Abstract: Aponte-R, A. M., Álvaro-A, W. R., Uribe-M., J. (2022): Checklist of the Bryophytes of Boyacá (Colombia). *Frahmia* 26:1-50.

The checklist of bryophytes reported in the literature for the department of Boyacá (Colombia) is presented. For the territory, 849 species of bryophytes are accepted (6 hornworts, 330 liverworts, 513 mosses) distributed in 295 genera and 102 families. For each name, the source or origin of the report is cited. The information included in this catalog was based on the catalogs or lists of bryophyte species in which specimens located in the department of Boyacá are referenced. Also included is a list of 198 names that correspond to synonyms and 15 questionable records. *Campylopus*, *Frullania*, *Plagiochila*, *Fissidens* and *Metzgeria* were the genera with the highest number of species. Lejeuneaceae, Pottiaceae, Brachytheciaceae and Hypnaceae were the families with the highest number of genera, while Lejeuneaceae, Leucobryaceae, Bartramiaceae, Pottiaceae and Lepidoziaceae were the families with the highest number of species. The information available for the region that reported 527 species in the catalog of plants and lichens of Colombia is updated.

1. Introduction

The oldest records of bryophytes for Boyacá department are dated from when Nueva Granada still existed, and this region was known as the province of Sogamoso Mitten (1869) reported 12 species, since then the catalogs of both liverworts and mosses for Colombia have included a significant amount, showing that the Andean region and in particular this department has a significant presence of the diversity known to the country.

The Catalog of lichens and plants of Colombia (Bernal et al. 2016) reports the presence of about 1660 species of bryophytes (13 hornworts, 715 liverworts and 932 mosses), of which 539 have been found in the territory of Boyacá (Churchill 2016, Gradstein & Uribe 2016). When carrying out the compendium of bryophyte studies in Colombia, it is found that Boyacá is the department where the largest number of floristic studies have been carried out. This leads us to consider the importance of gathering that information and presenting it up to date.

The objective of this work is to present the updated catalogue resulting from the compendium of all those bryological studies carried out in department, which will also identify those areas studied so far. In this way it seeks to contribute to the knowledge of national diversity.

2. Materials and methods

The list of bryophytes reported for the department was constructed from information published in taxonomic reviews for Colombia and for the Neotropics, as well as inventories or floristic studies carried out for the region. The catalog of the species reported for the department of Boyacá was built after an exhaustive review of each scientific name from the list stated above, which allowed updating the information of all those names cited in the consulted publications.

Additionally, it was found that many of them have been considered synonymous, others in which their known distribution is restricted to another natural region in relation to areas with low altitude (doubtful record) and for which a review of the voucher specimen is suggested. For this reason, a list of synonyms is provided. Finally, the list of those names for which the review of the specimen is suggested to confirm their identity, this is presented in the doubtful records section. The catalog follows the classification systems of Goffinet & Buck (2020) and Zander (2018), for mosses and Söderström et al. (2016), for liverworts and hornworts.

Study area

The department of Boyacá is in the north-eastern central part of Colombia, on the eastern cordillera, between $04^{\circ}39'10''$ and $07^{\circ}03'17''$ North latitude and $71^{\circ}57'49''$ and $74^{\circ}41'35''$ West longitude (Figure 1). It has an area of 23,189 km², distributed in 123 municipalities, which are grouped into 12 provinces: Sugamuxi, Tundama, Valderrama, Norte, Gutiérrez, Centro, Neira, Oriente, Lengua, Ricaurte, Márquez and Occidente. It limits to the north with the departments of Santander and Norte de Santander; to the east with Arauca and Casanare; to the south with Cundinamarca and Meta and to the west with Antioquia and Cundinamarca (Estupiñán 2014).

