Index Plantarum – Průhonice Botanical Garden

Introduction

The Index Plantarum was published by the Průhonice Botanical Garden and the Průhonice Park continuously for selected plant groups until the mid-1990s. Since then, the collections of the botanical garden have undergone extensive changes. Now we focus more on the key collections - irises, roses, daylilies and peonies. The garden is more opened for public and has been involved among the authorities dealing with conservation of domestic endangered species and their variability. This text is a brief summary of the garden and its activities and also includes a list of cultivated plants (species and varieties) up to the date of the Index Plantarum release.

The plants are listed according to the taxonomic system, and alphabetically within each family. Each species/variety has an ACCID, which consists of the year of registration and a registration number in the database Florius.cz, which is a Czech database for evidence of plants in botanical gardens. Additional information is available in this database. Further, a donor of the species/variety is indicated if known. If the donor is a botanical garden, it is the name of the place where the garden is located.

The Průhonice Botanical Garden is a member of the Czech Botanical Gardens Union, is an accredited BGCI garden and an ArbNet accredited arboretum of level III. The botanical garden is part of the IPEN network with the acronym PRUHO.

<http://www.florius.cz/botanickyustav>

Used taxonomy

The used taxonomy is based on the dictionaries of the database Florius.cz. Names of species native to the Czech Republic are adjusted according to: Danihelka J., Chrtek J. Kaplan Z. (2012): Checklist of vascular plants of the Czech Republic. Preslia 84: 647–811. Names of exotic species according to The Plant List (2013). Version 1.1. Published on the Internet; <http://www.theplantlist.org>.

The names of the wild iris species are given according to the Species Group of the British Iris Society (TSGBIS) (1997): *Irises, A Guide to Species, Their Identification and Cultivation*. – Cambridge University Press, Cambridge.

The names of registered varieties of irises, daylilies and peonies are adjusted according to the International Registration Authorities: Irises – American Iris Society <http://wiki.irises.org>; Hemerocallis – American Hemerocallis Society <https://daylilies.org> ; non registered varieties, names of peonies and roses are listed according to diabase <https://www.helpmefind.com>.

Průhonická botanická zahrada na Chotobuzi

(Průhonice Botanical Garden in Chotobuz)

Climatic conditions

Průhonice belongs to the temperate – warm (T2) and temperate – dry climatic global districts with prevailing moderate winter. It belongs to the temperate – warm climatic area of the Czech Republic. The average annual temperature is 8.5 °C, but the temperature considerably fluctuates. In severe winters it drops to -25 °C, while in the hottest summer months it reaches more than 35 °C. Average annual rainfall varies around 570 mm, with 400 mm in dry years and 700 mm or more in wetter years. The distribution of rainfall during the year is often unfavorable to the vegetation, especially when low total rainfall is in April and May.

Geomorphology

Průhonice is located in the Uhřetěves Plateau, which is one of the districts of the Říčany Plateau. Both of these subunits are a part of the Prague Plateau, which is located in Central Bohemia, i.e. in the territory of the capital of Prague and in its western and south-eastern surroundings. It is a relatively flat upland with extensive Tertiary flattened surfaces, with loess covers and drifts, which is slightly divided by shallow to medium deep valleys. The altitude in this area ranges from 267 to 301 m above sea level.

Geological Conditions

The territory is located on rocks of the Upper Proterozoic covered with Quaternary deposits. The rock complex is characterized by the alternation of siltstones, clay slate and offal, with a significant predominance of slate and siltstones. The rocks are mostly layered to laminated. In the locality there are so called rocks of the Štěchovice group, which is characterised by considerable uneven weathering, which causes big differences in the depth of occurrence of solid rock rocks. Quaternary coverings are represented by loess clays, which are also the most widespread type in the area of interest. Among the soil types, modal brown soil predominates, to a lesser extent gleyed brown soil is present.

Potential Natural Vegetation

Potential natural vegetation is acidophilous mesophilous oak forest *Luzulo luzuloidis-Quercetum petraeae* (formerly recognized as *Tilio-Betuletum*, Neuhäuslová et al., 2001) composed mainly of *Quercus petraea* and rarely *Quercus robur*. Other significant tree species are *Tilia cordata* and to a lesser extent also *Carpinus betulus*. The herbaceous level is dominated by *Poa nemoralis*, *P. angustifolia*, *Calamagrostis arundinacea* and *Melica nutans* (Chytrý, 2013).

Collections of Botanical Garden

The collections of the botanical garden have developed with regard to the focus of the garden and its capacities. Collections can be divided into core, complementary and landscape. The core collections are irises, roses, daylilies and peonies. They are compiled the best and they cover the development of breeding from variability of the wild species through ancient, historical varieties to novelties. Each core collection has a supervisor or curator. Complementary collections are partly historical collections that we maintain and partly new collections that are used in expositions to make

Index Plantarum – Průhonice Botanical Garden

them more attractive for visitors. These collections are maintained extensively, mostly in cooperation with external experts. They are bulbs, grove plants, Magnolias, Rhododendrons and aquatic plants. Landscape collections are used primarily to complement the garden landscape and preserve native plant species. They are mainly regional varieties of apple and pear trees.

Irises

The genesis of the iris collection is related to Mgr. Milan Blažek, who has been studying and breeding irises for all his life. He founded the collection in 1955 in Zbuzany near Prague as a private one. The collection included domestic wild species and all historical iris varieties cultivated around Prague. From *Iris* \times *germanica* group it was a clone sometimes called 'Major', from diploid irises of *I. \times**squalens* it was a form with the most contrasting colours, yellow with red-violet, and another form, very non-contrast, representing the transition to *I. \times**flavescens*. Of the true cultivars, clones of known origin, there were only two varieties from the 18th century.

The collection was moved to the Průhonice Botanical Garden in 1963. High number of wild irises, selected by options at the time of flowering, were sampled from a large part of Europe. The domestic sources of old irises were the Czech nurseries, e.g. Vajtasa Horticulture and Nurseries, Nursery in Žehušice and especially horticultural nursery in Litomyšl. Ten years later Mrs. Helen von Stein from Laufen (Baden, Germany) donated Irises from her collection, one of the world's most important collections of irises covering iris varieties from historical to new ones.

Other archaic irises were obtained by collecting at various locations: anonymous irises in rural gardens, irises escaped to vineyards and irises at castle ruins. Only in some cases it was possible to find the proper names in literature or in botanical gardens and other cultivation places.

The sources of new cultural irises were numerous gardens operated by specialists in various countries around the world, especially in the USA, Germany, Italy, Switzerland, but also in Russia, Austria and South Africa. After the involving domestic amateurs and professional growers, extensive long-term exchanging of plant material started in the Czech Republic. The collection was thus enriched with modern cultivars donated by growers Mr. Jaroslav Strouhal and Mr. Jaroslav Čmehil. In parallel to our collection, a collection of irises was developed VÚOZ and operated by Ing. Milada Opatrná in 1960s and 1970s. Suitability of the irises for cultivation in our climatic conditions was there tested in long-term.

