

A listing of plants cultivated between 1807 and 1825
by John Templeton (1766–1825) at
Cranmore, Malone, Belfast

E. Charles Nelson

*"Thoughtful, observant, enquiring,
he reasoned out horticultural techniques for himself
from what he knew about Ireland's native plants."*

Born in Belfast in 1766, John Templeton began to take an interest in gardening when he was about 20 years old "and soon made his flower-garden an object of attention". In 1793, according to his biographer, Templeton laid out an experimental garden in what was formerly an orchard and osiery. A stream was redirected to pass through the new garden; this probably formed the serpentine pond that survived long after John Templeton's death. A rock-garden was created. Into this place Templeton brought "from various parts of the world, rare and useful plants, which he endeavoured to naturalize in this climate". That is the nub of his pioneering horticulture.

He had his own methods for germinating seeds. "I never apply artificial heat", he wrote, "In sowing seeds I think great numbers are lost by sowing too deep". So he sowed his seeds on the surface of the soil: "Nature sows on the surface and leaves to chance the covering of them by leaves or Moss". Following this principle, John put a thick wad of chopped moss over freshly sown seeds; he knew that this would keep the soil in the pots moist even in summer "all the watering that is necessary is just to keep the [soil] dark color'd" – while in winter the moss-blanket "prevented the plants from being affected with frost".

It is most unlikely that Cranmore garden was a formal one, because the sorts of plants John Templeton acquired were not the ones that lend themselves to formality – indeed there were so many different plants formality would have been impossible. Cranmore's plant list has a present-day ring about it. There were *Magnolia* species including the bull-bay *M. grandiflora*, an array of sunroses (*Cistus*), such alpine plants as *Hepatica nobilis* in variety (including "double red" and "single white") and spring gentian (*Gentiana verna*), shade-lovers like dog's-tooth violets (*Erythronium* spp), *Rhododendron* species and cultivars, numerous roses, phloxes, red-hot-pokers (*Kniphofia* spp), daffodils, day-lilies (*Hemerocallis*) and heathers. Over the years he grew at least a dozen different azaleas, two dozen species of *Campanula*, 15 different *Crocus* including the saffron crocus, 18 different irises and as many different lilies, and a dozen peonies including the moutan (*Paeonia suffruticosa*) from China. *Saxifraga* was a particular favourite – nearly three dozen are named, and quite a few of these were varieties of native Irish species. As for trees, there was a grove of larch, and numerous specimens of maples, limes, elms, yews and oaks, along with ten different pines and the famous slow-growing cultivar of Norway spruce, *Pices abies 'Clanbrassiliana'*, from Tollymore near Newcastle, County Down. In 1813 Templeton obtained a young plant of the eastern North American swamp-cypress, *Taxodium distichum*, from a local nurseryman and, after planting it at Cranmore, tied a piece of horse-hair rope around its trunk "to prevent snails from climbing up".

The Cranmore garden produced fruit and vegetables for the family's use – John Templeton married Katherine Johnson on 21 December 1799, and the couple eventually had a son and four daughters. The list of fruits is impressive: raspberries, strawberries, gooseberries, greengages, plums, cherries, currants, black grapes and, although some of the orchard had become a flower garden, pears and apples in variety. Potatoes, peas, beans, "yellow Dutch" and "Swedish" turnips, early purple broccoli, lettuces, kale, cabbages (the varieties "sugar loaf", "early dwarf York", "Pomfret", "Penton or Portuguese" included) were grown in the Barn Garden.

To John Templeton it seems that all plants were interesting and worthy of cultivation. He was not averse to bringing in plants from local ditches, or from Ulster's mountains, bogs and coasts. For example, at Greyabbey, County Down, in 1793, he noted a plant of native bog rosemary, *Andromeda polifolia*, which had beautifully ridged, five-sided bells, brighter and larger than usual, with a dark stripe along each ridge. This became one of the jewels of Cranmore, regularly propagated from cuttings: "I have had it in my garden", he wrote shortly before his death in 1825, "where it has not altered". There was a crowberry, *Vaccinium vitis-idaea*, from a bog near Ballynahinch, which was unusual in having serrated, wavy leaves. For a few years at least Templeton carefully cultivated a white-flowered harebell (*Campanula rotundifolia*) found on the Newtownards Road – it was in bloom on 1 August 1812.

Templeton's famous find was the Irish rose, a natural hybrid between the dog rose (*Rosa canina*) and the burnet rose (*R. pimpinellifolia*, syn. *R. spinossissima*), that he named *R. × hibernica*. Templeton discovered this growing "On the Road side going from Belfast to the Village of Holywood" in about 1793. He propagated the rose, presumably either by cuttings or grafting (at which he was clearly adept), and gave young plants to such notables as the London nurserymen William Curtis and Samuel Dickson, and to the Dublin Society's Botanic Gardens at Glasnevin. This rose still survives in cultivation although the original colony at Holywood has long since disappeared.

Not all the native plants that Templeton brought to Cranmore survived. One casualty was cowbane, *Cicuta virosa*, a highly poisonous member of the carrot family (Umbelliferae): "Having brought some of this plant [from the Blackwater] to a pond in my Garden 2 tame Widgeon totally destroyed it without suffering the least injury from 2 or 3 plentifull meals."

It is very probable that John Templeton was the first to grow Australian trees and shrubs such as *Eucalyptus*, *Callistemon* (bottle-brushes, now *Melaleuca*) and *Acacia* (wattles or mimosa) out of doors in Ireland. Templeton discovered that by growing *Fuchsia* outside, he got larger, more highly coloured blooms than on pot-bound specimens grown indoors. As for camellias, also grown in the open air, one of the shrubs he planted was still alive at Cranmore in 1856, and so was then about 60 years old.

Thoughtful, observant, enquiring, he reasoned out horticultural techniques for himself from what he knew about Ireland's native plants. For example, noticing that established deciduous trees provided sufficient shelter to protect less hardy subjects – in autumn brambles and bracken growing under such trees stayed green longer than plants out in the open – he planted many of his new acquisitions, raised from seed, in sheltered situations beneath trees and remarkably many thrived. Templeton did not have a vast array of well-written, illustrated gardening manuals to consult – indeed, for many plants he would have had no information whatsoever, perhaps not even a name, certainly no fund of hard-won knowledge garnered by other gardeners. He had to take risks with seedlings and young cuttings. How to be successful with the cultivation of many exotic plants was, in the 1790s, as much "uncharted territory" as the places whence they came – Botany Bay and the Cape of Good Hope, for example. In February 1793, he wrote:

I am confident that if many plants that are now found too tender for our climate, were planted under the thick shade of trees, they would be found sufficiently hardy to stand our winters. I have at present a small *Passiflora caerulea*, climbing on a tree covered with ivy, that stood a frost when ice was 3 inches thick, and which killed a large plant against a south-facing wall. I have likewise a plant of the *Ficus stipulata* which has grown against a large Chestnut tree, last winter and this, without seeming at present affected with the Cold, an *Erica tubiflora* of near four feet high has stood out so far of this winter by having some Broom branches stuck about and over it.