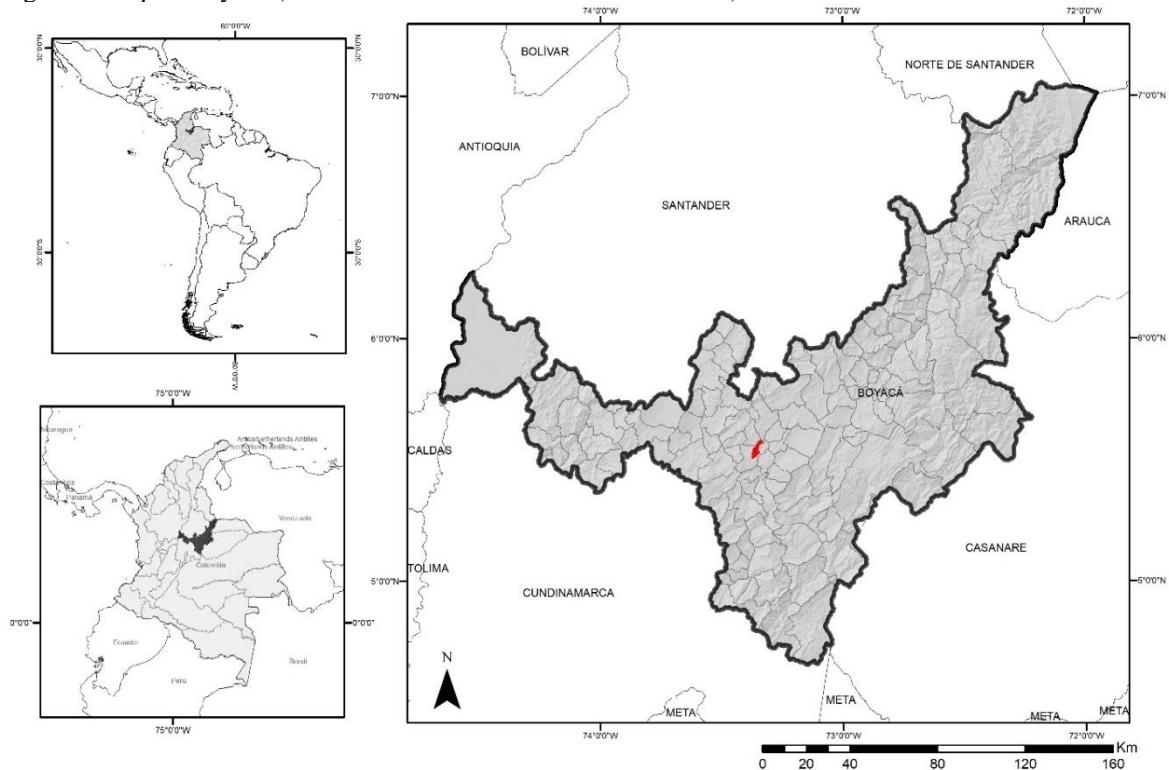

In the department, four morphological units can be distinguished according to the relief, the Magdalena River valley, the Altiplano, the foothills (750 m, serranía Las Quinchas) and the eastern mountain range (5380 m, Ritacuba Blanco in the Sierra Nevada del Cocuy).

The hydrographic system of Boyacá is made up of numerous rivers and streams that are tributaries of the Magdalena, Suárez, Chicamocha, Meta and Arauca rivers. It also presents numerous lentic environments of tourist importance such as the lakes of Tota, Sochagota and the Iguaque lagoon, and supplying aqueducts such as the Chivor reservoir, Teatinos, among others (Gobernación de Boyacá 2017).

Boyacá has four areas of National Natural Parks, 11 regional reserves, 11 municipal reserves, 9 civil society reserves and 1 indigenous reservation, which are important to ensure the conservation of biodiversity and the environmental offer in general (Vásquez 2005).

The main biomes in the department are perpetual snows, located in the Sierra Nevada del Cocuy; the paramos are represented in five complexes; wetlands; Andean forests, tropical humid forests and subxerophytic enclaves (Gobernación de Boyacá 2017).

3. Checklist of Bryophytes of Boyacá department (Colombia)

The catalog of bryophyte species for the department of Boyacá is presented, which is organized by group of plants (hornworts, liverworts and mosses), and within each of them, the families, genera and species.

