FEILO SYLVANIA

Formed in January 2016, Feilo Sylvania is 80% owned by Shanghai Feilo Acoustics Co., Ltd, which is principally engaged in the manufacture and distribution of lighting equipment. Headquartered in Shanghai, Shanghai Feilo Acoustics Co Ltd was founded in 1984 and is China's first joint-stock company (SH 600651). The company reorganised its M&A on a large scale in 2014 and became a joint enterprise comprising companies including Shanghai Yaming Lighting Co Ltd, Beijing Shen'an Group as well as Shanghai Sunlight Enterprise Co Ltd. With the acquisition of Havells Sylvania, Feilo has gained manufacturing bases, logistics centres, R&D technology centres around the world, as well as market access in 48 countries.

Feilo Sylvania is a leading, full-spectrum provider of professional and architectural lighting solutions. Built on over a century of expertise in lamps and luminaires, Feilo Sylvania supplies internationally state-of-the-art products and systems to the public, commercial and private sectors. Feilo Sylvania strives to deliver the finest products, service and consulting possible. All over the world, people rely on group business divisions: Concord, Lumiance and Sylvania, for top quality, energy-efficient solutions to suit their individual lighting needs.

Our Brands

Lamps

SYLVANIA

The heritage and broad spectrum of products makes Sylvania lamps one of the most respected lighting brands in the world. It has manufacturing and research centres across the globe.

Luminaires

Concord

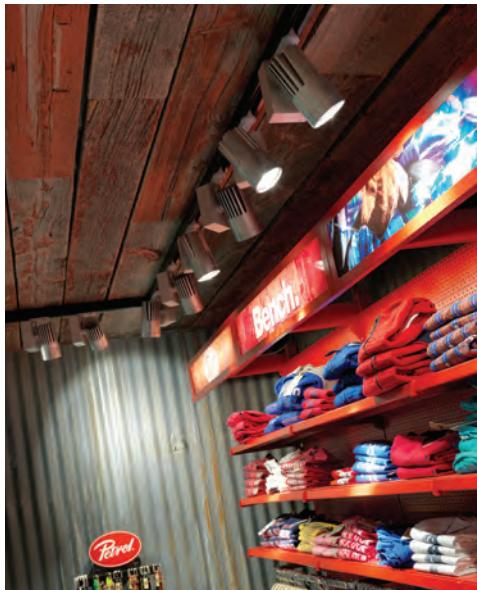

One of Europe's premium architectural lighting brands with an emphasis on technical performance and aesthetic form. Concord focuses on meeting the needs of architects and lighting designers.

Lumiance

Lumiance offers a wide range of contemporary designed luminaires, intended for a variety of applications such as shops, offices, hotels and restaurants.

SYLVANIA

Sylvania offers a comprehensive portfolio of attractive and competitively priced luminaires for industrial and commercial applications.

ToLEDo Retro Sylcone

Red Dot Award: Product Design 2016

The new, award-winning SylCone Retro range perfectly combines contemporary aesthetics and technology with vintage stylistics to create a unique range of decorative luminaires. The hand-blown glass lamp is available in three unique designs and incorporates the latest LED filament technology to provide a powerful yet efficient light source that replicates a warm glow of traditional, incandescent lighting with colour temperature of 2000K. The range has recently won the Red Dot Award: Product Design 2016.

RefLED+ ES50 V2.1

Awarded five stars and best LED GU10 lamp by Lux Magazine in 2015

Sylvania's RefLED+ ES50 V2 has been named the best GU10 lamp on the market in a five-star review given by independent testing laboratory, LIA laboratories, and lighting publication Lux Magazine. The lamp was commended not only for the accuracy of the information given on the packaging regarding its technical specifications but also its excellent power factor and efficacy of 79 lm/W. Singled out for special praise however, was the lamp's appearance, with Lux Technical Editor, Alan Tulla remarking in the review that "what sets this lamp apart, both on and off, is its appearance. The front face really sparkles when you switch it on. If you care about lighting, this is the lamp for you."

ToLEDo Retro GLS A60 Non-dimmable

Best LED Filament Lamp: 5.9/6 points
By VDE, the German Association for Electrical, Electronic & Information Technologies, March 22 2016.

Sylvania's ToLEDo Retro GLS A60 Non-dimmable has been named the best LED filament lamp on the market and awarded 5.9 points out of 6 by German testing laboratory, VDE, and Swiss television network SRF. The lamp was commended not only for the accuracy of the technical specifications given on the packaging but also the excellent power factor, efficacy, and the colour and efficiency that don't deteriorate as the lamps life decreases.

The Lux five-star best overall GU10 LED lamp, RefLED+ E50, is manufactured in our Tienen factory.

Made In Europe

Sylvania is proud of their strong manufacturing heritage in Europe. It has two centres of excellence for lamps, Tienen in Belgium since 1967 and Erlangen in Germany since 1968. They have been created to bring specific design, marketing and production engineering skills for each key lamp group together in one place.

By producing lamps in Europe, Sylvania has reduced product development time and created a clearer understanding of market requirements whilst guaranteeing European craftsmanship in the lamps.

- **Erlangen (Germany):** fluorescent lamps of all types

- **Tienen (Belgium):** Specialises in LED lamps, HID lamps, low voltage and mains voltage halogen lamps

Certifications

All our Feilo Sylvania factories have received ISO 9001 certification from authorized certification bodies.

Warranty

At Feilo Sylvania, we pride ourselves on the quality of our products. An extended warranty is available, subject to conditions. Please contact your local sales representatives to learn more.

2013 EU legislation changes impacting lighting

This legislation has had a major impact on all lighting technologies since it became European law, making it easier for consumers to compare products and enabling non-compliant and inefficient products to be removed from the market. The legislation can be split into three sections as shown below. Future changes have been highlighted in bold.

	DIM*1 Stage 6 for 244 and stage 2/3 for 1194? Eco Design requirements for non-directional household lamps	DIM*2 (1194/2012) Eco Design requirements for directional lamps, LED and luminaires. Stage 6 for 244 and stage 2/3 for 1194	Energy Label (874/2012) Directive
What's happening?	<ul style="list-style-type: none"> – Higher technical performance requirements by Sept. 2013 – Ban of non-directional Halogen from 1st Sept 2018 (postponed from Sept 2016) 	<ul style="list-style-type: none"> – Higher technical performance requirements by Sept. 2013 – Ban of inefficient reflectors. 450lm & CFLi reflectors – Ban on inefficient mains and low voltage halogen reflector lamps from 1st Sept 2016 	<ul style="list-style-type: none"> – New energy label to be added to all relevant lamp packaging – EEI** label classes on top of A class (A+, A++) are added. – Classes "F" and "G" are removed. – kWh/1000h added (energy usage) – Lamps starting September 2013, fixtures starting March 2014
Which Range?	<ul style="list-style-type: none"> – Non-directional CFLi, LED and Halogen 	<ul style="list-style-type: none"> – Directional Halogen, LED, CFLi and non-directional LED related equipment e.g. LED luminaires 	<ul style="list-style-type: none"> – All Lamp portfolios (Incandescent, Fluo, HID, SPG, LED and LED modules) – Fixtures with lamps 

Energy labels are available for download on our website

* DIM stands for Domestic Implementing Measures.

** EEI stands for Energy Efficiency Index - a measure of lamps energy efficiency

Watts will only tell you how much power the light consumes, not how much light it generates. Lumens will tell you what you actually need to know, how much light you will get from a light source; and it is an easier means for comparing the amount of light you will get from one lamp versus another.

Non-Directional Lamps

In non-directional lamps, the amount of lumens defines the total amount of light the lamp generates irrespective of direction.

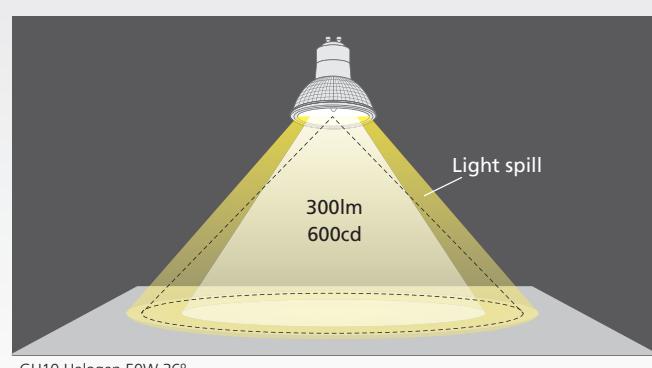

Directional Lamps

Previously, directional lamps only stated the luminous intensity (candela) of the light. This would only indicate how intense the light was and gave no frame of reference for the quantity (lumens) of light. The DIM² legislation specifies that the amount of useful light is the light that is emitted in a 90 degree cone from the lamp. Any light outside this cone is not considered useful in the pursuit of directional lighting. It is however important to maintain an element of "spill light", that is light outside the cone to ensure homogenous, uniform lighting. Directional lamp lumens are defined by the amount of useful light which is emitted forwards.

Useful lumens in directional lamps

The new legislation specifies that a 90° cone is used for the calculation of reflector lumen output. This is because Halogen lamps have more spill light. To accurately compare light emitted in a specific direction, we can only use the lumens in a 90° cone. This is known as useful lumens.

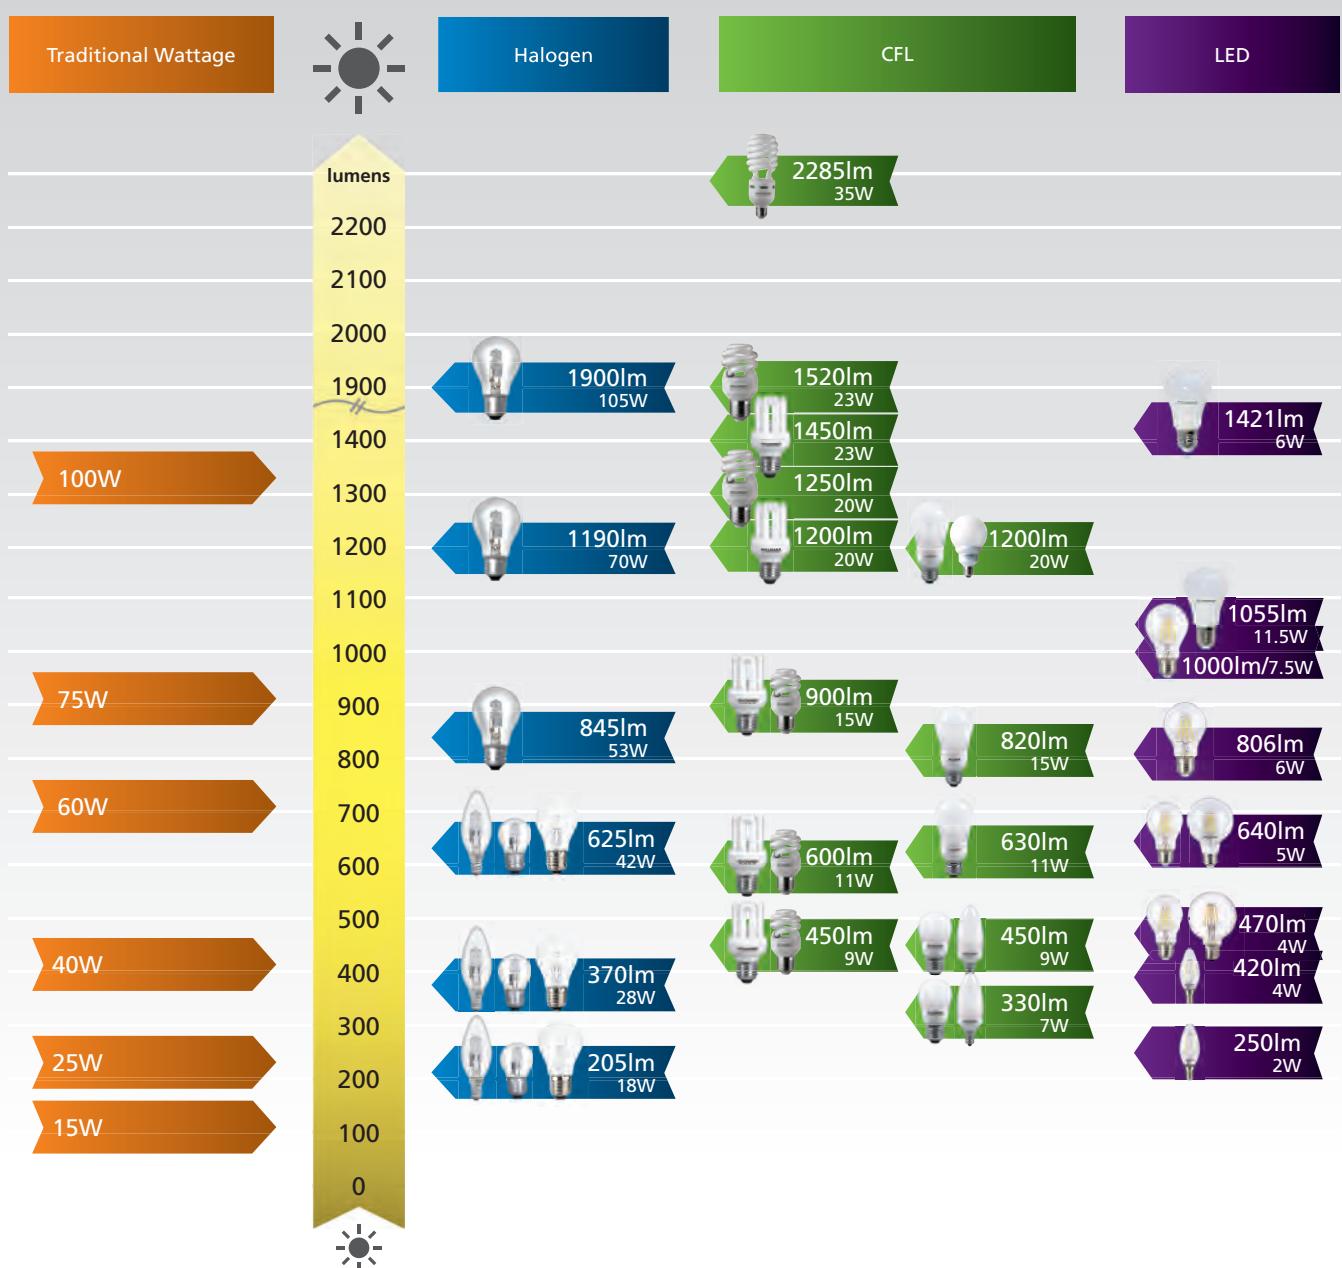

²DIM stands for Domestic Implementing Measures.

Non-directional lamps

For non-directional lamps, we will be focusing on lumens.
Lumens is the total luminous flux of a lamp in all directions.

