**TYRE GUIDE 2013-14**

## MAXXIS/CST

A commitment to excellence, combined with the pursuit of superior performance, is the driving force behind Maxxis. We stand firmly in this belief and stand by everything that we produce. We are driven to meet our customers' needs and then to surpass their expectations.

Our passion for success began in 1967 and has since evolved into what is now Maxxis: a premium line of tyres designed for almost every application imaginable. Maxxis produces tyres for cars and motorcycles as well as for light trucks, karts, bicycles, all-terrain vehicles (ATVs), lawn and garden equipment, trailers and industrial equipment.

Every day Maxxis tyres face the most challenging conditions the World has to offer. They stand up to extreme weather conditions, battle the toughest terrain and win championships. They are continually put to the test and every time they succeed.

Over 20,000 individuals on three continents strive to make these tyres the best available. The results of our efforts are offered on the following pages.

## TYPES OF TYRE

There are three tyre construction types:

- diagonal cross-ply
- radial ply
- bias belted

These may be:

- tubeless (no tube required) or
- tube type (requiring inner tube)

All three construction types are manufactured in several tread profiles. Tread patterns and profiles are available for front and rear positions.

Special tyres are available for sporting events, some of which are unsuitable for road use and are marked accordingly [normally NHS - Not for Highway Service].

## REGULATION MIXING OF TYRES

The intermixing of radial, bias belted and diagonal cross-ply tyres has legal requirements and motorcyclists are advised to consult the Motor Vehicles [Construction and Use] regulations obtainable from Her Majesty's Stationery Office.

Recommended fitment:

- 1 Diagonal cross-ply front and rear
- 2 Diagonal cross-ply front and bias belted rear
- 3 Diagonal cross-ply front and radial rear
- 4 Radial front and rear
- 5 Bias belted front and rear

Illegal fitment:

- 1 Radial front and diagonal cross-ply rear
- 2 Bias belted front and diagonal cross-ply rear
- 3 Radial front and bias belted rear

## TYRE LOAD AND SPEED MARKINGS

Radial, bias belted, and diagonal cross-ply tyres have markings to indicate their load and speed capabilities.

It is important that tyres are suitable for the maximum speed capability of the motorcycle. In some overseas countries this is a legal requirement.

Tyre speeds are shown in accordance with an alphabetical list of symbols indicating speeds at 10 km/h increments.

The relevant speed symbol is positioned near the size designation in conjunction with a load index: e.g. 120/90-18 65S, where '65' is the load index and 'S' the speed symbol. In the case of speed symbols 'V' and 'ZR', these are shown within the size designation, e.g. 120/90-V18. The size designation for 'V' and 'ZR' normally omits the load index. Details of speed symbols and load indices are shown in tables 1 and 2.

## WATCH YOUR TREAD

Tyre treads are designed to give good wet grip but the road surface condition plays the major part in tyre to road adhesion. In general, wet grip decreases as tyre tread patterns wear down or as the depth of surface water increases. Motorcyclists should take this into consideration and reduce speed when it is wet.

The legal limit of tyre tread depth in the UK for motorcycles over 50 cc is 1 mm across  $\frac{3}{4}$  of the width of the tread pattern and with visible tread on the remaining  $\frac{1}{4}$ . For motorcycles up to 50 cc the law requires that all the grooves of the original tread pattern must be clearly visible. The legal requirements may differ in other countries.

## SAFETY AND MAINTENANCE

Inflation pressures must be checked at least once a week. They should be checked only when the tyre is cold, since there is an increase in pressure when the tyre has warmed up after being run. A reliable pressure gauge should be used.

The recommended inflation pressures are vitally important for safe handling of the motorcycle. Pressures must be adjusted appropriately for solo and for pillion and pannier loads. It is dangerous to re-inflate a tyre which has been run flat or seriously under-inflated. Such tyres should be removed for inspection by a tyre specialist.

