**CPERC Recorders field days,  
Waterbeach Barracks &  
Airfield  
August 6<sup>th</sup> 2011  
June 9<sup>th</sup> 2012**

Louise Bacon, Data Officer, CPERC

The objective of the CPERC recorders field day was several-fold; to provide an opportunity to the Cambridgeshire recording community to record in their favoured species groups on a site to which they would rarely gain access; to spend a day with others of the recording community; and to provide the site owner with an insight into the species found on their site. Following the success of the first day, it was agreed that we would return earlier in the season in 2012 for a follow-up visit.

In total, 22 people (including three CPERC staff) attended the 2011 day and 11 the second visit. The Waterbeach site is an active MOD site, so we had pre-arranged our visits and security gate clearance was a smooth process, giving time for some of our recorders to find a few species around the lights of the Guardroom building. On the 2012 recording day, although for once it was not raining, it was very windy, and about 5 hours was spent by most people on the airfield; the botanists then obtained permission to spend a further two hours amongst the active buildings and residential part of the site, which was not covered by others.

Waterbeach Barracks and disused airfield is an active training site, but which has a large area of open space, most of which is not used particularly heavily by the MOD. There is a Golf course and a pair of lakes, one of which is used by a local fishing club. In addition, the disused runways are still extant, part used by a model plane group, and other habitats on site include several plantations, grassland, several disused buildings and other disused concrete and rubble areas, etc., as well as grassland, both managed as part of the golf course, and unmanaged and slightly scrubby. A section of the very northern part of the site is arable. Our 2011 visit was timed to coincide with the annual down-time of the military activities, making access to all areas of the site possible except for those areas associated with munitions storage and similarly hazardous activities, which are always fenced off due to the number of non-MOD users of parts of the site. This meant that we had in excess of 2 km<sup>2</sup> available to us for exploration – a daunting task for a six hour recording day. The 2012 visit explored essentially the same area – all the recorders were on their second visit and tended to work patches which they had not tried the first time but which seemed of interest.

A reasonably thorough survey of the plants of the site was carried out by the Cambridge Natural History Society in 2008, and their original plant list is supplied as additional material with this report.

As our parking and gathering area was close to the lakes, runways and within easy access of the golf course and both woodland and grassland habitats, wide-ranging across the site to find other habitats in the given time was unlikely. Therefore, much of our coverage was of the core of the site, although some individuals did range more widely, including on to the arable edge and Golf course. In 2011, two moth-lights had been run overnight prior to the recording day, one next to the lake, one in a belt of trees between the golf course and sports field.

Over 800 species were recorded on the visit, and others will no doubt appear when a few specimens have been worked through. This shows a broad diversity on the site. As far as we know, no aquatic sampling was done, so the lakes themselves will hold more species as yet unrecorded. Anecdotal evidence from MOD personnel also has a list of species recorded, including bats, grass snake and several hawkmoths (usually found at the guardroom lights, photographs shown to us include Lime and Privet Hawkmoths). These are not included in the report.

The table below shows the number of species recorded in each of the broad taxonomic groups. A species spreadsheet is also attached of our full findings.

Several species recorded are classified as Nationally scarce (a categorisation based on the number of 10km squares recorded in about 20 years ago for many insect groups) or Nationally rare – whilst not many, it is pleasing to see some more interesting species in our finds.

This report is being circulated to the County Wildlife Sites officer in the first instance, and soon, with MOD approval, to the recorders who were present on the day.

After arranging the 2012 visit in principle in 2011, the closure of the site was announced by the MOD centrally. The on-site staff, especially Major David Hornby, were supportive of our visits and allowed our 2012 visit to go ahead. The findings of the naturalists attending the two recording days is not connected to or intended to influence in any way any decisions which could be taken over the future of the site when it is finally decommissioned in the next year or so.

We would like to thank the site personnel for making our two enjoyable recording days possible.

Over the course of two days, 1007 species have been recorded. In 2011 we recorded 804 and in 2012, 409 species.

In addition, the fungus group made a separate visit on 5<sup>th</sup> Nov 2011 and recorded 20 additional species, making a total of 1027 species recorded.

Overleaf are lists of species per group for each year and in total, a full list of species recorded with any legal or rarity status, and as an addition, some recorders supplied narrative summaries of their expert group, which are appended at the end of this report.

