Killifishes of the world **Old World Killis**

Aphyosemion
Lampeyes
Ricefishes

Dr. Lothar Seegers

Systematical overview of the genera listed in the volumes of "Killifishes of the World" and the number of their respective species and subspecies

Familie:	Profundulidae Hoedeman & Bronner, 1951	
Gattung:	<i>Profundulus</i> HUBBS, 1924	(5)
Familie:	Goodeidae Jordan, 1923	
Unterfamilie:	Goodeinae JORDAN, 1923 (Etwa 35 Arten, nicht bei den Killifischen aufgeführt; about 35 species, mentioned separately from Killifishes)	
Unterfamilie:	Empetrichthyinae JORDAN, EVERMANN & CLARK, 1930	
Gattungen:	<i>Crenichthys</i> HUBBS, 1932	(6)
	<i>Empetrichthys</i> GILBERT, 1893	(4)
Familie:	Orestiidae Jordan, 1923	
Gattung:	<i>Orestias</i> VALENCIENNES, 1839	(5-43)
Familie:	Aplocheilidae Bleeker, 1860	
Gattungen:	<i>Adamas</i> HUBER, 1979	(1)
	<i>Aphyplatys</i> CLAUSEN, 1976	(1)
	<i>Aphyosemion</i> MYERS, 1924	(114)
	<i>Aplocheilus</i> McCLELLAND, 1839	(5)
	<i>Diapteron</i> HUBER & SEEGER, 1977	(5)
	<i>Epiplatys</i> GILL, 1862	(32)
	<i>Foerschichthys</i> SCHEEL & ROMANO, 1981	(1)
	<i>Fundulosoma</i> AHL, 1924	(1)
	<i>Nothobranchius</i> PETERS, 1844	(31)
	<i>Pachypanchax</i> MYERS, 1933	(3)
	<i>Paranothobranchius</i> SEEGER, 1985	(1)
	<i>Pronothobranchius</i> RADDA, 1969	(1)
Familie:	Rivulidae Myers, 1925	
Gattungen:	<i>Austrofundulus</i> MYERS, 1932	(2)
	<i>Campellobias</i> VAZ-FERRERA & SIERRA, 1974	(3)
	<i>Cynolebias</i> STEINDACHNER, 1876	(48)
	<i>Cynopocilus</i> REGAN, 1912	(1)
	<i>Leptolebias</i> MYERS, 1952	(7)
	<i>Maratecoara</i> COSTA, 1995	(2)
	<i>Millerichthys</i> COSTA, 1995	(1)
	<i>Moema</i> COSTA, 1989	(3)
	<i>Neofundulus</i> MYERS, 1924	(4)
	<i>Pituna</i> COSTA, 1989	(1)
	<i>Plesiobias</i> COSTA, 1990	(5)
	<i>Pterolebias</i> GARMAN, 1895	(11)
	<i>Rachovia</i> MYERS, 1927	(5)
	<i>Renova</i> THOMERSON & THAPHORN, 1995	(1)
	<i>Rivulus</i> POEY, 1860	(90)
	<i>Simpsonichthys</i> CARVALHO, 1959	(3)
	<i>Spectroblebias</i> COSTA & NIELSEN, 1997	(1)
	<i>Stenolebias</i> COSTA, 1995	(2)
	<i>Terranatos</i> TAPHORN & THOMERSON, 1978	(1)
	<i>Trigonectes</i> MYERS, 1925	(4)

Die Arten*

The species*

Adrianichthyidae WEBER, 1913

Adrianichthys WEBER, 1913

A. kruyti WEBER, 1913

Xenopoeilus REGAN, 1911

X. oophorus KOTTELAT, 1990

X. poptae WEBER & DE BEAUFORT, 1922

X. sarasinorum (POPTA, 1905)

Horaichthyidae KULKARNI, 1940

Horaichthys KULKARNI, 1940

H. setnai KULKARNI, 1940

Oryziidae SETHI, 1960 (= Oryziatidae ROSEN, 1964)