HORNWORTS

ANTHOCEROTACEAE

Anthoceros lamellatus Steph. - (Álvaro et al. 2019b)

Anthoceros tristanianus J.C. Villarreal, J.J. Engel & Váña- (Peñaloza et al. 2020)

DENDROCEROTACEAE

Nothoceros vincentianus (Lehm. & Lindenb.) J.C. Villarreal- (Álvaro et al. 2004, 2006, 2019a, Lagos & Morales 2008, Becerra et al. 2017, Becerra et al. 2020, Gradstein 2021)

Phaeomegaceros fimbriatus (Gottsche) R.J. Duff, J.C. Villarreal, Cargill & Renzaglia- (Gradstein 2021)

NOTOTHYLADACEAE

Phaeoceros carolinianus (Michx.) Prosk. - (Álvaro et al. 2019a, Becerra et al. 2020)

Phaeoceros laevis (L.) Prosk. - (Álvaro et al. 2019b)

LIVERWORTS

ACROBOLBACEAE

Acrobolbus cuneifolius (Steph.) Briscoe- (Gradstein & Uribe 2016, Gradstein 2021)

Acrobolbus laxus (Lehm. & Lindenb.) Briscoe- (Gradstein & Hekking 1979, Uribe & Gradstein 1998, Álvaro et al. 2007, 2019a, Gradstein & Uribe 2016, Becerra et al. 2020, Gil et al. 2020, Gradstein 2021)

Acrobolbus wilsonii Nees- (Gil & Morales 2016, Gradstein 2021)

Lethocolea glossophylla (Spruce) Grolle- (Gradstein & Uribe 2016, Gradstein 2021)

ADELANTHACEAE

Adelanthus lindenbergianus (Lehm.) Mitt. - (Álvaro et al. 2007, Gil et al. 2020, Gradstein 2021)

Adelanthus pittieri (Steph.) Grolle- (Gradstein & Uribe 2016, Gradstein 2021)

Pseudomarsupidium decipiens (Hook.) Grolle- (Uribe & Gradstein 1998, Álvaro et al. 2007, Gradstein & Uribe 2016, Gil & Morales 2016, Gradstein 2021)

4. Statistical data

Richness

For the department of Boyacá 849 species of bryophytes are reported (Appendix 1), included into 295 genera and 102 families, organized into three groups Bryophyta, Marchantiophyta and Antocerophyta (Table 1). The list of synonyms (Appendix 2) and doubtful or erroneous records (Appendix 3) is also presented.

Table 1: Diversity of bryophyte species reported for Boyacá.

| DIVISION | Families | Genera | Species |
|------------|----------|--------|---------|
| Mosses | 62 | 197 | 513 |
| Liverworts | 37 | 94 | 330 |
| Hornworts | 3 | 4 | 6 |
| Total | 102 | 295 | 849 |

The bryophyte families with the highest number of genera in the department are Lejeuneaceae, Pottiaceae, Brachytheciaceae, Hypnaceae, Amblystegiaceae, Pilotrichaceae, Dicranaceae, Neckeraceae, Lepidoziaceae y Lophocoleaceae, the remaining 92, representing 90,19%, have between 1 and 5 genera (Table 2).

Table 2: Bryophyte families with the highest number of genera in Boyacá

Table 5 summarizes the information on the department of Boyacá that has been presented in the national catalogs of bryophytes produced so far; From there several aspects stand out. Firstly, it is evident that the studies in bryophytes have been more abundant in mosses than in liverworts and / or hornworts for Colombia; second, it should be noted that the production of information has been continuous for the last 55 years; Finally, it is necessary to highlight the need for research on

hornworts in Colombia, given the recent information that has been found on their diversity, particularly considering that in their research Álvaro et al. (2006, 2019a, 2019b), Lagos et al. (2008), Becerra et al. (2017, 2020), have reported hornworts for the department; finally, the increase in the number of species known to the department with respect to the last national catalog stands out.

At the national level, the department of Boyacá is where the greatest number of local studies on bryophytes have been carried out, of which at least 20 catalogs or floristic studies have been published as research papers or book chapters; of these, 11 or 55% were carried out in high Andean terrestrial ecosystems (paramo and forest), 4 or 20% in aquatic ecosystems, 3 representing 15% in tropical forest and one, that is, 10% in urban areas (Table 6).

5. Discussion

In this work, a compilation of works carried out for the department of Boyacá was made, and the presence of 849 species was obtained as a result, which represents almost half (51,14%) of the number of species reported for the country. In this sense, it is considered that this figure may increase, if one considers that at the departmental level it is still advisable to carry out floristic studies in strategic ecosystems such as super paramo, subxerophytic enclaves, wetlands, rivers and streams, as well as continuing with the studies in the other high Andean paramos and forest complexes of the department, and also include intermontane tropical forests or low zones, transformed areas and crops and urban areas.

