14. Patents

Gericke, N., Van Wyk, B.-E., 1997 (filed 3 June). Pharmaceutical compositions containing mesembrine and related compounds. PCT/GB97/01493.

Research work on *Sceletium tortuosum* (now also called *Mesembryanthemum tortuosum*) was part of a THRIP-funded collaboration with SA Druggists (now Aspen Pharmacare) in the period 1993 to 1999. New crop development involved the selection of high-alkaloid genotypes for cultivation; mesembrine and other alkaloids were isolated

from various species and provenances and resulted in an international patent. The patent was recently transferred to a local company and serious development work is currently underway.

15. Branded medicinal (herbal) products

15.1 "Healers Choice" Branded range of African Traditional Medicines (developed by South African Druggists (now Aspen Pharmacare). THRIP-funded research on the botany and chemical variation of the plants during the period 1993 to 1999. This research has lead to new crops (*Sceletium*, *Artemisia*), an expanded factory for the production of plant tinctures (Parceval) and a registered international patent (*Sceletium* and its alkaloids).

15.2 "Phyto Nova" range of medicinal products. As founding director of Phyto Nova (Pty) Ltd (1999-2004), new crops and new medicinal products were developed and branded, based on African Traditional Medicinal Plants. Notable examples are *Sutherlandia* (now a household name, copied by many other companies), Pepperbark leaf (*Warburgia*), African ginger (*Siphonochilus*) and *Sceletium*; the company was taken over by Thebe Pharmaceuticals in 2004 and renamed "Thebe Natural Medicine" with *Phyto Nova* retained as a brand name. The range of products has expanded but the original concepts were retained. The Phyto Nova brand was sold to Bioscience Brands but recently reverted back to Thebe.

17. Current research activities

17.1 Apiaceae of Africa:

Aim: a detailed taxonomic review of all members of the family Apiaceae (Umbelliferae) in Sub-Saharan Africa and Madagascar (including morphology, anatomy, chemistry and molecular systematics) – a group of ca. 80 genera and ca. 350 species.

Collaborators: PM Tilney (UJ, RSA), Mei Liu (Harbin, China), AR Magee (SANBI, RSA), SR Downie (Illinois, USA), GM Plunkett (New York, USA), PP Lowry (Paris, France), MG Pimenov (Moscow, Russia), EV Kljuykov (Moscow), TA Ostroumova (Moscow), E Yembaturova (Moscow), AA Oskolski (Kamarov Botanical Institute, St. Pietersburg, Russia), EL Kotina (St. Pietersburg), A Stepanova (St Pietersburg).

Outputs thus far: Postgraduate students (PhD – 3, MSc – 4); scientific papers (42). Final output: academic books (*African Apiaceae* published in 2013).

17.2 Taxonomic studies of Asphodelaceae and Fabaceae:

Aim: morphological, anatomical, chemotaxonomic and molecular systematic studies of African Asphodelaceae and Fabaceae. Taxonomic revisions of African genera of Fabaceae.

Collaborators: PM Tilney (UJ, RSA), AN Moteetee (UJ, RSA), M Wink (Heidelberg, Germany), JS Boatwright (SANBI, RSA), MM le Roux (UJ, RSA).

Outputs thus far: Postgraduate students (PhD – 5, MSc – 3); scientific papers (42). Envisaged final output: academic books.

17.3 Medicinal and poisonous plants of South Africa:

Aim: detailed studies of medicinal and poisonous plants that are of commercial and/or forensic interest (including studies on morphology, anatomy, chemistry, biological activity and ethnobotany).

Collaborators: M Wink (Heidelberg, Germany), PM Tilney (UJ, RSA), AM Viljoen (TUT, RSA), SF Van Vuuren (WITS, RSA), IM Hulley (UJ, RSA), GPP Kamatou (TUT, RSA), HS Long (UJ, RSA).

Outputs thus far: Postgraduate students (PhD – 3, MSc – 4); scientific papers (more than 20 over the last five years). Envisaged final output: academic books.

17.4 Ethnobotanical studies (Indigenous Plant Use):

Aim: (1) To review all ethnobotanical information for the various language and cultural groups in South Africa; (2) to document traditional knowledge on useful plants in the Cape region of South Africa (including the Northern-, Western- and parts of the Eastern Cape Provinces) in order to provide a detailed synthesis and conceptualization of Khoi-San ethnobotany. Of particular importance is a detailed review of Cape Herbal Medicine (of Khoi-San and Cape Dutch origin) as a contribution to the cultural heritage of South Africa. This is a matter of extreme urgency, as Cape Herbal Medicine is poorly recorded and traditional knowledge is rapidly being lost to future generations. The ultimate aim is a review and synthesis of a distinct and interesting traditional medicine system here called Cape Herbal Medicine (*Kaapse Kruimedisyne*).

Collaborators: indigenous experts from several communities in the Cape region, including Calvinia, Citrusdal, Clanwilliam, Graaff-Reinet, Heuningvlei, Keimoes, Kleinvlei, Koueberg, Leliefontein, Middelpos, Murraysburg, Nieuwoudtville, Nourivier, Paulshoek, Renosterhoek, Riemvasmaak, Soebatsfontein, Steinkopf, Stilbaai, Wupperthal and Zoar.

Outputs thus far: Postgraduate students (MSc – 3; currently PhD – 3 and MSc – 2); scientific papers on Cape Herbal Medicine (ca. 10 since 2008). Envisaged final output: two academic books.