This report is being sent to all of those recorders who attended the two recording days and Major Hornby for the Waterbeach site. All species records are to be logged anonymously on the NBN Gateway for anyone to be able to see, as a dataset administered by CPERC.

Total number of species recorded by taxon group, all visits 2011-12

## THE LICHENS OF WATERBEACH AIRFIELD AND BARRACKS

The lichen communities of disused airfields had been seriously neglected until the late 1990s when Oliver Gilbert surveyed 50 disused military airfields across lowland Britain (Gilbert, 2000). During these surveys about 150 lichen taxa were encountered including one, *Staurothele frustulenta* from Devon, which was the first correctly identified occurrence in Britain. Gilbert concluded that disused airfields “offer an extensive, man-made, saxicolous/terricolous habitat extending across Britain” and that several of the lichen species were scarce and unexpected in a habitat only 50 years old.

The lichen surveys of Waterbeach Airfield and Barracks on 6<sup>th</sup> August 2011 and 9<sup>th</sup> June 2012 recorded 99 lichen taxa, most of which are common species but the following are of note:

*Acarospora cervina* is present on concrete at two localities. There is a pair of large concrete walls towards the western side of the site (TL484667) and the eastern one of these walls has a colony on its eastern face. A smaller colony is present on a large concrete block (fitted with a lifting eye and labelled with a 30 tonne lifting limit) which is present within the Barracks area (TL490663). Smith *et al.* (2009) state: “On hard limestones, epidiorite and other calcareous rocks, particularly in upland sites; local.” This species does occasionally turn up on man-made substrata in the lowlands.

*Buellia badia* is described by Smith *et al.* (2009) as occurring “On siliceous rock, especially roof tiles, usually closely associated or parasitic on *Xanthoparmelia* species; uncommon, local.” At Waterbeach Airfield this species is present (as extensive colonies) on the weathered boards of an external boardwalk of a girder bridge at the south end of the large pool (TL487667). Also present on these boards are two further notable species (*Lecanora invadens* and *Loxospora elatina*) which, however, are only tentatively identified and require confirmation.

*Caloplaca soralifera* is present on a large but loose slab of concrete lying near the western edge of the main runway (TL492672). This lichen species was mistakenly reported for the British Isles by Smith *et al.* (2009) from shingle on a Somerset beach. Very recently (May 2012) the first authentic record of this species was reported from a concrete curb at Lodge Farm Industrial Estate, Northampton. This occurrence at Waterbeach Airfield represents the second record for the British Isles. It is too early to say whether this lichen will turn out to be relatively common on concrete in the British Isles, having been previously overlooked, or whether it was rare but is spreading. Alternatively *C. soralifera* may be genuinely rare in this country and these two records, so close in time and geography, are coincidental finds.

*Catillaria atomaroides* is present on low walls built of hard, red engineering bricks towards the west side of the site (TL482669). This species is occasional in England but probably over-looked; to the naked eye it appears as little more than a black stain. These walls enclose some sort of drainage mechanism with stone chippings within. Such brickwork supports a distinctive community including, in addition, *Buellia aethalea* and *B. ocellata*, reminiscent of the community on sandstone headstones in churchyards.

*Lecania inundata* is infrequently recorded but was found on concrete in several places at Waterbeach Airfield. It is best developed, along with a rich saxicolous community, on an obelisk-

shaped concrete structure with a protruding metal bar near the north-west corner of the large pool (TL486671).

*Lecania rabenhorstii*. The identification of the pruinose *Lecania* species growing on calcareous substrata is notoriously difficult. Some lichen colonies growing on a large concrete wall towards the western side of the site (TL483670) would be recorded as *L. rabenhorstii* by many lichenologists. This and *Lecania inundata* were both noted as scarce species found during Oliver Gilbert's surveys.

*Lecidella carpathica* is described by Smith *et al.* (2009) as an uncommon species; it is usually recorded on brick and stonework. At Waterbeach, large colonies are present on wooden railway sleepers placed as revetments at the edge of a mound near the north-east corner of the large pool (TL489671).

*Piccolia ochrophora* was found on the trunks of large elder bushes just north of the sports pitches (TL494673). Smith *et al.* (2009) state the distribution as "S.W. British Isles, with some eastern occurrences, local."