After 2007 the selection of cultivars for our collection focused more on cultivars from Czech breeders. Gene-pool resources of Czech origin were included into National Programme on Conservation and Utilization of Plants, Animals and Microbial Genetic Resources Important for Nutrition and Agriculture. Irises were donated or exchanged with breeders: Jiří and Josef Dudek, Jaroslav Kovařík, Zdeněk Krupka, Pavel Nejedlo, Leonard Rýznar, Vojtěch Šmíd, Zdeněk Seidl, Dušan Slošiar. The National Program Iris collection also includes cultivars from the Czechoslovak breeders, namely: Igor Adamovič, Anton Mego and Ladislav Muška. Many of these cultivars were obtained before 2007 and were included into the National Program.

In the recent decades, the collection has been extended due to cooperation with the Botanical Garden of the City of Prague (Czech Republic), Botanical Garden and Arboretum of Mendel University (Czech Republic), Institute of Botany of the Chinese Academy of Sciences (China), The Botanical Garden of Vilnius University (Lithuania) and Wrocław University Botanical Garden (Poland). Wider cooperation with the most famous American Iris Garden – Presby Iris Memorial Gardens has been launched. Some plant material purchased from garden nurseries in the USA: Ensata Gardens, Joe Pye Weed's Garden, Bauer / Coble, Plant Delight. Europeans suppliers: the Dutch company Joosten,

Index Plantarum – Průhonice Botanical Garden

the German nursery Graffin von Zeppelin, Rare Bulb Nursery (Jānis Rukšāns & Līga Popova – Latvia).

The Iris Collection of the Průhonice Botanical Garden – “The Iridarium” – is one of the world's largest collections of its type. The collection includes typical and atypical individuals of wild species, historical interspecific hybrids and a number of hybrids resulted from our experimental work. The largest part of the collection manifests a structured set of cultural varieties from the oldest ones, which are among the rarest, to the latest novelties. It is important mostly for a representative selection of individuals, which represents gene pool of the genus, and for comprehensive comparison of archaic and historical bearded irises.

Curator of iris collection: Ing. Zuzana Caspers

Roses

Rosarium of the botanical garden consists of two collections, botanical and cultural roses. Each of them has its own history and they were created and operated individually.

The collection of botanical roses was founded by Dr. Ivan Klášterský in the botanical department of the National Museum in 1934. The collection was moved several times until it was transferred to Průhonice in the autumn 1963. In total, 250 individuals were transplanted. In 1966 there were 639 registered individuals. At the time of its greatest glory, the collection served primarily for research. The original rosary planted in Průhonice by Dr. Ivan Klášterský, which was located on a meadow near to an entrance of the present botanical garden, was abandoned after the promotion of Dr. Václav Větvíčka to the head in the 1990s. Only a part of the plant material from original collection has been preserved, and cultivated together with individuals resulting from hybridization experiments.

The collection of cultural roses was founded by prof. Pravdomil Svoboda. It was established in the Peklov Arboretum in Kostelec nad Černými lesy in 1954 – 62. In 1963, when the Botanical Garden was founded and prof. P. Svoboda was promoted to the head, roses were moved there. The collection was gradually extended by purchasing plants mainly from nurseries in Kunratice, Žehušice, Litomyšl, Blatná, and others. The collection also contains plants propagated from buds imported from abroad, mostly from the former Soviet Union, Germany and Hungary.

In 1985, the collection was reduced by about a quarter. In 1995, the collection of cultural roses contained 689 varieties. After setting up the exhibition area, the collection was stabilized, garden roses were cultivated in five individuals, and shrub roses and climbers in two or three individuals.

In 2010, there were 923 cultivars. Recently, the collection has been extended due to the cooperation with the Trial Rosary of the Rosa Club of the Czech Republic in Hradec Králové, Rosarium of Lidice Memorial, Flora Olomouc Exhibition Center, Borová Hora Arboretum (Slovakia), Dendrological Garden and VÚKOZ, Prouza – design, which is the Czech branch of company W. Kordes' Söhne (Germany), Europa Rosarium – Rosenstadt Sangerhausen GmbH (Germany), Poulsen Roser A / S (Denmark). We also purchased roses from Růže Kunratice (Macháček – Czech Republic), Rose and Garden Nursery Skaličany (Šíp Miloslav – Czech Republic), Rosenhof Schultheis e.K (Germany), Schmid Gartenpflanzen (Germany) and Rosarium Lottum (Belgium).

Curator of the collection: Ing. Petra Peroutková

Peonies

The Peony collection was founded by doc. Jaroslav Hofman in 1968–69. The basis of the collection were plants obtained from VÚOZ, where they were evaluated in terms of garden use by Ing. Milada Opatrná in 1956–75. The collection was then extended due to purchases from domestic nurseries,

Index Plantarum – Průhonice Botanical Garden

which at that time dealt with peonies (School Farm AF VŠZ Lednice – Olomučany, nurseries in Žehušice, Vejtasa Nursery in Jaroměřice) and also purchases from abroad (Gilbert H. Wild and son - USA; Gräfin von Zeppelin – Germany; Stauden Feldweber – Austria; Staudengärtnerei Klose – Germany).

In 1981–82, Uljana Blažková reviewed the collection and interspecific hybrids of herbaceous peonies were introduced. The collection had thus 217 varieties and 10 wild taxa (Blažková 1995).

In the mid-1990s, a selected representatives of the collection was planted into the public part of the garden. Plants were placed in semicircular slightly hilly beds.

In 2010, there were 248 varieties in more than 700 clumps. After 2010, the evaluation of local seedlings was completed. The collection was extended mainly with wild species of known origin, varieties of tree peonies and inter-group peonies.

The collections were supplemented in cooperation with Prague Botanical Garden, Beijing Botanical Garden, the Institute of Botany, CAS (China), Botanical Garden of Vilnius University (Lithuania), Wrocław University Botanical Garden (Poland) and Botanical Gardens of M.V. Lomonosov Moscow State University). In addition, wide cooperation with Green Works – The Netherlands was launched. The collection was also extended by purchases, mainly from Pivoines Rivière - France and Rare Bulb Nursery Jānis Rukšāns & Liga Popova – Latvia.

Currently we prepare new planting in the public part of the garden.

Curator of the collection: RNDr. Pavel Sekerka

Daylilies

In the Průhonice Botanical Garden at Chotobuz, a collection of daylilies was rising gradually since the 1980s to cover variability of botanical species and development of breeding. The collection is related to the research aimed at assortment's evaluation of 109 varieties of daylily, carried out by Ing. Milada Opatrná in VÚOZ in the 1960s. In 1983, she published a summary "Research of the World Assortment of Perennials *Hemerocallis*". The basis of the collection at Chotobuz was donated by Mrs. Helen von Stein Zeppelin (syn. Laufen). In 1995, the collection contained 16 species and 219 cultivars. The display of the daylilies in the public part of the garden was established in 2009. The varieties are arranged in the chronological order. In 2010, we included daylilies of hybrids of the Czech origin into the collection. This display collection is located at the Central Meadow and is arranged by breeders' names. These plants were donated mostly by Florianus Gardening, Dolce Daylily Farm, Mr. Pavel Roubín, Petr Mimiránek and Jiří Dudek. In 2019 there were 11 species (after revision of synonyms), 480 world wide and 150 Czech cultivars in the *Hemerocallis* collection. The plants come from different domestic and foreign sources. For example: Mr. Zdeněk Krupka, Lucon Bulbs, Prague Botanical Garden – Czech Rep., Arboretum Wojslawice – Poland, Kwekerij Joosten – The Netherlands, Mrs. Malgorzata Kralka – Poland, Garden of Vilnius University – Lithuania.

