого размера. Чтобы убедиться в том, что вы делаете правильный выбор, воспользуйтесь инструментом HP Power Calculator, который позволяет определить "необходимый размер" блока питания для вашего сервера. IT environments and businesses grow and deploy physical/virtual servers and arrays, the amount of information required to manage, share, and protect keeps growing. MPX200 provides all in one solution for multiprotocol network connectivity (FC, iSCSI, 1GbE, 10GbE, FCoE), IP gateway (FCIP) support for SAN/WAN and remote replication and simplified heterogeneous local and remote DM.

EOL HP MPX200 Multifunction Router

Standard features

- **SAN Based Unified Block Storage and Converged Infrastructure (FCoE)**

MPX200 allows easy deployment of VM by supporting 300-600 iSCSI initiator connections to P6000/EVA, XP24000/20000 and P10000/3PAR. Each VM can secure and manage its own LUNs; therefore existing storage management software and policies can be seamlessly maintained throughout the VM deployment.

To remain competitive, IT organizations must keep pace with ever-increasing workloads without a similar increase in their budgets or resources. While virtualization has provided some relief by enabling the benefits of faster deployment and consolidation, it tends to put additional stress on data center networks. The HP SN6000B 16Gb Fibre Channel Switch meets the needs of hyper-

EOL HP SN6000B Fibre Channel Switch

Standard features

• Flexible Fabrics

High Speed 16Gb optimized inter switch links (ISLs) provide twice the performance as previous generation Fibre Channel switches. The net result is there are fewer links, fewer cables, fewer ports and less power for the same performance.

• Metro Cloud Connectivity

Operating speeds of 16, 10, 8, and 4 Gbps offer a wide range of performance for long distance connectivity. In addition to native fiber, operating the port at 10 Gbps is also supported over Wave Division Multiplexing (WDM) solutions, such as Dense Wave Division Multiplexing (DWDM).

• Operational Simplicity

Diagnostic Ports (D_Ports) are a new port type that enable administrators to identify and isolate optics and cable problems, reducing fabric deployment and diagnostic times. Organizations also can use D_Ports to run a variety of tests for ports, SFPs, and cables for faults, latency, and distance.

• Cloud Optimized Performance

Provides aggregate 1536 Gb full-duplex throughput and any eight ports can be trunked for 128 Gb Inter-Switch Links (ISLs). Exchange-based Dynamic Path Selection (DPS) optimizes fabric-wide performance and load balancing by automatically routing data to the most efficient available path.

HP StorageWorks Medical Archive Solution Components use computing grid-based software to implement an Information Lifecycle Management (ILM) solution for secure and reliable storage and transmission of medical imaging data.

EOL Компоненты решения HP Medical Archive Solution

Standard features

- Свойство: Single fast-access grid based solution for long term archival of medical images: The Medical Archiving solution uses intelligent Information Lifecycle Management to automate and optimize information storage in the right place, on the right media, at the right time and at the right cost; Uses ILM policies to Align storage costs with value of the data; Policy driven migration and data replication based on value of data and retrieval performance requirements.
- Свойство: Strengthen Business continuity: Fault Tolerant, self-healing resilient architecture; No single points of failure; Dual data protection via RAID-5 and mirroring configuration available for soft-error correction and hard-error protection for each storage subsystem; Policy driven data replication to distribute data across the archive grid to control geographic location and number of replicas for desired level of redundancy.