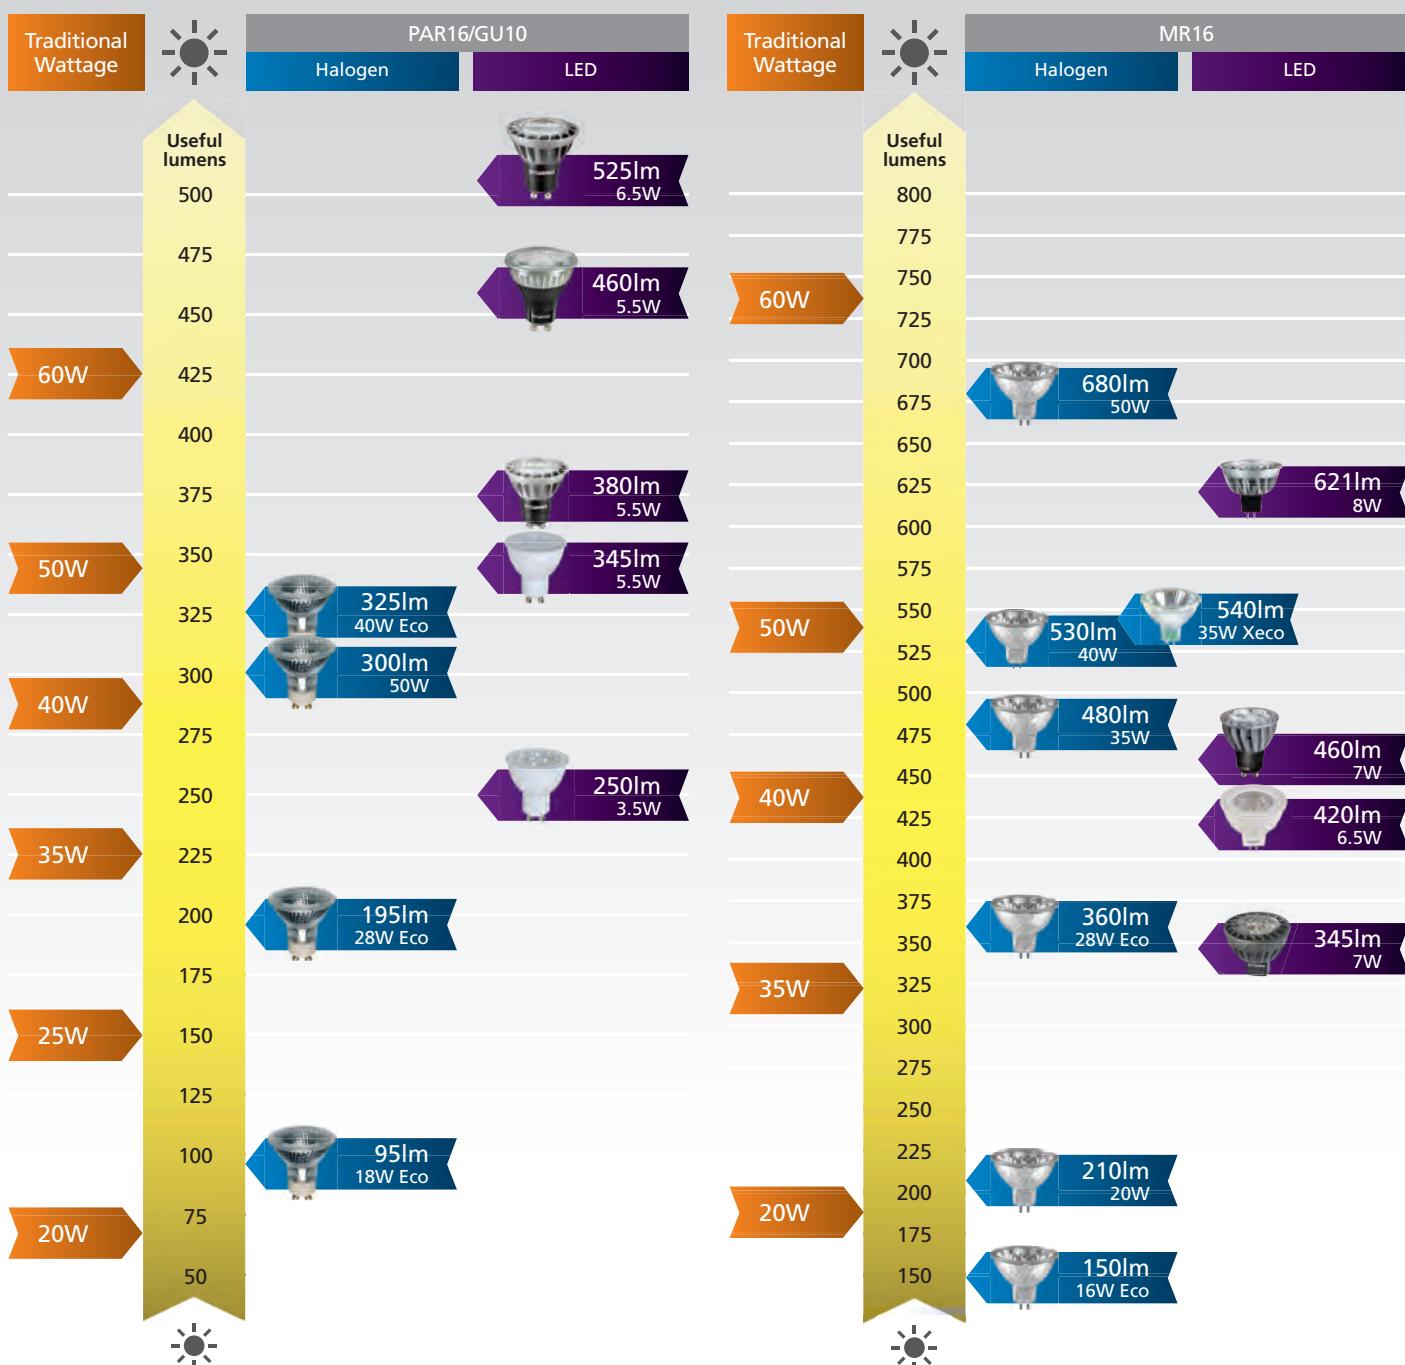

The higher the lumens the more light is generated by the lamp.

Directional Lamps

For directional lamps, we will be focusing on useful lumens. Useful lumens is the amount of luminous flux within a 90° cone in the forward facing direction of the lamp. This will tell you the amount of 'useful' light emitted from a directional light source.

Lamps are available in a wide range of shapes, sizes and technologies. The key lamp characteristics are highlighted below. Each lamp type has its own specific traits, so it's important to understand these in order to ensure you're choosing the right product for your needs.

Power in watt (W)

Watt is the unit of power and was used for incandescent lamps as an indication of their light output. Since modern energy saving lamps and LED lamps consume far less power to achieve the same brightness, the wattage is no longer as meaningful. The lumen value is now used to describe light output.

Lumens (lm)

The photometric unit of luminous flux. Luminous flux is the quantity of visible radiation emitted which is weighted to take into account the sensitivity of the human eye. There are two measures of lumens used:

- Lumens (non-directional lamps)

This is the total luminous flux of a lamp in all directions.

- Useful lumens (directional lamps)

This is the amount of luminous flux within a 90° cone in the forward facing direction of the lamp. This will tell you the amount of 'useful' light emitted from a directional light.

Candela (cd)

The unit of measurement for luminous intensity in a particular direction.

Instant light

A common issue with many compact fluorescent lamps is that full light output takes some time and occurs with a period of unpleasant light and switch delay. Instant light means the lamp illuminates within 1 second and achieves full light output within 60 seconds.

Colour temperature

An approximate indication of the colour impression created by a white light source. It describes how 'warm' or 'cool' the appearance of the light will be. The unit of measurement is degrees Kelvin. Sylvania lamps are offered in a range of colour temperatures from 2500K Candlelight, 2700K Homelight, similar to incandescent lamps, 3000K Warm white similar to Halogen, 4000K Cool white to 6500K Daylight.

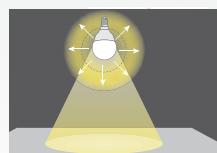

Watts to lumens examples non-directional lamps

Watts to lumens examples directional lamps

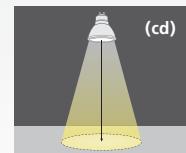

Lumens example
(Non-directional lamps)

Lumens example
(Directional lamps)

Candela example

Kelvins example

Beam angle

Indicates the width of the light beam from a directional light source. It can be thought of as an imaginary cone of light emitted from the front of the lamp and is defined as the angle at the point where luminous intensity has diminished to 50% of the candela intensity found at the centre beam.

The beam angle is particularly important to understand how focussed or how diffuse you need your light to be when lighting a specific object or an open space.

Colour Rendering Index (CRI)

This is the ability of a lamp to reproduce the colours it is illuminating (maximum CRI = 100).

The higher the CRI, the more accurate the quality of the colours of objects being lit.

Average rated life

For all technologies except LED, average rated life is based on 50% lifespan from a sample set of lamps. i.e 10000 hours will be the point at which 50% of lamps are still operating. For LED, life is defined on either 50% average rated life or 70% lumen maintenance which ever occurs first.

Lumen maintenance

Every lamp will gradually lose light output over life. The lumen maintenance will tell you how many percent of the original light is still generated at a given point in the lamps' life.

Dimmability

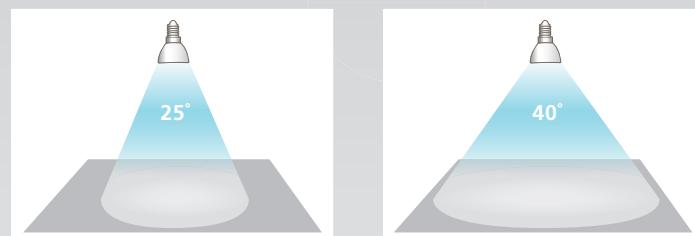

Most conventional dimmers have been designed for incandescent and halogen lamps and are rated for higher minimum loads than LED or CFL lamps consume. It is therefore important to ensure that the load applied to a dimmer matches at least the minimum load stated on the dimmer.

There may be some restrictions in terms of functionality of dimmers with individual LEDs/CFLs – but when more than one lamp is used to increase the total of loading, dimming becomes easier. It is also important not to overload a dimmer to its maximum load.

For further information on dimming and dimmer compatibility please visit www.havells-sylvania.com or contact your local Sylvania representative

For more information about lamps please go to the Glossary of terms section of the catalogue

Guide to Sylvania packaging

As part of the ErP update requirements, we've improved the design of the packaging to ensure key purchase criteria is captured on front of pack, to make the design more attractive and to make the shelf easier to navigate, thus ensuring consumers make the right choice quickly and easily.

Blister Packaging

The entire portfolio is available in sleeve or box, with a select range also available in blister for our retail customers.

3 RefLED Superia ES50 V2.1 Dimmable

6

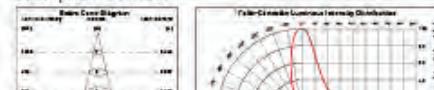

- High light output
- 500lm 2,700K - 70W Halogen equivalent
- 525lm 3,000K - 75W Halogen equivalent
- 550lm 4,000K - 77W Halogen equivalent
- Low energy at only 6.5W - up to 85lm/W
- A+ Energy class
- Single point source ensuring precision lighting
- Cool A+ Technology - up to 25'000 Hours life even in enclosed fixtures
- New PureForm shape - matches the shape and size of a halogen lamp ensuring it can retrofit all luminaires
- High power factor - 0.9
- Made in Europe quality
- Dimmable on approved dimmers*
- 5 Year Warranty

LED Lamps

Our technology has reached the stage where you can confidently replace old technology lamps with the latest LED retrofit lamps for general lighting purposes. Sylvania LED lamps will deliver satisfied customers by replacing incandescent and halogen lamps with LED, keeping the light level and comfort they are used to, but achieving huge energy savings.

Our LED lamps share one unique Sylvania design, building on our heritage with the spiralled reflectors used on halogen lamps. Our performance is best in class, making it easier to make the best choice on the market and take no risks on safety or quality. LED lamps contain no mercury, no lead, and achieve up to 90% energy savings, making them very environmentally friendly.

ToLEDo Retro

The ToLEDo Retro range, is a complete series of A++ Energy rated lamps to replace traditional light sources. The new products have been designed to keep the look and feel of incandescent lamps while offering up to 90% energy savings.

RefLED+ ES50 V2

The Lux Review recommended RefLED+ ES50 V2 is a true retrofit replacement for a Halogen GU10 with the energy saving and long life benefits of LED technology. The lamp benefits from a unique Halogen faceted lens design – full front face lens with no heatsink visible from the front – ideal for use with any colour downlight.

ToLEDo Superia T8

The newly upgraded ToLEDo Superia T8 LED tube replaces its predecessor of plastic-constructed tubes with an innovative, glass body design. The entire range provides an immensely energy efficient solution coupling high lumen output and outstanding distribution of light.

WARRANTY

All lamps have a standard 2 year warranty but LED lamps have an extended warranty of 3 to 6 years which is highlighted on each page

GLS A60 Clear

GLS A60 Frosted

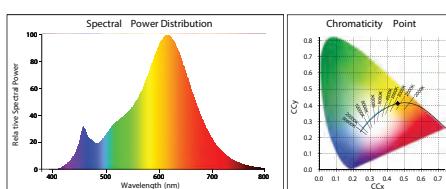

GLS Crown Silver

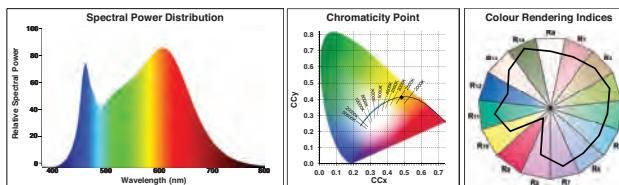

- Perfect for decorative and general lighting applications and creates a warm ambiance similar to traditional lamps
- 300° omni-directional light distribution
- First lamp of its type to achieve A++ rating - up to 134 lm/W
- Suitable for replacement of up to 75W incandescent lamps
- Gives same sparkling light effect as incandescent lamp
- Up to 90% energy saving compared to incandescent lamps
- Dimensionally identical to incandescent lamps - fits all fixtures

Candle C35 Clear

Candle C35 Golden

- Candlelight creates a warm and relaxing atmosphere and converts everyday lighting into a unique experience. 2200K is popular choice for both hospitality application and for general lighting as it gives perfect balance between illumination and dim-lit effect
- MagmaGlow is a perfect choice for creating a cosy ambience for leisure and relaxation. Combination of warm 1700K temperature, enhanced by golden glass cover and low lumen output recreates a dim-lit effect achieved by incandescent lamps and are a great choice as a mood setting lamp
- Dimming functionality helps to vary lighting scene as lamps can be dimmed from 100% to 10% and reduces energy consumption as well
- Sparkling light output.
- Omni-directional light distribution
- Environment friendly - no mercury and lower CO₂ emissions
- Dimmable on approved dimmers
- Specially designed snap-on decorative rings in metallic golden and silver finish to enhance lamp aesthetics
- Perfect for decorative and general lighting applications and creates a warm ambience similar to traditional lamps

RefLED Superia AR111 Dimmable

SYLVANIA

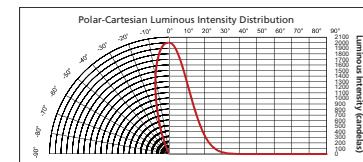

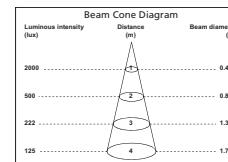

- Direct replacement of 50W, 75W and 100W Halogen AR111 lamps.
- 6.5W 450Lm, 10W 740Lm and 13W 905Lm - Up to 85% energy saving compared to standard halogen lamps
- High colour rendering CRI80 and CRI95 (SuperColour)
- SuperColour option with CRI95 (R9=80) for the ultimate in colour accuracy for retail and display lighting
- Dimmable on approved dimmers*
- Available in 2700K homelight, 3000K warmwhite and 4000K coolwhite
- High efficacy: up to 74lm/W
- Lifetime of 50,000 hours
- High Power Factor - 0.9
- 5 Years Warranty
- Very low glare just like a halogen lamp

Cool white - 840

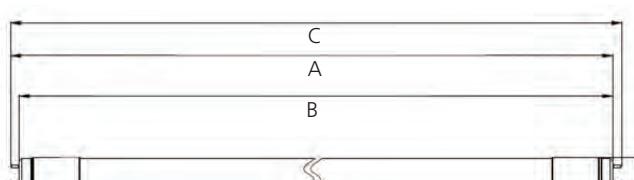

Daylight - 865

Remove existing starter and replace with the starter provided with the lamp
Not suitable for use on emergency or tandem ballast applications

Safety note:

In case a parallel capacitor for power factor compensation is used inside the luminaire, it will reduce the power factor in combination with LED tubes and thus can impact the energy consumption. According to local requirements/regulations, consider that power factor/capacitor could need to be adjusted.

HID Lamps

High Intensity Discharge (HID) lamps comprise three major groups – metal halide, high pressure sodium, and low pressure sodium – HID lamps meet a variety of lighting needs for interior and exterior applications. Sylvania's range of discharge lamps are characterised by quality materials, certified manufacturing techniques and stringent quality control procedures, to ensure the highest performance and reliability standards.

Relumina

Sylvania's new Relumina is a solution to the Energy related Product ban on Mercury lamps across the European Union, which took place in April 2015. The Relumina lamp, consisting of ceramic metal halide technology, is a direct retrofit solution for Mercury installations - requiring no change of existing control gear. Relumina offers significant energy savings, quick payback and improved quality of light all with the simplicity of a one-to-one lamp replacement.