Tyres should be examined regularly, removing stones and other objects embedded in the tyre. Oil or grease should be removed with a suitable diluted detergent.

Lumps or bulges could indicate internal damage and should be examined by a tyre specialist without delay.

## AGE DETERIORATION

Tyres can deteriorate with age which shows as cracking of the tread and sidewall rubber, sometimes accompanied by carcass deformation. Cracking is usually an indication that tyres have been in service for an extremely long time, but rubber deterioration may be brought about by poor storage conditions. If cracking is severe, the tyre must be replaced.

## TUBES

Ensure that the correct size and type is fitted and that the valve stem tightly fits the hole in the rim. Always use a new tube when fitting a replacement tube type tyre or a tubeless tyre requiring an inner tube.

Tubes which are stretched, thinned or excessively repaired may deflate without warning and should not be re-fitted.

Tubes must always be used with tyres fitted to wire spoked wheels, irrespective of whether the tyre is tubeless or tube type, except for those wire spoked rims specifically designed for tubeless tyres. A rim band or a rim tape of the correct type must be fitted to protect the tube from spoke head damage.

Inner tubes of the correct size may only be used with tubeless tyres if correctly fitted and approved by the individual tyre manufacturer. It must, however, be emphasised that the result of fitting tubes in tubeless tyres is that, in the event of a puncture, the assembly will behave in exactly the same way as a tube type tyre and tube assembly, i.e. it is likely to lose pressure more rapidly than a tubeless tyre assembly.

Where tubes for certain low profile tubeless tyres are not available, an alternative size tube should not be fitted.

Tyres which are marked 'Tube Type' or are not marked 'Tubeless' must be fitted with an inner tube.

## VALVES

A new valve should be fitted when replacing tubeless tyres. When checking or adjusting inflation pressure always ensure that the valve is not leaking.

The fitment of a valve core with a steel spring is necessary for high speed usage. Particular care must be taken to ensure that the valve is the correct size and type for the rim.

When a tube is fitted and the rim valve hole is designed for a rubber snap-in tubeless valve, it will be necessary to fit an adapter collar or skirted lock nut to ensure correct valve location. Always fit a valve cap, preferably of the sealing type.

## REPAIRED TYRES

Repairs to motorcycle tyres and tubes must be carried out in accordance with the current British Standard AU 159 and should, therefore, be entrusted to a specialist.

All punctured or damaged tyres must be removed from the wheel for internal and external examination to ensure there is no hidden damage which would cause a later failure.

In order to avoid such a hazard, neither externally applied plug tyre repairs nor liquid sealants are recommended and tyre manufacturers cannot be responsible for problems resulting from their use.

## WHEELS AND RIMS

It is essential that the wheel size and type is a suitable fitment for the tyre and motorcycle concerned [see table 3].

Tyres must not be used on damaged or distorted wheels since this could result in tyre damage and deflation.

Car and motorcycle rims of the same nominal diameter have different dimensions and therefore car and motorcycle rims and tyres must not be inter-changed.

## REMOVAL AND FITTING OF TYRES

These operations should be entrusted only to a tyre specialist who has the necessary equipment and expertise. Improper fitting can result in damaged tyres and wheels. Direction arrows, where shown on the sidewall, indicate the direction of rotation of front and rear tyres and must not be ignored.

## GENERAL

Driving over pot-holes, kerbs or other obstructions, even at low speeds, can result in the weakening or fracture of the casing structure.

## E-MARKING

Motorcycle tyres will be supplied in accordance with 'The Motor Vehicle Tyre (Safety) Regulations 1994'.

**TABLE 1: TYRE SPEED MARKINGS**

Speed Symbol	Maximum motorcycle speed for which the tyre is suitable	
	km/h	mph
Moped [B]	50	30
F	80	50

34	118	49	185	64	280	79	437					

Motorcycle tyres are manufactured in a number of different countries with differing requirements in terms of load, dimensions and speed ratings. This has resulted in various size markings. This chart gives a guide to the relationship between various size markings.