Curator of the collection: Ing. Markéta Macháčková

Pomological Arboretum

After the First World War, Mr. Jan Říha responded to the call of the Ministry of Agriculture and started (together with Dr. Karel Kamenický and Mr. Václav Karas) preparations for foundation of the state pomologic arboretum. Efforts to find a suitable site for the establishment of the pomologic arboretum continued till 1926, when the Ministry of Agriculture assigned the arboretum a land in Újezd near Průhonice. Unfortunately the location in Újezd was unsuitable in terms

Index Plantarum – Průhonice Botanical Garden

of microclimate, and the arboretum was gradually moved since 1940 to premises which are used by the botanical garden in Průhonice, now. In total, only 576 varieties from the original Říha's collections were moved to Průhonice, of which 214 varieties of apple trees, 68 varieties of pear trees, 84 varieties of cherries, 78 varieties of plum trees, 34 varieties of currants, 35 varieties of gooseberries and 63 varieties of hazel trees.

During the reorganization of the former Czechoslovak Academy of Agricultural Sciences and its research institutes in 1951 the Research and Breeding Institute of Pomology was moved from Průhonice to Holovousy in eastern Bohemia.

The Průhonice Botanical Garden also took over the planting of fruit trees. In the following years the research of fruit trees was gradually abandoned, but some of the trees have been preserved. At the beginning of 2012, when Ing. Vladimír Polesný carried out an inventory of the orchard in his diploma thesis, 56 apple varieties (around 190 trees) and 66 pear varieties (around 130 trees) were registered.

In 2013, the Institute of Botany signed an agreement on mutual cooperation in the conservation of gene pool of the fruit trees in the botanical garden with the Ecological Center Meluzína (regional center of the Brontosaurus Association). A part of the agreement is a proposal of environmentally friendly management of arboretum, with maintaining the biodiversity of animals bound to old fruit trees and to the communities of extensively maintained meadows.

Arboretum

The Arboretum of botanical garden was founded in 1975. It includes woody species originating from Czech garden nurseries and from seeds and seedlings obtained from various botanical gardens. The area served also as a nursery for further propagation as it was established primarily to provide material for the Průhonice Park. The vast majority of taxa growing in the nursery were provided by a long-standing employee of the Průhonice Park Miroslav Kučera. Till the 1990s, 320 taxa and varieties of woody species were planted here. Conifers are mostly represented here, especially *Chamaecyparis*, *Juniperus* and *Picea*. In 2011, we started revitalization of the area, which was prepared to be opened to public.

***Ex situ* conservation**

The Botanical Garden actively participates in the National Program of Genetic Resources and the Czech Botanical Gardens Union and its working group for gene pools. We specialize in the preservation of ancient and historical varieties of ornamental plants and selected endangered domestic plant species.

Plant Genetic Resources

National Programme on Conservation and Utilization of Plants, Animals and Microbial Genetic Resources Important for Nutrition and Agriculture was established by the Ministry of Agriculture 'in 1993 in order to ensure the permanent preservation, availability and sustainable use of genetic resources important for food and agriculture in the Czech Republic. The National Program is to ensure to the necessary extent, in accordance with national legislation, international conventions, norms and standards, and also according to the needs of users, activities necessary for safe long-term preservation and efficient use of genetic resources. The National Program is to contribute to the global efforts to preserve and sustainably use the genetic resources and biodiversity. There are

12 research institutions, breeding stations and universities participating in the National Program of Plant Genetic Resources. Coordination is provided by the gene bank of The Crop Research Institute. In 2006, the Institute of Botany of the CAS also became a part of National Program, initially with the collection of irises. Since 2015, the collections of daylilies (*Hemerocallis*) and peonies (*Paeonia*) were also included. The National Program includes species and varieties from our collection that are important genetic resources or important milestones in breeding, and also ancient varieties grown in the Czech Republic and varieties of Czech origin. The rules for keeping plants in the National Program include the identification by passport data (origin of plants) and description using a classifier, which unmistakably describes the variety or species using morphological characters. The peony classifier was completed and published in 2019. Genetic resources are published in the GRIN Czech database.

<https://grinczech.vurv.cz/gringlobal/search.aspx>

Ancient varieties of irises, peonies and daylilies

During expeditions of the botanical garden we collect and then preserve ancient varieties of ornamental plants, especially irises (*Iris* ×*germanica* s.l., *I. pallida* × *variegata* group), peonies (*Paeonia officinalis* group) and daylilies (*Hemerocallis fulva* 3n). In the field, ancient varieties often occur in anthropogenic and near-natural habitats (cemeteries, rural gardens, castle ruins, vineyard walls). We cultivate these plants in the garden; selected taxa are long-term preserved in collections.

TAČR

The Institute of Botany is involved in the project TAČR – EPSILON “Methodology of *ex situ* conservation for local populations of endangered plant species in changing climate's conditions”. Within this project, we preserve the variability of two selected species of *Iris pumila* and *I. arenaria* (South Moravian Region) and *Galanthus nivalis* (Central Bohemian Region and Olomouc Region). *Iris pumila* is variable in colour of petals which can be in different shades of blue, yellow and almost white with different colours of beards and a stain on the outer petals. The project will select 50 plant species/varieties with different characteristics, which will be preserved in the collections of the garden. In population of *Galanthus nivalis*, it is possible to find plants with different shapes of inner petals, with different size and colour of spots on the inner petals or with spots on outer petals. We preserve selected abnormalities in the garden collections.

Life for Minuartia

In 2017, we started to build serpentine rockery within the project Life for Minuartia, which is implemented by the Institute of Botany, Czech Academy of Sciences, Czech Union for Nature Conservation in Vlašim and the Ministry of the Environment of the Czech Republic. The rockery is intended for *Minuartia smejkalii*, a critically endangered endemic species of Central Bohemia. Individual populations are conserved by individual project partners. The litter was brought to the rockery from the locality, from which other accompanying species germinate.

International Cooperation

Trial Garden MEIS

Together with the Middle European Iris Society (MEIS) we are involved in a project aimed at testing and propagating the new-outputs of breeding of iris varieties: the so-called Trial Garden. The project is based on evaluation of quality of the new iris cultivars (varieties or seedlings) originating from MEIS members in comparison with world-wide varieties. All of them are cultivated at the same locality with identical conditions. Plants are evaluated by MEIS accredited judges and the plants are accessible to public. Irises are investigated for three years, first evaluation is carried out two years after planting by up to 50 points and a second time after 3 years from planting by up to 100 points; the evaluation is carried out at the time of flowering. We obtained the first plants for the evaluation during 2013, the first completed evaluation was completed in 2016.

China

Together with the Botanical Garden of the Capital City of Prague, we have been cooperating with Chinese botanical gardens for a long time, especially with the Botanical garden of the Institute of Botany, Chinese Academy of Sciences, in Beijing, botanical garden of the Xinjiang Institute of Ecology in Turpan, and city botanical garden in Beijing. Cooperation is primarily based on exchange of plant material and joint collection expeditions. In cooperation with chinese partners we have obtained remontant irises and daylilies, which came from their breeding programme.

Presby Iris Memorial Gardens

Founded in New Jersey over 100 years ago, the Presby Iris Memorial Gardens is one of the three largest iris collections in the world. Within the cooperation we have exchanged several hundred cultivars, especially historical ones, which have not been grown in gardens in Europe for many years, but were common in the past. The collection was upgraded with modern American cultivars, especially with large-flowered TB irises and also beardless irises from the *Spuriae* and *Laevigatae* series. The American side received selected assortment of Czech cultivars and lost cultivars originating from North America.