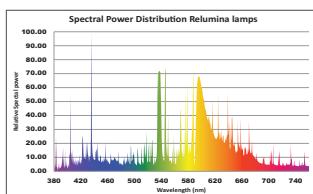

- Direct Retrofit replacement of HPMV (High Pressure Mercury Vapor)
- Energy saving solution for HPMV
- Highly efficient lamp with luminous efficacy up to 93 lm/w
- Fast payback within 4,000-10,000 hours of use
- Excellent CRI
- Long life
- High quality light (3,000K)
- Meets and exceeds legislation needs.
- Reduced CO₂ level

- UV-stop quartz reduces colour fading of merchandise
- For use only in luminaires equipped with a protective cover glass
- Applications in both interior and exterior lighting – shops, hotel lobbies and architectural
- WDL types are suitable for both electronic and electromagnetic gear but NDL types are recommended on electronic gear for optimal performance
- Superia CMI lamps can be "Dimmed" in accordance with the "Dimming Condition" specified on the datasheet available on the website

BriteSpot ES50 35W

Britespot ESD50 Dichroic

- The most compact quartz metal halide reflector lamp available, with stable light colour both initially and throughout life
- Crisp, powerful white light with outstanding colour rendering index of Ra90
- Three times more light compared to low voltage halogen lamps and reduced maintenance costs as a result of the long average lamp life
- Easy to install thanks to the robust new GX10 twist lock cap
- Extremely fast run-up (within less than 1 minute) with special design for safe failure at end of life
- Operation on compatible electronic gear as listed on the corporate website (www.feilosylvania.com)
- Wide range of interior applications in retail, restaurants, hotels, galleries and residential

Metal Halide BriteSpot /WDL

Dimensions (mm)

- Attractively styled lamp adds a touch of class to lighting designs
- Very high efficiency thanks to the large reflector and patented anti-glare optics
- Crisp, powerful white light with outstanding colour rendering index of Ra90
- Extremely high intensity possible with narrow beam versions, ideal for accent lighting
- Easy to install due to the robust new GX10 twist and lock cap
- Operation on compatible electronic gear as listed on the corporate website
- Wide range of interior applications in shops, restaurants, hotels, galleries and many other cultural and leisure venues

HSI-MP Metalarc Clear

HSI-MP Metalarc Coated

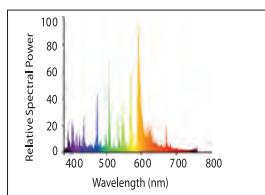

- A family of metal halide lamps specially designed for open and enclosed fixtures
- Lamps can directly replace High Pressure Sodium lamps to turn yellow installations to white light, simply by changing the lamp - for example, floodlighting, car parks
- Long service life of 15,000 hours keeps maintenance costs to a minimum
- Excellent colour maintenance throughout lamp life
- UV-stop outer jacket for reduced risks of fading
- Large variety of colours and wattages, in both clear and phosphor coated lamps
- Very economical light source for downlighting applications in large public spaces, for example airport terminals, halls, hotel lobbies and open-plan offices

HSI-HX

HSI-THX

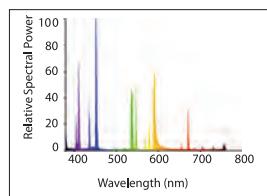

- Single ended quartz metal halide lamps with a tubular outer envelope
- Both internal and external ignitor versions available
- All versions operate on a standard mercury ballast, with or without (I type) external ignitor
- Very high light output with outstanding colour properties
- Suitable for colour television filming in sports stadia and large arena
- Industrial lighting applications in exterior car parks, rail and dock yards

- Compact double ended quartz metal halide lamp
- Short arc source allows for good optical control in floodlighting luminaires
- No outer envelope required, permitting the design of compact luminaires
- Very high light output with excellent colour rendering properties
- Suitable for colour television filming in sports stadia and large arenas
- Exterior lighting applications in outdoor car parks, petrol stations, rail and dock yards

Dimensions (mm)

SHP-S TwinArc Elliptical

- Range of high pressure sodium lamps with double arc tube construction
- Dual arc tube design guarantees immediate re-strike after a power interruption
- Doubled lamp life and reduced occurrence of early failures
- Exceptional reliability, offering 6 years of maintenance-free service and superior lumen maintenance, exceeding 95% over life
- Ideal for applications which are difficult to access, or where maintenance is expensive
- Perfect for tunnels, airports, military installations, harbours and industrial sites

SHP-S Super Elliptical

- Patented new construction featuring the Sylvania Wound Ignition Antenna for the ultimate starting reliability throughout lamp life
- Exclusive 'frameless' construction delivers superior system efficiency and improves lumen maintenance over life
- Exceptional reliability, offering 4 years service with over 95% lumen maintenance
- Super versions with high xenon pressure boost luminous efficacy up to 150 lm/W
- Offers increased lighting levels and an extended maintenance-free service life in all road and industrial applications

- Range of high pressure sodium lamps with internal ignitor
- Cost reduction opportunities since no ignitor or external wiring is required
- Enables luminaire size to be reduced since no ignitor is required
- Available in clear or coated elliptical bulbs
- Popular choice for parks, gardens, pedestrian zones and residential street lighting
- Low-cost illumination of workshops and small industrial areas

Fluorescent Tubes

The key benefits of fluorescent lamps are their proven efficiency, long lamp life and their suitability for use with magnetic ballasts or electronic control gear. Sylvania offers a comprehensive range of high-efficiency fluorescent lamps in various lengths, diameters, wattages, colours as well as lamps for a wide range of specialist applications.

T5 Ecoline

The most efficient replacement for standard T5 lamps. Powered by our advanced coating technique which allows reaching higher luminous efficacy while maintaining the same lumen output at a lower power consumption.

T8 Luxline Eco

A range of T8 fluorescent lamps for use with general lighting applications. Intended to replace standard halo phosphor or hi-phosphor T8 lamps, they achieve high colour rendering together with long life and high energy efficiencies, meaning great quality light with low cost to the user and the environment.

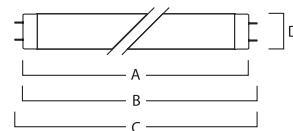

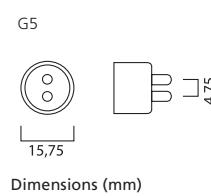

- Up to 10% energy saving on constant current electronic ballast
- Reduction in power consumption of up to 7W
- High luminous efficiency of up to 116 lm/W
- Optimum luminous flux at an ambient temperature of approx 35°
- The same lumen output as compared with Standard LUXLINE T5 FHE & FHO lamps
- Up to 10% lower CO₂ emissions
- 1:1 replacement of Standard T5 lamps
- For electronic ballast operation only
- High colour rendering (CRI=85, Class B)
- Average lifetime of 24,000 hours with pre-heating ballast

- The T5 FHO Luxline Plus triphosphor lamp is the ideal solution for indirect and direct lighting, i.e. industrial lighting systems with high ceilings
- For applications where a high luminous flux is required (up to 7000 lm per lamp)
- High colour rendering (CRI=85/Class 1B)
- For electronic ballast operation only
- Optimum luminous flux at an ambient temperature of approx 35°C
- Average life time of 24,000 hours with pre-heating ballast

- 16mm fluorescent lamps in Standard and Luxline Plus colours
- For applications where space is limited
- Ideal solution for furniture, showcases, bathroom cabinets, transportation and leisure applications
- For higher colour rendering index we recommend fluorescent T5 Short Luxline Plus (6W and 8W)

Dimensions (mm)

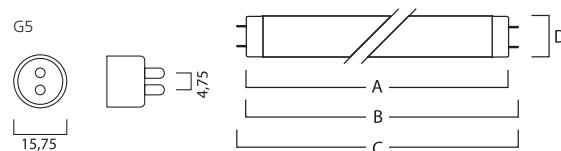

- 16mm fluorescent lamps in Standard and Luxline Plus colours
- For exclusive use in emergency lighting luminaires
- Only for operation by battery with electronic ballast (low lamp currents)
- Reliable ignition with compatible ballast
- Luminous flux dependant on individual ballast

Dimensions (mm)

- Intended to replace standard halophosphor T8 lamps offering 10% energy saving with no loss in light output
- T8 fluorescent lamp with high colour rendering and excellent lumen maintenance
- Good colour rendering (CRI=85)
- High luminous efficacy
- Operates on conventional and electronic ballasts
- Meets the lighting requirements as specified in the European Standard EN 12464-1 for workplaces
- Retrofit with standard T8 lamps
- Average rated life 15,000 hours with pre-heating ballast

- Standard T8 fluorescent lamps with a wide range of special wattages in standard colours
- Good colour rendering (CRI=85)
- Suitable for areas where people are not engaged in work for long periods of time (EN 12464-1)
- Not intended for use in general lighting applications. Intended for special applications including furniture, electrical distribution cabinets, signage and train carriages
- Average lifetime of 20,000 hours with pre-heating ballast).

- Multi-phosphor coating for highest colour rendering
- Make colours look natural and vibrant
- Particularly useful in applications where colour rendering is a benefit - eg shops to help make merchandise look more attractive
- Excellent colour rendering (CRI=90-99 / class 1A)
- Average lifetime of 20,000 hours with pre-heating ballast)

T8 Luxline® SuperColour

Dimensions (mm)

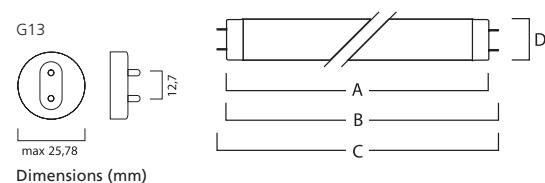

- Luxline Plus ShatterProof lamps provide protection against lamp breakages, where broken lamps could cause significant problems (e.g. clean rooms, kitchens, schools)
- Protection against splinters and other lamp parts
- Sleeve is made of FEP - which can easily withstand high ambient temperature, suitable for open and enclosed fixtures
- Excellent light transmission with no reductions in light output
- Average lifetime of 20,000 hours with pre-heating ballast

- Standard T8 fluorescent lamps with a wide range of special wattages in standard colours
- Colour rendering: (CRI=50-79/Class 3-2A)
- Suitable for areas where people are not engaged in work for long periods of time (EN 12464-1)
- For new installations or replacements we recommend T8 Luxline Plus where possible
- Not intended for use in general lighting applications. Intended for special applications including furniture, electrical distribution cabinets, signage and train carriages

- Circular and single-capped fluorescent with 16mm bulb diameter
- 2GX13 base
- High lumen efficiency
- Dimmable
- Operated with electronic ballasts only
- Ideal for flat, circular or square shaped fixtures in recessed pendant or wall mounted installations
- Available in warm white (830) and cool white (840)

- Quick-start without increasing the starting current
- Immediate switch off in case of flickering or defective lamp (end of life)
- Prevents overheating of the ballast
- Extended life compared to standard starters
- Reduced maintenance cost due to longer life time
- For single lamp operation
- Testhouse approved and ENEC/VDE marked

Compact Fluorescent Lamps

Sylvania Compact Fluorescent lamps are available in a wide range of shapes and formats to meet the growing need for compact, energy efficient and long lasting lamps, coupled with excellent colour rendering.

All Sylvania lamps are compliant with ErP 5, which is the EU legal requirement that makes CFL lamps achieve minimum energy efficiency and performance criteria.

Mini-Lynx® Fast-Start

Mini-Lynx Fast-Start energy savers are different. These exceptionally compact fluorescent lamps have no unpleasant flicker or switch delay. They illuminate in less than one seconds, except 8W*, achieve full luminous flux in under 40 seconds and are available in a wide range of wattages and colours. Furthermore, with a rated lifetime of 12,000 hours, they are easy to fit...and forget.

*8W illuminates within 1.5 seconds

Mini-Lynx® Fast-Start Spiro

The spiral design of these lamps provides optimum light distribution. The new range offers improved performance with a full spiral compact design, average lifetime of 10,000 hours and <1 second illumination time (9W <1.5 sec).

- Compact, fast-start energy saving lamps
- Up to 80% energy saving compared to incandescent lamps
- Provides a flicker-free start within 2 seconds
- Delivers 60% light in less than 40 seconds
- No liquid mercury (<1.5mg pill)
- 50,000 switching cycles
- Good colour rendering CRI=80
- Available in Homelight (2700K), Cool White (4000K) and Daylight (6000K)
- Average life: 12,000 hrs
- To be used in dry applications or fully enclosed fixtures

- Up to 80% energy saving compared to incandescent lamps
- Instant flicker free start <1 second (9W = <1.5 sec)
- Delivers 60% light in less than 40 seconds
- No liquid mercury (<2.5mg pill)
- Good colour rendering (CRI=80)
- Available in Homelight (2700K), Cool White (4000K) and Daylight (6500K)
- Average life: 10,000 hrs
- To be used in dry applications or fully enclosed fixtures

Lynx® - TE Amalgam

- Excellent luminous flux at high and low ambient temperatures
- Triple pin-base lamps for traditional fixtures, new installations and downlights
- Particularly suitable for use in the new generation of ultra compact fluorescent downlights and luminaires
- Amalgam technology designed for high temperature applications
- Excellent colour rendering (CRI=80-82)
- To be operated on electronic ballasts only
- Rapid Run-up
- Dimmable with suitable dimmer
- Available in Warm White (3000K) and Cool White (4000K)
- Average life: At least 12,000 hrs

Lynx® - D Superia

Lynx® - DE Superia

- Compact and high performance double bend 2-pin base lamp
- Suitable for operation on electronic control gear
- To be operated on electronic ballast only
- Suitable for emergency lighting
- Dimmable with suitable dimmer
- Excellent luminous flux
- Excellent colour rendering – (CRI=80)
- Available in Warm White (3000K), Cool White (4000K) and Daylight (6500K)
- Average life: 12,000 hrs

Halogen lamps

Halogen lamps with their beautiful, sparkling white light, are renowned for their unbeatable colour rendition, meaning that, unlike some other energy saving technologies, colours are shown in their true glory 100% of the time.

This is coupled with their unique ease with which they can be dimmed on virtually any system, proving themselves as the perfect choice for a wide variety of applications ranging from precise accent lighting in world leading museums and art galleries, to soft ambient lighting in your living room at home.

Classic Eco

Halogen Classic Eco are fully interchangeable with conventional incandescent lamps having no compatibility issues such as size, shape or with electronic control gear. Two times longer average life and excellent colour rendering makes it an ideal replacement lamp. All Halogen Classic Eco lamp are 100% dimmable, which means their light output can be modified according to the required ambience – from maximum brightness to comfortably dimmed.

Classic Eco A55

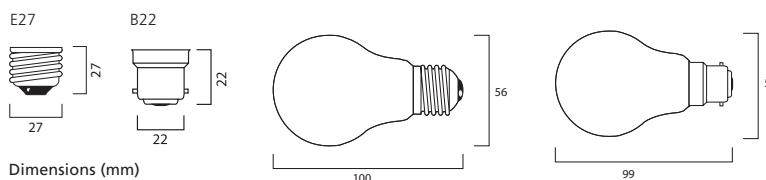

- 1:1 replacement of Incandescent A55 lamps
- Excellent colour rendering (CRI = 100)
- Instant illumination
- Sparkling light output
- Less heat generation than incandescent lamp
- Less CO₂ emissions
- Identical shape to standard incandescent lamp
- Commercial and domestic applications
- 100% dimmable
- Average life 2,000 hrs

Classic Eco A55

- 1:1 replacement of Incandescent Ball lamp
- Excellent colour rendering (CRI = 100)
- Instant illumination
- Sparkling light output
- Less heat generation than incandescent lamp
- Less CO₂ emissions
- Identical shape to standard incandescent lamp
- Commercial and domestic applications
- 100% dimmable
- Average life 2,000 hrs

Low Pressure Capsule - G4

Dimensions (mm)

Low Pressure Capsule - GY 6.35

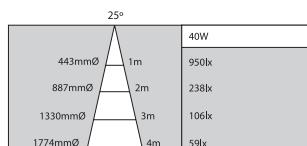

- Retrofit solution for E14 incandescent R50 lamps
- Halogen light without the need for a transformer
- Unique, patented spiral reflector design for uniform beam pattern
- 100% dimmable
- For use in mains voltage E14 cap downlights, spotlights and luminaires
- Average rated life 2,000 hrs

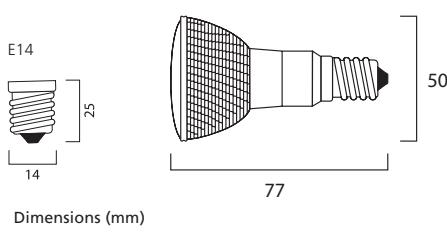

Hi-Spot® 50

Code	Description	Watt (W)	Voltage (V)	Beam Angle (°)	Base	Colour Temperature (K)	Candela (cd)	Luminous Flux (lm)	Average Rated Life (Hrs)	Packing Qty	Energy Class