Oryzias JORDAN & SNYDER, 1906

O. carnaticus (JERDON, 1849)

O. celebensis (WEBER, 1894)

O. curvirostris (NICHOLS & POPE, 1927)

O. javanicus (BLEEKER, 1854)

O. latipes latipes (TEMMINCK & SCHLEGEL, 1850)

O. latipes sinensis CHEN, HIROSHI & CHIU, 1989

O. luzonensis (HERBE & ABLAN, 1934)

O. marmoratus (AURICH, 1935)

O. matanensis (AURICH, 1935)

O. mekongensis UWA & MAGTOON, 1986

O. melastigmus (McCLELLAND, 1839)

O. minutillus SMITH, 1945

O. nigrimas KOTTELAT, 1990

O. orthognathus KOTTELAT, 1990

O. profundicola KOTTELAT, 1990

O. timorensis (WEBER & DE BEAUFORT, 1922)

Aplocheilichthyidae SETHI, 1960

Aplocheilichthys BLEEKER, 1863

A. antinorii (VINCIQUERRA, 1883)

A. atripinna (PFEFFER, 1896)

A. bracheti BERKENKAMP, 1983

A. brichardi (POLL, 1971)

A. bukobanus (AHL, 1924)

A. camerunensis RADDA, 1971

A. centralis SEEGERS, 1996

A. ehrichi BERKENKAMP & ETZEL, 1994

A. fuellborni (AHL, 1924)

A. hutereaui (BOULENGER, 1913)

A. jeanneli (PELLEGRIN, 1935)

A. johnstoni (GÜNTHER, 1893)

A. kabae DAGET, 1962

A. kassensiensis (AHL, 1924)

A. katangae (BOULENGER, 1912)

A. keilhacki AHL, 1928

A. kingii (BOULENGER, 1913)

A. kongoranensis (AHL, 1924)

A. lamberti DAGET, 1962

A. loati (BOULENGER, 1901)

A. lualabaensis (POLL, 1938)

A. luxophthalmus luxophthalmus BRÜNING, 1929

A. luxophthalmus hannerzi SCHEEL, 1968

A. macrurus (BOULENGER, 1904)

A. maculatus maculatus KLAUSEWITZ, 1957

A. maculatus lacustris SEEGERS, 1984

A. matthesi SEEGERS, 1996

A. mediolateralis POLL, 1967

A. moeruensisi (BOULENGER, 1914)

A. myaposaee (BOULENGER, 1908)

A. myersi POLL, 1952

A. nigrolateralis POLL, 1967

A. nimbaensis (DAGET, 1948)

A. normani AHL, 1928

A. omaculatus WILDEKAMP, 1977

A. paffi DAGET, 1954

A. pumilus (BOULENGER, 1906)

A. rancureli DAGET, 1964

A. rudolfianus (WORTHINGTON, 1932)

A. scheeli ROMAN, 1970

A. schioetzi SCHEEL, 1968

A. spillauchen (DUMÉRIL, 1859)

A. usanguensis WILDEKAMP, 1977

A. vitschumbaensis (AHL, 1924)

Hylopanchax POLL & LAMBERT, 1965

H. stictopleuron (FOWLER, 1949)

Hypposanchax MYERS, 1924

H. catenatus RADDA, 1981

H. jobaerti POLL & LAMBERT, 1985

H. jubbi POLL & LAMBERT, 1985

5 Photos: L. Seegers

Nigeria-Prachtkärpfling / Nigerian Killi
Makurdi, Nigeria; B; 6,0 cm

Aphyosemion gardneri ist in Süd-Nigeria und West-Kamerun weit verbreitet. Es existieren zahlreiche Farbformen, von denen einige als Unterarten betrachtet werden. Bezüglich ihres Ablaichverhaltens sind die *A. gardneri*-Formen wenig wählerisch, sie laichen

Aphyosemion gardneri is widespread in southern Nigeria and western Cameroon. A lot of color forms are known of which some basic phenotypes are considered as subspecies. As to their spawning habits *A. gardneri* forms are not restricted to a certain medium, they

sowohl an feinfiedrigen Pflanzen oder Wurzeln als auch auf dem Bodengrund ab. Bei der Zucht kann man als Ablaichsubstrat Torffasern oder einen Mop aus Kunstfasern verwenden, der mit Hilfe eines Korkens an der Wasseroberfläche schwimmt.

may spawn as soil spawners but as plant spawners as well. This group sometimes was called "switch spawners". For this type of killifish peat or spawning mops made from yarn are useful as spawning media. The latter may float at the water surface held by a cork.