THIS CHART DOES NOT IMPLY EXACT COMPARISONS.

## TYRE ASPECT RATIO

W

D

H

dr

Aspect ratio [Ar]

$$= \frac{H}{W} \times 100\%$$

Aspect ratio is the tyre section height expressed as a percentage of the width

## SIZE MARKINGS

There are essentially three types of size marking used for motorcycle tyres:

- 1 Imperial
- 2 Imperial Low Profile
- 3 Millimetric

All of these systems describe the width [W], height [H] and rim diameter [dr] of a tyre size.

The Tyre Aspect Ratio drawing (on page 6) shows where these dimensions are measured from and the overall diameter [D].

The height of the tyre and hence its overall diameter [D] is controlled by the Aspect Ratio [Ar].

Tyre sizes for all motorcycle tyres, except those for specialised non-road legal applications, (pure racing tyres, ATV tyres, etc.) are expressed as:

Width/Aspect Ratio	Construction or Speed Symbol	Rim diameter
W/R		dr

For older Imperial sizes the Aspect Ratio is 100% and not shown.

For example:

$$3.50 \times 18 = 3.50\text{'' wide, } 3.50\text{'' tall} - 18\text{'' rim diameter}$$

For the older Imperial Low Profile series the Aspect Ratio was 90% but as the widths of the tyres were unique, it was not shown. Where the tyre width was not unique, or where the Aspect Ratio was not 90%, the actual Aspect Ratio was shown.

For example:

$$4.10 \times 19, \text{ where } 4.10 \text{ is a unique width}$$

$$4.10\text{'' wide } 4.10 \times 90\% = 3.7\text{'' tall} - 19\text{'' rim diameter}$$

4.25/85-18, Where 4.25 is not a unique width and the Aspect Ratio is not 90%

$$4.25\text{'' wide}/4.25 \times 85\% = 3.6\text{'' tall} - 18\text{'' rim diameter}$$

Perhaps the most easily understood size markings are the modern millimetric type.

For example:

$$110/90-18$$

$$110 \text{ mm wide}/110 \times 90\% = 99 \text{ mm tall} - 18\text{'' rim diameter}$$

Although the mixing of Metric and Imperial units can, even in this case, cause some confusion.

The effect of changing the Aspect Ratio is to change the overall diameter of the tyre:

$$D = W \times Ar \times 2 + [25.4 \times dr]$$

Therefore:

$$120/100-18 \quad D = 120 \times 100\% \times 2 + [25.4 \times 18] = 697.2 \text{ mm}$$

$$120/90-18 \quad D = 120 \times 90\% \times 2 + [25.4 \times 18] = 673.2 \text{ mm}$$

$$120/80-18 \quad D = 120 \times 80\% \times 2 + [25.4 \times 18] = 649.2 \text{ mm}$$

Each of these tyres is 120 mm wide and fitted on an 18" rim but as you can see there is a significant difference in the overall diameters.

## MA-PS SUPERMAXX SPORT

Maxxis introduces its updated high performance sport bike tyre to its product line-up — the next generation Supermaxx Sport. Featuring an advanced tread pattern and distinct, angular profile the Supermaxx Sport allows quick, precise and responsive handling.

The silica compound, formulated for optimum traction in dry and wet conditions, allows for cooler running temperatures and maximum grip on both the track and street. Further more, the revolutionary radial carcass uses mono-spiral Kevlar® construction to maintain tyre uniformity at high speeds.

All combined, the updated Supermaxx Sport is a sport bike tyre with track day performance.

## MA-3DS SUPERMAXX DIAMOND

Maxxis' ground breaking MA-3DS Supermaxx Diamond — sports touring radial — features an eye catching Diamond shoulder tread pattern, incorporating micro-pore technology, combined with Maxxis' new 'Ultra' tread compound to deliver outstanding levels of dry traction and increased wet weather grip.

