ABSTRACT

This checklist of lichens of Assam, India is made authors own collections during field trips within the study area as well as the references published on lichen diversity of this study area till 2021. This checklist comprises 317 number of species belonging to 101 genera and 38 families of ecologically diverse region. It has been revealed that the family Graphidaceae has the most diversity of species.

Key words : Lichens, Assam, Graphidaceae.

Introduction

Lichens are one of the most complex life forms which can withstand the extremes of climate due to its complex symbiotic association of algae and fungi and its unique physiological association. And therefore it has been one of the important plant groups to study and document their importance in an ecosystem.

Phytogeographically the state of Assam of North East falls under biodiversity hot spot, the Eastern Himalayas, having varied landscape and climatic conditions. It has one of the rich diversity of lichen species that flourishes in this region. Thus the variation and presence of diverse species it leads to the diversity which are distinct to this part of the world. This region has got mosaic of climatic zones which leads to the formation of different forest types from semi-evergreen to evergreen type.

The study of lichen diversity from this study area was started by Stirton (1881). In the latter years various researchers have worked on the lichen diversity

of Assam along with the other parts of North East of India Awasthi and Singh, 1973; Pant and Upadhyay, 1993, Rout et al., 2010; Gupta et al., 2013; Daimari et al. 2014; Choudhary et al., 2016; Mishra et al. 2019; Gupta and Sinha, 2016. Recently, Gogoi et al., 2018 have reported some new species from this region.

Due to conservation crisis and there sensitivity to air pollution has lead to the extinction of many lichen species which were endemic/restricted only to this ecological hotspot. And for which it has become utmost necessary to conserve this group of plants with proper scientific interventions from the consequences of extinction from the complex ecosystem of this diverse Eastern Himalayas.

The Lichen are necessary critical components to an ecosystem therefore conservation efforts are necessary to preserve their biodiversity. As these long term shift in climate patterns impacts this region are broad and somewhat unpredictable, therefore protection in its natural habitat is important as we rely on it.

Materials and Method

Study Area

The present study on documentation and enumeration of Lichen species was from the state of Assam. Assam has an elevation of about 79.5m above sea level and covers an area of about 78,438 sq. Km. having the co-ordinates 26° 12' 2.174" N 92° 56' 15.266" E and annual average rainfall 1,524.6 mm. and average humidity is 83% and 211.76 cm respectively. The

state of Assam is topographically divided into the Brahmaputra valley, the Barak valley and the Mountainous Assam range having a subtropical climate. The state has diverse ecological habitats comprises of many Biosphere Reserve, National Park, and numerous wildlife sanctuary and Reserve forests which exhibits in this rich biodiversity.

Results

A total of 317 species of lichen has reported from varied habitat of Assam, belonging to 101 genera

35	Lecanographaceae	<i>Zwackhia</i>	2

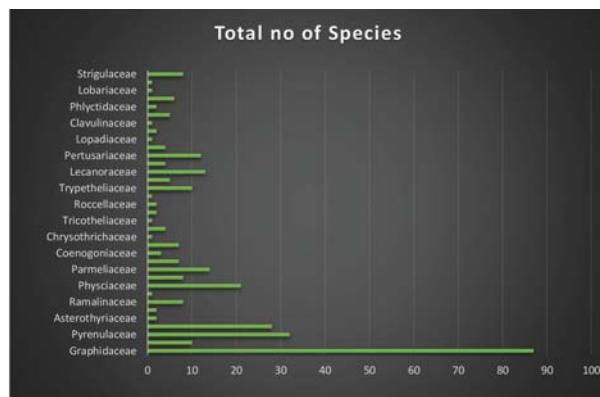

and 35 families. It is found that the family Graphidaceae has the highest occurrence from this diverse eco region.

Discussion

The present study have revealed the luxuriant diversity of lichens. The present study area have several ecologically sensitivities areas like Reserve forests, National Parks, Wildlife Sancturies which become necessary to conserve for the pioneer colonizers.

Moreover this biodiversity hotspots have been facing human encroachment, habitat fragmentation etc. So to safeguard this group of plants from grave

consequences of extinction from the complex ecosystem of the present study areaas well as from this diverse region of Eastern Himalayas, it is high time to step forward *in situ* conservation of the lichen diversity.
