**Abstract:** Senilolia H. Tuiwawa (2022): First Bryophyte collection, including substrate and distribution data, from the forests of Emalu, Province of Nadroga-Navosa: A Contribution to the Bryophyte Flora of Fiji. *Frahmia* 27:1-27.<sup>3</sup>

The knowledge on the bryoflora of Fiji is far from complete and available literature is but a handful of accounts from scattered locations. The region of Emalu, is a remote location along the transitional zone of central Viti Levu that is botanically under-collected with no historical citations at all about cryptogamic plants. Provided here is an annotated checklist and the first accounts of mosses, liverworts, and hornwort collections from the area. Specimens were collected from six different substrates and processed for drying, preservation and identification. The collection resulted to a total of nine species of hornworts assigned to four genera and three families; 166 species of liverworts assigned to 57 genera and 22 families; 59 species of mosses assigned to 44 genera and 22 families. Substrate and distribution descriptions are provided as part of the annotated checklist.

## 1 Introduction

Checklists of bryophytes are key and a fundamental need across sites that are botanically poor in collection (von Konrat et al. 2011). They are an invaluable permanent record of taxa occurring at a specific place and time (Bean, 2016) and are also especially critical where site locations are isolated and inaccessible to reach (Müller 2012; von Konrat et al. 2011).

Fiji's inventory of bryophytes has been a pulse of collection dating to as far back as the early 18th century (von Konrat et al. 2011). Some of the more notable bryophyte work in Fiji were collections undertaken by Brackenridge in 1840, Schultze-Motel in 1974, Milne 1856, Jack and Stephani in 1894; Gibbs 1907, 1909; Dixon and Greenwood 1930; Greenwood 1945; Campbell 1971, Miller et al. 1983, Higuchi and Iwatsuki 1982, 1991-92 (von Konrat et al. 2011). Key references in the early 20th century, comprises works by Fife and Naikatini (2011), von Konrat et al. (2011), Söderström et al. (2011), Pócs et al. (2011, 2018), Müller (2012). At present, the count of bryophytes in Fiji comprises 280 liverwort species and 11 hornworts (Söderström et al. 2011) and at least 306 species of mosses (Whittier 1975). In spite current inventory still in its infancy, there already is the strong realization of much needed work that requires completion particularly across areas that under-collected for various reasons (von Konrat et al. 2011; Müller 2012; Pócs et

al. 2011). The paper presents the first collection records of bryophyte taxa from the terrestrial forests of Emalu, a botanically under-collected and unknown area located in the province of Nadroga-Navosa on the island of Viti Levu in Fiji.

### **Area of Survey**

The Republic of Fiji is located in the South Pacific Ocean. It is an archipelago of 300+ islands of which 110 are inhabited. It is situated between Vanuatu and Tonga at geographic locations of 176.53 East and 178.12 West. The climate is tropical and warm throughout the year with the average temperature at 22°. Rain is more common along the southeastern parts of the larger islands compared to the northwestern parts. The island of Viti Levu is where the capital Suva resides, and it is one of the two largest islands of the Fijian archipelago (Figure 1). For more information, refer to: <https://www.nationsonline.org/oneworld/fiji.htm>

The area of collection is the region of Emalu. It is an important site location as it is a nationally established site for implementing REDD+ activities by the Fiji government. It is situated in the province of Nadroga-Navosa that lies adjunct to central Viti Levu. Apart from a few difficult back roads and tracks, the area is remote and inaccessible (Tuiwawa et al. 2013).

The 7347ha of Emalu comprises five principal vegetation types namely the: Grassland or Talasiga, Dry Forest, Lowland Rainforest, Upland Rainforest, and Cloud Forest (Mueller-Dombois and Fosberg, 1998; Tuiwawa et al. 2013). As rainfall is a key factor of vegetation systems, the area in a year receives an average rainfall of 2000-4000mm (Derrick 1951; Tuiwawa et al. 2013). Further, its terrains are steep and rugged with the highest peak of Mt. Vonolevu at approximately 1111m a.s.l. in elevation. Its geology consists mainly of Tholo Plutonic Suite, an intrusive type of rock which is intruded into the Wainimala Group and dated to the Upper Miocene period (Tertiary) or later (Rodda 1967; 1976). The alluvial soils from the tributaries in Navosa region are the Wainibuka sandy clay loam (Twyford and Wright 1965; Tuiwawa et al. 2013).