The unique high tension carcass construction incorporates jointless mono-spiral Kevlar® belts which increase carcass strength and maintain uniformity under extreme load conditions ensuring increased stability at high speed.

New stiffer side-walls ensure that the MA-3DS maintains its handling characteristics under typical loads for touring applications without compromising handling or performance.

## M6029 SUPERMAXX TOURING

Maxxis has developed the M6029 Supermaxx Touring tyre using Virtual Intelligent Prototyping and Finite Element Analysis (FEA) — the most advanced computer technology.

FEA is used to ensure even load distribution between cornering and straight-line performance. This identifies the stress/load conditions that the tyre will be used under, ensuring that even distribution of load is achieved at maximum stress levels under force, whilst achieving a fast and controlled response.

The Supermaxx Touring has a distinctive profile and tread pattern which creates responsive handling and stability for quick and precise cornering. The revolutionary radial construction uses Kevlar® belts to ensure tyre uniformity at high speeds.

**M6011 CLASSIC & WHITEWALL**

Available in both Classic and Whitewall options, the Maxxis M6011 is designed for classic and cruiser styled machines.

The specially formulated compound and matched front/rear tread pattern provide excellent traction and durability in dry and wet weather. Deep offset tread grooves channel water away from the contact patch.

Additional stability is provided by the offset centre rib, which resists tracking over surface rain grooves and steel grated bridges.

*A classic bike deserves a classic tyre!*

## MA-PD DETOUR

Maxxis introduces its radial Adventure-Touring tyre, the Detour. Available in V-Strom, Varadero, KLV 1000, BMW, and Triumph Tiger sizes, the Detour offers excellent and responsive handling in both wet or dry, on and off-road conditions.

The Detour's stable central blocks and large grooves easily disperse water and grip the road in a straight line and while weaving through the back roads, offering comfort and ease throughout your ride. With its unique compound, the new Detour will yield low tread wear to make your adventures seem endless!

## M6017 TRAXER

The Maxxis M6017 Traxer is a tyre that enables you to ride in every condition, on or off-road. The curve of the footprint area provides stability at all lean angles. The V-groove tread pattern is designed to allow more efficient water and mud dispersion.

The important thickness of the tread design gives excellent comfort and enables a maximum speed of up to 130 mph.

## **M6118 & M6119 SUPERMOTO**

The versatility of the Maxxis M6118 and M6119 Supermoto tyre speaks for itself. Kevlar® belted construction ensures stability, while specially formulated compounds maintain optimum grip in a wide range of conditions.

## M6102 & M6103 PROMAXX

The Promaxx is a high-performance bias ply street tyre. The matching front and rear tread pattern offers improved handling at higher speeds.

**C906 & C907 HI-MAX**

Give them a good look, because this pair of tyres have been designed and matched for one purpose — stable, high-speed touring in all weather conditions.

The low profiles and aggressive tread patterns give you a tenacious grip and an advanced, wear-resistant rubber compound meaning extra miles of worry-free thrills. The diagonal tread pattern is designed to allow more efficient water dispersion whilst maintaining good control in corners. With the special construction, this provides a safe and smooth ride at high speeds.

## **MA-SI MAXXCROSS RADIAL SI**

Maxxis is at the leading edge of innovation with the Maxxcross Radial SI.

The first in the industry to feature radial construction in an off-road tyre, the Maxxcross Radial SI provides a comfortable ride in the most rugged conditions.

Radial construction provides a larger contact patch for faster and more controlled acceleration, braking and cornering, as well as increased ride comfort making it the perfect tyre for any soft to intermediate terrain.

## MA-SX MAXXCROSS DUAL SX

Maxxis introduces the latest MA-SX. Developed and tested for use in Supercross and Arena-cross conditions, the MA-SX features a newly developed soft rubber compound offering unrivaled traction in hard-packed conditions.