*Scoliciosporum umbrinum* is a common species but it is of interest for its ability to grow on a wide range of substrates including those which seem inhospitable. A metal bridge at the south end of the large pool (TL486667) has unpainted, bare aluminium rails which have large colonies of this lichen. These colonies appear as little more than dark "crud" to the naked eye but they are thriving and fruiting abundantly on this unlikely surface. The aluminium rails of a road bridge at Great Staughton, Cambridgeshire are similarly dominated by this lichen.

## **Conclusions and management suggestions**

The lichen communities of the trees and shrubs on the airfield are rather poor with the only notable lichen found on *Sambucus nigra* (elder) bushes. Elder bushes are widely recognised as being of particular importance for both lichens and mosses and they should be retained where possible.

The various concrete structures and disused concrete pads support a rich assemblage of lichens and should not be demolished without good reason.

Disused airfields often contain a glorious clutter of debris and disused structures providing a range of metal, concrete and wooden substrata. Such structures and rubble should be preserved in areas where it is practical to do so. Of particular interest is the bridge at the south end of the lake (TL486667) and especially the wooden boards which form boardwalks at the outer sides of the parapets.

### Comments on specific species by recorders:

John Holden, South Cambridgeshire fungus group, 5<sup>th</sup> Nov visit

“It was particularly interesting to find *Arrhenia spathulata*, an uncommon small ear-like fungus growing in moss at the side of the track, which none of us had seen before.”

Ian Dawson, Spider expert:

“A couple of the spiders were of interest: an adult male *Trachyzelotes pedestris* (we found an immature in 2011), otherwise known in Cambs from the old railway line at Hayley Wood, and Cherry Hinton East Pit, though I think Ray Symonds has also found it recently at Fleam Dyke; and the money spiders *Ceratinopsis romana* and *Meioneta beata*, both previously found only at Boxworth in vc29, though also at Castor Hanglands in the admin county, and Monks Wood as well for the latter.”

Botanists:

“The highlight on the Airfield was finding that the *Galium parisiense*, first seen last year, is actually present in great numbers over a vast area in the south-western part of the site. This species seems to be having a renaissance in the UK at the moment and we have recently had it in three other new areas.

Outside the Airfield of course the Barracks turned out to provide the sensation of the day, the verges holding good populations of *Medicago minima*, *Vulpia ciliata* subsp. *ambigua*, *Trifolium arvense* and *T. scabrum*: the latter representing perhaps our only extant population of any significance in the county!”

“Botanically it was a delight. To find the *Galium parisiense* was so widespread and abundant was a revelation and between us we chalked up a really good list of additions. A second site for *Oenanthe pimpinelloides*, finding good *Aphanes australis* and a big colony of *Polypogon monspeliensis* were also highlights. The time spent afterwards on the area around the buildings was even more of a treat as the hint provided by *Medicago minima* at the start of the day suggested. The medick was widespread on the verges and in places was accompanied by more *Trifolium scabrum* than anywhere else in the county, together with *Trifolium arvense* and a good colony of *Vulpia ciliata* subsp. *ambigua*. Shame about the future plans for the area. But it has been good to see it now!

On our trip around the barracks we even had a short tutorial from Mark Powell who showed us how much interest there could be in a big block of concrete, which included another rare lichen!”

spider	<i>Dictyna uncinata</i>	<i>Dictyna uncinata</i>	06/08/2011	
spider	<i>Dictyna uncinata</i>	<i>Dictyna uncinata</i>	09/06/2012	Voucher specimen available. Sieved from willow litter on west shore of lake.
spider	<i>Diplocephalus latifrons</i>	<i>Diplocephalus latifrons</i>	09/06/2012	Voucher specimen available. Sieved from willow litter on west shore of lake.
spider	<i>Diplocephalus picinus</i>	<i>Diplocephalus picinus</i>	09/06/2012	Voucher specimen available. From dry leaf litter under willows at edge of old runway at TL490671.
spider	<i>Drassodes lapidosus</i>	<i>Drassodes lapidosus</i>	06/08/2011	
spider	<i>Enoplognatha latimana</i>	<i>Enoplognatha latimana</i>	06/08/2011	
spider	<i>Enoplognatha ovata</i>	<i>Enoplognatha ovata</i>	06/08/2011	beaten from evergreens
spider	<i>Enoplognatha thoracica</i>	<i>Enoplognatha thoracica</i>	09/06/2012	Voucher specimen available. Sieved from willow litter on west shore of lake.
spider	<i>Erigone dentipalpis</i>	<i>Erigone dentipalpis</i>	06/08/2011	
spider	<i>Erigone dentipalpis</i>	<i>Erigone dentipalpis</i>	09/06/2012	Voucher specimen available. Running on bare ground on bank.
spider	<i>Euophrys frontalis</i>	<i>Euophrys frontalis</i>	06/08/2011	
spider	<i>Euophrys frontalis</i>	<i>Euophrys frontalis</i>	09/06/2012	Voucher specimen available. From dry leaf litter under willows at edge of old runway at TL490671.
spider	<i>Gibbaranea gibbosa</i>	<i>Gibbaranea gibbosa</i>	06/08/2011	beaten from evergreens
spider	<i>Gongylidium rufipes</i>	<i>Gongylidium rufipes</i>	09/06/2012	Voucher specimen available. Beaten from oak