Other international Cooperation

The Průhonice Botanical Garden has long term cooperation with Polish Arboretum Wojslawice (branch of the Wrocław University Botanical Garden) and the Vilnius University Botanical Garden in Lithuania. The cooperation is based on the exchange of plant material, and also cooperation within international projects, such as B-Ardent! (Botanical Gardens as part of the European Cultural Heritage, Erasmus plus No. 2018-1-CZ01-KA202-048171, in 2018–2021) with the fourth partner German Park der Gärten.

Iris ×*germanica* L. – German iris

The concept of this taxon is differing by authors. In a broader concept, *Iris* ×*germanica* s.l. also includes tetraploid taxa, generally described in eastern Mediterranean and Turkey mostly from anthropically influenced habitats (*I. trojana* A. Kern. Ex Stapf, *I. mesopotamica* Dykes, *I. cypriana* Foster & Baker, *I. biliottii* Foster) and from western Mediterranean - *I. belouinii* Boiss. & Cornuault (Andalusia and Morocco).

Iris ×*germanica* s. str. in terms of Linné's description ($2n = 44$) is a group of almost sterile clones formed by crossing tetraploid Mediterranean or Middle Eastern irises ($2n = 48$), probably with *I. lutescens* Lam. ($2n = 40$). Areas of supposed maternal species do not currently overlap, therefore we assume that *I. ×germanica* s. str. is of garden origin (Blažek 1982a). *I. ×germanica* s. str. are ancient cultural plants cultivated at least since the medieval ages (Blažek 1990c). Individual cultivars (clones) have been described since the late 18th century, sometimes as individual species. In total there are 20–30 clones grown in Europe.

Iris pallida × *I. variegata* – ancient diploid hybrids of irises

Iris pallida × *I. variegata* hybrids have been known in horticulture for hundreds of years. Individual clones can be found in Europe and the Caucasus. Because they are less thermophilous than *I. ×germanica*, they escape and survive in nature in colder areas. The taxonomy of this group is very disputable. Individual clones were described as autonomic species (*Iris* ×*squalens*, *I. ×sambucina*, *I. ×lurida* and *I. ×flavescens*), although it would be suitable to treat them as cultons, i.e. according to the nomenclature code for cultivated plants. *Iris pallida* × *I. variegata* hybrids are sometimes in the literature deceptively associated with *I. ×germanica*, or they are described as *I. ×lurida* s. l. (TSGBIS 1997, The Plant List 2013).

”Aphylloids“

In the north-east of Romania, in Ukraine, Moldova and Russia up to the Urals, plants are grown in gardens, they supposed to have one of the parents *Iris aphylla*. They are tetraploid irises, which, in terms of overall size and time of flowering, correspond with the average varieties of the German iris. The first branch of inflorescence separates from the base already to the middle of the stem and is relatively thick, with more flowers. They always have monochromatic single-tone blue or red-violet flowers. They are fertile. In some places they run wild. Horticulturally, they can be described under a global temporary name ”aphylloids“.

Iris breeding in Průhonice

Mgr. Milan Blažek have selected and introduced to Průhonice 60 varieties of bearded irises of all categories which developed since the 1960s and 40 varieties of spuria irises. They were registered with the AIS (American Iris Society) in 2013.

In 1957, M. Blažek made the first targeted crossing in the garden of his family farm in Zbuzany near Prague, and continued the work in Průhonice after 1963. The first modern cultivars used for breeding came from the American breeder R. Schreiner. Later, other cultivars were obtained from P. Cook, D. Niswonger and K. Keppel.

An important role in the Průhonice breeding programme represent not only plants of cultural origin, but also domestic wild species or their interesting clones. For example, *Iris pumila*, the most variable of our irises, crossed with tall tetraploid irises. It was the case for '**Maly Pink**' (Blažek, 1965), SDB, seedling from 2nd filial generation from crossing of 'Happy Birthday' TB × *I. pumila* (white form selected from nature). Another one, dark purple cultivar '**Temno**' (Blažek, 1967) with a height of 20 cm, won the second place in a trial of miniature dwarf irises in Vienna in 1970. Descendants of IB, like the first orange variety '**Meruňka**' (Blažek, 1968) and the pink cultivar '**Zlom**', were awarded in the 1980s at Internationale Zwergiris – Konkurrenz Wien competition.

Iris aphylla and, to a lesser extent, *I. variegata* have been used in hybridization. These species bear rich variability and therefore they carry valuable characteristics, successfully transferred to their new emerging seedlings. To explain relationship with other species and ancient varieties he crossed *Iris pallida* × *I. variegata*. He compared offsprings with native species and also with diploid hybrids such as *I. ×squalens*, *I. ×sambucina* and *I. ×flavescens*. Individual clones (varieties) are significantly different in colour. Hybrids of the first generation show the characteristics of both parents, but violet colour predominates usually in flowers, although the dominance is not complete. In the next generations, characters close to only one parent prevail. Only in the following generations of hybrids, the bicolour close to the *I. variegata* appears, on the other hand, individuals with monochromatic blue flowers that are difficult to distinguish from the *I. pallida* may appear (Blažek 2017c, 2017b). Some of the more derived hybrids have flowers almost the same as *Iris pallida* or *I. variegata*, but their bracts show hybrid origin (Blažek et al., 2011a). There is a clear sign of hybrid origin in the bracts - green lower half changes into non-green scarious tips in all hybrids (Blažek, 2017b).

Other crossings were carried out at the level of ancestry lines of individual garden irises and their descendants in order to find other flower colours. The cultivar '**Zbuzanka**' (Blažek, 1986) belonging to medium irises obtained a award of merit at the Concorso Internazionale dell'Iris in Florence in 1986, and it comes from the crossing ('Gaylord' × 'Olympic Torch') × 'Whole Cloth' / X 'Edenite'. Cultivar '**Úroda**' (Blažek, 1973) has origin in Libor X (Kytice - Bazaar × Rococo).

In 1986 the cultivar '**Uljana**' (Blazek, 1983) containing genes of the important ancestor *Iris susiana* was awarded the fourth place within evaluation of cultivars of medium irises in Vienna. It comes from the crossing of two phenotypically close dull yellow irises, 'Úroda' × 'Carilla'.

To improve existing features of irises, M. Blažek focused on parent selection of the same or closely related recessive lines within the group. An example in the cultivar '**Alena**' (Blažek, 1973), TB, in which he focused on recessive plicata colouring obtained award of merit at the Florence Competition, Concorso Internazionale dell'Iris.

The genus *Iris*

To show new features, parent selection is aimed only at individuals within one dominant line that may have hidden recessive genes. An example of using this method is '**Lavina**' (Blažek, 1980) BB, which awarded the 1st place in the border bearded category at the Internationale Zwergiris – Konkurrenz competition in Vienna. To obtain new shades of colours, combinations of less related parents (e.g. recessively heritable flower colours combined with different dominant colours) were used for instance in '**Irenka**' (Blažek, 1969) TB.

