

CHECK STOCK SECURITY FEATURES

Quality Check Stock At an Affordable Price

Protect yourself by using quality 24-pound check stock with multiple security features. Wellspring Software's check stock is the first defense against forgery, counterfeiting, alteration, erasure, toner removal, and photocopying. This bottom check stock is designed for PrintBoss check printing. The smooth bottom edge helps your bank easily read your MICR line. Page perforations and check background colors fit exactly with the standard form files distributed with PrintBoss so that checks can be printed within minutes of installing the software.

- A** **Check21 Image Ready**
When a financial institution stores checks electronically or as a microfilm it is necessary for the data to take up a small amount of storage space and be readable. Through the use of passive inks with a neutral finish, our checks assure the smallest image size possible and reduce the background clutter to make the check readable and yet secure.
- B** **True Watermark**
A watermark is embedded within the paper, so it cannot be copied or scanned.
- C** **Toner Grip Paper**
Toner grip paper chemically bonds laser toner to the paper so modification rips away actual paper fibers.
- D** **Fluorescent Fibers**
Embedded in the paper are fluorescent fibers that glow under an ultraviolet light.
- E** **Void Paragraph**
VOID appears multiple times across the face of the check when copied.

(sample front of check)

F **Rainbow Prismatic Colored Stock**
Two-colored paper is difficult to photocopy accurately.

G **Chemically Reactive Paper**
Various color stains appear when alteration is attempted.

H **Micro-Printing**
Line borders on check are micro-printed with "Wellspring Software." Text is too small to be photocopied or scanned.

(sample back of check)

I **Non-Negotiable Stub Backer**
"Non-Negotiable" printed on the back of the check stub to prevent fraudulent use of check stock.

J **ABA Check Endorsement Clause**
American Banking Association endorsement clause is printed on the back of the check and verifies the colored check stock and micro-printing.

K **Warning Banks**
References security features shown on the front and back of the check paper.

L **Registration Mark**
Used to ensure that MICR line is properly aligned.
