CHRISTOF INNERHOFER

POWER TURN ROCKER

This ski has high traditional camber for 90% of its length, delivering power as well as excellent snowfeel and grip on the piste. A slight rocker over the remaining 10%, at the tip, makes turn initiation easier and more controllable.

OVERSIZED SIDECUT

The Oversized sidecut combines the very deep carving ski sidecut with current underfoot widths. The width at tip and tail delivers effective grip as well as power and precision. The width underfoot gives increased control and better hold in turns. OVERSIZED SIDECUTS offer maneuverability, power and control.

CASCADE TIP

This specific tip construction involves stepping the end-points of the top two layers, one metal and the other fiberglass. The objective is to reduce tip inertia and weight, giving a ski that is livelier and more receptive. This construction also delivers better torsional control of the tip, for more effective grip and very high precision in turns.