 Zickzack-Prachtkärpfling, Gérys Prachtkärpfling / Géry's Killi
 Bwian, Gambia

Photo: L. Seegers

A03356-4 *Aphyosemion geryi* ist der nordwestlichste Vertreter der Gattung, er wurde früher zur Gruppe der "kleinen Roloffia-Arten" gezählt. Die Fische laichen an Pflanzen, aber auch am Bodengrund ab.
Aphyosemion geryi is the most northwesterly member of the genus. Formerly the species was included in the group of small Roloffia species. The fish spawn between plants but as soil spawners too.

Photos: L. Seegers

A03475-4 *Aphyosemion rectagoense* RADDI & HUBER, 1977

Léconi-Prachtkärpfling / Léconi Killi, "G 11/76" [T.L.]

6 km W Léconi town on Franceville-Bongoville road, Gabon; W; 4,5 cm

Das typische Ablaichverhalten aller *Aphyosemion*-Arten beginnt damit, daß das Männchen über das Weibchen schwimmt und der Partnerin in engem Kontakt zu einem Ablaichort folgt. Dort hält das Weibchen an und das Männchen schwimmt an seine Seite.

Usually the spawning habit of *Aphyosemion* species starts in that the male approaches the female and swims over the partner. It is the female which looks for a suitable spawning locality followed by the male which keeps close contact. Then the female stops and the male

Dieses versucht dann das Weibchen mit der Rückenflosse zu umgreifen, und beide Tiere drücken sich gegen den Bodengrund. Das Weibchen gibt ein Ei ab, das vom Männchen befruchtet wird, und beide Tiere trennen sich mit einem Ruck voneinander.

swims alongside trying to "embrace" the partner with fins overlapped. The body is firmly pressed against the spawning medium. The fish quickly jerk their bodies expelling a single egg into the plants or peat.

Die ersten *Aphyosemion scheeli* wurden als Aquaristik-Importe aus Nigeria nach Deutschland importiert und zunächst mit dem ungültigen Phantasienamen "Aphyosemion Burundi" verbreitet. Der genaue Fundort war unbekannt. RADDA beschrieb die Fische
 The first specimens of *Aphyosemion scheeli* were imported as ornamental fish from Nigeria to Germany and spread with the invalid name "Aphyosemion Burundi". The exact collecting locality then was unknown. RADDA described the species in honour of J. J. SCHEEL.

zu Ehren von J. J. SCHEEL. Erst später wurde durch Aufsammlungen von RADDA die Vermutung bestätigt, daß diese Art in Südost-Nigeria beheimatet ist. Die Fische gehören in die *A. gardneri*-Gruppe und laichen wie diese Art als Boden- oder Pflanzenlaicher ab.
 Only later on it was confirmed by collections of RADDA that this species indeed occurs in southeastern Nigeria. The fish are belonging to the *A. gardneri* species group and as most or all members of this group they use to spawn both as soil spawners or as plant spawners.

A03946-4 *Aphyosemion splendopleure* (BRÜNING, 1929)

Grüner Glanzprachtkärpfling / Splendid Killi

Kumba, West-Kamerun (= ex *volcanum*) / Kumba, western Cameroon (= ex *volcanum*); W; 5,5 cm

Aphyosemion splendopleure weist eine weite Verbreitung entlang des kamerunischen Küsteneinzugs auf. Hier ist die als *A. volcanum* beschriebene Form aus Kumba zu sehen. Alle Arten der UnterGattung *Chromaphyosemion*, zu der *A. splendopleure* gehört, laichen

Aphyosemion splendopleure has a wide distribution along the coastal drainage of mainly Cameroon. Here the phenotype is shown which was described as *A. volcanum* from Kumba. All members of the subgenus *Chromaphyosemion* to which *A. splen-*

sowohl als Haftlaicher an Pflanzen und Wurzeln ab, als auch als Bodenlaicher. Die Zucht ist deshalb mit Torf wie bei Saisonfischen möglich, aber die Eier können auch von Pflanzen oder einem Ableichmop abgelesen und in Wasser zur Entwicklung gebracht werden. *dopleure* belongs are able to spawn as plant spawners as well as soil spawners. It is possible, therefore, to breed this species like a seasonal fish by using peat, but it is also possible to use plants and to move the eggs to containers for development.

A03560-4 *Aphyosemion walkeri* ist in der Gattung *Aphyosemion* ein typischer Bodenlaicher. Beim Ablaichen drückt sich das Paar tief in den Bodengrund, um die Eier in der Trockenzeit vor dem Austrocknen zu schützen.