Hi-Spot 50 - E14

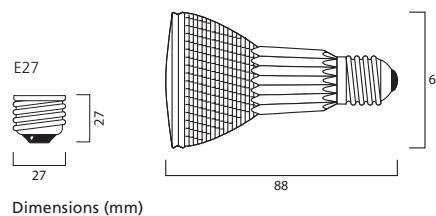

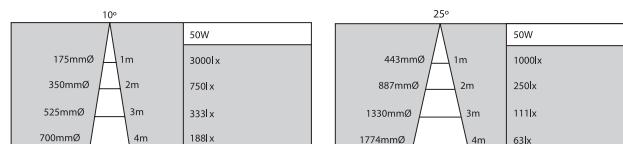

- Halogen light without the need for a transformer
- Unique, patented, spiral faceted aluminised reflector
- 100% dimmable
- For use in mains voltage E27 cap downlights, spotlights and luminaires
- For accent or decorative lighting in retail, commercial and domestic applications
- Suitable for outdoor use when protected from direct contact with water
- Average life 3,000 hrs - 25% longer life than conventional PAR halogen lamps

Hi-Spot® 63 Extralife

Hi-Spot 63 Extralife - E27

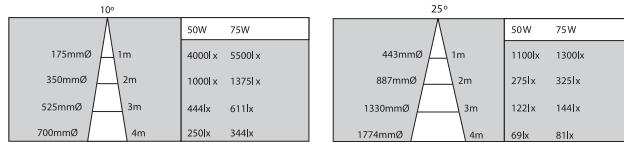

- Halogen light without the need for a transformer
- Unique, patented, spiral faceted aluminised reflector
- 100% dimmable
- For use in mains voltage E27 cap downlights, spotlights and luminaires
- For accent or decorative lighting in retail, commercial and domestic applications
- Suitable for outdoor use when protected from direct contact with water
- Average life 3,000 hrs - up to 50% longer than conventional halogen PAR lamps

Hi-Spot 80 - E27

- Halogen light without the need for a transformer
- Unique, patented, spiral faceted aluminised reflector
- 100% dimmable
- For use in mains voltage E27 cap downlights, spotlights and luminaires
- Use dichroic lamps for lighting food, textiles and other objects sensitive to heat
- Suitable for outdoor use when protected from direct contact with water
- Average life 3,000 hrs - 50% longer life than conventional halogen PAR lamps

Hi-Spot ES63/ESD63 - GU10/GZ10

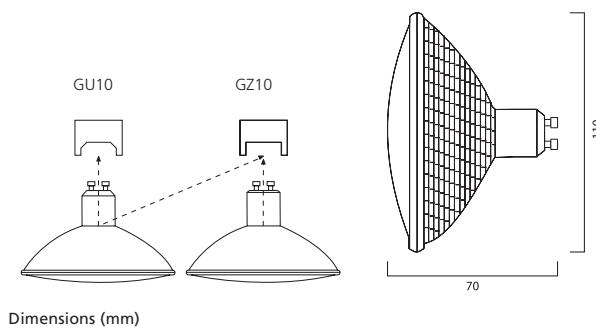

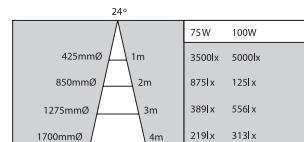

- Mains voltage alternative to Sylvania SA111 aluminium reflector lamp
- Excellent beam control - minimum glare
- Up to 40% energy savings
- High light intensity
- 100% Dimmable works in virtually every installation
- With integral anti-glare shield option
- Halogen light without the need for a transformer
- Installing and changing lamps made easier with the 'twist and lock' GU10 and GZ10 caps
- For accent or decorative lighting in retail, commercial and domestic applications
- Average rated life at least 2,000 hrs

Hi-Spot ES111/ESD111AG - GU10/GZ10

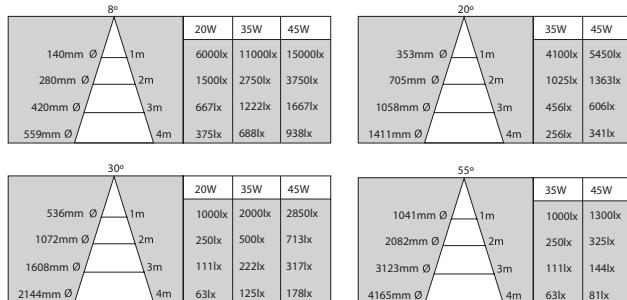

- Up to 40% energy savings
- Hard coated glass ensures stable light appearance throughout its life
- No loss in light intensity compared with standard MR16 dichroic lamps
- Unbeatable light quality (Ra=100)
- Attractive back light - preferred by Architects
- 100% Dimmable works in virtually every installation
- Average rated life of 5,000 hrs - 2.5 times longer compared to standard MR16 dichroic lamps

MR16 Superia EcoPlus - GU5.3

Dimensions (mm)

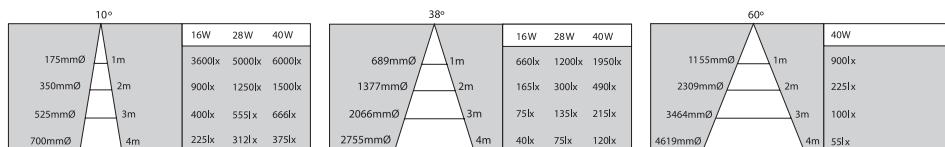

- 10% energy saving compared with standard MR16 lamp
- Same light intensity as standard MR16 lamps.
- Cool beam - 66% of the heat produced is radiated through the back of the lamp
- Less CO₂ emissions - ECO Friendly
- Less heat generation
- Dimmable using a suitable dimmer for operation with a transformer
- Constant colour and light output throughout lamp life
- Accent and decorative lighting in retail, commercial and domestic applications
- Suitable for use in open luminaires following Luminaire Standard EN 60598-1
- Excellent colour rendering (CRI=100)
- Average life up to 3,000 hrs

Lamps

150 Appliance Lamps

Incandescent Lamps

European ERP has banned incandescent lamps for household illumination. Only decorative and special purpose lamps remain available. Sylvania offers a small range suitable for use in refrigerators, ovens and other household appliances, along with decorative, low lumen vintage lamps.

Appliance Lamps

A family of special application lamps suitable for use in ovens, refrigerators and other household appliances.

Decorative Vintage Lamps

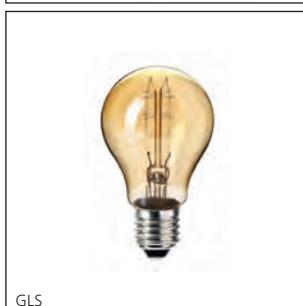

A range of special application lamps with an elongated filament and special coating to create an appropriate environment in decorative applications to meet the increasing demand for low lumen lamps with the antique glow of classic incandescent lamps. This new lamp range includes GLS, candles, globes and ST64 shape lamps with a golden finish that enhance the traditional rustic look.

ST64

- Modern renaissance-style decorative lamps with an elongated filament and special coating to create an appropriate environment in special purpose applications
- Perfect for lanterns or exposed-bulb lighting applications
- Hand-wound filaments in different light bulb premises that create a beautiful home or commercial ambience
- Warm incandescent glow to enhance the mood of both historical and modern environments
- Fully dimmable, helping you alter the mood of a room by adjusting the light level
- Up to 2000 hrs lifetime
- Ideally for hospitality applications

Special Application Lamps

Sylvania offers a comprehensive range of lamps to meet a diverse range of specialist applications.

Photo Optic

Sylvania offers a wide and competitive range of lamps specifically designed for photo and projection applications.

We have a strong background and expertise in photo optic lighting, all our developments are manufactured in our Tienen factory in Belgium.

Petcare

If you need to replace natural light – whether for plants, aquariums or terrariums – Sylvania has an extensive collection of lighting solutions available for you. For example, Sylvania's GROLUX is a world leader in plant illumination. Proper light and UV-radiation is very important for fish and reptiles. Our lighting engineers have developed lamps with specific light spectra for the most diverse uses. Either independently or in combination, Sylvania Aquarium and Terrarium lamps deliver the best results for complex biological requirements. Whether for plants, fish, corals, reptiles, or the entire biotope of aquariums and terrariums - with Sylvania you'll find the appropriate lighting.

Insect Trapping and Disinfection

Flying insects such as the common house fly, wasps, midges etc. carry up to 4 million pathogenic bacteria. Their presence is totally unacceptable in areas where hygiene is paramount. Sylvania offer a wide range of UV-A lamps in various lengths and diameters to attract these insects. Sylvania lamps are utilised in many brands of insect traps.

Micro-organisms such as bacteria, moulds, yeasts etc can be destroyed or removed by physical, biological, and chemical methods. UV-C radiation destroys or inactivates the micro organism so that it can no longer multiply. Our extensive range of germicidal and blacklight lamps are ideal for generating the right sterilising effect.

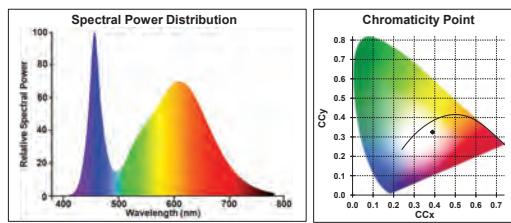

- Complete range from 600 to 1500mm length
- Easy replacement of LFL meat lamps
- Energy efficient
- High average rated life (50,000 Hrs)

- Fruit and vegetables should reflect freshness. They need a higher colour temperature and cooler light and the display of fish needs it even more
- Truthful colour rendering does not disturb the natural colours of the products
- Reduced warm up of the goods illuminated
- Available in Toughcoat-version (shatter proof). The protective FEP coating meets the IEC600682-75 pendulum hammer test (5 Joule) and 4m drop test demonstrating excellent glass retention in the event of accidental lamp breakage

BriteArc Single Ended Non Hot Restrike lamps are compact light sources with excellent performance, specially designed for a wide variety of audiovisual applications. The BriteArc lamps are filled with mercury and rare earth elements to obtain a high efficacy and a stable colour with a very good rendering index. They can be re-struck after 10 minutes. These lamps can be operated in any position.

Features

- High luminous efficacy
- Low infrared
- Colour stability
- Excellent lumen maintenance
- Physical ruggedness

Applications

- Theatre
- Discotheque
- Architectural
- Entertainment

BriteArc Single Ended/2 lamps are compact light sources with a very high colour temperature offering stable crisp bright light during the complete lamp life. They can be re-struck after about 10 minutes. These lamps can be operated in any position.

Features

- Crisp bright light
- High luminous efficacy
- Low infrared
- Colour stability
- Excellent lumen maintenance
- Physical ruggedness applications

Applications

- Theatre
- Discotheque
- Architectural
- Entertainment

BriteArc Double Ended lamps are metal halide light sources with excellent performance, specially designed for a wide variety of audio-visual applications. The BriteArc lamps are filled with mercury and rare earth elements to obtain a high efficacy and a stable colour. They can be re-struck at any time with a voltage peak from 25 to 55 kV.

Features

- High luminous efficacy
- Low infrared & Colour stability
- Excellent lumen maintenance
- Physical ruggedness, Hot restrike

Applications

- Theatre
- Discotheque
- Architectural
- Entertainment

Directions for use

- Burning position: universal for 575W, 700W and 1200W; horizontal plus or minus 30 degrees for BA 2500 DE, BA 2500 DE S; horizontal plus or minus 15 degrees for BA 2500 DE A, 4000W, 6000W and 12000W
- Can be operated on an electronic power supply or on a magnetic ballast

BA 300/2 LL mini BriteFit and BA 700/2 mini BriteFit

BriteArc "BriteFit" lamps are metal halide light sources with excellent performance, specially equipped with a bayonet system "BriteFit", for fast and easy replacement.

Features

- Easy replacement system Sylvania BriteFit
- No outer bulb : allows reduced lamp dimensions
- High luminous efficacy
- Low infrared
- Very good colour stability and quality
- Excellent lumen maintenance
- Physical ruggedness

Applications

- Show lighting
- Theatre
- Discotheque lighting
- Effect lighting
- Studio lighting

Features

- Near continuous spectrum ranging from 200-1000nm
- Colour temperature: 5400K.
- Xenon spectrum, similar to daylight
- Instant ignition, no warming up time

Applications

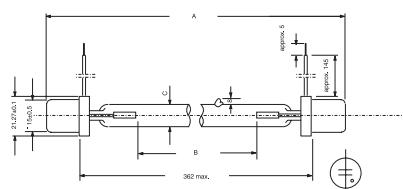

- Discotheque
- Entertainment

Directions for use

- Operate on a semi resonant ballast
- Ignitor providing a starting pulse of 10kV required
- Forced -air cooling needed
- The UV radiation must be cut out with a filter glass

Pulsed Xenon

Code	Description	Watt (W)	Current (A)	Base	Max. Pinch Temp. (C°)	Max. Bulb Temp. (C°)	Dimensions A (mm)	Dimensions B (mm)	Dimensions C (mm)	Average Rated Life (Hrs)	Packing Qty

Dimensions (mm)

Blacklight Mercury Lamps

SYLVANIA

HSW 125W

HSW 400W

Features

- Outer bulb in Wood's Glass
- Powerful, compact source of UV-A
- 15% UV depreciation per thousand hours
- Operates on conventional mercury ballast
- 160W version requires no ballast

Applications

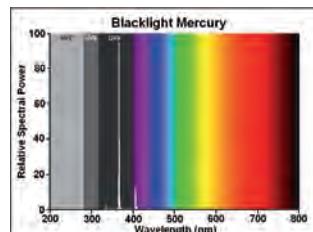

- Effect lighting
- Theatrical and stage lighting
- Leak and crack detection
- Advertisements and sign boards
- Geological investigation of stones and rocks
- Textile and Food Industries

Directions for use

- Burning position for 125 and 400W: universal
- Burning position for 160W: Vertical +/- 30 degrees
- 160W is a self ballasted lamp

Blacklight Mercury Lamps

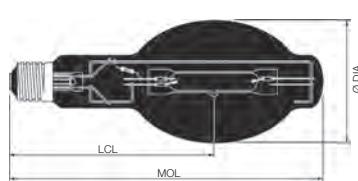

Fig. 2

Dimensions (mm)

EKE 21V 150W

ELC 24V 250W

Features

- Compact filament
- Perfect alignment of the burner
- Highly efficient reflector/lamp combination
- Dichroic reflector, which radiates 75% of the heat backwards
- Long life versions for disco lighting
- Excellent lumen maintenance over life

Applications

- Discotheque
- Medical equipment
- Microfilm readers
- Fibre optic applications
- Overhead projectors
- Slide projectors

Directions for use

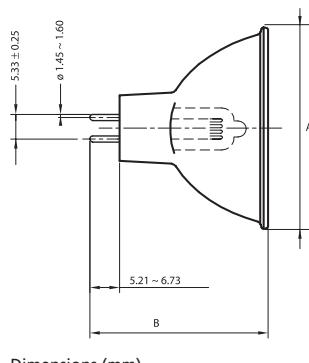

- Forced cooling necessary

BRL 12V 50W G6.35

Features

- Low voltage, quartz halogen lamp
- Flat filament
- Constant high light output
- Pre-focused based lamps have a better defined filament position

**Applications**

- Studio lighting
- Film lighting
- Theatre lighting
- Microfilm readers
- Film projectors
- Overhead projectors
- Slide projectors

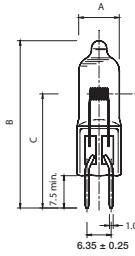

Capsule Lamps Low Voltage

Remote Control

Receiver

Features

- Choice between RGB or fixed white version
- High power LED retrofit for incandescent PAR lamps
- Produces full spectrum of rich colours or white (multi colours)
- Sylvania patent pending colour control technology
- Simple on/off switching sets colour changing or fixed mode (can be achieved by using a standard switch)
- Optional Sylvania remote control and receiver available
- Identical shape to incandescent PAR56 = easy retrofit
- Unique sealing method guarantees IP68 water-tightness
- Die cast aluminium housing cools LEDs for high output
- Chlorine-resistant materials permits use in swimming pools
- Long lamp lifetime > 25.000 hours
- Low heat generation

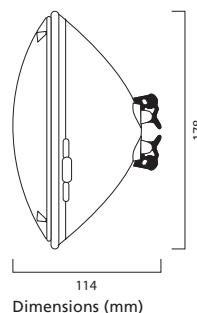

**Applications**

- All retrofit PAR56 underwater
- Swimming Pools
- Fountains

The Sylvania PAR56 LED represents a top class professional development for underwater illumination of swimming pools, fountains etc. By combining high power LEDs of red, green and blue or fixed white colour, together with an internal microprocessor, it is capable of generating the full spectrum of colours. The lamp can be operated in a mode of continuous colour changing, or fixed at any desired colour by briefly switching off and back on again. This is facilitated by the optional Sylvania remote control and receiver.

