much is so
Designed to match your style

Pick a print format

Make your choice of C (conventional) or H (HDTV) format prints. And better yet, you can choose when you shoot, or make the decision later when you order your prints.

C format

H format

Index prints for easy reordering

Ordering enlargements or extra prints for family or friends is quick and easy, thanks to the handy index print that shows every shot on the film.

22mm Fujinon lens

The high quality 22mm Fujinon lens is the secret behind the Nexia Q1's beautifully clear results. Simply frame your shot and press the shutter release for superb results, every time.

Auto flash with red-eye reduction

Low light? No problem. The Nexia Q1's Auto Flash senses ambient light and automatically fires the flash when necessary. What's more, a red lamp fires before the flash to remove the unwanted red-eye effect.

Auto-focus

The Nexia Q1 is designed for real point-and-shoot fun, so you get auto-focus to keep your subjects razor-sharp. There's no fussing with complicated camera settings, and that means you're always ready to capture those special, once-in-a-lifetime moments.

Drop-in Film Loading

Easy, error-free film-loading: simply drop the cartridge in—it only fits one way—and close the film door. Auto wind advances the film to the first frame, and you're ready to start shooting. When the roll is finished it automatically rewinds, ready for the next cartridge.