To have grown any of *Erica* (Cape heaths) native to southern Africa, particularly the Cape of Good Hope, and getting one to four feet tall with no more protection outside than a wigwam of broom was no small achievement.

John Templeton had a keen interest in the weather and gauged the severity of a winter by the thickness of the ice – it was never more than an inch thick during the "uncommonly mild" winter of 1788–1789, but on 22 December 1796, at 8.30am "Ice on a pond in my Garden 2 inches thick, bore 7 stone Weight" – the temperature was then 12°F below freezing (20°F). The 3½ inches of ice that put an end to the passionflower suggests a very severe frost.

SOURCES

No published catalogue of Cranmore garden exists. Templeton mentioned garden plants in his published articles, especially his "Naturalist's reports" in the *Belfast monthly magazine*, but there is no thorough contemporary account of his garden.

The list of plants presented here was compiled by searching for mentions of plants in Templeton's unpublished manuscript journals 1807–1825, a few letters (particularly those to Professor Thomas Martyn) and his article "On the naturalization of plants", published in *Transactions of the Royal Irish Academy* 8, 111–129 (1802). A manuscript card index was then created on which the date of (first) mention was noted as well as whatever name Templeton employed; sometimes additional dates were noted especially when he made an interesting comment, or the plant was unusual. He also noted in his diaries native species that grew at Cranmore but were probably not deliberately cultivated; as there was no way usually of telling whether he had deliberately planted these, they are included too.

Usually Templeton gave a Latin (scientific) name, but sometimes he only wrote down a vernacular one. Caution is needed in interpreting the names he employed because there are no extant herbarium specimens from Cranmore which can be consulted to verify identification. Some names cannot be traced in *The International Plant Names Index* – they are printed in roman (not italic). Well-established synonyms are given in square brackets, if the synonymy is unambiguous. When the name Templeton used could apply to more than one species, the name is printed in roman without any synonymy given.

The dates provided in the central column are dates of first (and perhaps also later) mention in the diaries. The dates of introduction of some plants into cultivation are in the right-hand column. However, these latter dates are not necessarily reliable and need to be treated with caution. For example, it is possible, but rather unlikely, that Templeton was growing *Acacia angustifolia* from Australia, a decade before its stated date of introduction: he may have had a different species or the date given in horticultural literature may be inaccurate.

Plants names are arranged alphabetically by genus name and then by specific epithets; when Templeton only used a generic name (whether Latin or English) a dash is used in place of the specific epithet. Family names follow *Mabberley's plant book* (third edition, 2008). Dates of introduction have been derived from a variety of sources, principally *Paxton's dictionary of botany* (new edition, 1868). Names are not found in *Paxton's dictionary* ... generally will not have dates of introduction.

Plants mentioned in John Templeton's "Naturalist's report" are denoted by §; there is clear coincidence between the unpublished notes and the "Naturalist's reports" so only examples of the latter are indicated.

A

ABIES (Pinaceae: fir)

— April 1813

ACACIA (Leguminosae: mimosa, wattle)

<i>Acacia angustifolia</i>	October 1807	(Australia, 1816)
<i>Acacia decurrens</i>	January 1807	(Australia, 1790)

ACER (Aceraceae: maples)

<i>Acer creticum</i> [= <i>A. sempervirens</i>]	February 1812	(Europe, 1752)
<i>Acer × hybridum</i>	February 1812	(N. America, 1790)
<i>Acer montanum</i>	February 1812	(N. America, 1750)
<i>Acer pensylvanicum</i>	April 1809	(N. America, 1755)
<i>Acer pseudoplatanus</i>	October 1808 §; May 1812	(Europe, c. 1550)

ACHILLEA (Compositae: yarrow)

<i>Achillea clavennae</i>	July 1816	(Europe, 1656)
<i>Achillea cristata</i>	August 1818	(Europe, 1784)
<i>Achillea dentata</i>	July 1816	
<i>Achillea hybrida</i>	September 1810	
<i>Achillea incisa</i>	July 1816	
<i>Achillea millefolium</i>	July 1809 §	native
<i>Achillea pentaphyllum</i>	September 1810	
<i>Achillea ptarmica</i>	July 1809 §, July 1813 §	native
<i>Achillea rosea</i>	July 1816	

ACONITUM (Ranunculaceae: monkshood)

<i>Aconitum uncinatum</i>	August 1808	(N. America, 1768)
<i>Aconitum variegatum</i>	August 1809 §	(Europe, 1597)

ACORUS (Acoraceae: sweet flag)

<i>Acorus gramineus</i>	December 1808	(E. Asia, 1796)
-------------------------	---------------	-----------------

ADELIA (Euphorbiaceae)

<i>Adelia lanceolata</i>	January 1813	
--------------------------	--------------	--

ADIANTUM (Pteridaceae: maidenhair fern)

<i>Adiantum capillus-veneris</i>	April 1825	native
----------------------------------	------------	--------

ADONIS (Ranunculus: pheasant's eye)

<i>Adonis vernalis</i>	April 1808	(Europe, 1629)
------------------------	------------	----------------

ADOXA (Adoxaceae: moschatel)

<i>Adoxa moschatella</i>	August 1818	native
--------------------------	-------------	--------

AESCRULUS (Hippocastanaceae: horse chestnut)

<i>Aesculus hippocastanum</i>	May 1808	(Europe, c. 1616)
-------------------------------	----------	-------------------

<i>AGRIMONIA</i> (Rosaceae: agrimony) <i>Agrimonia odorata</i> [= <i>A. procera</i>]	May 1821	native
<i>AGROSTEMMA</i> (Caryophyllaceae: corn cockle) <i>Agrostemma coronaria</i> 'Plena' <i>Agrostemma flos-jovis</i> [= <i>Lychnis flos-jovis</i>]	July 1813 July 1810	(Europe, 1726)
<i>AILANTHUS</i> (Simaroubaceae: tree-of-heaven) <i>Ailanthus glandulosa</i> [= <i>A. altissima</i>]	[by 1800] ¹ ; January 1813	(E. Asia, 1751)
<i>AJUGA</i> (Labiatae: bugle) <i>Ajuga reptans</i>	May 1812	native
<i>ALCEA</i> (Malvaceae: hollyhock) <i>Alcea rosea</i>	July 1808	
<i>ALLIUM</i> (Alliaceae: onions) <i>Allium triquetrum</i>	May 1809	(Europe, 1789)
<i>ALOPECURUS</i> (Graminae: foxtail grass) <i>Alopecurus geniculatus</i>	June 1812	native
<i>ALYSSUM</i> (Cruciferae: alyssum) <i>Alyssum deltoideum</i> [= <i>Aubrieta deltoidea</i>] <i>Alyssum montanum</i> <i>Alyssum olympicum</i> <i>Alyssum thalimifolia</i> <i>Alyssum utriculatum</i>	September 1812 September 1812 September 1815 March 1813 March 1811	(Europe, 1713) (Europe, 1700)
<i>AMARYLLIS</i> (Amaryllidaceae) <i>Amaryllis atamasco</i> [= <i>Zephyranthes atamasco</i>] <i>Amaryllis formosissima</i> <i>Amaryllis longifolia</i> [= <i>Crinum longifolium</i>]	February 1812 April 1811 May 1812	(N. America, 1629) (N. America, 1658)
<i>AMMI</i> (Umbelliferae: bullwort) <i>Ammi majus</i>	June 1821	
<i>AMYGDALUS</i> (Rosaceae: almond) <i>Amygdalus incana</i> [= <i>Prunus incana</i>] <i>Amygdalus nanus</i> [= <i>Prunus tenella</i>] <i>Amygdalus orientalis</i> — double dwarf	March 1809 April 1814 March 1810 June 1816	(Asia, 1800) (Europe, 1683) (Asia, 1756)
<i>ANAGALLIS</i> (Primulaceae: pimpernel) <i>Anagallis arvensis</i> <i>Anagallis fruticosa</i> <i>Anagallis monelli</i>	May 1812 August 1812 [1800] ²	native (N. Africa, 1803) (Italy, 1648)
<i>ANCHUSA</i> (Boraginaceae: bugloss) <i>Anchusa sempervirens</i> [= <i>Pentaglottis sempervirens</i>]	May 1812	
<i>ANDROMEDA</i> (Ericaceae: bog rosemary) <i>Andromeda calyculata</i> [= <i>Chamaedaphne calyculata</i>] — narrow-leaved	April 1807, March 1810 § April 1807	(N. Hemisphere, 1748)

