

June 30, 2016

Judith Whitney, Clerk  
Vermont Public Service Board  
112 State Street, 4<sup>th</sup> Floor  
Montpelier, VT 05620

**Re: Request for Clarification Regarding Docket No. 8652 Order dated 6/24/2016**

Dear Public Service Board Members,

Thank you for your deliberations and acceptance of GMP's petition to extend some net metering opportunities to customers above the statutory cap via the Order issued June 24, 2016 in Docket 8652. On behalf of Renewable Energy Vermont's members and our members' customers impacted by the Order, I write to seek clarification on the Board's decision and implementation process. The questions below are not a request for reconsideration of the Order, because it is not the intent to delay implementation of the Order.

*Attrition Block*

The Board's Order states that "[GMPs] petition ... is hereby approved, subject to the discussion in this Order." REV requests confirmation that the Board approved GMP's revised net metering cap of 123 MW, under which projects are considered eligible for net metering rules and rates in effect at the time of petition, per the Order and evidence and testimony submitted by GMP and the Department of Public Service (DPS) throughout that Docket (excerpts attached hereto).

As shown in the testimony put forth by GMP, the cap of 123 MW was proposed to be "*the estimated attrition [25%] plus the revised cap...*". This calculation was supported by the DPS testimony, which stated "*The Department supports the use of a 25 percent attrition rate... to establish GMP's net metering cap. The Department recognizes that if less than 25 percent of the applied-for projects drop out of the queue, GMP could be seen to exceed its cap. However, the Department submits that this is an acceptable outcome*". DPS further stated that "*those net metering applications... within the cap plus 25 percent attrition rate should not be contingent on actual attrition, **but instead should be processed and moved forward in the normal course.***" (emphasis added). For clarity, the list identifying the projects accepted under this 123 MW cap is that which was submitted by GMP on January 6th, 2016 ("Attachment\_II\_Net-Metering\_Queue\_Redacted") and attached hereto.

REV reads the Board's Order as approving the cap as proposed by GMP and supported by the DPS, and would welcome confirmation from the Board that this is in fact the case.

### *Host Customer Property Definition*

Several customers have reached out to our members with questions regarding what qualifies as a “host customer’s property”. Related to attesting that host electricity use thresholds are met per the Order, a clearer definition of "host customer's property" may assist GMP in its review of applications.

For example: A site is owned by a town and its’ associated school district or other building (within reasonable distance (~10 miles) of the solar site) that will be the consumers of the more than the 50% required threshold outlined in the Order. However, the project is not located immediately at the school or town building, but is located on property owned by the customer, would the project qualify as eligible?

Another example: A site is a multi-family housing building such as a condominium. The project would exceed the 50% electricity use by host threshold if each of the participating customers’ meters are considered in totality, however no single meter alone will reach the 50% threshold. REV reads the order that host is not defined as a single meter on the customer’s property and requests confirmation from the Board.

Many commercial users hold real estate ownership in a separate legal entity from their business. So the property tax bill or the property deed name may not match the business name. REV reads the Order to intend that a “host customer’s property” includes any property in which the host occupies the property and holds a legal interest in the property to include interests held by lease, easement, joint ownership, or other reasonable proof of legal interest. We additionally request that the Board confirm this reading and these provisions of the Order so that participating in this limited net metering opportunity does not require a host to alter their property legal ownership to satisfy the spirit and intent of this “close to the host” provision.

A narrow reading of the Order would result in town and community solar projects being ineligible for participating in net metering in 2016, despite the projects being shovel ready in 2015.

### *Application Process*

In order to avoid potential conflicts and delay, REV requests clarity from the Board on the process and timing for resolving differences of interpretation between GMP and customers or project developers related to project eligibility under the Board’s criteria. An independent regulator or mediator such as the Board or DPS would be most fair and consistent with statute.

### *Solar Map*

The Order directs that eligible projects must be located in areas identified as green on GMP’s solar map. GMP’s website states that “the solar map is updated weekly”.<sup>1</sup> With continuous changes to

---

<sup>1</sup> <http://www.greenmountainpower.com/innovative/solar/solar-map/>

the map occurring it is extremely difficult for customers and project developers to know whether their projects will still be located in green areas given passage of time of potential more than a month between project submission and review by GMP.

Consistent with the Board's Order stating that "the statute requires the Board to consider the costs and benefits of net-metering systems already connected", Renewable Energy Vermont respectfully requests clarification from the Board that project eligibility under above the cap be "green" on GMP's solar map published June 24, 2016.

REV requests these clarifications in order to provide certainty and avoid confusion and conflict for customers and businesses in determining project eligibility. Clarification on the questions above would also aid GMP in reviewing projects for eligibility and reduce costly delays. We would greatly appreciate response from the Board or the Board's designee on any of the questions above and separate responses on each question as soon as information is available if that would expedite these clarifications.