PAR64 CP601000W NSP

PAR64 CP61 1000W SP

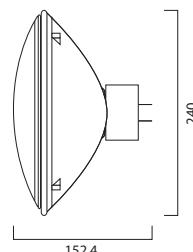

PAR64 CP62 1000W MFL

Features

- Pressed glass reflector lamps
- Extremely powerful beam
- Halogen inner capsule, for 100% lumen maintenance through life
- Beam patterns: from very narrow spot through wide angle floods
- Consistency from lamp to lamp
- Instant replaceability without the need to re-focus and re-aim fixtures
- Double internal fused for end of life safety

Applications

- Theatre lighting
- TV and studio
- Entertainment and Architectural applications
- Displays
- Museums
- Churches
- Towers
- Exhibitions
- Gardens
- Discos

F8 T5 BLB 8W & F18 T8 BLB 18W

Features

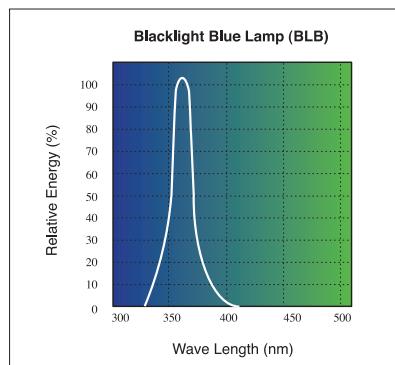

- The lamps efficiently emit near ultraviolet radiation at 315nm-400nm with strong photochemical and fluorescent effects
- The special deep blue filter glass absorbs visible rays and transmits near (UV-A) ultraviolet rays only
- Shape, electrical characteristics and lighting circuits similar to general fluorescent lamps

**Applications**

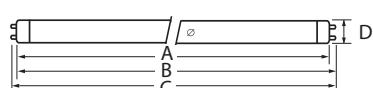

- Special effects
- Counterfeit detection in philately, bank notes, papers
- Leak and crack detection
- Excitation of fluorescent paints in dark rooms
- Revealing fluorescence of drawings on textiles
- Geological investigation of stones and rocks

PureSun™
SYLVANIA

Next generation lamp technology

For deeper, longer-lasting tans

UV phosphor only the best is good enough

Our new PureSun range uses advanced materials and technology to provide both an improved tan for the customer and a longer life lamp for the salon owner. The choice of phosphor is crucial to PureSun's success. Our secret lies in selecting phosphor with the ideal UVA/UVB ratio for direct and indirect tanning. In addition to this, we use a high-tech process called Chemical Vapour Deposition to ensure the purity of the phosphor in each lamp, resulting in a reduction in UV loss over time.

Mercury content – less than 10mg

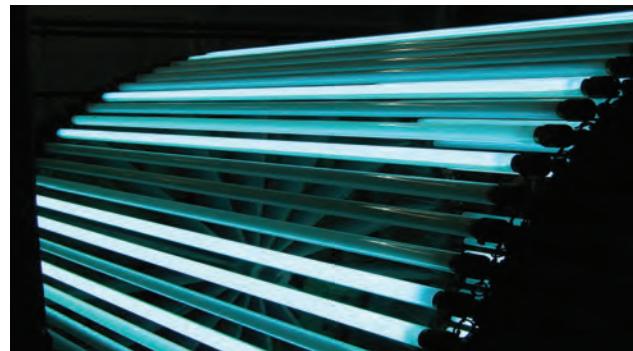

The Mercury (Hg) discharge is the engine that determines the efficiency of the lamps. Without Mercury the lamp switches off, but if there is too much Mercury the UV output of the lamp does not become stable and cannot reach its maximum UV output. This phenomena is what you experience as uneven 'colour' and is often called a 'dull effect' by end users.

Sylvania can fill all T12 sun tanning lamps with a precise amount of Mercury – less than 10mg – using a unique, patented method. EU environmental legislation requires less than 15mg of Mercury – so our lamps are well below this limit.

Advanced manufacturing ensures gas purity inside each lamp

The Mercury (Hg) discharge is the engine that determines the efficiency of the lamps. Without Mercury the lamp switches off, but if there is too much Mercury the UV output of the lamp does not become stable and cannot reach its maximum UV output. This phenomena is what you experience as uneven 'colour' and is often called a 'dull effect' by end users.

Sylvania can fill all T12 sun tanning lamps with a precise amount of Mercury – less than 10mg – using a unique, patented method. EU environmental legislation requires less than 15mg of Mercury – so our lamps are well below this limit.

PureSun HOT lamps are long-lasting premium products that produce considerable amounts of UVB and UVA. These lamps are strong enough to reach very short session times in any tanning equipment. PureSun HOT is designed to give your customers immediate colour using higher UVA and UVB levels.

Premium lamps with higher output, universal results and true 1000 hour life make it a major advancement in the tanning. Proprietary phosphors give a superlative tanning experience and quick results. They not only deliver an exceptional tan but offer a long service life too – you can expect this from all PureSun lamps.

PureSun is designed to tan gently, within the limits set by EU regulations governing all types of tanning equipment. Based on scientific research, these limit photo-biological irradiance values to 0.3 W/m², which is equivalent to the summer sun at midday in the Mediterranean. In other words: the safe, maximum level is what we have evolved to enjoy, naturally.

PureSun's long-lasting UV stability guarantees constant session times even after hundreds of hours. And PureSun operates at the precise spectrum of wavelengths required for maximum tanning effect, but with reduced irradiance. So, it offers exactly the right balance for reliable, even and gentle tanning, time and again. Advanced design and manufacturing quality ensures that PureSun consistently outshines the competition for amazing results.

1. Wattage code

Nominal wattage of the recommended ballast which is used for the measurement. It can be different than the ballast in the application.

2. Reflector code

- O for non-reflector lamps
- B for lamps with broad reflector angle $\Omega > 230^\circ$
- N for lamps with narrow reflector angle $\Omega < 200^\circ$
- R for lamps with regular reflector $200^\circ \leq \Omega \leq 230^\circ$

3. X code

E_{er} [mW/m²] Total erythema irradiance over range 250nm-400nm

4. Y code

$E_{NMSC<320nm} / E_{NMSC>320nm}$ ratio of the NMSC effective.

Visit www.puresun-tanning.com for more product information.

Please note: SYLVANIA tanning tubes and lamps should only be used with appropriate consideration of the type of equipment in use as well as the person's specific skin type. You can find details on this below.

High-altitude sun – CAUTION – Ultraviolet (UV) and infrared radiation.

Please observe instructions for use. UV and infrared radiation from studio tubes carries with it a number of health risks and can cause, among other things, cancer, premature skin aging, burns, injuries to the eyes, cataracts, a weakening of the immune system, allergic reactions and injuries to the vascular system. Pregnant women and persons taking prescription or over-the-counter pharmaceuticals should consult their physician's prior to tanning in a studio. The simultaneous ingestion of such medications as sedatives, antibiotics, diuretics or lower blood pressure medications, anti-neo-plastics or contraceptives can lead to the development of sunburn more quickly because such pharmaceuticals increase the skin's sensitivity to light. The same applies to cosmetics. UV radiation can accelerate the aging process of your skin and increase the risk of skin cancer, for instance squamous cell carcinoma or basal cell carcinoma. Your skin cancer risk is greater the more often you are exposed to UV radiation. Those who do not tan under direct sunlight will usually not tan in a tanning studio either and, in addition, such persons will also expose themselves to a greater danger of experiencing the detrimental effects of tanning lamps. If you do not tan in direct sunlight, then you should avoid tanning lamps. UV exposure in childhood is suspected of favouring the formation of melanoma in adulthood. Therefore, children should not use tanning studios without check-ups by a physician.

NEVER TAN WITHOUT USING SUITABLE PROTECTION FOR YOUR EYES (UV PROTECTIVE EYEWEAR)! WITHOUT EFFECTIVE EYE PROTECTION, YOU RUN THE RISK OF SERIOUS BURNS TO THE EYE OR A LONGER TERM IMPAIRMENT OF VISION!

Use tanning lamps ONLY with a timer and in conformity with instructions from the manufacturers of both the equipment and the lamps, also in proper consideration of your skin type. Before installing the lamps or switching out the tubes, take all appropriate safety precautions and observe the instructions of the manufacturers of the tanning equipment and the light sources used.

Exclusion of liability: Feilo Sylvania will not be liable for injuries resulting from the improper use of its products or from not adhering to legal and regional regulations as to the use of such products by its customers or final users. All the data presented here is the result of measurements made under standardised laboratory conditions. Details on the certification of UVA radiation and the guaranteed service life of the equipment are based on a 5-hour value and refer to operational conditions defined by Feilo Sylvania. Feilo Sylvania reserves the right to change this technical data without any prior announcement.

This information is not legally binding consultation and cannot replace such consultation. We recommend that you remain up-to-date in an appropriate manner as to all developments, particularly those concerning the conversion of European Guidelines into national law, e.g. by consulting a solicitor or a qualified professional association.

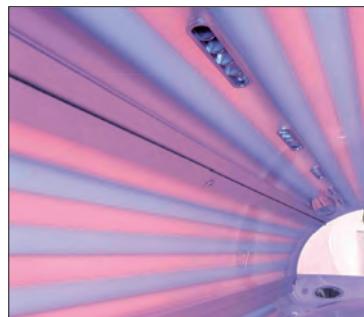

Collagen is a biological, autologous building block and important part of human skin which provides elasticity and strength to the skin. Fibroblasts (Collagen producing cells) continuously produce new collagen fibres. By the increased generation of Collagen fine lines are reduced, the skin is visibly tightened and the visual appearance of the skin is improved.

The advanced design of the high pressure lamps features a novel and unique spectrum. The high energy output enables the skin to support the maximum rate of collagen regeneration.

UV-A= 315-400nm UV-B=280-315nm

Features

- Matches flying insects eye sensitivity
- High UV-A output (at 368 nm)
- Long life time and low UV-A depreciation over the entire season
- Protective coating according to the IEC61459 requirements with the 4m drop test

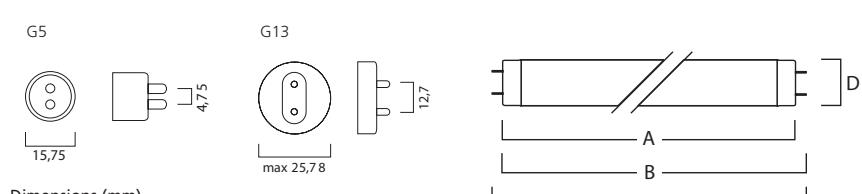

Applications

- Food and beverage industry
- Insect trapping
- Pharmaceutical industry

- Suitable for the most aquarium sizes thanks to the adjustable metal holders
- Available in 3 difference lengths (28cm / 46cm / 76cm)
- Daylight colour (6500K) gives outstanding appearance for your fish and perfect illumination for plants to grow
- Dimmable with touch sensor
- Daylight simulation with USB stick (optional)

AquaStar LED

Code	Description	Watt (W)	Colour Temperature (K)	Luminous Flux (lm)	Packing Qty

Aquastar MINI LED

Packaging Note: The sleeve pictured is for the retail product

Features

- Light colour: 10000 Kelvin (simulating the tropical light spectrum)
- Promotes the growth of coral and aquatic plants through natural red and blue sections of the light spectrum
- Excellent lighting performance
- T5 - FHO: high output and lumen per watt in comparison to T8 versions
- New T5 ℓ 8: 50% more light output in comparison to the same length in T8. Ideal for the new generation of aquaria with T5 lamps, but in the length of T8 lamps. The ideal fit of the lamps in the aquarium results in a perfect illumination of the aquarium

Applications

- For all biological organisms in fresh and marine water aquaria
- Excellent results in combination with Daylightstar

Dimensions (mm)

Packaging Note: The sleeve pictured is for the retail product

Features

- Reduces algae growth through a special UV-STOP protective sleeve
- Allows fish and plants to be seen in their true colours (high colour rendition)
- 5000K triphosphor lamp with a daylight character
- High colour rendition
- In combination with Grolux® it produces a well balanced and optimal aquarium life

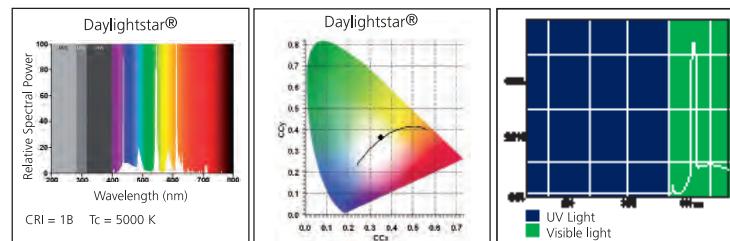

Applications

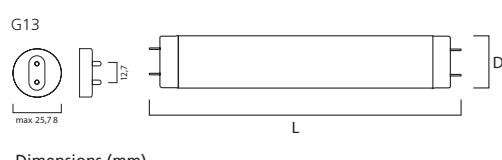

- Fresh water aquariums

Daylightstar T8

Dimensions (mm)

Packaging Note: The sleeve pictured is for the retail product

Features

- Reproduces light conditions found at coral reefs through actinic blue light
- Promotes the growth of coral and invertebrates by supporting the growth of zooxanthellae
- See coral in its true colour(s)
- T5 - FHO: high output and lumen per watt in comparison to T8 versions
- New 5 |8: 50% more light output in comparison to the same length in T8. Ideal for the new generation of aquaria with T5 lamps, but in the length of T8 lamps. The ideal fit of the lamps in the aquarium results in a perfect illumination of the aquarium

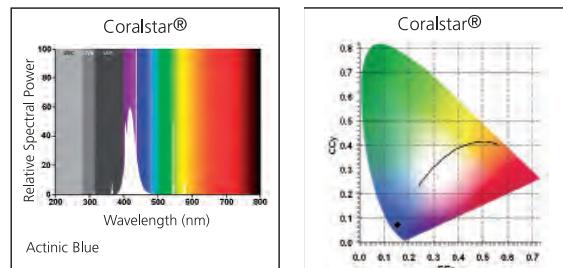

Applications

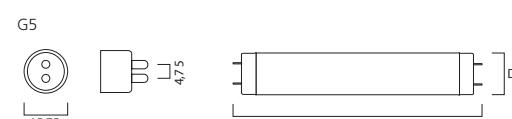

- Lighting to promote growth of coral and invertebrates in marine water aquariums

Coralstar T5

L	590	895	1200	
D	16	16	16	

Dimensions (mm)

Packaging Note: The sleeve pictured is for the retail product

Features

- Ideal lamp for marine lighting.
- High colour rendering of the marine aquatic environment
- High colour temperature: 15000K
- Reproduces light conditions found at coral reefs through radiation in the 420-510 mm wavelength
- Promotes the growth of coral and invertebrates by supporting the growth of zooxanthellae
- Much bright light output than Coralstar and less blue

Applications

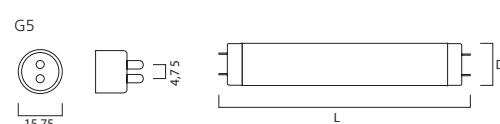

- Lighting of marine water aquaria

Marinestar T5 15000K

Code	Description	Watt (W)	Colour Temperature (K)	Base	Diameter	Packing Qty
0002720	FHO24W/Marinestar	24	15000	G5	T5	25

T5 Standard	24W	39W	54W	80W
L	549	849	1149	1449
D	16	16	16	16

Dimensions (mm)

Features

- High light output and good efficiency
- High colour rendering
- Very high colour stability over the whole lamp life
- High colour temperature (10000K)
- Point-source of light creates attractive shadow effect of water ripples on the aquarium bed

NOT SUITABLE
FOR HOUSEHOLD
ROOM ILLUMINATION

Applications

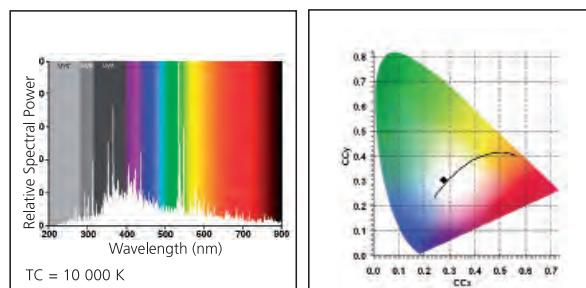

- For use in fresh and seawater aquaria
- Strong directional light which penetrates deep into large tanks
- Lifelike appearance of fish, corals and plants