¹⁴ "... the Buddlea [globosa] seldom is injured by our cold": *Trans Royal Irish Academy* 8, 124.

¹⁵ "[propagated] by Cuttings": J. Templeton to T. Martyn, 23 January 1800.

¹⁶ "Dwarf Box bears flowers annually when allowed to grow uncut": J. Templeton to T. Martyn, 23 January 1800.

¹⁷ "[propagated] by Layers and Cuttings, more hardy than Laurustinus [*Viburnum*]": J. Templeton to T. Martyn, 23 January 1800.

¹⁸ "A Camellia japonica which I planted in a Close corner near the pond after its buds were formed in the Autumn of 1805 remained through the Summer of 1806 in a state of suspended animation the leaves green and apparently in good health, but it did not shoot nor did the buds swell during the winter of 1806–7, which was a very mild one with regard to frost the leaves began to turn brown many fell off and some of the branches appearing dead I cut them away in the spring some time ago however the buds on the remaining branches began to swell and the plant is now growing vigorously."

I have remarked that although last winter had very little frost and was apparently not unfavourable to vegetation yet whether it was the extraordinary wetness in the fore part of the winter which affected the roots or the dryness of the spring, it is not easy to say, but more trees have died this season than I ever remember. A larch of 10 or 12 feet has died in the grove, and in the Avenue 2 pinasters which made good shoots last year and were about 6 feet high have died."

<i>Erodium alpinum</i>	November 1821	
<i>Erodium romanum</i> [= <i>E. acaule</i>]	April 1809	
<i>ERYNGIUM</i> (Umbelliferae: sea holly)		
<i>Eryngium amethystinum</i>	October 1807	
<i>Eryngium bourgatii</i>	April 1817	
<i>Eryngium planum</i>	June 1813	

²⁵ "At James Holmes's, Esq. on the eastern shore of Carrickfergus bay, four miles north of Belfast, there is a plant in the greatest vigour at the present time (July 1799) which has now stood uninjured three as severe winters as Ireland ever experienced, viz. 1794, 5, 1797, 8, and 1798, 9": *Trans Royal Irish Academy* 8, 125.

<i>ERYSIMUM</i> (Cruciferae)		
<i>Erysimum officinale</i> [= <i>Sisymbrium officinale</i>]	June 1811	
<i>ERYTHRONIUM</i> (Liliaceae: dog-tooth violet)		
<i>Erythronium alba</i> [? = <i>E. dens-canis</i> 'Album']	March 1810	
<i>Erythronium americanum</i>	July 1820	
<i>Erythronium dens-canis</i>	February 1808	
<i>EUCALYPTUS</i> (Myrtaceae)		
<i>Eucalyptus piperita</i>	March 1810 §	(Australia)
<i>EUONYMUS</i> (Celastraceae: spindle)		
<i>Euonymus atropurpureus</i>	April 1809	(N. America)
<i>EUPHORBIA</i> (Euphorbiaceae: spurge)		
—	July 1814	
<i>EUPHRASIA</i> (Scrophulariaceae)		
<i>Euphrasia odontites</i> [= <i>Odontites vulgaris</i>]	August 1808 §	

F

<i>FAGUS</i> (Fagaceae)		
<i>Fagus castanea</i> [= <i>Castanea sativa</i>] ²⁶	[1803]	
<i>Fagus sylvatica</i>	October 1808 §	
<i>FARSETIA</i> (Cruciferae)		
<i>Farsetia deltoides</i>	May 1821	
<i>FICUS</i> (Moraceae: figs)		
<i>Ficus stipulata</i> [= <i>F. pumila</i>]	[by 1800]	
<i>FILIPENDULA</i> (Rosaceae)		
<i>Filipendula ulmaria</i>	June 1811	native
<i>FONTANESIA</i> (Oleaceae)		
<i>Fontanesia phillyreoides</i>	May 1821	(W. Asia, 1787)
<i>FOTHERGILLA</i> (Hamamelidaceae)		
— [probably <i>F. gardenii</i>]	[by 1800]	
<i>FRAGARIA</i> (Rosaceae: strawberry)		
<i>Fragaria sterilis</i> [= <i>Potentilla sterilis</i>]	February 1807, October 1809 §	native
<i>Fragaria vesca</i>	April 1810, August 1812	native
<i>FRANKENIA</i> (Frankeniaceae)		
<i>Frankenia pulverulenta</i>	July 1814	
<i>FRAXINUS</i> (Oleaceae)		
<i>Fraxinus excelsior</i>	October 1808 §	native
<i>FRITILLARIA</i> (Liliaceae: fritillary)		
<i>Fritillaria meleagris</i>	March 1817	

²⁶ "... among our most beautiful trees, fo quick growth in a sandy or light loamy soil. There are four on my farm of considerable size; one is above eleven feet in girt, growing rapidly; and yet there is reason to believe them about a hundred years old": *Trans Dublin Society* 3, 165–166 (1803).