Respectfully submitted,

Olivia Campbell Andersen  
Executive Director  
Renewable Energy Vermont

Enclosures:

- Exhibit A: January 6th, 2016 "Attachment II: Net-Metering Queue Redacted"
- Exhibit B: Excerpts from DPS Comments dated 12-18-2015
- Exhibit C: Excerpts from GMP Response to DPS Comments dated 12-31-2015

*Renewable Energy Vermont represents businesses, non-profits, utilities, and individuals committed to reducing our reliance on dirty fossil fuels by increasing clean renewable energy and energy efficiency in Vermont. Vermont's clean energy economy supports at least 17,715 sustainable jobs, representing approximately 6% of Vermont's workforce. Together, we will achieve 90% total renewable energy (electric, thermal, transportation) by 2050 in order to reduce climate pollution.*

The Department recognizes that if less than 25 percent of the applied-for projects drop out of the queue, GMP could be seen to exceed its cap. However, the Department submits that this is an acceptable outcome, given the ambiguities in the statute set forth above, as well as the fact that the statute, by its very terms, allows for significant changes in the cap based on a given year's peak demand. In order to provide certainty to the process, the Board should confirm that all projects that have a complete and valid application filed prior to the point where GMP reached its cap of 15 percent peak demand plus 25 percent attrition rate are deemed within the cap. Stated otherwise, those net metering applications filed last in time but still within the cap plus 25 percent attrition rate should not be contingent on actual attrition, but instead should be processed and moved forward in the normal course.

## **II. Above-Rate Cap Proposal**

The Department generally supports GMP's proposal to allow 7.5 MW above its cap on a limited and targeted basis. At first blush, the conditions required by GMP appear reasonable, and some form of a lottery appears to be a fair procedural path. Nevertheless, the Department believes it is important to get the view of stakeholders directly involved in this process prior to making a final determination. Accordingly, the Department recommends that the Board establish a date for stakeholders to provide comments on this (and any other issue), after which the Department will provide additional comment.

## **III. Procedural Recommendation**

The Board should conduct this proceeding as an uncontested matter. There is no statutory or administrative requirement to address this issue in a contested case fashion. Petitions filed under 30 V.S.A. § 219a(h)(1)(A) do not expressly require review using a formal hearing process;<sup>5</sup> given the goal of expediency in this proceeding, the Department believes that it is appropriate to review the Petition on the papers using a notice and comment process. Such procedures will likely have

---

<sup>5</sup> Compare *Investigation into Establishing Rate Schedules for Power Sold to the Purchasing Agent Pursuant to Public Service Board Rule 4.100*, Docket No. 8010, Order of 8/22/14, at n.5 ("Board Rule 4.104(E) expressly states that the Board shall approve or modify proposed rate schedules 'after hearing.' Pursuant to 3 V.S.A. § 801(b)(2), a proceeding requiring hearing is a 'contested case' and therefore, requires the use of a contested case process.").

protocols. Given that nearly 20 years have passed, it is not practical to determine with exact precision what each company's protocols were.

Practical examples help illustrate this point. First, VT Marble's peak loads were not coincident with GMP's and CVPS's and VT Marble's logs are no longer available to ascertain its precise peak. Second, Rochester and Readsboro's coincident peak loads are also not available, plus they did not appear to file a FERC Form 1 due to their small size. Based on 4.100 kWh sales information from 1996, we believe the effect on the net metering cap would be small (approximately 0.225 MW which is 15% of their combined, estimated 1.5 MW peak load). Finally, we contacted VELCO to ascertain whether they had any 1996 load and/or peak data available, and they did not.

For all these reasons, the 1996 peak load cannot be determined with precise certainty. Nonetheless, we do not object to using 748 MW (which ties out to legacy GMP, CVPS, and Omya's FERC Form 1s) as the 1996 peak. This has the effect of increasing our net metering cap from 106 to 122 MW.

We have also considered the Department's proposal that "[i]n order to provide certainty to the process, the Board should confirm that all projects that have a completed and valid application filed prior to the point where GMP reached its cap of 15 percent peak demand plus 25 percent attrition rate are deemed within the cap." Comments at 6. We appreciate the Department's sentiment, which is to provide certainty to the process that the projects are deemed within the cap *now*, rather than at the time of interconnection (which could be as long as a year from today).

In response, we pulled further historical data to ensure the attrition rate was rigorously substantiated. At the Department's suggestion, GMP developed a weighted-average method of estimating the attrition rate of the net metering program to date as shown in Exhibit 3. The program-to-date attrition rate is calculated in the first table within three different size ranges. The second table calculates the average size of the applications in each range, and the third table multiplies the estimated attrition rate times the estimated number of projects in the queue. When the project-level attrition estimates are converted back to MW in the third table, the results indicate that 11 MW of attrition can be expected.

As shown in Exhibit 4, the estimated attrition plus the revised cap totals 123 MW. This estimate is 1 MW (less than 1%) higher than the 122 MW in the original petition. We will therefore be amending our Petition to make explicit that we seek authority to interconnect up to 123 MW (representing a 112 MW cap plus 11 MW of expected attrition) so as to allow certainty for projects to go forward, as per the Department's recommendation.

Furthermore, when the full application queue is posted to GMP's website on January 6<sup>th</sup>, we will make it clear which applicants will be accepted as a result of the 1 MW increase. We will maintain the list of projects and their status on the GMP website and update it on a weekly basis.

Finally, we also persist with our initial request, as set forth in our Petition, for a limited, strategic extension of GMP's net metering cap.

We appreciate the Department's Comments as well as the participation of other stakeholders and the ultimate guidance and decision of the Public Service Board.
