Are you doing nightly backups? Is it easy for you to share files across your business? You have more pressing concerns than how to backup and share your data. The HP X500 Data Vault series provides a simple and cost effective solution for a small business to store, secure and share data for under \$1000. Based on Microsoft Windows Home Server, it provides a user-friendly interface with

HP X500 Data Vault

Standard features

- Simple Data Protection**

For businesses with 10 or less PC and Mac clients, the HP X500 Data Vault provides full system protection. The HP Data Vault automatically backs up each client every day without you having to manage the process.

Share files on the local network via the HP X500 Data Vault. Create shared folders based on your business needs. Access your Data Vault from any internet connected computer via a custom web address that you create. Use the remote computer like your own PC.

- Protection of Critical Files Means Data Security**

The HP X500 Data Vault lets you choose which file folders are the most important. With the ease of a mouse click, you can tell the X500 to duplicate that folder to a second hard disk drive. If a hard disk drive was to fail, your data will still be safe on the second hard disk drive.

IT environments and businesses grow and deploy physical/virtual servers and arrays, the amount of information required to manage, share, and protect keeps growing. MPX200 provides all in one solution for multiprotocol network connectivity (FC, iSCSI, 1GbE, 10GbE, FCoE), IP gateway (FCIP) support for SAN/WAN and remote replication and simplified heterogeneous local and remote DM.

HP MPX200 Multifunction Router

Standard features

- **SAN Based Unified Block Storage and Converged Infrastructure (FCoE)**

MPX200 allows easy deployment of VM by supporting 300-600 iSCSI initiator connections to P6000/EVA, XP24000/20000 and P10000/3PAR. Each VM can secure and manage its own LUNs; therefore existing storage management software and policies can be seamlessly maintained throughout the VM deployment.

- **Enterprise Class High Availability**

The MPX200 enterprise-class availability design is economical and provides dual hot-plug power supplies and router blades for no single point of failure requirements.

- **Fibre Channel over IP (FCIP) for SAN over WAN Support**

MPX200 provides FCIP functionality enabling customers to connect local and remote SAN's with low cost remote data replication over IP networks using HP Continuous Access P9000/XP and P6000/EVA and P10000/3PAR Remote Copy Software.

- **High Performance and Simplified Heterogeneous Local and Remote Data Migration**

MPX200 acts like a data migration appliance to help customers migrate their data at a very high speed between heterogeneous storage arrays using a user friendly data migration GUI, supports P6000/EVA, P9000/XP, P10000/3PAR, P4000 and a number of third party storage systems.

- Availability features: A second optional blade may be ordered in addition to the base unit with 1 blade for high availability requirements.
- Host interface: 8 Gb/sec Fibre Channel; 1 Gb/sec iSCSI; 10 Gb/sec iSCSI; Number and type of ports vary depending on model purchased; FC: Fabric Attach or Direct Connect; iSCSI: Uses standard TCP/IP connection; FCIP (licensing required); FCoE (Converged Infrastructure)
- Number of ports: (2) Fibre Channel; (4) Ethernet
- Compatible operating systems: Microsoft Windows 2008, 2003, XP Professional; Linux Red Hat; Linux SuSE; Oracle Solaris; VMware; Apple OS X; Hyper-V; See the HP SPOCK website for supported operating system versions

HP Enterprise Fabric Management Suite (EFMS) software is a set of simple and powerful fabric management tools for HP H-series fabrics. A single pane of glass provides performance and fabric monitoring as well as configuration tools for H-series fabrics. Users are licensed to manage an unlimited number of switches and fabrics from a single, fully integrated application. Enterprise

H-series Enterprise Fabric Management Suite Software

Standard features

- Fabric Management Tools for Optimum SAN Performance and Availability**

Performance monitoring provides easy-to-configure/easy-to-use graphs for monitoring the performance of your FC SAN. Troubleshoot fabric problems or find the performance bottlenecks before they become an issue. Historical performance data can be exported to spreadsheets or databases for analysis.

- Switch Management**

Device management makes setup and configuration of devices in the fabric simple and fast. With one mouse click from the topology view, users can configure IP network properties, upgrade firmware, view and modify switch properties easily.

- Diagnostic Tools**

As an essential tool for troubleshooting fabric problems, Fibre Channel Fabric Ping verifies that a functional path exists between two-ports and provides round-trip information. Administrators determine which ports and devices are responding - allowing the administrator to zoom in on the problem.

- Unique Capabilities**

mPort® technology allows users to choose which license ports are active (H-series with less than 20 enabled ports). De-activate one to four of the high-speed stacking ports and enable the equivalent number of device ports. The administrator decides which ports are active based on their fabric needs.