<i>FUCHSIA</i> (Onagraceae)		
<i>Fuchsia coccinea</i> ²⁷	[by 1799]; May 1808	(S. America, 1786)
<i>FUMARIA</i> (Papaveraceae: fumitory)		
<i>Fumaria bulbosa</i> [= <i>Corydalis solida</i>]	March 1809	
<i>Fumaria capnoides</i> [= <i>Corydalis capnoides</i>]	April 1817	
<i>Fumaria cucullaria</i> [= <i>Dicentra cucullaria</i>]	May 1817	
<i>Fumaria formosa</i> [= <i>Dicentra formosa</i>]	April 1814 §	
<i>Fumaria laxa</i>	May 1817	
<i>Fumaria nobilis</i> [= <i>Corydalis nobilis</i>]	April 1819	
<i>Fumaria odorata</i>	April 1813	
<i>Fumaria solidia</i> [= <i>Corydalis solidia</i>]	April 1812	
<i>Fumaria speciosa</i> ²⁸	February 1821	

G

<i>GAGEA</i> (Liliaceae)		
<i>Gagea lutea</i>	March 1811	
<i>GALANTHUS</i> (Liliaceae: snowdrop)		
<i>Ganthus nivalis</i>	February 1809 §	
— [probably <i>G. nivalis</i>]	January 1807	
<i>GALEGA</i> (Leguminosae: goat's rue)		
<i>Galega orientalis</i>	July 1816	
<i>GALIUM</i> (Rubiaceae)		
<i>Galium mollugo</i>	April 1814	
<i>Galium verum</i>	July 1811	
<i>GAULTHERIA</i> (Ericaceae)		
<i>Gaultheria procumbens</i>	[by 1800]	
<i>GENISTA</i> (Leguminosae; brooms)		
<i>Genista divaricata</i> ²⁹	March 1813	
<i>Genista florida</i>	[by 1800]	
<i>Genista pilosa</i>	March 1810	
<i>Genista tinctoria</i>	October 1810	(Europe)
<i>Genista triquetra</i>	September 1812	
<i>GENTIANA</i> (Gentianaceae; gentians)		
<i>Gentiana acaulis</i>	May 1810	
<i>Gentiana asclepiadea</i>	September 1810	
<i>Gentiana cruciata</i>	March 1813	
<i>Gentiana lutea</i>	July 1812 §	
<i>Gentiana macrophylla</i>	August 1818	
<i>Gentiana pneumonanthe</i>	January 1813	
<i>Gentiana purpurea</i>	February 1821	
<i>Gentiana saponaria</i>	February 1817	
<i>Gentiana verna</i>	December 1808	native

²⁷ ".... although killed to the ground by the winter's cold, send forth abundance of shoots which attain the height of three feet in summer, and are decorated with its elegant flowers, which are larger and more brilliant than ever they are when confined in a house": : *Trans Royal Irish Academy* 8, 124.

²⁸ Binomial not published until 1849.

²⁹ This binomial was not published until 1822

<i>GERANIUM</i> (Geraniaceae: crane's bills)		
<i>Geranium aconitifolium</i> [= <i>G. palmatum</i> or <i>G. rivulare</i>]	May 1809	
<i>Geranium campanulatum</i> ³⁰	May 1814	
<i>Geranium ibericum</i>	April 1819	
<i>Geranium lancastriense</i> [= <i>G. sanguineum</i> var. <i>striatum</i>]	May 1822	
<i>Geranium lucidum</i>	May 1808	
<i>Geranium macrorrhizum</i>	July 1816	
<i>Geranium phaeum</i>	May 1809	
<i>Geranium pyrenaicum</i>	May 1814	
<i>Geranium reflexum</i>	May 1809	
<i>Geranium reichardii</i>	July 1816	
<i>Geranium robertianum</i>	May 1812	native
<i>Geranium sanguineum</i>	June 1811	native
<i>Geranium sylvaticum</i>	May 1807	native ³¹
<i>GEUM</i> (Rosaceae: avens)		
<i>Geum microphyllum</i>	June 1813	
<i>Geum rivale</i>	May 1810	native
<i>Geum urbanum</i>	June 1812	native
<i>GLADIOLUS</i> (Iridaceae)		
<i>Gladiolus byzantinus</i> [= <i>G. communis</i> ssp. <i>byzantinus</i>]	June 1810	(Europe)
<i>Gladiolus cardinalis</i>	May 1808	
<i>Gladiolus communis</i>	June 1815	
<i>Gladiolus tristis</i>	March 1811	
—	August 1815	
<i>GLAUX</i> (Primulaceae)		
<i>Glaux maritima</i> [= <i>Lysimachia maritima</i>]	June 1812	native
<i>GLECHOMA</i> (Labiatae)		
<i>Glechoma hederacea</i>	April 1811	native
<i>GLEBITSIA</i> (Leguminosae; honey locust)		
<i>Gleditsia horrida</i> [= <i>G. sinensis</i> or <i>G. triacanthos</i>]	April 1817	
<i>Gleditsia monosperma</i> [= <i>G. aquatica</i>]	February 1812	
<i>Gleditsia tetrasperma</i>	February 1812	
<i>Gleditsia triacanthos</i>	April 1816	(N. America, 1700)
<i>GLOBULARIA</i> (Globulariaceae)		
<i>Globularia vulgaris</i>	February 1812	
<i>GLYCINE</i> (Leguminosae)		
<i>Glycine bimaculata</i> [= <i>Hardenbergia violacea</i>]	[by 1800]	(Australia)
<i>GNAPHALIUM</i> (Compositae)		
<i>Gnaphalium stoechas</i> [= <i>Helichrysum stoechas</i>]	June 1811	
<i>GORDONIA</i> (Rubiaceae)		
<i>Gordonia lasianthus</i>	March 1810 §	(N. America)
<i>Gordonia pubescens</i> [= <i>Franklinia alatamaha</i>]	January 1822	(N. America)

³⁰ This binomial was not published until 1955, so what Templeton gave this name to is unknown.

³¹ In Ireland confined to a narrow coastal strip in County Antrim between Larne and Glenarm, and first found in 1800 by John Templeton in Glenarm, but there is no evidence the plants in his garden came from that area.

GORTERIA (Compositae)
Gorteria rigens [= *Gazania rigens*] April 1819 (S. Africa)

GYPSOPHILA (Caryophyllaceae)
Gypsophila saxifraga (= *Petrorrhagia saxifraga*) September 1815

H

HALESIA (Styracaceae: snowdrop tree)
Halesia tetrapeta [= *H. carolina*] [by 1800]; June 1808 (N. America, 1756)
— April 1808

HEDERA (Araliaceae: ivy)
*Hedera helix*³² November 1808 §

HEDYSARUM (Leguminosae)
Hedysarum obscurum [= *H. hedysaroides*] August 1818

HELIANTHUS (Compositae: sunflowers)
Helianthus multiflorus [= *H. × multiflorus*] July 1816
Helianthus pubescens [? = *H. mollis*] July 1816

HELIANTHEMUM (Cistaceae: rockroses)
Helianthemum multiflorum plenum March 1814³³
Helianthemum polifolium [= *H. apenninum*] September 1815 (Europe)

HELLEBORUS (Ranunculaceae)
Helleborus hyemalis [= *Eranthis hyemalis*] April 1807 (Europe)
Helleborus niger December 1807; February 1809 § (Europe)
Helleborus viridis June 1810 (Europe)

HEMEROCALLIS (Liliaceae: day lilies)
Hemerocallis caerulea [= *Hosta ventricosa*] May 1810
Hemerocallis disticha [= *H. fulva* var. *disticha*] November 1818
Hemerocallis flava [= *H. lilioasphodelus*] July 1809
Hemerocallis fulva, June 1809 §, June 1810
Hemerocallis graminea May 1810
Hemerocallis japonica [= *Hosta* sp.] May 1812

HEPATICA (Ranunculaceae)
— double red February 1807
single red February 1809 §
February 1809 §

HERACLEUM (Umbelliferae: hogweeds)
Heracleum spondylium July 1810 native

HERNIARIA (Illecebraceae)
Herniaria denticulata June 1813

HESPERIS
Hesperis inodora plena [? = *H. matronalis*] July 1814

³² "The beautiful evergreen ivy ..., which gives to the venerable ruin a pleasing gloom, and picturesque effect, is not going out of bloom and its flowers are giving place to its black berries which ripen through out coldest winters, and afford a grateful food to Thrushes, Blackbirds &c." §

³³ Binomial not published until 1826.

