

MC-300W

Wood Moisture Meter

**User Manual
&
Wood Group Selection Table**

INTRODUCTION:

With the moisture measuring instrument **MC-300W**, Exotek AB has introduced an hand-held moisture measuring unit, incorporating electronic circuitry perfected over years of development and practical application.

The wood moisture measuring instrument MC-300W works on high frequency according to the contact measurement process, thus a damage of the material to be measured is excluded.

Due to the approved contact measurement procedure, a quick determination of the moisture in timber is given.

Since it is used individually and is designed to fulfil requirements economically, this unit satisfies in every respect the demands made on a modern precision measuring apparatus.

Reliability, durability and a high standard of accuracy are assured by ultra-modern, completely dependable digital analogue components built to cope with the stress of uncompromising everyday use.

The setting of the wood-groups combined with the automatic 0-correction, allow exact measurements on **all** European and exotic timbers.

The MC-300W moisture measuring device is equipped with an international standardized 9 Volt alkali block-battery, which can be obtained anywhere.

SWITCH-ON:

By pressing the push-button, the unit is switched on.

SWITCH-OFF:

By pressing **and** holding the push-button (after the unit is on and the values have been displayed), the unit is switched off after approx. 3 sec.

or: Remains the unit switched on after measurements have been taken, it's being switched off automatically after 2 minutes if it is not in use.

SELECTION OF WOOD GROUPS:

After the unit has been switched on, the previous selected group for wood is indicated on the Display (*H2 - H10*) Each time the push-button is being pressed again (during the valid group is shown), the unit selects the next higher group in steps of 1.

The indicated wood group is equivalent to the density range of the timber. For selection of wood group see *Wood Group Selection Table* (page 5 – 14).

MEASURING PROCEDURE:

After selecting the appropriate wood-group, releasing the push-button, the unit must be hold up in the air. The unit is "ready for use" after about 3 sec. On the display appear " – **00.0** " and now measurements can be taken by placing the springs onto the material.

The 3 measuring springs must have a good contact with the material to be measured. This guarantees exact measurements.

After 3 sec. a correct and constant measuring value is being achieved, indicated by a minus sign "-" in front of the value.

THIN MATERIALS:

For single materials, thinner than 5 mm, the volume is too small for accurate measuring values, but it is possible to make comparing measurements for determination of too wet areas.

To obtain exact measuring results, we recommend measurements in a pile, but take care in getting a thickness of 5mm minimum, as well as having no air-spaces between the single sheets.

**PIN-FREE MOISTURE METERS
DENSITY TABLE MC-300W**

BASE:

With material thickness < 50 mm you absolutely have to take care of the right base. Generally avoid a metal base. The best results are taken, if the material to be measured is hold up in the air. You also can use polystyrene below the timber with at least a thickness of 50 mm.

VOLTAGE:

The unit is equipped with an international standardized 9 Volt alkali block-battery. In case of low voltage, an arrow "←" appears at the left upper side of the display. In this case the battery has to be exchanged, to ensure further, correct measuring results.

TECHNICAL SPECIFICATIONS

Measuring method:	High frequency dielectric constant measurement
Measuring range - Wood:	0 - 80 % moisture content (H ₂ O)
Scanning depth:	5 - 50 mm
Density Range:	200 – 1100 kg/m ³
Hold function:	No
Alarm function:	No
Automatic switch off:	Yes
Automatic 0-correction:	Yes
Low battery warning:	Yes
Operating temperature:	-10 / +60°C
Working conditions, temp / RH:	-10 to +60° C / 0 – 90 %
Display:	LCD digital
Resolution:	0.1%
Housing material:	ABS
Sensor material:	Chrome plated steel
Power supply:	9 V alkaline battery
Power consumption:	Approx. 5mA
Carrying case:	Artificial leather
Dimensions (h x w x d):	130 x 60 x 27 mm
Weight (incl. battery):	150 g
Warranty:	1 year