Packaging Note: The sleeve pictured is for the retail product

Features

- Promotes vitamin D3 production which aids good health, growth and the general well-being of reptiles in terrariums through a high content of UVB (up to 5%) and UVA (up to 30%)
- This full spectrum (6500 K) lamp improves the natural appearance of reptiles
- Shows reptiles in their true colours

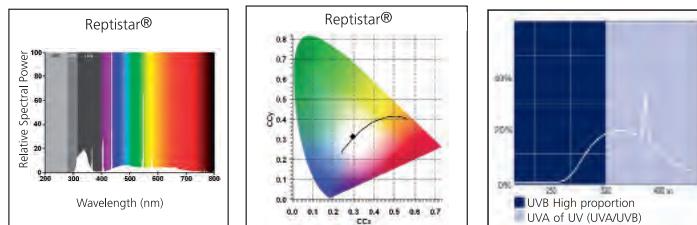

Applications

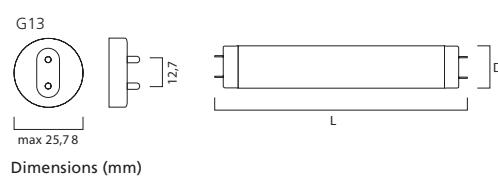

- For the artificial lighting of reptiles in terrariums

Infrared Reflector

SYLVANIA

Features

- Converts electric current into infrared radiation

Applications

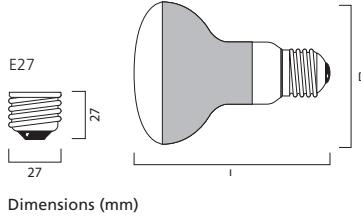

- Provides the necessary infrared radiation for reptiles in terrariums and for other pets like hamsters, mice etc

Infrared Reflector

Code	Description	Watt (W)	Voltage (V)	Type	Base	Average Rated Life (Hrs)	Packing Qty

	50W	75W	100W
L	103	103	110
D	63	63	80

Dimensions (mm)

Features

- These lamps consist of a tubular glass envelope and emit more than 85% of their energy in the UV-C ultra violet radiation with a peak at 253.7nm for germicidal action
- Shape, electrical characteristics and lighting circuits are similar to general fluorescent lamps
- The majority of germicidal lamps operate most efficiently in still air at an ambient temperature of 25°
- All lamps are Ozone free
- A protective coating on the inside of the lamp limits the depreciation of the UV-C output

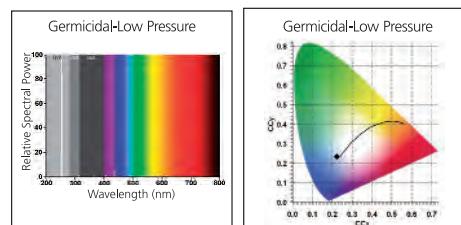

Applications

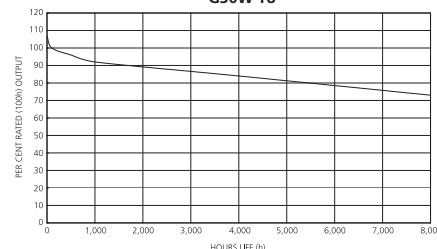

- Residential drinking water units
- Stand alone air purifiers
- Wall mounted air purification units
- Ponds & Aquaria

Directions for use

- The radiation from these lamps is very harmful to eyes and skin. Always protect your eyes and skin against radiation
- Germicidal lamps must only be used in appropriate equipment and applications
- When using UV-C emitting lamps, the official reference guides and the current industrial safety guideline must be followed
- Maximum Permissible Exposure Time (MPET) can be established for a given range of wavelengths. For example: 1 minute/day at a distance of 30cm

ULTRAVIOLET RADIATION AS RELATED TO THE LIFE

Dimensions (mm)

**Features**

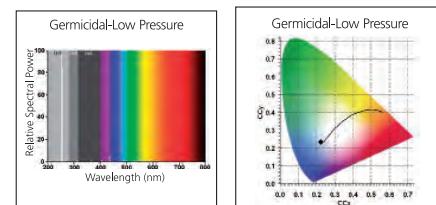

- These lamps have all the benefits of linear germicidal lamps, but have also a very compact design. This allows for compact fixture design. As they are single ended, replacement is very easy
- The HO (High Output) lamps are most efficient in air purification installations, as they are wind chill corrected
- Shape, electrical characteristics and lighting circuits are similar to general lighting compact fluorescent lamps
- The majority of germicidal lamps operate most efficiently in still air at an ambient temperature of 25°
- All lamps are Ozone free
- A protective coating on the inside of the lamp limits the depreciation of the UV-C output

**Applications**

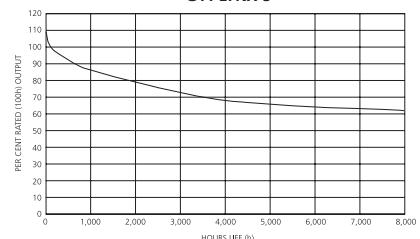

- Residential drinking water
- Pond water
- Induct air treatment units
- Stand alone air purifiers

Directions for Use

- The radiation from these lamps is very harmful to eyes and skin. Always protect your eyes and skin against radiation
- Germicidal lamps must only be used in appropriate equipment and applications
- When using UV-C emitting lamps, the official reference guides and the current industrial safety guideline must be followed
- Maximum Permissible Exposure Time (MPET) can be established for a given range of wavelengths. For example: 1 minute/day at a distance of 30cm

ULTRAVIOLET RADIATION AS RELATED TO THE LIFE G11 LYNX-S

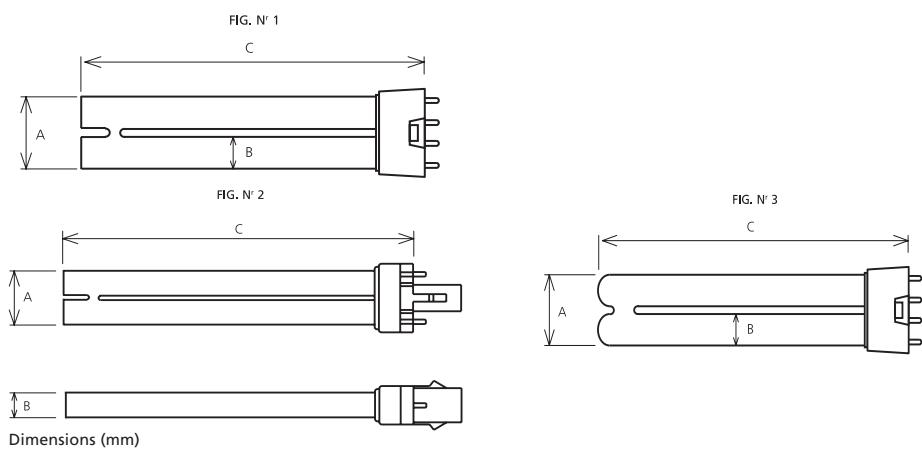

**Germicidal Compact**

Features

- Germicidal VHO – lamps consist of a double ended quartz discharge tube filled with mercury.
- Power concentration is 120 Watts per cm of arc length (low pressure tubes are < 1W per cm).
- Extremely high UV-C concentration levels are possible.
- Lamps have a self cleaning halogen feature which results in improved UV-C maintenance.
- Forced air ventilation is required to remove the ozone produced with VHO lamps

NOT SUITABLE
FOR HOUSEHOLD
ROOM ILLUMINATION

Applications

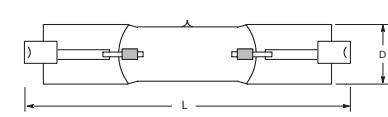

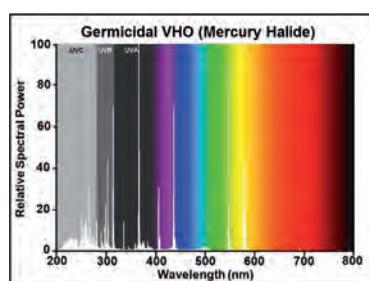

- Used in a wide range of photochemical processes
- Label printing
- Disinfection of municipal waste water
- Curing of lacquers, paints and inks
- In combination with black glass filters for fluorescence excitation
- Artificial material aging
- Exposure of diazo film material and print masters

Directions for use

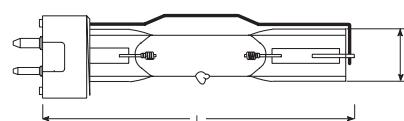

- The radiation from these lamps is very harmful to eyes and skin. Always protect your eyes and skin against radiation
- Max. permissible bulb temperature is 950°C
- Max. permissible pinch temperature is 350°C
- Can be used with a standard mercury ballast and ignitor

Germicidal High Pressure VHO

Dimensions (mm)

**Features**

- Tubular envelope made from ruby red quartz (Rub Slim)
- Secondary outer envelope made from red quartz (Ruby Jacket)
- Transmits virtually all infrared while blocking most visible light
- Instant on-off capability

Applications

- Space heating of large rooms
- Outdoor heating of communal areas
- Energy efficient alternative to patio heaters

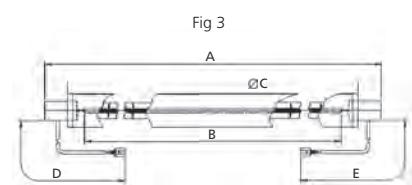

Fig 3

Dimensions (mm)

Features

- Tubular envelope made from transparent clear quartz
- Transmits the full spectrum of visible and infrared radiation
- Clear lamps are the most efficient for transmitting infrared energy
- Instant on-off capability

Applications

- The glare from the visible light component restricts these to industrial applications, eg Drying of paints in tunnels and automotive body shops
- Heating of plastics for PET bottle blowing
- High speed drying in paper production mills
- Drying of lacquers and printing inks
- Baking and curing of powder coatings
- Thermal sterilisation

Dimensions (mm)

**Features**

- Tubular envelope made from translucent (satin) or clear quartz
- Emits both visible light and infra red radiation
- Rapid on-off capability
- No pre heating of the cabin needed

Applications

- Personal care in infra-red cabins
- Optimised spectrum to penetrate deeper into the skin for more efficient heat dissipation
- Creates a softer and more pleasant heating sensation than regular lamps

Dimensions (mm)

Features

- Tubular quartz envelope with gold dichroic coating
- Blocks more light than Ruby quartz types, for lower glare
- Advanced vacuum-sputtered coating won't crack or peel
- Coating extends right over the tip-off area – no light leaks

Applications

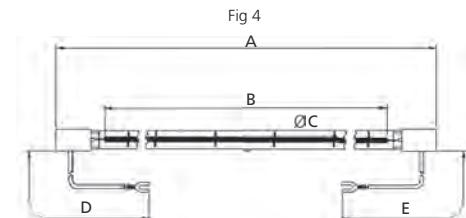

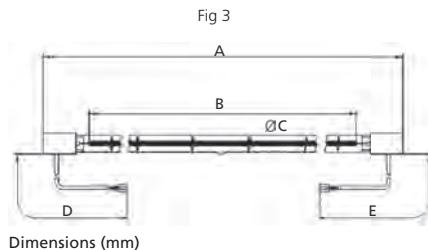

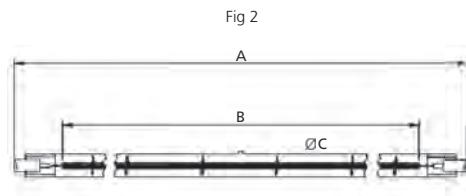

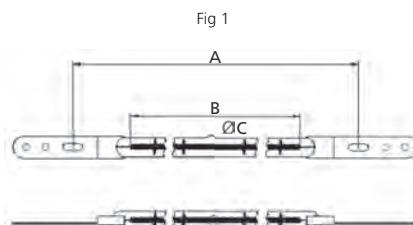

- Gradually replacing ruby quartz types where reduced glare is desirable
- Creates comfort zones in the outdoor cold, ideal for patios, restaurants and cafés
- Efficient spaceheating in large buildings e.g. churches, halls, warehouses, garages, stadiums, exhibition halls etc
- Glare free de-icing of pedestrian walkways

Features

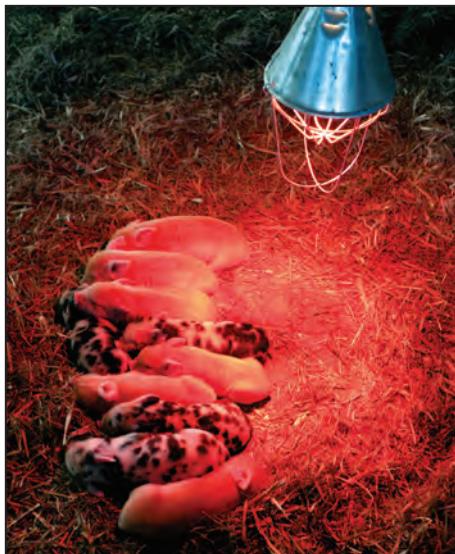

- Integral reflector facilities simple and economical installations
- Pre-focussed optics deliver intensely controlled radiation
- PAR38 lamps have a pressed hard glass bulb with precision-optical lens
- R125 and R95 lamps have a blown hard glass bulb for low cost applications
- E27 base allows use in almost any suitable lampholder
- Instant heat after switch-on
- All R125-lamps have a mechanical fitted base in order to avoid loose base problems

Applications

- Animal husbandry and other agricultural uses
- Food heating in the catering trade
- Wellness and medical applications for muscle relaxation
- Creates a pleasant warmth in bathroom drying areas
- Various industrial uses for drying, heating, vulcanising, distilling, softening, melting, pasteurising, polymerising, evaporating, gelatinising etc

Features

- Current controlled (6.0, 6.6A & 8.33A) lamps
- Long reliable through life performance
- Complete interchangeability for existing capsule types
- Constant colour temperature
- Dimming possible
- Infra red radiation output allowing operation in toughest winter conditions

Applications

- Approach lights
- Runway edge lights
- Threshold lights
- Runway lights
- Taxiway lights
- Visual approach slope indicator systems

Directions For Use

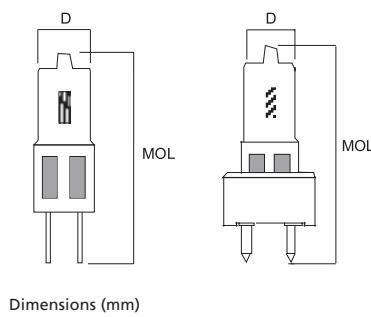

- Bulb should never be touched with bare fingers

**Features**

- Current controlled (6.0, 6.6A) lamps
- Temperature resistant hard coated reflector
- Optimum alignment in the reflector
- High luminaire efficiency
- Constant colour temperature (3000K) over life
- Long life (1500hrs)
- Infra red radiation output
- Cable connections reduce the risk of pinch seal overheating and molybdenum foil oxidation

**Applications**

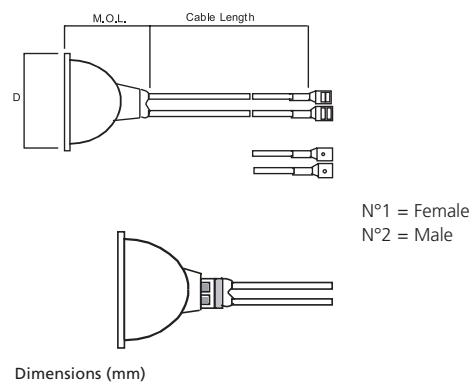

- Runway lights & Taxiway lights
- Approach lights & Threshold lights
- Runway edge lights
- Visual approach slope indicator systems
- Taxiway guidance signs

Directions for use

- Bulb should never be touched with bare fingers

Features

- Lamps with very specific colour point (CCx: 0,319, CCy: 0,369 after 100 h) and colour temperature: 6000K
- Colour point responds to the International Airfield Standard
- Very long reliable through life performance
- High colour rendering: Ra 85

Applications

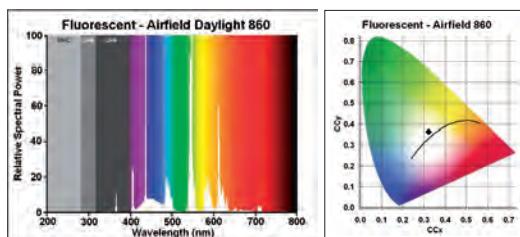

- Used in guidance signs to mark direction, destination and boundary

Directions For Use

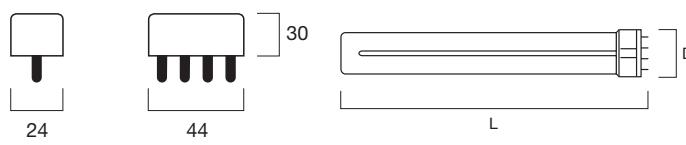

- Lamp ambient temperature should not be lower than -30°C

Dimensions (mm)