Acknowledgments

The authors thank the people who throughout history have contributed to the knowledge of the Colombian bionota, especially those made in Boyacá department, a special mention to María Eugenia Morales the teacher whose research group has been carrying out studies in different places in the region. To María Celeste Montilla for preparing the map that accompanies the document.

Appendix 1: LIST OF SYNONYMS

HORNWORTS

Megaceros vincentianus = *Nothoceros vincentianus* (Villarreal et al. 2010)

LIVERWORTS

- Adelanthus crossii* = *Pseudomarsupidium decipiens* (Gradstein & Uribe 2016)
- Adelanthus decipiens* = *Pseudomarsupidium decipiens* (Gradstein & Ilku-Borges 2015)
- Anastrophyllum austroamericanum* = *Sphenolobus austroamericanus* (Váña et al. 2013b)
- Anastrophyllum crebrifolium* = *Anastrophyllum auritum* (Gradstein & Costa 2003)
- Anastrophyllum leucocephalum* = *Anastrophyllum auritum* (Gradstein & Costa 2003)
- Anastrophyllum leucostomum* = *Anastrophyllum auritum* (Gradstein & Costa 2003)
- Anastrophyllum pearcei* = *Anastrophyllum tubulosum* (Gradstein et al. 2003)
- Andrewsianthus jamesonii* = *Lophonardia jamesonii* (Söderström et al. 2013a)
- Archilejeunea porelloides* = *Archilejeunea ludoviciana* (Gradstein & Costa 2003)
- Austrofossombronia peruviana* = *Fossombronia peruviana* (Gradstein et al. 2003)
- Bazzania boliviensis* = *Bazzania falcata* (Gradstein et al. 2003)
- Bazzania breutelianae* = *Bazzania hookeri* (Gradstein et al. 2003)
- Bazzania chimbazensis* = *Bazzania hookeri* (Gradstein & Costa 2003)
- Bazzania longa* sensu Fulford = *Bazzania hookeri* (Gradstein 2017)
- Brachiolejeunea nitidiuscula* = *Blepharolejeunea incongrua* (van Slageren 1985)
- Calypogeia cyclostipa* = *Mnioloma cyclostipum* (Gradstein & Costa 2003)
- Campanocolea fragmentissima* = *Lophocolea fragmentissima* (Schuster 1978)
- Cephalozia crassifolia* = *Fuscocephaloziopsis crassifolia* (Hodgetts et al. 2020)
- Cephalozia dussii* = *Cephalozia crossii* (Gradstein & Costa 2003)
- Cephalozia pleniceps* = *Fuscocephaloziopsis pleniceps* (Stotler & Crandall-Stotler 2017)
- Chiloscyphus connatus* = *Cryptolophocolea connata* (Söderström et al. 2013b)
- Chiloscyphus martianus* = *Cryptolophocolea martiana* (Stotler & Crandall-Stotler 2017)
- Chiloscyphus proteus* = *Cryptolophocolea martiana* (Söderström et al. 2013b)
- Colura patagonica* = *Colura naumannii* (Gradstein & Uribe 2016)
- Cryptochila grandiflora* = *Syzygiella sonderi* (Gradstein & Uribe 2016)
- Cryptolophocolea martiana* subsp. *bidentula* = *Cryptolophocolea martiana* (Söderström et al. 2013b)
- Cryptolophocolea proteus* = *Cryptolophocolea martiana* (Gradstein & Uribe 2016)
- Drepanolejeunea navicularis* = *Drepanolejeunea cutervoensis* (Gradstein & Uribe 2016)
- Frullania albertii* = *Frullania standaertii* (Gradstein & Uribe 2016)
- Frullania arecae* = *Frullania obscura* (Gradstein 2012)
- Gongylanthus innovans* = *Gongylanthus limbatus* (Gradstein & Uribe 2016)
- Gymnocoleopsis multiflora* = *Gymnocoleopsis cylindriformis* (Váña et al. 2013a)
- Gymnomitrion andinum* = *Gymnomitrion bolivianum* (Gradstein & Uribe 2016)