Within the genus Aphyosemion, A. walkeri is a typical soil spawner. When spawning the pair presses its body deeply into the soft soil to protect the eggs against desiccation during the dry season.

Símbolos

Teniendo en cuenta la enorme variedad de lenguas a nivel mundial, hemos decidido, intencionadamente, sustituir cualquier descripción textual detallada por símbolos internacionales. De esta forma se pueden obtener los datos más importantes, sobre las especies y su cuidado. Los símbolos sobre el cuidado siempre hacen referencia a las condiciones en acuario y no a las del país de origen ó de los biotopos.

Continente de origen

Simplemente, fíjese en la letra que va delante del código numérico

A = Africa E = Europa N = Norte America
S = Latino America X = Asia/Australia

Edad

El último número del código siempre significa la edad del pez

- 1 = muy pequeño (avejin /juvenil pequeño)
- 2 = pequeño (juvenil/tamaño comercial)
- 3 = mediano (sub-adulto/buen tamaño comercial)
- 4 = grande (adulto/tamaño de cría)
- 5 = extra grande (adulto totalmente desarrollado)
- 6 = excepcionalmente grande (especimen de exposición)

Procedencia

W = salvaje B = criado en acuario
Z = forma de cría (variedad "artificial") X = híbrido

Tamaño

... cm = tamaño aproximado que el pez puede alcanzar de adulto.

Sexo

♂ macho ♀ hembra ♂♀ pareja

Temperatura

- <D> 18-22°C(64-72°F) (temperatura ambiente)
- > 22-25°C(72-77°F) (muchos de los peces tropicales)
- △ 24-29°C(75-85°F) (Discos etc.)
- ▽ 10-22°C(50-72°F) (agua fría/templada; p.e. Norte America/Europa)

Valor de pH

- P pH 6,5-7,2 Sin necesidades especiales (neutro)
- IP pH 5,8-6,5 prefiere agua blanda, ligeramente ácido
- IP pH 7,5-8,5 prefiere agua dura y alcalina

Iluminación

- ☉ brillante. Mucha luz/sol
- ☾ no demasiado intensa
- ☿ muy tenue

Alimentación

- ☺ omnívoros; alimento seco, sin necesidades especiales
- ☹ dieta especial; alimento vivo y congelado
- ☼ piscívoro; se alimenta de peces vivos
- ☿ herbívoro; necesita alimento vegetal

Nivel de natación

- ☐ aguas medias/todos los niveles
- ☒ capas superficiales/nadador de superficie
- ☑ capas inferiores/nadador de fondo

Decoración del acuario

- ☐ Sólo rocas y el sustrato
- ☒ Rocas y raíces, cuevas
- ☑ Acuario plantado con rocas y raíces

Comportamiento/Reproducción

- ☺ mantener en parejas ó tríos
- ☹ Pez de cardumen, no mantener menos de 10 ejemplares
- ☼ Ovíparo
- ☿ Vivíparo
- ☑ Incubador bucal
- ☒ criador en cuevas
- ☼ Constructor de nidos de burbujas
- ☹ comedor de algas/limpiacristales (raíces + alimento vegetal)
- ☼ pez no agresivo, fácil de mantener (acuario comunitario)
- ⚠ difícil de mantener, leer previamente literatura especializada
- ☼ cuidado, extremadamente difícil, solo para especialistas experimentados
- ⊖ los huevos necesitan cuidados específicos
- ⊖ especies protegidas (WA), se necesitan permisos especiales ("CITES")
- ~L~ anfibios (necesitan zona de tierra)
- <BW> agua salobre (añadir sal al agua)
- ~SW~ marino (vive en el mar)
- <~SW~ juvenil en el mar (después tanto en agua salobre como en agua dulce
- ~SW~> juvenil en agua dulce (después en el mar)
- <~SW~> tanto en el mar como en agua dulce (cambial)

Tamaño mínimo de acuario

☼	super pequeño	20-40 cm	5-20 l
☒	pequeño	40-80 cm	40-80 l
☒	mediano	60-100 cm	80-200 l
☒	grande	100-200 cm	200-400 l
☒	XL	200-400 cm	400-3 000 l
☒	XXL	más de 400 cm	más de 3 000 l

(Acuarios de exposición)
