Kerzhner, I.M., Kuznetsova, V.G. & Rider, D.A. 2004. Karyotypes of Pentatomoidea additional to those published by Ueshima, 1979 (Heteroptera). *Zoosystematica Rossica*, 13(1): 17-21.

A list of pentatomoid karyotypes published after the monograph by Ueshima (1979) or overlooked by him is given. It includes 131 species.

Karyotypes are used in the systematics of Pentatomoidea mainly at suprageneric level. Ueshima (1979) published a monograph on the heteropteran karyotypes based on examination of an extensive literature. Independently, such a list for Pentatomoidea was compiled by Nuamah (1982); it included also some species overlooked by Ueshima and numerous original data. In the 25 years, which lapsed since publication of Ueshima's work, some other papers on the pentatomoid karyotypes were published as well. The number of examined species increased about 1.5 times, and it seems

expedient to publish a list of additions (see the Table). For better comparability, we accepted the suprageneric taxa of Pentatomidae as in Ueshima, though the tribal classification used by him is partly outdated. In contrast to Ueshima, we did not subdivide the not numerous Cydnidae and Scutelleridae into subfamilies.