Milan Blažek obtained seeds from eight varieties of *Iris spuria*-hybr. from the German nursery garden of Countess Helen Gräfin von Zeppelin of Laufen. The varieties came from the 1970s. In 1980–2015 he selected individuals both from the first generation and from that resulting from spontaneous pollination of these plants. Seeds obtained from random dusting were sown and new and interesting individuals were selected in the following years. Because they proved to be comparable with foreign commercial material, they were named and registered by the AIS (American Iris Company) in 2013. The selection has continued even now.

An interesting deviation is the multiplication of the petals and the combination of the two colours in the inner and outer petals eg '**Rozmar**' (Blažek, 2013). '**Neklid**' (Blažek, 2013) is unusual in lower growth – the flowering plant is about 80 cm tall. Among the white varieties with a yellow tongue on the outer petals are included: '**Bílé vlny**' and the early variety '**Bílá Kytice**' with internal petals colour with a light lavender hue. The varieties have wider outer petals that are not elongated in shape compared to the parent species.

Among the later two-coloured white-yellow varieties, the '**Velikonoce**' and '**Slunce v ledu**' varieties, with a broad white border in the yellow-coloured inner petals is to be mentioned colour. The blue varieties are represented by the '**Modrá paleta**' (Blažek, 2013) with the deep violet-blue inside and outside petals with colour with a distinct bronze mirror on the outside petals. Of the lowest varieties around 80 cm, the '**Tajemství**' (Blažek, 2013) is the most impressive; its inner petals are deep deep purple, the outer petals are deep yellow with bronze and dense purple veins and dots. The most numerous are yellow-coloured varieties represented by interesting two-tone '**Citronová Pěna**' with bright lemon inner petals, colour deep lemon outer petals, and white shoulders. Most yellow varieties are characterised by bright yellow throughout the flowers – the self type, such in the early flowering cultivar '**Žlutý Magnet**' or '**Slunný Den**' with a more intense spot in the outer petals. Remarkable also is the yellow lemon colour in the outer and inner petals of the variety '**Žlutášek**' and '**Citronka**'. The brown colouring of the '**Doba Bronzová**' (110 cm) and '**Bronzová Ozdoba**' (95 cm) varieties turn into a bronze shade in the outer petals with a distinct bronze vein. Mahogany-coloured is the cultivar '**Mahagonový Svícen**'.

Breeding of Peonies in Průhonice

The Průhonice collections, which represented a cross-section of the contemporary assortment, including interspecific hybrids, were a good basis for experimental crossings. In the 1980s and 1990s, Ing. Uljana Blažková sowed seeds obtained by self-pollination, especially of hybrid peonies and varieties of *Paeonia lactiflora* with Japanese flower shape. Some of the obtained individuals showed high quality. The first stage selection covered about 50 plants and in the second stage (2011) 31 individuals (seedlings) of peony plants were selected and further propagated and evaluated. In cooperation with the Litomyšl Nursery (2017, 2018), three seedlings of *P. lactiflora*, named after the wives of Charles IV, have been selected: 'Blanka z Valois' (CH20) – full double, dark red, 'Anna Svidnická' (CH26, seedling form variety 'Watteau') – simple light pink, 'Anna Falcká' (CH09 - seedling from 'L'Étincelante') – simple, pink.

The genus *Paeonia*

Other interesting *P. lactiflora* descendants were named '**Andromeda**' (CH10, seedling from 'O Shokun'), large, single-flowered, Japanese flower type with yellow petaloids; '**Moonlight Sonata**' (CH11 – 'La Financée' seedling), lower, early, semi-double, white, with sepals mixed with stamens; '**Salamandr**' (CH15), plants with purple-coloured stems, while flowers, and leaves that sprout in purple colour and remain dark coloured for a long time, but the flower is unstable semi-double to double; '**Noble Carmen**' (CH18) – a robust plant with large single to semi-double dark red flowers with a smaller yellow center.

In terms of hybrid peonies, important are three robust plants, with simple cup-like flowers, mostly single, early flowering with some characteristics inherited from Caucasian peonies (*P. daurica* s.l.). Unlike other single peonies they bloom for a quite longer time. Other important peonies are '**French Poppy**' (CH01, poppy red), '**Czech Poppy**' (CH04, 'Gedenken' seedling, dark pink) and '**Silesian Poppy**' (CH05, light pink).

Currently, in cooperation with Green Works, a Dutch company, evaluation of the above mentioned plants is carried out in the Netherlands with the possibility of their registration as new varieties. But we are not sure whether the company will accept the names.

Among interspecific hybrids developed in the Průhonice Botanical Garden, *Paeonia obovata* × *P. tenuifolia* '**Erotikon**', a gracilous plant with bright pink flowers and distinctive cheek, appears to be promising. The crosses of *P. anomala* × *P. tenuifolia* gave rise to more vigorously growing peonies with delicate foliage and single red flowers, approximately half of the seedlings have red stems. Another interesting group are very early flowering hybrids of *P. rossii* × 'Early Caucasian'.

Breeding of peonies in Prague Botanical Garden

In terms of the National Program for Genetic Resources we have also included plants from breeding in the Prague Botanical Garden. We grew them since 2015. Trojan breeding is a selection of seedlings derived from a mixture of seeds obtained by self-pollination from varieties purchased from the Chinese company He Ze East Flowers at the City of Prague Botanical Garden. Sowing took place out around 2000 and the plants bloomed around 2005. Sowing and selection was carried out by Pavel Sekerka. The assortment has been propagated and offered by Martin Lemon and Ing. Petr Beran – Ornamental Woody Plants, Řež, CR

Overview of Trojan breeding of woody peonies		
Cultivar Name	Seedling Number	Description
Trojan Poppy	S03	
Trojan Tomahawk	S04	Pink with an eye, single
Trojan Primabalerina	S06	Pink double
Trojan Black-eyed Bride	S08	White semi-double with dark eye
Trojan Night	S09	Dark purple, semi - double
Trojan Gypsy Princess	S10	Dark wive – red , single
Trojan Day	S11	White, full double

Hybrids of roses from Průhonice

Collection of botanical roses in days of its greatest glory served mainly for research. It was carefully documented by herbarium items and microscopic specimens, since 1966 cytological analyzes were carried out (Irena Klášterská, Naděžda Končalová) and phenology was observed (Helena Vacková). Plants were biometrically evaluated by Václav Větvíčka; Evžena Kolátorová studied composition of essential oils in leaf glandules.

A significant part of today's collection is represented by plants from autogamic and hybridization experiments of Dagmar Jičínská from the late 1960s. Nowadays, only a part of the plants in the experimental garden have been preserved, especially the results of hybridization experiments and some selected individuals from original collection of Dr. Ivan Klášterský. Some hybrid plants, especially hybrids of *Rosa rugosa* and *R. glauca*, show high landscaping qualities.

Overview of roses hybridized at the Institute of Botany:

- 2010.01506 *Rosa arvensis* × *R. gallica*
2010.01509 *Rosa arvensis* × *R. gallica*
2010.01510 *Rosa arvensis* × *R. gallica*
2010.01511 *Rosa arvensis* × *R. gallica*
2010.01520 *Rosa canina* × *R. majalis*
2010.01521 *Rosa canina* × *R. pendulina*
2010.01522 *Rosa canina* × *R. rugosa*
2010.01534 *Rosa corymbifera* × *R. degenensis*
2010.01529 *Rosa corymbifera* × *R. majalis*
2010.01536 *Rosa eglant* × *R. arvensis*

SPECIES LIST OF NATIVE PLANTS OF THE PRŮHONICE PARK

Petr Petřík, Czech Academy of Sciences, Institute of Botany
Zámek 1, CZ-252 43 Průhonice, petrik@ibot.cas.cz

The list of vascular plant species consists of 510 taxa (incl. aggregates) sampled across different habitats of the whole Průhonice Park in the period 2013–2018. This does not include historical records and cultivated species; however, the origin of some taxa remains questionable. The species-richest habitats are semi-natural mesophilous meadows (with over 40 vascular plant species per 25 m²). The second largest species group are plants of anthropogenic and forest habitats. A minor part of species are bound to rocks or walls, or streams or ponds. About a tenth of wild taxa are non-native to the area and some species are red-listed (e.g. *Dactylorhiza majalis* or *Lilium martagon*).