## Field Collection

The present collection cites the different substrate types that were encountered on site collection. Apart from the epiphyll substrate, specimens were collected from five other substrates: (1) tree branches of live trees, mostly those within reach of the collector (below 2m tall) (2) stones, rocks, and boulders along flowing river, creeks, and tributaries (3) tree trunks of mostly native trees irrespective of height and girth sizes (4) soil surface along the forest floor and along rivers, small streams, and tributaries (5) deadwood and debris on land and semi-aquatic surfaces. Together with the locality data in Table 1, the substrate types for each collection are defined as part of the annotated checklist. All five substrates are consistent and present in at least three of the principal vegetation types, namely the lowland rainforest, the upland vegetation, and cloud forest that lie across three water catchments (Figure 1): Tovatova Catchment Area (TCA), Waikarakarawa Catchment Area (WCA) and Mavuvu Catchment Area (MCA). There were no collections in the grassland or talasiga and dry forest area due to time constraints. Collections was undertaken in the periods of July 2012 and March 2013.

In the list of bryophytes section is the annotated checklist of the collection. Specimens were identified with the help of available literature and voucher collections. The nomenclature of each taxa uses the currently accepted taxonomic status available through TROPICOS, including referencing the global checklist of bryophytes (Söderström et al. 2016). It is hoped that the species listing will accurately still reflect current taxonomic revisions. All 235 vouchers are deposited by the author at the regional herbarium (SPRH) in Suva.

Bryophytes were found at 27 previously undocumented localities listed in Table 1. 11 of the sites were from the TCA, 6 of the sites were from the WCA, 9 of the sites from the Mavuvu catchment. These are detailed as annotated checklist in the list of bryophyte section of this paper.

## 2. List of Bryophytes

The list of species is arranged alphabetically under each Family and Genera. Locations are abbreviated followed by locality, elevation (recorded in meters above sea level), type of substrate, collector's numbers (denoted by SHT), collectors' number of the specimen examined (where available), and the herbarium voucher number.

### HORNWORTS

#### Anthocerotaceae

1. *Folioceros amboinensis* (Schiffn.) Piippo. – (Hasegawa 1986)  
WCA, near Waikarakarawa river; 350m; Soil surface; SHT 5255/2013. Herbarium No.: 37230

2. *Folioceros fuciformis* (Mont.) D.C. Bharadwaj. – (Campbell 1971)  
TCA, near basecamp; 130-200m; Soil surface; SHT 5256/2012. Herbarium No.: 37231

3. *Folioceros gladulosus* (Lehm. et Lindenb.) D.C. Bharadwaj. – (Schiffner 1890)  
TCA, near basecamp; 130-200m; Soil surface; SHT 5257/2012. Herbarium No.: 37232

4. *Folioceros pinnilobus* (Steph.) D.C. Bharadwaj. – (Hasegawa 1986)  
TCA, near basecamp; 130-200m; Rocks; SHT 5262/2012. Herbarium No.: 37233

#### Dendrocerotaceae

5. *Dendroceros cavernosus* J. Haseg. – (Hasegawa 1986)  
TCA, near basecamp; 130-200m; Deadwood and debris; SHT 5259/2012. Herbarium No.: 37234

6. *Dendroceros granulatus* Mitt. – (Hasegawa 1986)  
TCA, near basecamp; 130-200m; Soil surface; SHT 5260/2012. Herbarium No.: 37235

7. *Dendroceros javanicus* (Nees) Nees. – (Gibbs 1909)  
WCA, near Waikarakarawa river; 350m; Rocks; SHT 5261/2013. Herbarium No.: 37236

8. *Megaceros flagellaris* (Mitt.) Steph. – (Hasegawa 1986)

WCA, near Waikarakarawa river; 350m; Soil surface; SHT 5262/2013. Herbarium No.: 37237

#### **Notothyladaceae**

9. *Phaeoceros carolinianus* (Michx.) Prosk. – (Campbell 1971)

TCA, near basecamp; 130-200m; Soil surface; SHT 5263/2012. Herbarium No.: 37238

#### **LIVERWORTS**

##### **Anastrophyllaceae**

10. *Plicanthus birmensis* (Steph.) R.M. Schust. – (Campbell 1971)

TCA, near basecamp; 130-200m; Tree trunk; SHT 5264/2012. Herbarium No.: 37239

11. *Plicanthus hirtellus* (F. Weber) R.M. Schust. – (Miller et al. 1983)

WCA, old settlements near basecamp; 230m; Tree trunk; SHT 5265/2013. Herbarium No.: 37240