The rear tyre's shoulder knobs feature standard soft SX compound, while center knobs are even softer, providing unrivaled straightforward traction - without losing stability in corners.

The front tyre has standard base compound for stability and soft-compound cap for braking and cornering traction.

Designed specifically for blue-groove and hardpack terrains, this tyre is lightweight and has durable construction for the performance and quality you expect from every Maxxis tyre.

## M7304 & M7305 MAXXCROSS PRO INTERMEDIATE TRACK

A unique knob and groove tread design offers exceptional and precise handling through intermediate conditions. The combination of M7304 front with the M7305 rear offers uncompromised straight line and cornering balance.

This tyre is E-marked, street legal.

## M7311 & M7312 MAXXCROSS PRO SOFT/INTERMEDIATE TRACK

The self-cleaning tread pattern and race-proven rubber compound deliver excellent traction and outstanding tyre wear in soft/intermediate conditions. The uniquely spaced tread pattern produces superior straight line control and precise cornering, the bridged centre knobs provide predictability, control and excellent straight-line traction under acceleration whilst the optimised shoulder knob design gives incredible cornering stability.

## M7307 & M7308 MAXXCROSS PRO SM SANDMASTER

The Maxxcross Pro SM Sandmaster is an exclusive sand and mud tyre that combines a mud-repelling, silica-based rubber compound with a computer-enhanced tread design.

In addition to its specially formulated compound, the Sandmaster tyre also incorporates anti-flex knob bridges on the shoulder, increasing traction and stability.

## M7313 & M7314 MAXXENDURO F.I.M APPROVED

Maxxis introduces its new versatile M7313 and M7314 MaxxEnduro which is an E-marked road legal tyre and is ideal for most enduro conditions.

The side blocks provide accurate steering in muddy conditions and are designed for aggressive cornering even in the deepest of mud.

## C7209 & C7210 SURGE INTER

With a tread design that works in a wide variety of intermediate terrain and large block knobs which quickly shed mud, the Surge Intermediate has a strong and durable construction making it the perfect choice for the rider who needs one tyre that can do it all — hit the track and venture off into the woods!

Durable construction resists punctures.

Stable block tread pattern holds tight in corners.

Offers predictable grip during acceleration and braking.

E-marked, street legal.

## C858 PREMIUM TRAIL

Ideal tyre for a budget priced replacement.

Popular on-road/off-road pattern which makes this an excellent tyre for on-road/off-road riding.

Special knobs penetrate loose surfaces.

## M6017 TRAXER

The Maxxis M6017 Traxer is a tyre that enables you to ride in every condition, on or off-road. The curve of the footprint area provides stability at all lean angles. The V-groove tread pattern is designed to allow more efficient water and mud dispersion.

The important thickness of the tread design gives excellent comfort and enables a maximum speed of up to 130 mph.

## C6006 DUAL SPORT TRAIL

The Maxxis Dual Sport Trail C6006 offers superior performance on and off-road. A unique directional tread pattern delivers a smooth ride on level terrain, while a lower knob ratio enhances traction for off-road applications.

With a 70% knob-to-groove ratio, this tyre delivers smooth performance on the highway while adding excellent grip on off-road surfaces.

The unique tread block design offers an excellent self-cleaning effect, providing riders quick access when going from off-road to street surfaces.

Designed for large dual-purpose bikes.

**M6029 SCOOTER TYRE**

With its exceptional design, the M6029 offers everything you need in a high performance tubeless scooter tyre. Providing outstanding grip, handling and stability, this tyre is also built to last with a high-quality rubber compound.

The low profile tread design increases the footprint area allowing optimum acceleration, cornering and braking power in wet and dry conditions.

The special crossed tread grooves provide excellent water dispersion and enhance the grip and stability of the tyre. The improved wide tread pattern design yields maximum mileage.