<i>Abutilon theophrasti</i>	<i>Arrhenatherum elatius</i>	<i>Campanula trachelium</i>
<i>Acer campestre</i>	<i>Aruncus dioicus</i>	<i>Capsella bursa-pastoris</i>

<i>Dianthus carthusianorum</i>	<i>Fragaria viridis</i>	<i>Hylotelephium maximum</i>
<i>Dianthus deltoides</i>	<i>Fraxinus excelsior</i>	<i>Hyoscyamus niger</i>
<i>Digitalis purpurea</i>	<i>Fumaria officinalis</i>	<i>Hypericum maculatum</i>
<i>Digitaria ischaemum</i>	<i>Gagea lutea</i>	<i>Hypericum perforatum</i>
<i>Dipsacus pilosus</i>	<i>Galega officinalis</i>	<i>Hypericum tetrapterum</i>
<i>Dipsacus strigosus</i>	<i>Galeobdolon luteum</i>	<i>Hypochaeris radicata</i>
<i>Dryopteris carthusiana</i>	<i>Galeobdolon montanum</i>	<i>Chaerophyllum</i>
<i>Dryopteris dilatata</i>	<i>Galeopsis bifida</i>	<i>aromaticum</i>
<i>Dryopteris filix-mas</i>	<i>Galeopsis pubescens</i>	<i>Chaerophyllum hirsutum</i>
<i>Duchesnea indica</i>	<i>Galeopsis tetrahit</i>	<i>Chaerophyllum temulum</i>
<i>Echinochloa crus-galli</i>	<i>Galinsoga parviflora</i>	<i>Chelidonium majus</i>
<i>Echium vulgare</i>	<i>Galinsoga quadriradiata</i>	<i>Chenopodium album</i>
<i>Eleocharis palustris</i>	<i>Galium ×pomeranicum</i>	<i>Chenopodium hybridum</i>
<i>Elymus caninus</i>	<i>Galium album</i>	<i>Chenopodium</i>
<i>Elymus repens</i>	<i>Galium boreale</i>	<i>polyspermum</i>

SPECIES LIST OF NATIVE PLANTS OF THE PRŮHONICE PARK

<i>Inula helenium</i>	<i>Myosotis nemorosa</i>	<i>Potentilla anserina</i>
<i>Iris pseudacorus</i>	<i>Myosotis palustris</i>	<i>Potentilla argentea</i>
<i>Juncus articulatus</i>	<i>Myosotis ramosissima</i>	<i>Potentilla erecta</i>
<i>Juncus conglomeratus</i>	<i>Myosotis sparsiflora</i>	<i>Potentilla reptans</i>
<i>Juncus effusus</i>	<i>Myosotis stricta</i>	<i>Prunella vulgaris</i>
<i>Juncus tenuis</i>	<i>Myosotis sylvatica</i>	<i>Prunus avium</i>
<i>Knautia arvensis</i>	<i>Myosoton aquaticum</i>	<i>Prunus padus</i>
<i>Lactuca serriola</i>	<i>Myosurus minimus</i>	<i>Prunus spinosa</i>
<i>Lamium album</i>	<i>Nardus stricta</i>	<i>Pseudofumaria lutea</i>
<i>Lamium amplexicaule</i>	<i>Noccaea caeruleascens</i>	<i>Pteridium aquilinum</i>
<i>Lamium maculatum</i>	<i>Oenothera biennis</i>	<i>Pulmonaria obscura</i>
<i>Lamium purpureum</i>	<i>Oxalis acetosella</i>	<i>Pulmonaria officinalis</i>
<i>Lapsana communis</i>	<i>Oxalis corniculata</i>	<i>Quercus petraea</i>
<i>Lathyrus pratensis</i>	<i>Oxalis stricta</i>	<i>Quercus robur</i>
<i>Lathyrus sylvestris</i>	<i>Papaver rhoeas</i>	<i>Ranunculus acris</i>
<i>Lathyrus vernus</i>	<i>Persicaria amphibia</i>	<i>Ranunculus auricomus</i>
<i>Lemma gibba</i>	<i>Persicaria hydropiper</i>	agg.
<i>Lemma minor</i>	<i>Persicaria lapathifolia</i>	<i>Ranunculus bulbosus</i>
<i>Lemma turionifera</i>	subsp. <i>brittingeri</i>	<i>Ranunculus flammula</i>
<i>Leontodon hispidus</i>	<i>Persicaria maculosa</i>	<i>Ranunculus nemorosus</i>
<i>Leucanthemum ircutianum</i>	<i>Phalaris arundinacea</i>	<i>Ranunculus repens</i>
<i>Ligustrum vulgare</i>	<i>Phalaris canariensis</i>	<i>Ranunculus sceleratus</i>
<i>Lilium martagon</i>	<i>Phleum pratense</i>	<i>Reynoutria ×bohemica</i>
<i>Lolium perenne</i>	<i>Phyteuma spicatum</i>	<i>Reynoutria japonica</i>
<i>Lonicera caprifolium</i>	<i>Picea abies</i>	<i>Reynoutria sachalinensis</i>
<i>Lotus corniculatus</i>	<i>Pilosella aurantiaca</i>	<i>Rhinanthus minor</i>
<i>Lupinus polyphyllus</i>	<i>Pilosella bauhinii</i>	<i>Rorippa palustris</i>
<i>Luzula campestris</i>	<i>Pilosella caespitosa</i>	<i>Rorippa sylvestris</i>
<i>Luzula divulgata</i>	<i>Pilosella densiflora</i>	<i>Rosa canina</i>
<i>Luzula multiflora</i>	<i>Pilosella officinarum</i>	<i>Rubus caesius</i>
<i>Lycopus europaeus</i>	<i>Pimpinella saxifraga</i>	<i>Rubus dollnensis</i>
<i>Lychnis flos-cuculi</i>	<i>Plantago lanceolata</i>	<i>Rubus fabrimontanus</i>
<i>Lysimachia nummularia</i>	<i>Plantago major</i>	<i>Rubus franconicus</i>
<i>Lysimachia vulgaris</i>	<i>Plantago media</i>	<i>Rubus idaeus</i>
<i>Lythrum salicaria</i>	<i>Platanthera bifolia</i>	<i>Rubus koehleri</i>
<i>Maianthemum bifolium</i>	<i>Poa angustifolia</i>	<i>Rubus mollis</i>
<i>Matricaria discoidea</i>	<i>Poa annua</i>	<i>Rubus moschus</i>
<i>Matricaria chamomilla</i>	<i>Poa bulbosa</i>	<i>Rubus nessensis</i>
<i>Medicago lupulina</i>	<i>Poa compressa</i>	<i>Rubus odoratus</i>
<i>Melampyrum nemorosum</i>	<i>Poa nemoralis</i>	<i>Rubus pedemontanus</i>
<i>Melampyrum pratense</i>	<i>Poa palustris</i>	<i>Rubus plicatus</i>
<i>Melica nutans</i>	<i>Poa pratensis</i>	<i>Rubus</i> sect. <i>Rubus</i> ser.
<i>Melilotus albus</i>	<i>Poa trivialis</i>	<i>Glandulosi</i>
<i>Melilotus officinalis</i>	<i>Polygonatum multiflorum</i>	<i>Rubus schleicheri</i>
<i>Mentha arvensis</i>	<i>Polygonum arenastrum</i>	<i>Rudbeckia laciniata</i>
<i>Mercurialis annua</i>	<i>Polygonum aviculare</i>	<i>Rumex acetosa</i>
<i>Mercurialis perennis</i>	<i>Polygonum rurivagum</i>	<i>Rumex acetosella</i>
<i>Microrrhinum minus</i>	<i>Polypodium vulgare</i>	<i>Rumex conglomeratus</i>
<i>Moehringia trinervia</i>	<i>Populus tremula</i>	<i>Rumex crispus</i>
<i>Myosotis arvensis</i>	<i>Portulaca oleracea</i>	<i>Rumex obtusifolius</i>
<i>Myosotis discolor</i>	<i>Potamogeton crispus</i>	<i>Rumex sanguineus</i>