##### **Aneuraceae**

12. *Aneura maxima* (Schiffn.) Steph. – (Gibbs 1909)

TCA, old settlements near basecamp; 100m; Soil surface; SHT 5266/2012. Herbarium No.: 37241

13. *Lobatiriccardia coronopus* (De Not. ex Steph.) Furuki. - (Campbell 1971)

TCA, old settlements near basecamp; 100m; Soil surface; SHT 5267/2012. Herbarium No.: 37242

14. *Riccardia alba* (Colenso) E.A.Br. – (Campbell 1971)

TCA, old settlements near basecamp; 100m; Soil surface; SHT 5268/2012. Herbarium No.: 37243

15. *Riccardia graeffei* (Steph.) Hewson. – (Furuki 1991)

TCA, ridge towards upland forest; 800m; Deadwood and debris; SHT 5269/2012. Herbarium No.: 37244

##### **Dumontieraceae**

16. *Dumortiera hirsuta* (Sw.) Nees. – (Gibbs 1909)

TCA, ridge towards upland forest; 820m; Rocks; SHT 5270/2012. Herbarium No.: 37245

##### **Geocalycaceae**

17. *Heteroscyphus argutus* (Reinw., Blume et Nees) Schiffn. – (Gibbs 1909)

TCA, ridge towards upland forest; 800m; Deadwood and debris; SHT 5271/2012. Herbarium No.: 37246

18. *Heteroscyphus aselliformis* (Reinw., Blume et Nees) Schiffn. – (Campbell 1971)

MCA, vicinity of Mt. Vonolevu; 900m; Tree trunk; SHT 5272/2012. Herbarium No.: 37247

19. *Heteroscyphus coalitus* (Hook.) Schiffn. – (Campbell 1971)

TCA, near basecamp; 130-200m; Deadwood and debris; SHT 5273/2012. Herbarium No.: 37248

20. *Heteroscyphus succulentus* (Gottschke) Schiffn. – (Campbell 1971)

TCA, near basecamp; 130m; Soil surface; SHT 5274/2012. Herbarium No.: 37249

21. *Notoscyphus lutescens* (Lehm. et Lindenb.) Mitt. – (Schuster 2002)  
TCA, track towards the upland forest; 690m; Soil surface; SHT 5275/2012. Herbarium No.: 37250

#### **Hymenophytaceae**

22. *Hymenophyton flabellatum* (Labill.) Dumort. ex. Trevis. – (Evans 1925)  
TCA, ridge to the lowland rainforest; 540m; Tree trunk; SHT 5276/2012. Herbarium No.: 37251

#### **Jamesoniellaceae**

23. *Cuspidatula contracta* (Reinw., Blume et Nees) Steph. – (Jack and Stephani 1984)  
TCA, ridge to the lowland rainforest; 540m; Tree trunk; SHT 5276/2012. Herbarium No.: 37252
24. *Denotarisia linguiifolia* (De Not.) Grolle. – (Hürlimann 1989)  
WCA, along Waikarakarawa river; 330m; Boulder; SHT 5451/2013. Herbarium No.: 37253

#### **Jubulaceae**

25. *Frullania apiculata* (Reinw., Blume et Nees) Nees.  
WCA, along Waikarakarawa river; 130-200m; Tree trunk; SHT 5278/2013; Specimen Examined:  
S.&T. Pócs 03304/F. Herbarium No.: 37254
26. *Frullania arecae* (Spreng.) Gottsche – (Yuzawa 1991)  
TCA, in the lowland rainforest; 250m; Tree trunk; SHT 5279/2012; Herbarium No.: 37255
27. *Frullania capillaris* Steph. – (Hattori 1985)  
TCA, in the lowland rainforest; 200m; Tree trunk; SHT 5280/2012; Herbarium No.: 37256
28. *Frullania chevalieri* (R.M. Schust.) R.M. Schust. – (Pócs 2008)  
TCA, in the lowland rainforest; 200m; Tree branches; SHT 5281/2012; Herbarium No.: 37257
29. *Frullania cordistipula* (Reinw., Blume et Nees) Dumort. – (Mitten 1862)  
TCA, near basecamp; 100m; Soil surface; SHT 5282/2012; Herbarium No.: 37258
30. *Frullania ericoides* (Nees) Mont. – (Pócs 2008b)  
MCA, vicinity of Mt. Vonolevu; 1000-1111m; Deadwood and debris; SHT 5283/2012;  
Herbarium No.: 37259