<i>HIBISCUS</i> (Malvaceae: mallow)		
<i>Hibiscus syriacus</i>	September 1808 §	(Asia, 1500s)
<i>HIERACIUM</i> (Compositae: hawkweeds)		
<i>Hieracium aurantiacum</i>	June 1811	
<i>Hieracium molle</i>	April 1810	
<i>Hieracium murorum</i>	June 1810	
<i>Hieracium pilosella</i>	June 1808

 M		
 <i>MAGNOLIA</i> (Magnoliaceae)		
<i>Magnolia acuminata</i>	January 1813	(N. America, 1736)
<i>Magnolia fuscata</i> [= <i>M. figo</i>]	May 1825	(China, 1789)
<i>Magnolia gracilis</i> [= <i>M. liliiflora</i>]	February 1817	
<i>Magnolia grandiflora</i> ferruginea [= <i>M. grandiflora</i> 'Ferruginea']	March 1809	(N. America, 1734)

<i>Magnolia obovata</i> [= <i>Magnolia hypoleuca</i>]	January 1822	(Japan, 1865)
<i>Magnolia tripetala</i>	September 1807	(N. America, 1752)
<i>MALAXIS</i> (Orchidaceae)		
<i>Malaxis paludosa</i> ⁴⁰ [= <i>Hammarbya paludosa</i>]	July 1814	native
<i>MALUS</i> (Rosaceae: apples)		
— scarlet Siberian crab [= <i>Malus baccata</i>]	May 1809	(Asia 1784)
<i>MALVA</i> (Malvaceae: mallow)		
<i>Malva alcea</i>	August 1823	
<i>Malva moschata</i>	July 1810	
<i>Malva rotundifolia</i>	July 1809 §	
<i>Malva sylvestris</i>	July 1809 §	
—	March 1811	
<i>MARICA</i> (Iridaceae)		
<i>Marica californica</i> (= <i>Sisyrinchium californicum</i>)	July 1814	
<i>Marica striata</i> (= <i>Sisyrinchium striatum</i>)	June 1813	
<i>MAURANDYA</i> (Plantaginaceae)		
<i>Maurandya semperflorens</i> [= <i>M. scandens</i>]	August 1812	
<i>MELISSA</i> (Labiatae)		
<i>Melissa grandiflora</i> [= <i>Clinopodium grandiflorum</i>]	April 1807	
<i>MENYANTHES</i> (Menyanthaceae)		
<i>Menyanthes nymphoides</i> [sic = <i>Limnanthemum nymphoides</i>]	June 1807	
<i>Menyanthes trifoliata</i>	May 1810	native
<i>MENZIESIA</i> (Ericaceae)		
<i>Menziesia caerulea</i> [= <i>Phyllodoce caerulea</i>]	February 1821	
<i>Menziesia polifolia</i> [= <i>Daboecia cantabrica</i>]	April 1817	native
<i>MESPILUS</i> (Rosaceae)		
<i>Mespilus canadensis</i> [= <i>Amelanchier canadensis</i>]	April 1807	
<i>Mespilus grandiflora</i> [= × <i>Crataemespilus grandiflora</i>]	March 1813	
<i>Mespilus praecox</i> ⁴¹	April 1807	
<i>Mespilus pumila</i> [= <i>Aronia arbutifolia</i>]	May 1812	
<i>Mespilus pyracantha</i> [= <i>Pyracantha coccinea</i>]	[by 1800] June 1808	
<i>Mespilus tomentosum</i> [? = <i>Cotoneaster tomentosus</i>]	January 1813	
—	April 1808	
<i>METROSIDEROS</i>		
—	[by 1800]	
<i>MIMOSA</i> (= <i>Acacia</i> : Leguminosae)		
<i>Mimosa decurrens</i> [= <i>Acacia dealbata</i>]	16 January 1807 ⁴²	(Australia, 1790)
—	May 1822	

⁴⁰ Templeton recorded the rare orchid from the western side of Slievenanee, Co. Antrim, "in a marshy piece of ground" on 31 July 1809 (see Stewart and Corry 1938). The record of it flowering suggests he did have it in cultivation.

⁴¹ Perhaps the Glastonbury thorn, *Crataegus monogyna* 'Biflora' (*C. oxyacantha* 'Praecox').

⁴² "Ice totally gone. The *Mimosa decurrens* leaves killed."

<i>MIMULUS</i> (Scrophulariaceae: musk, monkey-flowers)		
<i>Mimulus luteus</i>	July 1815	
<i>Mimulus ringens</i>	May 1811	
<i>MIRABILIS</i> (Nyctaginaceae)		
<i>Mirabilis jalapa</i>	September 1807	
<i>MITELLA</i> (Saxifragaceae)		
<i>Mitella diphylla</i>	April 1810	
<i>Mitella nuda</i>	August 1818	
<i>MOMORDICA</i> (Cucurbitaceae)		
<i>Momordica elaterium</i> [= <i>Ecballium elaterium</i>]	July 1814	
<i>MONARDA</i> (Lamiaceae)		
<i>Monarda clinopodia</i>	April 1810	
<i>Monarda didyma</i>	April 1807	
<i>Monarda fistulosa</i>	April 1810	
<i>Monarda rugosa</i>	April 1810	
<i>MORUS</i> (Moraceae: mulberry)		
<i>Morus nigra</i>	April 1819	(W. Asia, 1500s)
<i>Morus papyrifera</i> [= <i>Broussonetia papyrifera</i>]	February 1812	
<i>MYAGRUM</i> (Cruciferae)		
<i>Myagrum sativum</i> [= <i>Camelina sativa</i>]	July 1812 §	
<i>MYOSOTIS</i> (Boraginaceae: forget-me-not)		
<i>Myosotis palustris</i> [= <i>M. scorpioides</i>]	June 1814	native
<i>Myosotis rupicola</i> [<i>M. alpestris</i>]	September 1815	
<i>Myosotis versicolor</i> [= <i>M. discolor</i>]	June 1814	
<i>MYRTUS</i> (Myrtaceae: myrtles)		
— [= <i>M. communis</i>]	April 1808, August 1812	(Europe, 1500s)
N		
<i>NARCISSUS</i> (Amaryllidaceae: daffodils)		
<i>Narcissus bicolor</i>	April 1814 §	
<i>Narcissus bulbocodium</i>	May 1808	
<i>Narcissus calathinus</i>	May 1808	
<i>Narcissus minor</i>	March 1809