SPECIES LIST OF NATIVE PLANTS OF THE PRŮHONICE PARK

<i>Salix alba</i>	<i>Sonchus arvensis</i>	<i>Triticum aestivum</i>
<i>Salix aurita</i>	<i>Sonchus asper</i>	<i>Turritis glabra</i>
<i>Salix caprea</i>	<i>Sonchus oleraceus</i>	<i>Tussilago farfara</i>
<i>Salix cinerea</i>	<i>Sorbus aucuparia</i>	<i>Typha angustifolia</i>
<i>Salix euxina</i>	<i>Sorbus torminalis</i>	<i>Typha latifolia</i>
<i>Salix triandra</i>	<i>Sparganium erectum</i>	<i>Ulmus glabra</i>
<i>Salix viminalis</i>	<i>Stachys palustris</i>	<i>Ulmus laevis</i>
<i>Salvia glutinosa</i>	<i>Stachys sylvatica</i>	<i>Urtica dioica</i>
<i>Sanguisorba minor</i>	<i>Stellaria alsine</i>	<i>Vaccinium myrtillus</i>
<i>Sanguisorba officinalis</i>	<i>Stellaria graminea</i>	<i>Vaccinium vitis-idaea</i>
<i>Saxifraga granulata</i>	<i>Stellaria holostea</i>	<i>Verbascum lychnitis</i>
<i>Scirpus sylvaticus</i>	<i>Stellaria media</i>	<i>Verbascum thapsus</i>
<i>Scorzonera humilis</i>	<i>Symphoricarpos albus</i>	<i>Veronica arvensis</i>
<i>Scorzoneroideis autumnalis</i>	<i>Symphytum officinale</i>	<i>Veronica chamaedrys</i>
<i>Scutellaria galericulata</i>	<i>Taraxacum</i> sp. div.	<i>Veronica officinalis</i>
<i>Securigera varia</i>	<i>Taxus baccata</i>	<i>Veronica persica</i>
<i>Sedum album</i>	<i>Telexia speciosa</i>	<i>Veronica serpyllifolia</i>
<i>Sedum hispanicum</i>	<i>Teucrium chamaedrys</i>	<i>Veronica sublobata</i>
<i>Sedum sexangulare</i>	<i>Thlaspi arvense</i>	<i>Viburnum opulus</i>
<i>Sedum spurium</i>	<i>Thymus praecox</i>	<i>Vicia cracca</i>
<i>Selinum carvifolia</i>	<i>Thymus pulegioides</i>	<i>Vicia hirsuta</i>
<i>Senecio aquaticus</i>	<i>Tilia cordata</i>	<i>Vicia sativa</i>
<i>Senecio jacobaea</i>	<i>Tilia platyphyllos</i>	<i>Vicia sepium</i>
<i>Senecio ovatus</i>	<i>Tragopogon orientalis</i>	<i>Vicia tetrasperma</i>
<i>Senecio sylvaticus</i>	<i>Tragopogon pratensis</i>	<i>Vinca minor</i>
<i>Senecio viscosus</i>	<i>Trifolium alpestre</i>	<i>Vincetoxicum hirundinaria</i>
<i>Senecio vulgaris</i>	<i>Trifolium arvense</i>	<i>Viola ×intersita</i>
<i>Setaria viridis</i>	<i>Trifolium campestre</i>	<i>Viola arvensis</i>
<i>Silene noctiflora</i>	<i>Trifolium dubium</i>	<i>Viola canina</i>
<i>Silene otites</i>	<i>Trifolium hybridum</i>	<i>Viola odorata</i>
<i>Silene vulgaris</i>	<i>Trifolium medium</i>	<i>Viola reichenbachiana</i>
<i>Sinapis arvensis</i>	<i>Trifolium pratense</i>	<i>Viola riviniana</i>
<i>Sisymbrium officinale</i>	<i>Trifolium repens</i>	<i>Viscaria vulgaris</i>
<i>Solanum nigrum</i>	<i>Tripleurospermum</i>	<i>Vulpia myuros</i>
<i>Solidago canadensis</i>	<i>inodorum</i>	
<i>Solidago gigantea</i>	<i>Trisetum flavescens</i>

Bibliography

1960

Blažek M. (1960): Wild *Iris* Species in Czechoslovakia. The Bulletin of the American Iris Society 156: 98-101.

1961

Blažek M. (1961): Zahradní kosatce. Vesmír 40: 158-159.

Blažek M. (1961): Kosatec nízký v Pavlovských kopcích. Živa IX: 12-14.

1963

Blažek M. (1963): Botanical Species of Irises in the Territory of Czechoslovakia. Atti dell I. Simposio Internazionale dell'Iris: 481-488.

Blažek M. (1963): *Iris pumila* von PoLauer Bergen in Mähren. Deutsche Iris- und Liliengesellschaft, Jahrbuch 1962/63: 76-79.

1964

Blažek M. (1964): Kosatce v našich zahradách. ABC zahrádkáře č. 12 (ČOZS)

1966

Blažek M. (1966): *Iris* der Tschechoslowakischen Gärten. Deutsche Iris- und Liliengesellschaft, Jahrbuch 1966: 47-53.

1968

Blažek M. (1968): Iridárium jako příklad expozice okrasných rostlin. Zpravod. bot. zahr. ČSSR 2: 34-51.

Blažek M. (1968): *Iris*. - in Vaněk V., ed.: Mečíky a ostatní hlíznaté květiny: 133-193.

Blažek M. (1968): *Iridodictyum*. - in Vaněk V., ed.: Mečíky a ostatní hlíznaté květiny: 258-261.

Blažek M. (1968): *Juno*. - in Vaněk V., ed.: Mečíky a ostatní hlíznaté květiny: 281-284.

1971

Blažek M. (1971): Iridárium v Průhonické botanické zahradě. Zpravod. bot. zahr. ČSSR 9: 1-14.

1972

Blažek M. (1972): Vítání jara - sněženky. Živa XX: 11-13.