				on north side of wooded strip at TL486673.
spider	<i>Heliophanus flavipes</i>	<i>Heliophanus flavipes</i>	06/08/2011	
spider	<i>Hylyphantes graminicola</i>	<i>Hylyphantes graminicola</i>	06/08/2011	beaten from evergreens
spider	<i>Hylyphantes graminicola</i>	<i>Hylyphantes graminicola</i>	09/06/2012	Voucher specimen available.
spider	<i>Larinioides cornutus</i>	<i>Larinioides cornutus</i>	06/08/2011	
spider	<i>Lathys humilis</i>	<i>Lathys humilis</i>	06/08/2011	beaten from evergreens
spider	<i>Lathys humilis</i>	<i>Lathys humilis</i>	09/06/2012	Voucher specimen available. Beaten from oak on north side of wooded strip at TL486673.
spider	<i>Lepthyphantes tenuis</i>	<i>Lepthyphantes tenuis</i>	06/08/2011	
spider	<i>Lepthyphantes tenuis</i>	<i>Lepthyphantes tenuis</i>	09/06/2012	Voucher specimen available. From dry leaf litter under willows at edge of old runway at TL490671.
spider	<i>Maso sundevalli</i>	<i>Maso sundevalli</i>	09/06/2012	Voucher specimen available. From dry leaf litter under willows at edge of old runway at TL490671.
spider	<i>Meioneta beata</i>	<i>Meioneta beata</i>	09/06/2012	Voucher specimen available. From ground among short grass.
spider	<i>Meioneta rurestris</i>	<i>Meioneta rurestris</i>	06/08/2011	
spider	<i>Metellina</i>	<i>Metellina</i>	06/08/2011	
spider	<i>Micaria pulicaria</i>	<i>Micaria pulicaria</i>	06/08/2011	
spider	<i>Micaria pulicaria</i>	<i>Micaria pulicaria</i>	09/06/2012	Voucher specimen available. From dry leaf litter under willows at edge of old runway at TL490671.
spider	<i>Micrargus herbigradus</i>	<i>Micrargus herbigradus</i>	09/06/2012	Voucher specimen available. Sieved from willow litter on west shore of lake.
spider	<i>Microlinyphia pusilla</i>	<i>Microlinyphia pusilla</i>	06/08/2011	
spider	<i>Microneta viaria</i>	<i>Microneta viaria</i>	09/06/2012	Voucher specimen available. From dry leaf litter under willows at edge of old runway at TL490671.
spider	<i>Monocephalus fuscipes</i>	<i>Monocephalus fuscipes</i>	09/06/2012	Voucher specimen available. Sieved from willow litter on west shore of lake.
spider	<i>Neottiura bimaculatum</i>	<i>Neottiura bimaculatum</i>	09/06/2012	Beaten from rose.
spider	<i>Neriere clathrata</i>	<i>Neriere clathrata</i>	06/08/2011	beaten from oak
spider	<i>Neriere peltata</i>	<i>Neriere peltata</i>	06/08/2011	beaten from evergreens
spider	<i>Nuctenea umbratica</i>	Walnut Orb-Weaver Spider	09/06/2012	On painted corrugated iron shelter.
spider	<i>Panamomops sulcifrons</i>	<i>Panamomops sulcifrons</i>	09/06/2012	Voucher specimen available. From dry leaf litter under willows at edge of old runway at TL490671.
spider	<i>Pardosa nigriceps</i>	<i>Pardosa nigriceps</i>	06/08/2011	
spider	<i>Pardosa palustris</i>	<i>Pardosa palustris</i>	09/06/2012	Voucher specimen available. Running on ground.
spider	<i>Pardosa prativaga</i>	<i>Pardosa prativaga</i>	06/08/2011	
spider	<i>Pardosa pullata</i>	<i>Pardosa pullata</i>	09/06/2012	Voucher specimen available. Running on ground.
spider	<i>Pardosa saltans</i>	<i>Pardosa saltans</i>	06/08/2011	
spider	<i>Pelecopsis parallela</i>	<i>Pelecopsis parallela</i>	06/08/2011	
spider	<i>Philodromus aureolus</i>	<i>Philodromus aureolus</i>	09/06/2012	Voucher specimen