<i>Narcissus pseudonarcissus</i>	January 1808	
— plenus ['Plenus']	March 1811	
<i>Narcissus triandrus</i>	May 1808	
— hoop petticoat	April 1809	
— double	March 1808	
<i>NARTHECIUM</i> (Melanthiaceae: bog asphodel)		
<i>Narthecium ossifragum</i>	July 1811	native
<i>NYMPHAEA</i> (Nymphaeace: waterlilies)		
<i>Nymphaea lutea</i> [= <i>Nuphar lutea</i>]	May 1807	native
<i>Nymphaea odorata</i>	March 1813	native
— white	May 1807	

O

OENOTHERA (Onagraceae: evening primrose)

<i>Oenothera biennis</i>	July 1811
<i>Oenothera fraseri</i>	July 1816
<i>Oenothera fruticosa</i>	May 1812
<i>Oenothera pumila</i> [= <i>O. perennis</i>]	June 1813

ONOCLEA (Onocleaceae)

<i>Onoclea struthiopteris</i> [= <i>Matteuccia struthiopteris</i>]	April 1819
---	------------

ONONIS (Leguminosae: rest-harrow)

<i>Ononis fruticosa</i>	March 1814
<i>Ononis rotundifolia</i>	September 1810

OPHRYS (Orchidaceae: bee orchid)

<i>Ophrys apifera</i>	(August 1819)	native
-----------------------	---------------	--------

ORCHIS (Orchidaceae)

<i>Orchis conopsea</i> [= <i>Gymnadenia conopsea</i>]	July 1814	native
<i>Orchis latifolia</i> [= <i>Dactylorhiza sambucina</i>]	June 1810	
<i>Orchis maculatus</i> [= <i>Dactylorhiza maculata</i>]	April 1810	native
<i>Orchis mascula</i>	May 1818	native
<i>Orchis pyramidalis</i> [= <i>Anacamptis pyramidalis</i>]	July 1814	native

ORNITHOGALUM (Liliaceae)

<i>Ornithogalum lacteum</i> [= <i>O. narbonense</i>]	August 1815
<i>Ornithogalum lutea</i> [= <i>Gagea lutea</i>]	April 1808
<i>Ornithogalum nutans</i>	May 1809
<i>Ornithogalum pyramidale</i>	1807
<i>Ornithogalum umbellatum</i>	June 1813
—	May 1809

OROBANCHE (Orobanchaceae: broomrapes)

<i>Orobanche rubra</i> [= <i>O. alba</i>]	August 1810	native
--	-------------	--------

OROBUS (Leguminosae)

<i>Orobus angustifolia</i> [= <i>Lathyrus pallescens</i>]	September 1815
<i>Orobus sylvatica</i>	[by 1800]
<i>Orobus tuberosus</i> [= <i>Lathyrus linifolius</i>]	June 1812

OXALIS (Oxalidaceae: wood sorrel)

<i>Oxalis acetosella</i>	April 1810	native
<i>Oxalis tetraphylla</i>	August 1818	

P

PAEONIA (Paeoniaceae: peony)

<i>Paeonia albiflora</i> [= <i>P. lactiflora</i>]	June 1814
<i>Paeonia corallina</i> [= <i>P. mascula</i>]	December 1807
— plena	February 1821
<i>Paeonia hybrida</i>	May 1812
<i>Paeonia moutan</i> [= <i>P. suffruticosa</i>]	September 1821; 28 May 1824
<i>Paeonia officinalis</i> single	May 1807
— double	May 1807
<i>Paeonia peregrina</i>	May 1808
<i>Paeonia sibirica</i> [= <i>P. anomala</i>]	May 1822
<i>Paeonia tenuifolia</i>	May 1809

<i>PANCRATIUM</i> (Liliaceae)		
<i>Pancratium illyricum</i>	June 1814	
<i>Pancratium maritimum</i>	February 1808	
<i>PAPAVER</i> (Papaveraceae: poppies)		
<i>Papaver cambricum</i> [= <i>Meconopsis cambrica</i>]	May 1808	native
<i>Papaver dubium</i>	June 1813	
<i>Papaver orientale</i>	May 1809	
<i>PARDANTHUS</i> (Iridaceae)		
<i>Pardanthus chinensis</i> [= <i>Iris domestica</i>]	August 1818	
<i>PARIETARIA</i> (Urticaceae: pellitory-of-the-wall)		
<i>Parietaria tomentosa</i>	August 1819	
<i>PARIS</i> (Liliaceae)		
<i>Paris quadrifolia</i>	September 1815	
<i>PARTHENIUM</i> (Compositae)		
<i>Parthenium integrifolium</i>	July 1816	
<i>PEDICULARIS</i> (Labiatae)

<i>Polemonium caeruleum</i>	February 1817	
<i>Polemonium mexicanum</i>	February 1821	
<i>Polemonium reptans</i>	June 1816	
 <i>POLYGALA</i> (Polygalaceae: milkwort)		
<i>Polygala officinalis</i>	May 1810	
<i>Polygala vulgaris</i>	June 1812	
 <i>POLYGONUM</i> (Polygonaceae)		
<i>Polygonum viviparum</i> [= <i>Persicaria vivipara</i>]	July 1810	

⁴³ Binomial not published until 1825.

⁴⁴ Binomial only formally published in 1833 (J. Forbes, *Hortus Woburnensis*, p. 210) although as early as 1820 the name was included in Conrad Loddiges's 1820 catalogue (p. 31). A cultivar (witch's broom) from Tollymore said to have been spotted by Lord Clanbrassil about 1750 and subsequently propagated.

POLYPODIUM (Polypodiaceae)

<i>Polyodium calcareum</i> [= <i>Gymnocarpium dryopteris</i>]	May 1819	
<i>Polyodium virginianum</i>	September 1815	

POTENTILLA (Rosaceae)

<i>Potentilla alba</i>	April 1810	
<i>Potentilla anserina</i>	June 1808	native
<i>Potentilla aurea</i>	May 1819	
<i>Potentilla bifurca</i>	July 1815	
<i>Potentilla diffusa</i> [= <i>P. norvegica</i> var. <i>diffusa</i>]	September 1815	
<i>Potentilla fruticosa</i>	July 1807	native
<i>Potentilla reptans</i>	July 1811	
<i>Potentilla rupestris</i>	July 1810	
<i>Potentilla tridentata</i>	September 1814	(N. America, 1776)

PRIMULA (Primulaceae: primroses)

<i>Primula acaulis</i> [= <i>P. vulgaris</i>]	March 18108, December 1818	native
<i>Primula cortusoides</i>		
<i>Primula farinosa</i>	August 1808	
<i>Primula helvetica</i> [= <i>Androsace helvetica</i>]	August 1818	
<i>Primula integrifolia</i>	March 1810