## M943 & M944 iRAZR RADIAL

The iRazr's radial construction offers a smoother and more controlled ride by reducing bump steer and arm fatigue, giving riders that extra edge. Radial construction also reduces the sidewall tension of the tyre, allowing a wider contact patch with the terrain and better braking performance.

The innovative tread pattern and flat profile provides excellent braking and steering response.

Designed for optimum performance in all MX conditions.

## M933 & M934 RAZR2

The 6-ply rating makes the Razr2 suitable for all types of terrain. The Razr2's increased depth and angled tread offers improved steering and braking. With the Razr and Razr2, Maxxis offers the best set-up for the serious cross country racer on every track and weather condition known to man.

The aggressive tread pattern enhances cornering while an increased lug depth offers increased skid and traction control.

E-marked street legal.

## M931 & M932 RAZR

Since its inception, the Maxxis Razr has changed the face of Cross Country ATV racing. The Razr has been a mainstay among top riders in many series.

The front tyre features a raised centre ridge to provide precise steering, while side knob placement offers superb handling and cornering capability.

Specially formulated racing compound delivers superior traction while extending tread life.

\*3775 Soft/Intermediate Track [orange RAZR with yellow Z]

\*\* 397 Intermediate/Hard Track [orange RAZR]

*Sizes in bold/italic are  
E-marked, street legal*

## M917 & M918 BIGHORN RADIAL

The tread pattern and wide footprint give this radial exceptional traction. The Bighorn's shoulder lugs protect the side-walls. Solid raised white lettering gives this tyre an attractive look. With radial construction, recreational riders as well as ATV racers will immediately appreciate the ride quality and comfort.

The radial construction offers a significantly smoother ride over rough trails.

Maxxis' Bighorn Radial is suitable for desert, dirt and rock application.

### M917 FRONT

28 x 9.00-14	6	52J

**C9311 & C9312 ANCLA**

Aggressive, sweeping tread design provides superb traction on all surfaces, particularly mud.

Deep, widely spaced tread bars shed mud for strong initial traction and control.

Sure-footed, comfortable ride on hard-pack with 6-ply build for improved puncture resistance (26 x 9.00 - 12 only available in 4-ply).

**C9312 REAR**

## C983 RUBICON OVERSIZE

Oversize conversion tyres are for ultimate performance in arduous conditions while still using standard wheel rims.

The powerful C983 Rubicon gets you through the most rugged terrain you will face. Its wide, self-cleaning hook and bar tread design offers plenty of traction and power to tackle the toughest mud and steepest hills.

With a computer-designed tread pattern for maximum performance and a rugged rubber compound, the C983 Rubicon lets you take on brutal conditions and obstacles that might defeat other tyres.

## C9208 SURTRAK

The SurTrak was designed to perform under the most demanding conditions. Dual traction lugs channel loose soil away from the contact patch to provide optimum grip. In addition, the SurTrak features a durable nylon carcass to improve puncture resistance.

Multi-directional tread design delivers traction in mud, snow, and sand.

Outside shoulder lugs provide aggressive side bite.

E-marked street legal.

**C9272 & C9273 STREETMAXX**

The comprehensive Maxxis range of ATV and sports quad tyres includes the C9272 and the C9273 Streetmaxx which have the benefit of being E-marked and, therefore, street legal.

Speed index rating N (88 mph/140 kph).

E-marked street legal.

## C9299 & C9300 STREET

Directional tread pattern of the C9299 and C9300 Street tyres provides predictable traction on any hard terrain. The smooth rolling design offers comfort and stability at high speeds.

Long-wearing tread compound.

Good wet and dry performance.

E-marked street legal.

## WINX MOUSSES

Winx Mousses are the alternative to a DNF through punctures.

Commonly used on the enduro circuit in extreme conditions mousses are now becoming more popular on the motocross scene where race finishes count. The mousse system replaces the conventional inner tube and is manufactured from a foam material to replicate the feel of a inner tube without any sacrifice in grip or tyre performance.

Mousses come with fitting lubricant and instructions.