				available. Beaten from hawthorn and ash.
spider	<i>Philodromus cespitum</i>	<i>Philodromus cespitum</i>	06/08/2011	
spider	<i>Philodromus cespitum</i>	<i>Philodromus cespitum</i>	09/06/2012	Voucher specimen available. From dry leaf litter under willows at edge of old runway at TL490671.
spider	<i>Philodromus collinus</i>	<i>Philodromus collinus</i>	06/08/2011	beaten from evergreens
spider	<i>Phrurolithus festivus</i>	<i>Phrurolithus festivus</i>	06/08/2011	
spider	<i>Phrurolithus festivus</i>	<i>Phrurolithus festivus</i>	09/06/2012	Voucher specimen available. From dry leaf litter under willows at edge of old runway at TL490671.
spider	<i>Pisaura mirabilis</i>	Nursery-Web Spider	06/08/2011	
spider	<i>Salticus scenicus</i>	Zebra Spider	09/06/2012	
spider	<i>Steatoda nobilis</i>	<i>Steatoda nobilis</i>	06/08/2011	
spider	<i>Stemonyphantes lineatus</i>	<i>Stemonyphantes lineatus</i>	06/08/2011	
spider	<i>Talavera aequipes</i>	<i>Talavera aequipes</i>	06/08/2011	
spider	<i>Tetragnatha montana</i>	<i>Tetragnatha montana</i>	09/06/2012	
spider	<i>Theridion tinctum</i>	<i>Theridion tinctum</i>	06/08/2011	beaten from evergreens
spider	<i>Theridion tinctum</i>	<i>Theridion tinctum</i>	09/06/2012	Voucher specimen available. Beaten from oak on north side of wooded strip at TL486673.
spider	<i>Theridion varians</i>	<i>Theridion varians</i>	06/08/2011	beaten from evergreens
spider	<i>Theridion varians</i>	<i>Theridion varians</i>	09/06/2012	Voucher specimen available. Both with epigyne plugged. Beaten from alder and rose with dense nettle cover at NW side of lake.
spider	<i>Tibellus oblongus</i>	<i>Tibellus oblongus</i>	06/08/2011	
spider	<i>Trachyzelotes pedestris</i>	<i>Trachyzelotes pedestris</i>	06/08/2011	
spider	<i>Trachyzelotes pedestris</i>	<i>Trachyzelotes pedestris</i>	09/06/2012	Voucher specimen available. Photograph taken. Running across path at NW side of old airfield, close to A10 road on western boundary of site at TL48366746.
spider	<i>Xysticus cristatus</i>	<i>Xysticus cristatus</i>	06/08/2011	
spider	<i>Xysticus cristatus</i>	<i>Xysticus cristatus</i>	09/06/2012	With prey on Creeping Thistle in grassland.
spider	<i>Xysticus ulmi</i>	<i>Xysticus ulmi</i>	06/08/2011	
spider	<i>Xysticus ulmi</i>	<i>Xysticus ulmi</i>	09/06/2012	Voucher specimen available. Swept from long grass under oaks.
spider	<i>Zelotes latreillei</i>	<i>Zelotes latreillei</i>	06/08/2011	
spider	<i>Zelotes latreillei</i>	<i>Zelotes latreillei</i>	09/06/2012	Sieved from willow litter on west shore of lake.
spider	<i>Zygiella x-notata</i>	<i>Zygiella x-notata</i>	06/08/2011	
mammal	<i>Clethrionomys glareolus</i>	Bank Vole	06/08/2011	
mammal	<i>Oryctolagus cuniculus</i>	Rabbit	06/08/2011	
mammal	<i>Oryctolagus cuniculus</i>	Rabbit	09/06/2012	
mammal	<i>Sciurus carolinensis</i>	Grey Squirrel	06/08/2011