— semi-double white	July 1814	
— yellow Scotch	April 1814	
 <i>RUBIA</i> (Rubiaceae)		
<i>Rubia peregrina</i>	April 1810	native
 <i>RUBUS</i> (Rosaceae)		
<i>Rubus arcticus</i>	January 1813	
<i>Rubus chamaemorus</i>	January 1813	
<i>Rubus corylifolius</i>	June 1807	
<i>Rubus fruticosus</i>	September 1813 §	
<i>Rubus rosaefolius</i>	March 1822	
 <i>RUDBECKIA</i> (Compositae)		
<i>Rudbeckia digitata</i> [= <i>R. laciniata</i> var. <i>digitata</i>]	August 1808 §	
<i>Rudbeckia laciniata</i>	August 1808 §	
<i>Rudbeckia purpurea</i> [= <i>Echinacea purpurea</i>]	May 1810	
 <i>RUMEX</i> (Polygonaceae)		
<i>Rumex digynus</i> [= <i>Oxyria digyna</i>]	July 1815	native: Ben Bulben
 <i>RUSCUS</i> (Ruscaceae)		
<i>Ruscus racemosus</i> [= <i>Danae racemosa</i>]	March 1814	

S

SAGITTARIA (Alismataceae)
Sagittaria lancea [sic = *S. lancifolia*] July 1814

1 Calyx equally common as 2. 3 Petal. 4 Stamen with an anther. 5 same magnified. 6 the Fruit.

<i>SALIX</i> (Salicaceae: willows)		
<i>Salix cardinalis</i> [= <i>Salix alba</i> 'Cardinalis']	January 1813	
<i>Salix pubescens</i>	July 1813	
<i>Salix viminalis</i>	March 1810	
<i>SALVIA</i> (Labiatae: sage)		
<i>Salvia heterophylla</i> ⁴⁷	June 1813	
<i>SAMBUCUS</i> (Caprifoliaceae: elder)		
<i>Sambucus nigra</i>	June 1810	native
<i>SANGUINARIA</i> (Papaveraceae)		
<i>Sanguinaria canadensis</i>	April 1807	
<i>SAPINDUS</i> (Sapindaceae)		
—	May 1822	
<i>SAPONARIA</i> (Caryophyllaceae: soapwort)		
<i>Saponaria ocymoides</i>	May 1821	
<i>SATYRIUM</i> (Orchidaceae)		
<i>Satyrium repens</i> [= <i>Goodyera repens</i>]	October 1819	
<i>SAXIFRAGA</i> (Saxifragaceae) ⁴⁸		
<i>Saxifraga adscendens</i>	May 1819	
<i>Saxifraga aizoides</i>	July 1815	native: Ben Bulben
<i>Saxifraga ajugifolia</i> [= <i>S. prostii</i>]	May 1812	
<i>Saxifraga androsacea</i>	August 1818	
<i>Saxifraga aspera</i>	September 1810	
<i>Saxifraga caesia</i>	August 1818	
<i>Saxifraga cespitosa</i> ⁴⁹ [= <i>S. rosacea</i>]	April 1810, May 1819	native: Brandon Mountain
<i>Saxifraga ceratophylla</i> [= <i>S. pentadactylis</i>]	August 1818	
<i>Saxifraga cordata</i>	July 1814	
<i>Saxifraga decipiens</i> [= <i>S. rosacea</i>]	May 1819	
<i>Saxifraga densa</i> [? = <i>S. hypnoides</i>]	May 1819	
<i>Saxifraga geranoides</i>	May 1812	
<i>Saxifraga granulata</i>	May 1808	
<i>Saxifraga hieraciifolia</i> [= <i>Micranthes hieracifolia</i>]	September 1815	
<i>Saxifraga hircinum</i> [? <i>S. hircinum</i>]	May 1817	
<i>Saxifraga incurva</i> ⁵⁰ [= <i>S. rosacea</i>]	May 1819	
<i>Saxifraga intermedia</i>	September 1810	
<i>Saxifraga laevis</i> [? = <i>S. rosacea</i>]	May 1812	
<i>Saxifraga mutata</i>	September 1815	
<i>Saxifraga muscosa</i> [probably = <i>S. rosacea</i>]	April 1810	native: Brandon Mountain

⁴⁷ Binomial not formally published until 1835.

⁴⁸ From this long list of names, John Templeton clearly was most interested in saxifrages and he apparently had a good collection of the species and variants found in the wild in Ireland.

⁴⁹ The name applies to a species from central Europe; the Irish plant is *S. rosacea*. First collected by James Townsend Mackay in 1806 and it is probable that Templeton obtained living plants from Mackay.

⁵⁰ It is noteworthy that this name is attributed by David Don (*Trans Linn. Soc. London* **13** (2): 423 (1822) to J. T. Mackay "in literis". The habitat was given as "in Hiberniae rupibus alpinis". Don stated that "Having cultivated it for many years, I do not hesitate to give it with confidence as a distinct species. ... In some respects, but especially in habit, it approaches near to *S. caespitosa*, Linn." Templeton's source indubitably was also Mackay.

<i>Saxifraga oppositifolia</i>	January 1821	
<i>Saxifraga petraea</i> [= <i>S. tridactylites</i> var. <i>alpina</i>]	April 1810	
<i>Saxifraga pilosa</i> [= <i>Micranthes virginensis</i>]	August 1818	
<i>Saxifraga platypetala</i> [= <i>S. cespitosa</i>]	June 1813	
<i>Saxifraga punctata</i>	April 1810	
<i>Saxifraga pygmaea</i> [= <i>S. exarata</i>]	August 181	
<i>Saxifraga quinquefolia</i> [sic; <i>S. hypnoides</i> or <i>S. rosacea</i>]	May 1819	
<i>Saxifraga rivularis</i>	August 181	
<i>Saxifraga rupestris</i> [= <i>S. hypnoides</i>]	May 1819	
<i>Saxifraga spathulata</i> [= <i>S. spathularis</i>]	May 1819	
<i>Saxifraga tridactylites</i>	May 1812	
<i>Saxifraga trifida</i> [= <i>S. hypnoides</i>]	January 1821	
<i>Saxifraga umbrosa</i> [= <i>S. spathularis</i>]	May 1811, 1815	native: Muckish
<i>Saxifraga virginiensis</i> [= <i>Micranthes virginensis</i>]	May 1819	
<i>Saxifraga viscosa</i> [= <i>S. hypnoides</i>]	May 1819	
 <i>SCABIOSA</i> (Dipsacaceae: scabious)		
<i>Scabiosa canescens</i>	February 1821	
 <i>SCILLA</i> (Liliaceae)		
<i>Scilla amoena</i>	April 1809	
<i>Scilla autumnalis</i>	July 1808 §	
<i>Scilla biflora</i> [= <i>Oziroe biflorum</i>]	February 1809 §, April 1811	
— <i>alba</i>	June 1820	
— <i>rubra</i>	July 1820