- Herbertus acanthelius* = *Herbertus juniperoides* ssp. *acanthelius* (Feldberg & Heinrichs 2006)
- Herbertus divergens* = *Herbertus bivittatus* (Gradstein & Uribe 2016)
- Herbertus grossispinus* = *Herbertus sendtneri* (Feldberg & Heinrichs 2006)
- Herbertus pensilis* = *Herbertus juniperoides* spp. *pensilis* (Feldberg & Heinrichs 2006)
- Herbertus subdentatus* = *Herbertus juniperoides* ssp. *acanthelius* (Feldberg & Heinrichs 2006)
- Isotachis tenax* = *Isotachis multiceps* (Gradstein & Uribe 2016)
- Jamesoniella autumnalis* = *Syzygiella autumnalis* (Stotler & Crandall-Stotler 2017)
- Jamesoniella rubricaulis* = *Syzygiella rubricaulis* (Hodgetts et al. 2020)
- Jamesoniella undata* = *Syzygiella undata* (Feldberg et al. 2010)
- Jensenia erythropus* = *Jensenia spinosa* (Schuette & Stotler 2005)
- Jungermannia callithrix* = *Solenostoma callithrix* (Stephani 1901)
- Jungermannia hyalina* = *Solenostoma hyalinum* (Stotler & Crandall-Stotler 2017)
- Jungermannia sphaerocarpa* = *Solenostoma sphaerocarpum* (Stotler & Crandall-Stotler 2017)
- Lejeunea monimiae* = *Lejeunea subsessilis* (Bastos & Gradstein 2020)
- Lejeunea silvatica* = *Lejeunea flava* (Stotler & Crandall-Stotler 2017)
- Lepidozia brasiliensis* = *Lepidozia cupressina* (Gradstein & Uribe 2016)
- Lepidozia lindigiana* = *Lepidozia cupressina* (Gradstein & Uribe 2016)
- Lepidozia muenchiana* = *Lepidozia cupressina* (Gradstein & Uribe 2016)
- Lophocolea bidentula* = *Cryptolophocolea martiana* (Söderström et al. 2013b)
- Lophocolea guadalupensis* = *Cryptolophocolea guadalupensis* (Söderström et al. 2013b)
- Lophocolea proteus* = *Cryptolophocolea martiana* (Gradstein & Uribe 2016)
- Lophocolea trapezoides* = *Leptoscyphus trapezoides* (Söderström et al. 2013b)
- Lophozia incisa* = *Schistochilopsis incisa* (Stotler & Crandall-Stotler 2017)
- Macrolejeunea pallescens* = *Lejeunea pallescens* (Söderström et al. 2015)
- Marsupella involuta* = *Gymnomitrion truncatoapiculatum* (Gradstein & Uribe 2016)
- Metzgeria atramentaria* = *Metzgeria violacea* (Costa 2008)
- Metzgeria decipiens* = *Metzgeria furcata* (So 2003)
- Metzgeria gigantea* = *Metzgeria claviflora* (Costa 2008)
- Metzgeria papulosa* = *Metzgeria leptoneura* (Costa 2008)
- Metzgeria sandei* = *Metzgeria leptoneura* (Costa 2008)
- Odontoschisma atropurpureum* = *Odontoschisma variabile* (Gradstein & Ilku-Borges 2015)
- Omphalanthus filiformis* = *Cheilolejeunea filiformis* (Ye et al. 2015)
- Plagiochila bryopteoides* = *Plagiochila deflexirama* (Gradstein 2015)
- Plagiochila oblita* = *Plagiochila alternans* (Gradstein & Uribe 2016)
- Porella splendida* = *Porella brachiata* (Gradstein & Uribe 2016)
- Prionolejeunea microdonta* = *Prionolejeunea denticulata* (Gradstein & Uribe 2016)
- Rectolejeunea berteroana* = *Rectolejeunea versifolia* (Söderström et al. 2015)
- Riccardia amazonica* = *Riccardia regnellii* (Gradstein & Reeb 2018a)
- Riccardia andina* = *Riccardia fucoidea* (Gradstein & Reeb 2018b)
- Riccardia columbica* = *Riccardia hans-meyeri* (Gradstein & Reeb 2018b)
- Riccardia crassicaulis* = *Riccardia fucoidea* (Gradstein & Reeb 2018b)
- Riccardia herzogiana* = *Riccardia pallida* (Gradstein & Reeb 2018b)
- Riccardia judithae* = *Riccardia wallisii* (Gradstein & Reeb 2018b)
- Riccardia lepidomitria* = *Riccardia fucoidea* (Gradstein & Reeb 2018b)
- Riccardia paramorum* = *Riccardia cataractarum* (Gradstein & Reeb 2018b)
- Riccardia parasitans* = *Riccardia latifrons* subsp. *parasitans* (Gradstein & Reeb 2018b)
- Riccardia plumiformis* = *Riccardia fucoidea* (Gradstein & Reeb 2018b)
- Syzygiella liberata* = *Syzygiella trigonifolia* (Váña et al. 2014)
- Taxilejeunea pterigonia* = *Lejeunea pterigonia* (Söderström et al. 2015)
- Taxilejeunea sulphurea* = *Lejeunea sulphurea* (Söderström et al. 2015)
- Trachylejeunea decurvirostra* = *Pycnolejeunea decurvirostra* (Gradstein & Costa 2003)