Blažek M. (1972): Nekosatce a neocúny. Živa XX: 53-55.

Blažek M. (1972): Nové kosatce. Živa XX: 88-90, 93.

Blažek M. (1972): Modré květy v trávníku. Živa XX: 133-136.

Blažek M. (1972): *Colchicum* L., rod nedočkavců. Živa XX: 173-175.

Blažek M. (1972): Řebčíky a kandíky. Živa XX: 208-209.

1973

Blažek M. (1973): Využití kosatců v botanických zahradách. Zpravod. bot. zahr. ČSR 12: 68-73.

Blažek M. (1973): Kosatce. Botanická zahrada Průhonice - leták č. 2: 1-16.

1974

Blažek M. (1974): Iridárium. Zprávy botanické zahrady Průhonice 7-1974; 96 stran.

Blažek M. (1974): O kosatcích po třinácti letech. Vesmír 53 /9/: 272-273, 275-276 a 288.

1978

Blažek M. (1978): Nejkrásnější kosatce. Zpravodajství Národního musea v Praze: 1-5.

1979

Blažek M. et P. Peršín (1979): Sbírký kulturních rostlin v botanické zahradě BÚ ČSAV. Zpravod. bot. zahr. ČSSR 21: 19-31.

1982

Blažek M. (1982): Historické kosatce. Živa XXX: 171-173.

Blažek M. (1982): Kosatec německý. Živa XXX: 210-212.

Blažek M. (1982): Kosatce. Soubor 18 portrétů, 17 stran dopro vodného textu. ČTK-Pressfoto Bratislava.

1983

Blažek M. (1983): Zakládání tematických sbírek. Zpravod. bot. zahr. ČSSR 25: 32-35.

Blažek M. (1983): Botanická zahrada BÚ ČSAV. Informace o botanických zahradách zúčastněných na společné ex pozici Flora Olomouc, str. 26.

Garden Map

Pivoňky (paeonies - *Paeonia*)

- I. zahradní odrůdy bylinných pivoňek a meziskupinové hybridy (cultivars of herbaceous peonies and inter-sectional hybrids)
- II. variabilita *Paeonia officinalis* a *P. peregrina* (variability of *Paeonia officinalis* and *P. peregrina*)
- III. *Paeonia papaveracea* × *P. ostii*
- IV. *Paeonia tenuifolia* a další plané druhy (*Paeonia tenuifolia* and other wild species)
- V. směsný záhon s planými druhy pivoňek (mixed bed with wild species of herbaceous peonies)
- VI. skupina Lemoinových pivoňek (*Paeonia xlemoinei*)
- VII. dřevité pivoňky (tree peonies)
- VIII. čínské odrůdy bylinných pivoňek (Chinese cultivars of herbaceous peonies)
- IX. české odrůdy pivoňek (cultivars of Czech origin)
- X. historicky pěstované odrůdy dřevitých pivoňek (tree peonies grown historically in Czech lands)

Růže (roses - *Rosa*)

- I. multiflora a polyantky (PH, polyanthahybrids and POL, polyantha)
- II. miniaturní růže (MIN, miniature)
- III., IV. čajohybridy a floribundy (TH, hybrid-tea roses, grandiflora and FG, floribunda-grandiflora)
- V. anglické růže (ENG, english)
- VI. moderní šlechtění (modern breeding)
- VII. hybridy *Rosa spinosissima* (hybrids of *Rosa spinosissima*)
- VIII. hybridy *Rosa rubiginosa* (hybrids of *Rosa rubiginosa*)
- IX. odrůdy *Rosa alba* (cultivars of *Rosa alba*)
- X. parkové růže (SHR, shrub roses)
- XI. pnoucí růže (CL, climbing/ rambling roses)
- XII. hybridy planých růží vyšlechtěné v BÚ AV ČR (hybrids of wild species originated in CAS, Průhonice)
- XIII. odrůdy *Rosa gallica* (cultivars of *Rosa gallica*)
- XVI. *Rosa xpruhoniciana*
- XVII. Kordesovy jarní růže (Kordes spring roses)
- XVIII. historické růže – damašské (*Rosa xdamascena*)
- XIX. odrůdy planých růží (cultivars of wild species)
- XX. stolistky a mechovky (*Rosa xcentifolia* and *Rosa xmuscosa*)
- XXI. šípkový sad (wild rose park)
- XXII. půdopokryvné (BOD, landscape, ground cover)
- XXIII. rugosa hybridy (hybrids of *Rosa rugosa*)
- XXIV. remontantky (remontant roses)

Kosatce (irises - *Iris*)

1. kulturní odrůdy sibiřských kosatců (cultivars of Siberian irises)
2. vysoké kartáčkaté kosatce (TB, Tall Bearded)
5. prastaré odrůdy kartáčkatých kosatců, obrubové kosatce, miniaturní vysoké kosatce (ancient cultivars of bearded irises, BB - Border Bearded and MTB - Miniature Tall Bearded)

6. hybridy a odrůdy skupiny *Oncocyclus* a *Regelia* (hybrids and cultivars of *Oncocyclus* and *Regelia*)
7. variabilita *Iris graminea* + *I. variegata* (variability of *Iris graminea* + *I. variegata*)
8. japonské a vodní kosatce (Japanese and water irises)
9. kosatce skupiny *Spuria* (irises of *Spuria* group)
10. variabilita *Iris lactiflora* (variability of *Iris lactiflora*)
11. Testovací zahrada (Trial Garden)
12. střední kartáčkaté kosatce (IB, Intermediate Bearded)
13. nízké kartáčkaté kosatce (SDB, Standard Dwarf Bearded)
14. netradiční odrůdy kosatců (Space Age Irises)
15. plané druhy bezkartáčkatých kosatců (wild species of beardless irises)
16. plané druhy bezkartáčkatých kosatců (wild species of beardless irises)
17. plané druhy bezkartáčkatých kosatců (wild species of beardless irises)

Denivky (daylilies - *Hemerocallis*)

1. zahradní odrůdy (cultivars)
2. plané druhy (wild species)
3. plané druhy (wild species)
4. české šlechtění (cultivars of the Czech origin)

Jezírka a vodní zahrada (Ponds and water garden)

- I. odrůdy *Iris versicolor* (cultivars of *Iris versicolor*)
- II. americká tůň (American pond)
- III. leknínové jezírko a odrůdy *Iris pseudacorus* (water lily pond and cultivars of *Iris pseudacorus*)
- IV. středoevropská tůň (central-European pond)
- V. lousianské kosatce, lekníny (Louisiana irises, waterlilies)
- VI. lekníny a jiné vodní rostliny (other aquatic plants)
- VII. lekníny a jiné vodní rostliny (other aquatic plants)
- IX. živinami chudá tůň a písčina (nutrient-poor water and sandbank)

Březový háj	Birch park
Centrální louka	Central meadow
Cibuloviny	Bulbs
Hadcová skalka	Serpentinit rock garden
Hrušně	Pear trees
Jabloně	Apple trees
Jezírka	Ponds
Květnatá louka	Flowery meadow
Opadavé azalky	Deciduous azaleas
Pěnišníky	Rhododendrons
Skalka	Rock garden
Sněženky	Snowdrops (<i>Galanthus</i>)
Šácholany	<i>Magnolia</i>
Vápencová skalka	Limestone rock garden
Vodní zahrada	Water garden
Zahradnické zázemí	House of gardeners