<i>Scilla italicica</i> [= <i>Hyacinthoides italicica</i>]	April 1809	
<i>Scilla non-scripta</i> <i>incarnata</i> [= <i>Hyacinthoides non-scripta</i> 'Incarnata']	July 1816	
<i>Scilla nutans</i> [= <i>Hyacinthoides non-scripta</i>]	May 1809	
<i>Scilla peruviana</i>	July 1809 §	
<i>Scilla siberica</i>	July 1816	
<i>Scilla verna</i>	June 1810	native
 <i>SCOLOPENDRIUM</i> (Aspleniaceae)		
<i>Scolopendrium officinarum</i> <i>ramosum</i> [= <i>Asplenium scolopendrium</i> 'Ramosum']	July 1815	
—	March 1813	
 <i>SCOPARIUM</i> (Leguminosae)		
<i>Scoparium junceum</i> [= <i>Spartium junceum</i>]	July 1807	
 <i>SCUTELLARIA</i> (Labiatae: scullcaps)		
<i>Scutellaria alpina</i>	July 1814	
<i>Scutellaria lupulina</i> [= <i>S. alpina</i> ssp. <i>supina</i>]	July 1815	
<i>Scutellaria minor</i>	September 1815	
 <i>SEDUM</i> (Crassulaceae: stonecrop)		
<i>Sedum anglicum</i>	June 1813	
<i>Sedum crenulatum</i> ⁵¹	July 1814	
<i>Sedum forsteri</i>	July 1814	
<i>Sedum telephium</i> [= <i>Hylotelephium telephium</i>]	July 1814	
— <i>major</i>	July 1814	
<i>Sedum virens</i>	July 1814	

⁵¹ Binomial not published until 1858.

<i>SEMPERVIVUM</i> (Crassulaceae)		
<i>Sempervivum arachnoideum</i>	March 1811	
<i>Sempervivum globiferum</i>	May 1821	
<i>Sempervivum hirtum</i> [= <i>Jovibarba globifera</i> ssp. <i>hirta</i>]	April 1810	
<i>Sempervivum montanum</i>	April 1810	
<i>Sempervivum sediforme</i> [<i>sic</i> , ? <i>Sedum sediforme</i>]	April 1810	
<i>SENECIO</i> (Compositae: groundsel)		
<i>Senecio abrotanifolius</i> [= <i>Jacobaea abrotanifolia</i>]	July 1815	
<i>Senecio jacobaea</i> [= <i>Jacobaea vulgaris</i>]	November 1811	native
<i>Senecio vulgaris</i>	December 1811	native
<i>SERAPIAS</i> (Orchidaceae: helleborines)		
<i>Serapias latifolia</i> [= <i>Cephalanthera damasonium</i>]	August 1811	
<i>Serapias palustris</i> [= <i>Epipactis palustris</i>]	July 1814	native
<i>SERRATULA</i> (Compositae)		
<i>Serratula alpina</i> [= <i>Saussurea alpina</i>]	July 1814	
<i>Serratula quinquefolia</i> [= <i>Klasea quinquefolia</i>]	Julye 1816	
<i>Serratula spicata</i> [= <i>Liatris spicata</i>]	April 1807	
<i>SHERARDIA</i> (Rubiaceae)		
<i>Sherardia arvensis</i>	May 1811	native
<i>SIBTHORPIA</i> (Scrophulariaceae)		
<i>Sibthorpia europaea</i>	July 1810	native
<i>SILENE</i> (Caryophyllaceae)		
<i>Silene acaulis</i>	July 1808, July 1815	native: Ben Bulben
<i>Silene alpestris</i>	September 1815	
<i>Silene bupleurifolium</i> [? <i>S. bupleuroides</i>]	August 1818	
<i>Silene fruticosa</i>	October 1807	
<i>Silene maritima</i> [= <i>S. uniflora</i>]	June 1810	native
<i>Silene nutans</i>	May 1821	
<i>Silene saxatilis</i>	August 1818	
<i>Silene saxifraga</i>	November 1821	
<i>Silene supina</i>	August 1818	
<i>Silene vallesia</i>	July 1814	
<i>SILPHIUM</i> (Compositae)		
<i>Silphium perfoliatum</i>	August 1808 §	
<i>SISYRINCHIUM</i> (Iridaceae)		
<i>Sisyrinchium anceps</i> [= <i>S. angustifolium</i>]	June 1823	
<i>Sisyrinchium striatum</i>		
<i>SOLANUM</i> (Solanaceae)		
<i>Solanum tuberosum</i>	June 1822	
<i>SOLDANELLA</i> (Primulaceae)		
<i>Soldanella alpina</i>	April 1814 §	
<i>SOLIDAGO</i> (Compositae: golden red)		
<i>Solidago altissima</i> [= <i>S. canadensis</i>]	September 1809 §	
<i>SORBUS</i> (Rosaceae: rowan)		
<i>Sorbus aucuparia</i>	May 1808	native

<i>SPARTIUM</i> (Leguminosae)		
<i>Spartium junceum</i>	July 1810	
<i>Spartium scoparium</i> [= <i>Lebeckia sepiaria</i>]	May 1807	
<i>Spartium striatum</i> [sic; probably <i>Cytisus striatus</i>]	June 1810	
<i>SPERGULA</i> (Caryophyllaceae)		
<i>Spergula arvensis</i>	June 1809 §	
<i>Spergula subulata</i> [= <i>Sagina subulata</i>]	May 1809	
<i>SPIGELIA</i> (Strychnaceae)		
<i>Spigelia marilandica</i>	September 1820	(N. America, 1694)
<i>SPIRAEA</i> (Rosaceae)		
<i>Spiraea aruncus</i> [= <i>Aruncus dioicus</i>]	June 1810	
<i>Spiraea chamaedryfolia</i>	May 1808	
<i>Spiraea hypericifolia</i>	May 1808	
<i>Spiraea laevigata</i> [= <i>Sibiraea laevigata</i>]	May 1809	
<i>Spiraea salicifolia</i>	June 1810	
<i>Spiraea thalictroides</i> [= <i>S. aquilegiifolia</i>]	February 1808	
<i>Spiraea tomentosa</i>	June 1808	
<i>Spiraea trifoliata</i> [= <i>Gillenia trifoliata</i>]	June 1810	
<i>Spiraea ulmaria</i> [= <i>Filipendula ulmaria</i>]	June 1812 §	
<i>Spiraea ulmifolia</i> [= <i>S. chamaedryfolia</i> var. <i>ulmifolia</i>]	February 1808	
<i>STAPHYLEA</i> (Staphyleaceae)		
<i>Staphylea pinnata</i>	June 1808	
<i>STATICE</i> (Plumbaginaceae)		
<i>Statice arenaria</i> [= <i>Armeria arenaria</i>]	June 1818	
<i>Statice armeria</i> [= <i>Armeria vulgaris</i>]	May 1808	
<i>Statice cephalotes</i> [= <i>Armeria pseudarmeria</i>]	June 1813