31. *Frullania gaudichaudii* (Nees et Mont.) Nees et Mont. – (Hattori 1985)  
MCA, vicinity of Mt. Vonolevu; 1000-1111m; Tree branches; SHT 5394/2012; Herbarium No.:  
37261

32. *Frullania gracilis* (Reinw., Blume et Nees) Gottsche, Lindenb. et Nees.  
MCA, vicinity of Mt. Vonolevu; 1000-1111m; Deadwood and debris; SHT 5085/2012; Specimen  
Examined: S.&T. Pócs 03288/AQ. Herbarium No.: 37262

33. *Frullania intermedia* (Reinw., Blume et Nees) Gottsche.  
MCA, vicinity of upland forest; 870m; Tree branches; SHT 5287/2012; Specimen Examined:  
S.&T. Pócs 03281/L. Herbarium No.: 37262

34. *Frullania meyeniana* Lindenb. – (Hentschel et al. 2009)  
MCA, vicinity of Mt. Vonolevu; 1000-1100m; Rocks; SHT 5288/2012. Herbarium No.: 37264

35. *Frullania neurota* Taylor – (Campbell 1971)  
MCA, vicinity of Mt. Vonolevu; 1000-1111m; Deadwood and debris; SHT 5289/2012.  
Herbarium No.: 37265
36. *Frullania nodulosa* (Reinw., Blume et Nees) Nees.  
TCA, track towards the upland forest; 840-870m; Rocks; SHT 5290/2012; Specimen Examined:  
S.&T. Pócs 03721/B, 2003. Herbarium No.: 37266

### 3. Discussion

The rapid bryophyte collection of the area led to the resulting data presented under the list of bryophyte section comprising, a total of 235 species assigned to 47 families and 105 genera. The percentage collection compositions are near the same significance percentages at all substrate types: deadwood and debris (26%) followed by the substrates of stones, rocks, and boulders (24%) and soil surface (21%). There was a total of 59 species of mosses in 44 genera and 22 families; 166 species of liverworts in 57 genera and 22 families; nine species of hornworts in four genera and three families. The largest families for each of the groups are the: Calymperaceae and Meteoriaceae (for mosses), Lejeuneaceae (for liverworts) and Folioceros (for hornworts). The data also showed that there were only a few genera with 1 species with the majority having a higher diversity e.g. *Radula* with 11 species, *Cololejeunea* with 24 species, *Leucobryum* with 4 species, *Aerobryopsis* with 3 species, *Folioceros* with 4 species. In spite of the discrepancies of recorded species, these are the first and initial accounts of the bryophyte flora and preliminary analysis of the diversity of bryophytes in Emalu. Overall, the taxa are an incredible find towards the limited information about the local diversity of bryophyte species of the area relative to the rest of Viti Levu and more so, broadening our current understanding about the bryophyte flora for Fiji.

In addition, there is a non-existing knowledge of cryptogamic plants specifically for the area of Emalu. The study by Campbell (1971) provides the closest other referenced collection from the Nadroga-Navosa provincial corridor on Viti Levu whereby the collection of A. C. Smith and W. Greenwood are annotated and documented. The location of their collections however lies south of the Emalu forest block. More so, collections from the other parts of Viti Levu and across Fiji are short lived surveys and expeditions from relatively accessible sites, and so this opportunity to list and annotate species collections even at the opportunistic level particularly in areas that are remote and inaccessible, is invaluable. Further, these findings support the region of Emalu as an extended location of the currently known distribution range of bryophytes on Viti Levu and other parts of Fiji.

Beyond the scope of the initial collection, the area of Emalu presents a unique and an incredible location with the opportunity to further existing collection.

### 4. Acknowledgments

Visiting bryologists and the terrestrial biodiversity lead of the Emalu survey are acknowledged for the technical support and providing the necessary resources for making this work possible: Andrea Sass-Gyarmati, Tamás Pócs, Marika Tuiwawa, Allan Fife, the late Elizabeth Brown. Thank you also to the field collectors of the Emalu survey: Saula Mule, Manoa Maiwaqa, Panapasa Tubuitamana, Taka Seva.

The data and information presented is an excerpt of the author's collection that was part of the larger technical rapid biodiversity assessment work in Emalu, funded by the Forestry Departments of the Ministry of Agriculture, Fisheries and Forestry of the Fiji Islands and the SPC/GIZ 'Coping with Climate Change in the Pacific Island Region' Programme.