**Features**

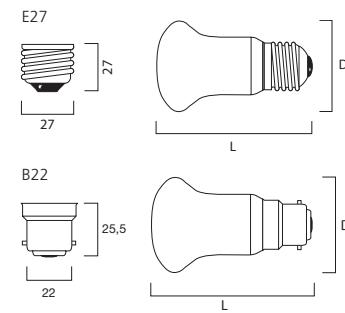

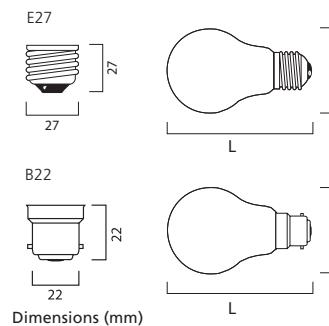

- Mushroom shaped (50mm and 60mm) envelope
- Robust construction: the filament is held by extra supports to resist vibration
- Average rated life: 8,000 hours
- Available in E27 and B22 base

**Applications**

- Traffic lights and signs
- Private parkings
- Tramway traffic lights
- Industrial sites

Features

- Patented arc tube delivers highest photosynthetic efficiency of any lamp in the world
- Performance maintained at an exceptional level due to improved structure of outer bulb
- Optimised for the highest Phytolumens or PAR output
- GroLux light spectrum maximises red output essential for plant growth
- Industry leading lumen maintenance of 95% at the end of life

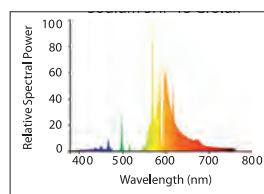

Applications

- Complete or additional artificial lighting of plants
- Recommended for use in greenhouses and indoor gardens

SHP-T GroXpress

Packaging Note: The sleeve pictured is for the retail product

Features

- High level of blue and red radiation helps promote healthy plant growth
- Strengthens the natural colours of aquatic plants and fish in aquaria
- Promotes the process of photo synthesis in plants
- Oldest, but most optimal light colour for plants and aquaria
- T5 - FHO: high output and lumen per watt in comparison to T8 versions
- New T5 ℓ 8: 50% more light output in comparison to the same length in T8. Ideal for the new generation of aquaria with T5 lamps, but in the length of T8 lamps. The ideal fit of the lamps in the aquarium results in a perfect illumination of the aquarium

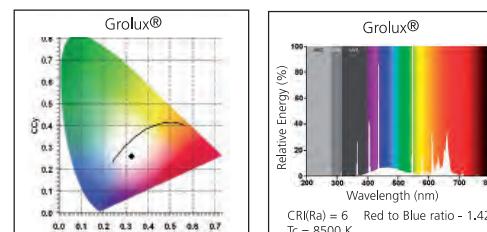

Applications

- Complete or additional artificial lighting for plants
- Recommended also for use in greenhouses, indoor gardens, flowers and aquarium

Glossary of terms

Ballast lumen factor BLF (%)

Refers to the ratio of light output from the lamp on emergency operation to the nominal light output.

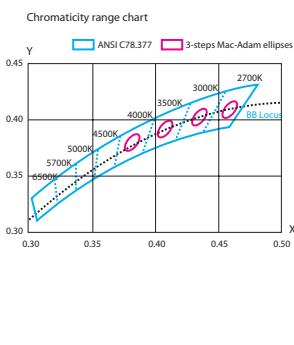

Beam Angle

Indicates how broadly the light is emitted from a reflector lamp. It can be thought of as an imaginary cone whose apex intersects the lamp face, and the breadth of the cone extends outwards to the point where luminous intensity has diminished to 50% of the centre beam value.

Binning

The term binning refers to the variations which occur within a single production batch of LED's such as chromaticity, lumen output and forward voltage. It is important that a specific bin has been identified and selected to ensure a uniform and constantly even lighting installation is achieved. If all the LED's were selected from one production batch and used in the same luminaire or installation, there would be a mix of colour temperatures and brightness levels. For the lighting manufacturer / designer binning is an essential part of LED specification.

MacAdam ellipses methodology was created in 1943 for mathematically constructing ellipses around target points, something which became very useful for the lamp industry. ANSI C78.377 is now the standard for chromaticity specified by the American National Standards Institute. ANSI recommends that lamp manufacturers stay within a "4-step" ellipse. This means that, given a certain target point on the CIE diagram, manufacturers are given a fairly wide range of perceptible differences.

Candela (cd)

The unit of measurement for luminous intensity, which refers to the quantity of light emitted in a particular direction. The symbol is cd.

Colour Correlated Temperature (CCT)

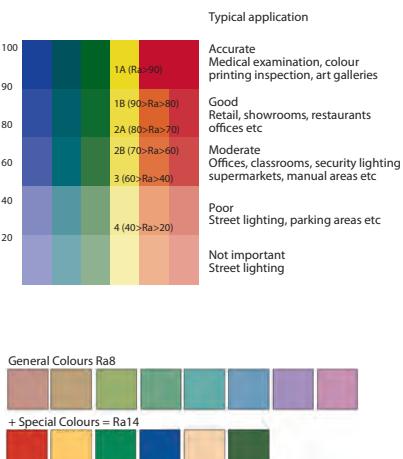

An incandescent light bulb is very close to a perfect black-body radiator, so its colour temperature is basically the temperature of the filament. However many light sources, such as fluorescent tubes or high intensity discharge lamps, emit light by processes other than thermal radiation and therefore it is not possible to apply the black-body spectrum. For these light sources it is possible to assign what is known as a colour correlated temperature (CCT). The CCT is the colour temperature of a black-body (Planckian) radiator which most closely matches the colour of the light emitted from the lamp.

Colour Rendering Index (CRI)

The colour rendering of a light source is an indicator of its ability to realistically reproduce the colour of an object. The chart illustrates our ability to accurately determine colour depending on the colour rendering properties of the light source. The higher the colour rendering index (on a scale of 0 to 100) of the source the better our ability to perceive differences in colour, which is a considerable aid to highlighting fashion products and effective display of coloured artworks.

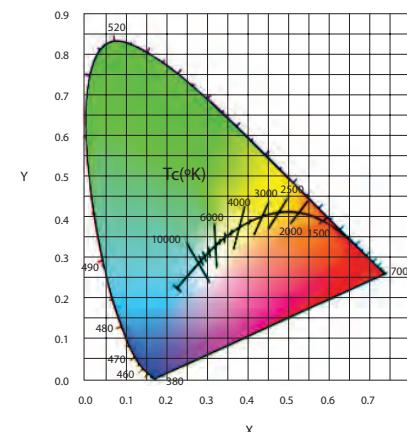

The CIE colour rendering index (CRI) is a method to determine how well a light source's illumination of eight standardised colour patches compares to the illumination provided by a reference source. At Ra (8) the perceived colour shift of eight reference colours is measured as a percentage and averaged to give one number. However it is currently understood that due to the spectral power distribution of LED's that instead of using the standard Ra8 it is important to include 7 additional colours which include red, yellow, blue & green and use Ra14 to ensure better results.

Colour Temperature

Colour temperature is a characteristic of visible light that plays a significant role in lighting applications. The colour temperature of a light source is the temperature of a perfect black-body radiator that radiates light of a similar appearance to that of the light source. The colour temperature is measured in units of absolute temperature; Kelvin (K).

Colour temperature works paradoxically to our cultural associations with colour, red as hot and blue as cold. On the black-body curve, blue occurs at higher temperatures than red. A good example is a candle which has a warm red orange appearance but in fact has a low Kelvin temperature, 1850K. Therefore higher colour temperatures (5000K more) are called cool colours (blueish white); lower colour temperatures (2700 – 3000K) are called warm colours (yellowish white through red).

The Planckian locus shows the chromaticities of black-body light sources of various colour temperatures and lines of constant correlated colour temperature shown within the CIE chromaticity diagram

Dimmability

The Sylvania lamps range includes dimmable LEDs lamps. Most conventional dimmers have been designed for incandescent lamps and are therefore rated for higher minimum loads (W) than LED lamps consume. There may therefore be some restrictions in terms of functionality of dimmers with individual LEDs – but when more than one lamp is used to increase the total loading, dimming becomes easier.

Downward Flux Fraction (DFF)

The factor of the total LOR, which is downward, taking the combined ULOR and DLOR as 100%. Using Cassini as an example, the DLOR is 37% and the ULOR is 15% so the combined is 52%. If this is taken as 100% LOR, 72% is downward (37% divided by 53%).

Drivers

Electronic devices that transform the high mains voltage into a constant current lower voltage for operating the LEDs. A miniature electronic driver is contained inside the base of each Sylvania LED lamp.

Glare

Glare is the discomfort caused by high luminances in the field of vision.

Heat Sink

A device used to conduct heat away from the LED sources and dissipate it to the surrounding air. The more efficiently an LED is cooled the greater its efficacy, light output and lifetime. Materials having excellent thermal properties and optimised cooling fin geometries are engineered into Feilo-Sylvania lamps and luminaires to deliver the pinnacle of performance.

Infrared (IR) Radiation

Comprises electromagnetic waves in the spectral range between visible light and microwaves, which produce a heating effect when absorbed by materials. All lamps and luminaires produce infrared radiation, but the quantity emitted by LEDs is far lower than other technologies and this makes them ideal for reducing air conditioning load, as well as for the illumination of heat-sensitive goods.

Illuminance

This definition determines the amount of light that covers a surface. If Φ is the luminous flux and S is the area of the given surface then the illuminance E is determined by $E = \Phi/S$. The unit of illumination in SI system is lx, and in foot-pound system it is foot-candle. One lx is the illuminance of 1 m² surface area uniformly lighted by 1 lm of luminous flux.

Junction Temperature (T_j)

The temperature of the Junction of the LED die inside the LED lamp. Measuring the LED die temperature by direct mechanical means is difficult and may lead to erroneous results. It is recommended that the T_j is calculated with manufacturer's data through measurement of the temperature at the solder point (T_{sp}).

LED (Light Emitting Diode)

An electronic semiconductor component which emits light when an electrical current flows through it. The colour of light emitted depends on the chemical doping of the semiconductor material.

Lens

An optical component having two refractive surfaces, at least one of which is either convex or concave. In LED lamps the function of a lens is to focus or disperse the light rays to achieve the desired beam angle or light distribution pattern.

Lifetime

LED lamps can have extremely long lives, however their light output diminishes as they age. They can carry on working until they are emitting less than 10% of their initial light output, but with so little light left they would be practically useless. Sylvania defines the lifetime of its LED lamps the same way as for other lamps: i.e. the burning hours until the light output has decreased to 70% of the initial value, or when 50% of a group of lamps will have failed – whichever is the soonest. The International Electrotechnical Commission (IEC) is currently preparing an international standard based on similar threshold values.

Light

Light Electromagnetic radiation with a wavelength between 380-780nm. Ultraviolet light has a wavelength of less than 380nm whilst infrared light's is greater than 720nm.

Lighting level

The incidence of light flux on a surface per unit of area, measured in lux. There is a difference between the vertical and horizontal lighting level.

Light output ratio (LOR)

The ratio of the luminaire light output to lamp light output. The efficiency of the luminaire.

Lumen (lm)

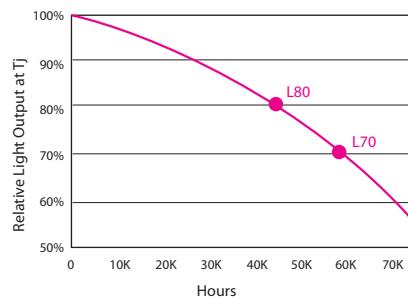

Unit of luminous flux used to describe a quantity of light emitted by a source or received by a surface.

Lumen Maintenance

Rated Lumen Maintenance Life (L_{xx}): The elapsed operating time over which the LED light source will the percentage, xx, of its initial light output.

- L₈₀ = Time to 80% lumen maintenance, in hours
- L₇₀ = Time to 70% lumen maintenance, in hours

For LED lamps and luminaires, lumen maintenance is often shown as curves of relative lumen output over time for the LED under various operating conditions, such as drive current and junction temperature.

Luminance

The measure of brightness with which the eye perceives an illuminated surface from a certain direction. The luminous intensity per unit of visible surface of a light source (direct) or an illuminated surface (reflection). Luminance is indicated in candelas per square metre (cd/m²).

Luminous efficacy (lm/w)

Indicates how efficiently a light source converts electrical energy to light.

Luminous flux (lm)

The total light output of a light source measured in lumens.

Luminous intensity (cd)

The power of a source or illuminated surface to emit light in a particular direction, measured in candelas.

Lux (lux)

The unit of illuminance, equal to one lumen per square metre (lm/m²).

Glossary of terms

Performance cone

Shows whether the luminaire emits a narrow or wide beam of light and indicates the lighting level measured at the centre of the beam. The beam diameter and angle indicate where half the illuminance is measured in relation to the centre of the beam. It gives only a rough guide of the size of beams narrower than 40°.

Recycling

Feilo Sylvania lamps and luminaires are extremely durable and do not contain any hazardous substances beyond the allowed threshold values as mentioned in the applicable EU legislation. Recycling of products shall be made in full compliance with the requirements of the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE).

Reflector

An optical component having a mirror surface, which captures light rays from the source and bounces them back at a particular angle. Although more commonly used in incandescent and halogen lamps, some Sylvania LED lamps use reflectors to control their light instead of a lens.

Shielding angle (°)

The horizontally measured angle from which the lamp or reflection from it in the reflector is no longer visible. It is an important measure of glare and, therefore, light comfort.

Switching Frequency

LED lamps cannot be switched on and off indefinitely, but are rated to tolerate an impressive 60,000 switching cycles or more.

TCO (Total Cost of Ownership)

TCO includes all the costs over the entire life of a lamp or for a particular operating time. It covers procurement costs, electricity consumption costs, relamping costs and may even incorporate a reduction in the necessary air conditioning load. LEDs are presently more expensive to purchase than lamps based on other technologies, but their minimal energy consumption results in rapid payback when replacing incandescent and halogen lamps.

Transformer

A device for reducing the high mains voltage down to a lower voltage. A distinction is made between conventional (magnetic) transformers and electronic transformers. Sylvania low voltage LEDs will function on all magnetic transformers, and compatibility details with electronic transformers are available in the technical data sheets.

Uniformity ratio of illuminance

This indicates the degree of evenness of the light on the working surface and is shown as a ratio of the minimum to the mean lighting level on a surface. The lower the number the more disturbing the light.

Ultra Violet (UV) radiation

Comprises electromagnetic waves in the spectral range between visible light and X-rays, which are invisible to the human eye but essential for all life (delivered via natural sunlight). Small amounts of UV are emitted by many light sources (e.g. Halogen and Discharge) and over time will cause fading of coloured objects being illuminated. Feilo Sylvania lamps and luminaires do not emit any UV radiation.

Useful lumens (lm)

For use with directional lamps. This is the amount of luminous flux within a 90° cone in the forward facing direction of the lamp. This will tell you the amount of 'useful' light emitted from a directional light.

Utilisation factor

The ratio of the light flux which the reference surface receives to the totalled luminous fluxes of the installation lamps. This is influenced by the shape of the room and selected luminaire and is expressed in the form of UF tables.

Volt

The derived SI unit of electrical pressure (symbol V). Low voltage LED lamps (12V) operate with transformers. High-voltage LED lamps can be operated directly on the mains supply (220-240V).

Watt

Watt is the SI unit of power and was used for incandescent lamps as an indication of their light output. Since modern energy saving lamps and LED lamps consume far less power to achieve the same brightness, however, the wattage is no longer as meaningful. The lumen value is now used instead.

Wattage Comparison According to ErP

The EU directive for nondirectional light (ErP DIM I) requires a certain luminous flux from LED lamps to make a comparison with incandescent lamps.

Abbreviations	Meaning
1	1 pack
10	10 pack
830	3000K lamp
840	4000K lamp
1-10V	1-10V analogue dimmable ballast
3 hour emrg.	3 hours emergency

STE	Brushed steel
STRPL	Strip light
SURF	Surface mounted
SUSP	Suspension kit
SYM	Symmetric
TLT	Tilt
UV	Ultra Violet
WHT	White
WW	Warm white

Guide to lamp and luminaires symbols

Electrical protection

EN 60.598

Class 1 – fittings comply with class 1 (I) earthed electrical requirements i.e. functional insulation in all parts and earth termination.