- Trichocolea flaccida* = *Leiomitra flaccida* (Katagiri 2019)
Trichocolea robusta = *Leiomitra robusta* (Katagiri 2019)
Trichocolea tomentosa = *Leiomitra tomentosa* (Katagiri 2019)
Trichocolea uleana = *Leiomitra tomentosa* (Katagiri 2019)
Tylimanthus laxus = *Acrobolbus laxus* (Briscoe 2015)
Tylimanthus setaceo-ciliatus = *Acrobolbus laxus* (Burghardt et al. 2008)

MOSSES

- Acroporium estrellae* = *Aptychopsis estrellae* (Câmara et al. 2015)
Actinodontium integrifolium = *Actinodontium sprucei* (Churchill 2016)
Anomobryum plicatum = *Anomobryum prostratum* (Churchill 2016)
Atrichum polycarpum = *Atrichum androgynum* (Aponte & Uribe 2017)
Barbula laevigata = *Didymodon laevigatus* (Zander 1978)
Barbula replicata = *Pseudocrossidium replicatum* (Zander 1979)
Bartramia flavicans = *Bartramia brevifolia* (Churchill 2016)
Bartramia subdisticha = *Breutelia subdisticha* (Costa et al. 2016)
Brachythecium prasophyllum = *Brachythecium occidentale* (Costa et al. 2016)
Brachythecium stereopoma = *Brachythecium ruderale* (Ignatov & Huttunen 2002)
Breutelia allionii = *Breutelia trianae* (Churchill 2016)
Bryum billardieri = *Bryum andicola* (Ochi 1978)
Callicostella colombica = *Thamniopsis colombica* (Allen 2010)
Callicostella rivularis = *Thamniopsis rivularis* (Allen 2010)
Campyliadelphus chrysophyllum = *Campylium chrysophyllum* (Crum & Anderson 1981)
Campyliadelphus polygamus = *Drepanocladus polygamus* (Hedenäs, 1997)
Campylium praegracile = *Campylophyllum sommerfeltii* (Allen 2018)
Campylopus annotinus = *Campylopus heterostachys* (Frahm 1991)
Campylopus apollinairei = *Campylopus cavifolius* (Frahm 1991)

Thuidium recognitum = *Thuidium delicatulum* (Allen 2018)
Tortula andicola = *Syntrichia andicola* (Ochyra, 1992)
Trachypus viridulus = *Trachypus bicolor* var. *viridulus* (Churchill 2016)
Trachyxiphium glanduliferum = *Thamniopsis glandulifera* (Allen 2010)
Trichostomum tenuirostre = *Chionoloma tenuirostre* (Alonso-García et al. 2019)
Zygodon goudotii = *Zygodon peruvianus* (Churchill 2016)
Zygodon subdenticulatus = *Zygodon reinwardtii* (Churchill 2016)

Appendix 2: DOUBTFUL RECORDS

LIVERWORTS

- *Lophocolea leptantha* (Hook.f. & Taylor) Gottsche, Lindenb. & Nees cited in Barbosa et al. 2007. Engel (1978) establishes that the distribution of the species includes Patagonia, Tierra del Fuego, and the Falkland Islands. In Colombia this species does not exist, it probably corresponds to *L. bidentata* (L.) Dumort.

