SUTORÝ K. & BUZUNOVA I. O. 2000: Material of type character in the Münch-Bellinghausen collection in the Moravian Museum, (BRNM). 1. Wilibald Swibert Joseph Gottlieb Besser. *Acta Musei Moraviae, Scientiae biologicae* (Brno) **85:** 365–379. – Sixty five of Besser's specimens (higher plants) of type character deposited in the Moravian Museum in Brno (BRNM) are listed.

Key words: Wilibald Swibert Joseph Gottlieb Besser, Tracheophyta, collection, Moravian Museum

Introduction

The Münch-Bellinghausen collection contains a number of specimens of type character collected by various botanists in the first decades of the nineteenth century (SUTORÝ 1986).

There are many specimens in the collection contributed by Besser. Particular attention should be paid to 65 specimens of plants described by him (or by Andrzejowski – five names). Two of them (*Allium flavum* var. *tauricum* BESSER ex REICHENB., *Anemone pratensis* var. *minor* BESSER) are varieties, while the others are at species level. Eight specimens (*Asperula humifusa* (BIEB.) BESSER, *Caragana mollis* (BIEB.) BESSER, *Cerefolum trichospermum* (SCHULT.) BESSER, *Ostericum palustre* (BESSER) BESSER, *Polygala vaillantii* (BESSER) BESSER, *Schiwereckia podolica* (BESSER) ANDRZ. ex DC., *Serratula nitida* (WALDST. & KIT.) BESSER, *Serratula radiata* (WALDST. & KIT.) BESSER) represent only Besser's taxonomic conception of his own proposed nomenclatural combinations. Five names (*Alyssum petraeum* BESSER, *Aster amelloides* BESSER, *Asperula apparine* BESSER, *Myosotis montana* BESSER, *Rosa ratomsciana* BESSER) were published as illegitimate homonyms. Eight names (*Anemone wolfgangiana* BESSER ex RCHB., *Centaurea salicifolia* BESSER ex NYMAN, *Draba intermedia* ANDRZ. ex DC., *Farsetia linifolia* ANDRZ. ex DC., *Genista marginata* BESSER ex LEDEB., *Koeleria gigantea* BESSER ex LEDEB., *Peplis borysthениca* BIEB. ex BESSER, *Syrenia biebersteinii* ANDRZ. ex DC.) are *nomina nuda*. *Veronica orchidea* BESSER exists only in schedis.

The Ministry of Culture of the Czech Republic supported the work of the first author on this contribution in the years 1996–1997.

The labels are rectangular, around 5×6 cm, and some of them have printed decoration round the margin. The hand-written text is completed by the printed name of W. Besser (see photographs in SUTORÝ 1986). Only one specimen does not bear the original text (*Peplis borysthenica* BIEB. ex BESSER).

This work should contribute to a better knowledge of Besser's material.

The duplicate specimens were checked against the herbaria KW, LE (partly BP). One specimen was selected by the latter author as a lectotypus (*Rosa jundzillii* BESSER).

If current literature accepts the cited name as synonymous, the valid name is given in brackets .

Wilibald Swibert Joseph Gottlieb Besser (7. 7. 1784 – 11. 10. 1842)

After his studies in Lvov and Krakow, he spent the years 1809–1834 in Kremenec, 1834–1838 in Kiev, then in 1841 he came back to Kremenec. Predominant among his studies was the flora of the contemporary west Ukraine, and he published 43 papers. His main herbarium (about 52,000 sheets) is preserved in Kiev – KW (Ukraine) but he sent many of his specimens, now deposited in various European herbaria, to various botanists. (BARBARYCH 1960, ZAVERUKHA 1984).