Class 2 – fittings comply with class 2 (II) double insulated electrical requirements i.e. complete insulation in all parts without earth termination. In the event of an electrical fault, no dangerous voltage can reach touchable metal parts.

Class 3 – fittings comply with class 3 (III) triple insulated electrical requirements i.e. designed to connect to an external low voltage supply which is the same as the internal operating voltage requirement. In the event of an electrical fault, no dangerous voltage can develop. Inflammability of surface protection EN 60.598

Suitable for mounting in or on furniture made or semi-incombustible or normally combustible materials such as wood.

Fittings made for mounting in or on furniture made of materials of unknown properties.

Passes the 650° glow wire test in accordance with IEC 695-2-1.

Horizontal rotation

Vertical tilt

Safety isolating transformer

Electronic transformer

Electronic ballast/gear

HID lamp requires an external ignitor

Trailing edge dimmable (capacitive)

Leading edge dimmable (inductive)

Ingress protection

Impact protection

Minimum distance in metres permitted from lighted object

European Norms Electrical Certification

Suitable for Office applications

Suitable for Healthcare applications

Suitable for Education applications

Suitable for Retail and Display applications

Suitable for Exterior applications

Allowed lamp operating positions

Universal burning position

Horizontal burning position

Vertical burning position

Incandescent Candle and Ball:

Base up not allowed

Lamp can be operated in luminaires without a protective shield

Lamp should be operated only in a luminaire provided with a protective shield

Lamp emits a high level of UV radiation

UV STOP Reduced UV emissions

Cool beam reflector

Not dimmable

Protection against water contact

Internal ignitor

External ignitor

Ballast is required

Lamp should not be operated when the outer bulb is broken

Be aware of high temperatures when replacing lamp

Do not hold the lamp glass when installing or removing

Switch off power supply before replacing lamp

DO NOT TOUCH LAMP WITH BARE FINGERS

Do not touch lamp with bare fingers when replacing lamp

Energy saving

Treat lamp as small chemical waste

Open packaging and read instructions

Read instructions before use

Lamp complies with legal standards

Lamp complies with legal standards

Green Point

Bowl Mirror lamps

Luminaire can be looped

RoHS compliant

WEEE compliant

Standard Terms And Conditions Of Sale

1) GENERAL

- A. All orders are accepted and executed on the understanding that the Purchaser is bound by the following General Conditions of Sale. Where there is any inconsistency between these General Conditions of Sale and any conditions which the Purchaser seeks to impose these General Conditions of sale shall prevail.
- B. Where there is a distributorship agreement between the Company and the Purchaser existing at the date of the contract and there is a conflict between the provisions of that agreement and these General Conditions of sales, the provisions of such distributorship agreement shall prevail.
- C. No waiver, alteration or modification of any of the provisions of the contract shall be binding on the Company unless in writing signed by one of its officers.

2) PRICES

- A. Unless otherwise agreed in writing all orders shall be executed subject to prices and any relevant discounts ruling at the date of despatch. The orders shall be accepted subject to a revision of prices in the event of increases in the cost of materials, wages or other circumstances arising before despatch. Any price list of the Company whether published or not shall not affect the right of the Company to charge for goods in accordance with this clause.
- B. Unit prices do not include Value Added Tax and costs caused by or in connection with the transformation of the WEEE-Directive on electrical and electronical waste into national law.
- C. Value Added Tax at the appropriate rate shall be payable by the Purchaser.

3) PAYMENT

- A. The terms of payment shall be as stated on our invoices and the Purchaser shall strictly adhere to such terms.
- B. The Company shall have the right to discontinue delivery and also at its discretion to terminate the contract in respect of any undelivered goods if the Purchaser defaults in payment, but in either event the Purchaser shall remain liable to pay for such goods as have already been delivered.
- C. The Company reserves the right to withhold the supply of goods which have been accepted on order in those instances where there is reason to believe that payment for the goods would not be forthcoming within these terms of trading if goods were supplied.
- D. Where a contract is to be or may be fulfilled in separate instalments, deliveries or parts, payment for each such instalment, delivery or part, shall be made as if the same constituted a separate Contract.
- E. The Company reserves the right to charge interest on overdue accounts at the rate of 10% per annum above National Westminster Bank plc basic rate

4) PACKING AND CARRIAGE

- A. Unless otherwise specified by the Company, orders of value less than £200 excluding VAT shall be subject to a minimum service charge. Orders of £200 and over shall be delivered carriage paid. Unless otherwise specified, the price includes delivery to the Purchaser within the mainland of GB. The company reserves the right to choose the method of transport and to charge for deliveries outside the mainland. Where special delivery arrangements are requested the difference in cost between standard and special delivery will be charged to the Purchaser.
- B. A charge for delivery may be made where the Company is requested to deliver to a third party on behalf of the Purchaser at their request.
- C. By prior arrangement with our Head Office, goods can be collected by Purchasers.
- D. A signature by an employee of the consignee on a carrier's delivery sheet or delivery note shall constitute proof of delivery.
- E. If by reason of instructions or lack of instructions from the Purchaser despatch in accordance with the contract is delayed for more than 14 days after the Purchaser has been notified that the goods are ready for despatch, the Purchaser shall be liable to take delivery or arrange for storage and for the purpose of Clause 3 (Payment) the goods shall thereupon be deemed to have

been delivered. If and for so long as its storage facilities permit (but without being obliged to) the Company may store the goods and the Purchaser shall be liable to pay a reasonable charge therefore.

- F. Packaging and all cost caused by or in connection with the transformation of the WEEE-Directive on old electrical and electronical waste into national law shall be charged separately.

5) SHORTFALL OR DAMAGE IN TRANSIT

- A. No claim in respect of damage in transit will be accepted unless the Company and its carriers are advised in writing within 72 hours of receipt of the goods, irrespective of the condition of packing, goods and packing should be held for inspection by the Company and its carriers. After inspection the Company will arrange for the goods to be collected.
- B. No claim in respect of loss in transit or short delivery will be accepted unless the Company and its carriers are advised in writing of such loss or short delivery at the time of delivery. The shortfall must be specified in writing on the delivery note. Marking in words "not examined" or "not counted" or any similar statement on the delivery note will not entitle the purchaser to claim loss in transit or short delivery at any time after delivery. If the purchaser does not note any shortfall on the delivery note the Company will be deemed to have delivered the correct quantity of goods to the Purchaser in accordance with the order.
- C. Any claim for damage or loss in transit or short delivery must be accompanied by the following details:
 - advice note number
 - carrier's name (if other than the Company)
 - conditions of packages
 - date consignment received
 - date carrier advised
 - extent of damage or shortfall
 - copy of delivery note
- D. In the event of non-delivery carriers and the Company must be advised within 5 days of invoice.
- E. The Company will not in any event be responsible for goods lost or damaged in transit or for short delivery unless the above conditions are strictly observed.

6) DELIVERY AND PASSING OF RISK

- A. Any stipulated time for delivery shall date from the receipt by the Company of the Purchaser's written order. For delivery within the United Kingdom, unless otherwise agreed, the Company shall deliver the goods to the purchaser and the goods shall be at the Purchaser's risk on delivery. For delivery outside the United Kingdom, our terms of sale are "ex. Works".
- B. Delay in delivery or, in the case of a contract for delivery by instalments, delay in the delivery of an instalment shall not give rise to any liability on the Company, whether or not any time or date is given in this respect, unless a guarantee of delivery has been given in writing by the Company expressly stating that the Company guarantees delivery within a specified time.

7) RETENTION OF TITLE

- A. The goods shall remain the sole and absolute property of the Company until such a time as the Purchaser shall have paid to the Company the agreed price together with the full price of any other goods the subject of any other contract with the Company.
- B. The Purchaser acknowledges that the Purchaser is in possession of the goods solely as bailee for the Company until such time as the full price thereof is paid to the Company together with the full price of any other goods the subject of any other contract with the Company.
- C. Until such a time as the Purchaser becomes the owner of the goods, the Purchaser will store them on its premises separately from the Purchaser's own goods or those of any other person and in a manner which makes them readily identifiable as the goods of the Company.
- D. The Purchaser's right to possession of the goods shall cease if it does anything or fails to do anything which would entitle a receiver to take possession of any assets or which would enable any person to present a petition for winding-up. The Company may for the purpose of recovery of the goods enter upon any premises where they are stored or where they are reasonably thought to be stored and may repossess the same.

Standard Terms And Conditions Of Sale

- E. Subject to the terms hereof the Purchaser is licensed by the Company to agree to sell the Company's goods, subject to the express condition that such an agreement to sell shall take place as agents and bailees for the Company whether the Purchaser sells on its own account or not and that the entire proceeds thereof are held in trust for the Company and are not mingled with other monies and shall be at all times identifiable as the Company's monies.
- F. If the Purchaser has not received the proceeds of any such sale, it will upon being called upon to do so by the Company within seven days thereof assign to the Company all rights against the person or persons to whom the Purchaser has supplied the goods.

8) DEFECTS AFTER DELIVERY

- A. The Company will make good by repair or, at the Company's option, by the supply of replacements, defects which, under proper use, appear in the goods after delivery within the product guarantee period stated in our current published catalogues for lamps and within a period of twelve calendar months for fixtures and which arise solely from faulty design (other than a design made, furnished or specified by the Purchaser for which we have disclaimed responsibility in writing) materials or workmanship provided the goods concerned have been stored and used in a proper manner and have been returned to our stores carriage paid and adequately packed and provided further that in respect of parts or components not of the Company's manufacture the Company will pass on to the Purchaser the benefit of any guarantee which the Company may have received from the supplier of such parts or components but will have no further or other liability in respect thereof whatsoever.
- B. Goods returned as defective but found on inspection to be in good order, will be returned to the Purchaser subject to a handling charge.
- C. Units out of guarantee or those used outside an approved manner will normally be scrapped unless the Company has had specific disposal instructions. Where a specific test report is required, this must be requested in writing prior to the goods being returned.

9) RETURN OF GOODS

- A. In no circumstances are goods supplied against a firm order be returned without the purchaser having first applied for and obtained the written consent of the Company. A handling charge of up to 35% of the invoiced value, will be deducted from any credit allowed, unless the goods are returned pursuant to the provisions of Clause 5 or 8 hereof or because of any error on the part of the Company.

10) DESCRIPTION MATTER AND ILLUSTRATIONS

All descriptive and forwarding specifications, drawings and particulars of weight and dimensions issued by the Company are approximate only and are intended only to present a general idea of the goods which they refer and shall not form part of any contract. The right is reserved to change specifications without prior notification or public announcement.

11) PATENTS

In the event of any claim being made or action being brought against the Purchaser in respect of infringement of patents by the use or sale of goods supplied hereunder, the purchaser shall not settle or compromise such claim or action but shall notify the Company immediately and the Company shall be at liberty with Purchaser's assistance if required, but at the Company's expense, to conduct throughout the Company's own lawyers and experts, all negotiations for the settlement of the same or any litigation that may arise therefrom, subject to compliance with the above provisions and provided that no such goods, or any part thereof shall be used for any purpose other than that for which the Company supply them the Company will indemnify the Purchaser in respect of any such claim.

12) DELIVERIES AGAINST ORDER SCHEDULES

- A. Orders on non-standard lines (including specially branded units) will be delivered to within plus or minus 10% order quantity.
- B. On standard lines the Company requires 6-8 weeks notice of change in requirements, where a delivery date is brought forward or a quantity amended.
- C. On non-standard lines (including specially branded units) the Company requires 8-12 weeks notice of change in requirements, where a delivery date is brought forward or quantity amended.
- D. Scheduled quantities may be subject to a variation where necessary to bring them into line with the nearest boxed quantity.

13) EXPORT

No goods sold by the Company are to be re-sold or delivered outside Great Britain or Northern Ireland without first obtaining the Company's written consent.

14) EXCLUSIONS

Save as provided by these General Conditions and save for the Company's implied undertakings as to title etc. contained in S.12 of the Sale of Goods Act 1979 all conditions and warranties express or implied statutory or otherwise and, except as provided in S.2 of the Unfair Contract Terms Act 1977 (liability for death or personal injury resulting from negligence) all other obligations and liabilities whatsoever of the Company whether in contract or in tort or otherwise are excluded.

15) DIRECT, INDIRECT OR CONSEQUENTIAL LOSS OR DAMAGE

Except as provided in S.2 of the Unfair Contract Terms Act 1977 (liability for death or personal injury resulting from negligence) the Company accepts no responsibility in any circumstances for any direct, indirect or consequential loss or damage, however arising, which the Purchaser may sustain in connection with goods supplied under the contract whether such goods are of the Company's own manufacture or not.

16) FORCE MAJEURE

- A. If the performance of the contract shall be delayed by any circumstances or conditions beyond the control of the Company including (but without prejudice to the generality of the foregoing) war, industrial disputes, strikes, lock-outs, riots, malicious damage, fire, storm, Act of God, accidents, non-availability or shortage of materials or labour, any statute, rule, bye law, order or requisition made or issued by any Government or Government Department, local or other duly constituted, then the Company shall have the right to suspend further performance of the contract until such time as the cause of the delay shall no longer be present.
- B. If the performance of the contract by the Company shall be prevented by any such circumstances or conditions beyond the control of the Company, then the Company shall have the right to be discharged from further performance of and liability under the contract. If the Company exercises such right the buyer shall thereupon pay the contract price less a reasonable allowance for what has not been performed by the Company.

17) ARBITRATION

Any dispute, difference or question which shall at any time arise between the parties to the contract as to the construction, meaning or effect of these Conditions of Sale or the rights and liabilities of the parties or otherwise howsoever, relating thereto shall be referred to the decision of a single arbitrator to be nominated in the event of disagreement between the parties by the President for the time being of the London Chambers of Commerce and such reference shall be deemed to be an arbitration agreement within the meaning of the Arbitration Act 1950 or any statutory re-enactment thereof.

18) LAW

The contract shall be subject to and interpreted in accordance with the laws of England.

The following notes prepared to meet the company's obligations imposed by the Health & Safety at Work Act 1974 (Amended 1988) are of a general nature only. Specific information regarding installation use and disposal appropriate to individual models is provided in the instruction leaflet packed with the product, or can be found on the relevant pages of this catalogue.

The Health & Safety at Work Act 1974 imposes upon the users of the company's products an obligation to ensure that all personnel involved in the installation, handling, use or disposal of these products are acquainted with the information provided by the Company and are made fully aware of any precautions that need to be taken.

The installation of these products should only be carried out by a qualified contractor in accordance with the instructions supplied with the product.

Specifications

Leadership in design is based on constant development and improvement. Whilst great care is taken to give up-to-date information in this publication, the right is reserved to change any specifications herein detailed, without prior notice. All descriptions, illustrations etc, in this publication shall not form part of any contract.

Lamps

Wattage and where applicable type of lamp are shown for every fitting. Incorrect lamps may affect efficiency, change the planned distribution, create glare and in some cases, seriously overheat the luminaire. Unless otherwise stated all luminaires are supplied without lamps.

Transformer & Control Gear

Transformers and Control Gear are available for 240V 50HZ and 230V 50HZ with other options subject to special quotation.

240V 50HZ will be supplied unless any other voltage is requested at the time of ordering.

Product colours and finishes

The Feilo Sylvania range of standard colours has been rationalised. This change situation has provided Havells-Sylvania with the opportunity to harmonise our standard colours in line with developments that have taken place in architectural materials and building accessories.

For reference the standard paint finishes are now:

LED Lamps

RAL 9023 Dark Silver

RAL 9016 Traffic White

Please note:

- Due to photography and the printing process the colours reproduced in this catalogue may not be truly representative.
- Though paint colours may be the same, gloss, matt, satin and textured finishes will appear different.

Protection of Electronic Components

All products incorporating electronic components are protected against damage which may result from transients on the mains supply.

The level of protection incorporated is generally in excess of the minimum level specified in the current international standards.

It is the customer's responsibility to ensure that electronic equipment is not subjected to transients above these international immunity standards. In extreme cases additional suppression devices may be needed on the mains supply. The company does not take responsibility for damage to products caused by excessive mains transients.

Intellectual property rights

Sylvania, Concord and Lumiance are registered trademarks of the Feilo Sylvania group. Many products listed in this catalogue are the subject of patents, copyrights, design rights and other intellectual property rights of Feilo Sylvania.