- *Metzgeria cleefii* Kuwah. cited in Álvaro et al. 2007
Gradstein (2021) affirm that the species needs verification because the characteristic attenuate branches of this specie, are not shown in the illustrations in the paper.

- *Tylimanthus diversifolius* E.A. Hodgs. Cited in Gil & Morales (2016).

This species corresponds to *Acrobolbus tenellus* var. *diversifolius* according to Briscoe et al. (2015). Additionally, when consulting GBIF (<https://www.gbif.org/species/9389285>) the distribution is restricted near its type locality in New Zealand.

MOSSES

- *Acroporium longirostre* (Brid.) W.R. Buck cited in Gil & Morales (2016).

Câmara et al. (2015) reviewed the genus for the Neotropics, the distribution of the species is restricted to Mexico and the Caribbean, however, they did not review material from Colombia.

- *Bryum truncorum* (Brid.) Brid. Cited in Robinson (1967).

Mohamed (1979) affirm that the species is restricted to the Reunion Islands and Madagascar.

- *Calymperes rubiginosum* (Mitt.) W.D. Reese cited in Gil & Morales (2016).

Churchill (2016) establishes that the distribution of the species is the Amazon in Colombia and cites specimens from Vichada, Guainía and Vaupés, for which it is considered necessary to confirm the determination given that the work where it is cited is about paramo flora.

- *Campylopus frigidus* Lesq. cited in Martínez et al. (2019).

According to Müller & Frahm (1987) it corresponds to *Paraleucobryum sauteri* (Bruch & Schimp.) Loeske and they establish that the distribution of the species includes Europe, Russia and the United

States, for which it is considered necessary to confirm the determination given that the work where it is cited is about paramo flora.

- *Hypopterygium tamariscinum* (Hedw.) Brid. cited in Churchill & Linares (1995) y Martínez (2019).

According to O'Shea (2006) it corresponds to *Canalohypopterygium tamariscinum* (Hedw.) Kruijer. Allen (2010) makes a clear explanation in which it is clear that the species does not have a distribution in the Neotropics.

- *Orthodontium lineare* Schwägr. cited in Aguirre (2008).

It is a species with distribution in Europe (Hasel & Söderström 2005) and Africa (O'Shea 2006). There are no reports for the neotropics, so it is suggested that the specimen be reviewed to verify its taxonomic identity.

- *Racomitrium crispulum* (Hook. f. & Wilson) Wilson cited en Robinson (1967) y Florschütz-de Waard y Florschütz (1979).

Churchill & Linares (1995) make the reference that this species is distributed in the Antarctic circle and that the specimens from Colombia correspond to *Racomitrium crispipilum* (Taylor) A. Jaeger. Additionally, Ochyra et al. (2008), affirm that *R. crispulum* is an endemic species of New Zealand.

- *Sphagnum pylaesii* Brid. cited in Aguirre (2008).

Crum & Anderson (1981) affirm that it is a synonym of *Sphagnum lindbergii* Schimp. whose distribution is the northern hemisphere.

- *Splachnum ampullaceum* Hedw. cited in Aguirre (2008).

Smith (2004) establishes that the distribution of the species is circumpolar, for which it is considered necessary to confirm the determination.

- *Syrrhopodon africanus* (Mitt.) Paris cited in Martínez et al. (2019).

Reese (1995) affirm that this species is present in Africa. For America, *S. africanus* subsp. *graminicola* (R.S. Williams) W.D. Reese included in this catalog from a specimen cited in Aguirre (2008) from lowland areas of the department, for this reason it is considered necessary to confirm the determination given that the work where it is cited deals with paramo flora.

- *Syrrhopodon rupestris* Mitt. cited in Martínez et al. (2019).

Churchill et al. (2000) and Reese (1977, 1993) establish that the distribution of the species is the Amazon in Colombia, Brazil and Venezuela, additionally specimens from Amazonas and Vaupés are cited, for which it is considered necessary to confirm the determination given that the work where it is cited it is paramo flora.

- *Syrrhopodon xanthophyllus* Mitt. cited in Gil & Morales (2016).

Churchill et al. (2000) and Reese (1977, 1993) establish that the distribution of the species is the Amazon in Colombia, Bolivia, Brazil and Venezuela, additionally specimens from Guainía are cited, for which it is considered necessary to confirm the determination given that the work where it is cited it is paramo flora.
