

**Sammelreisen 1997 nach
S- und NW-Griechenland
für die
Flora Hellenica**

Brachypodium sylvaticum

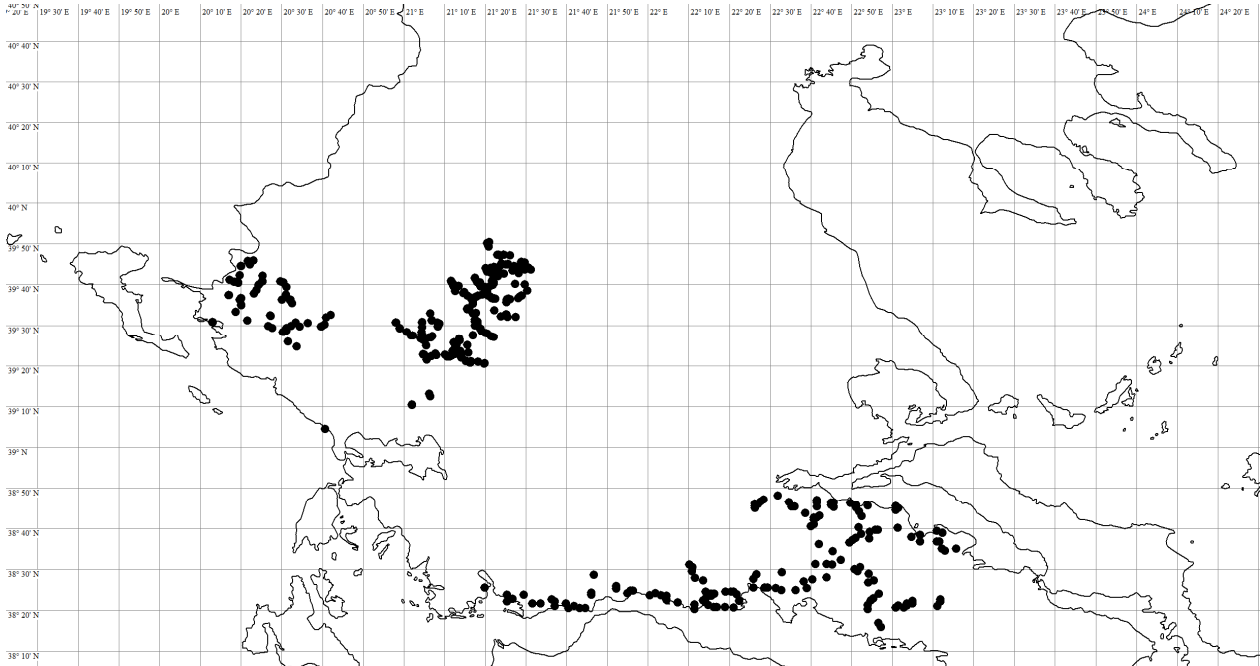

von
Dr. Rita Eisenblätter & Dr. Eckhard Willing

Berlin, November 1997

1. Einleitung

Hiermit möchten wir über unsere botanischen Sammelaktivitäten in Griechenland im Jahr 1997 informieren. In diesem Zeitraum haben wir zwei Einzelreisen durchgeführt:

10.3. - 27.3.97	Stereia Ellas	Etolia-Akarnania, Fokis, Fthiotis, Viotia
23.6 - 19.7.97	Epiros	Thesprotia, Notia Pindos: Arta, Ioannina, Trikala

Neben topographischen Gegebenheiten und Standorttypen haben wir uns bei der Fundortauswahl auch diesmal nach 10 x 10 km-UTM-Rasterfeldern gerichtet. Wie in den Vorjahren haben wir uns in jedem Rasterfeld bemüht, alle von uns erkannten blühenden oder fruchtenden Blütenpflanzen zu erfassen und mit Herbarbelegen zu dokumentieren. Am jeweils 2. Fundort und allen weiteren Fundorten innerhalb eines Rasterfeldes haben wir versucht, nur die bisher nicht erfaßten Arten zu sammeln. Diese Beschränkung erfolgte alleine aus Kapazitätsgründen der Trockenpressen. Von dieser Vorgehensweise abweichend haben wir erneut alle erkannten Arten erfaßt, wenn es uns aus wesentlichen Veränderungen der Topographie oder der Standorte sinnvoll und wichtig erschien.

Für die Trocknung benutzten wir diesmal 5 Pressen, wie wir sie in "Phyton" 32 (1): 119-128; 1992 beschrieben haben. Wir sammelten täglich 220 bis 280 Pflanzen, gemittelt über die gesamten Reisen 238 (im März) bzw. 250 Pflanzen (im Juni/Juli) pro Tag. Wenn nicht trocken-schwierige Arten (z.B. Sedum, Valeriana) überrepräsentiert waren, waren nach 24 Stunden nur noch 5-10 (seltener bis zu 20) Pflanzen etwas feucht. Auch sehr große, flächendeckende Pflanzen führten nicht zu Problemen bei der Trocknung. Dickköpfige Distelgewächse, dickstengelige Umbelliferen oder holziges Baummaterial beanspruchten die Wellpappen natürlich erheblich. Dennoch überstand ein Wellpappensatz die 26 Sammeltage. Um den Trocknungsprozeß bei stark beanspruchenden Pflanzen und hohen Feuchtigkeitsgehalten nicht zu beeinträchtigen, sollten stark verformte Wellpappen nach etwa 20 Tagen ausgewechselt werden. Dies wirkt sich auf die Materialkosten nur unerheblich aus, da eine Wellpappe des benutzten Formats nur etwa 0,20 - 0,25 DM kostet.

Hinsichtlich der Trockentechnik sind in Ergänzung zu "Phyton" zwei Punkte zu erwähnen:

Besonders bewährt haben sich Wellpappen, die auf der einen Seite eine graue, besonders saugfähige und auf der anderen Seite eine braune, besonders formstabile Deckschicht besitzen. Diese Wellpappen haben sich besonders gegenüber dickstengeligen und verholzten Pflanzen als sehr stabil erwiesen.

Zur Vermeidung von Wärmeverlusten umgeben wir die Pressen bis hinab zum Boden, also rings um den darunter umgekehrt stehenden Campinghocker, mit einem 180 cm langen und 60 cm hohen "Wickelrock" aus schwer entzündbaren Kunststofffolien. Dieser paßt sich der Pressenstärke gut an, vermeidet unnötige

Wärmeabstrahlung und ermöglicht selbst bei windigem Wetter das Aufstellen der Presse außerhalb von geschlossenen Räumen, zum Beispiel auf dem Balkon (Natürlich nur bei trockenem Wetter oder unter einem Dach).

Die Herbarbelege bis zum Jahr 1996 lagern, wie alle übrigen Belege aus früheren Jahren, im Griechenland-Herbar des Botanischen Museums Berlin-Dahlem. Sie wurden von uns bestimmt - hoffentlich nicht allzu fehlerhaft - und zum Teil von Experten überprüft und revidiert. Die Herbarbelege aus dem Jahr 1997 sind auf Kartons montiert und etikettiert, müssen aber noch bestimmt werden und befinden sich deshalb noch in unserer Wohnung. Bei Bedarf können diese Herbarbelege dort eingesehen werden. Belege ausgewählter Familien, Gattungen oder Arten können direkt bei uns oder über das Botanische Museum Berlin-Dahlem angefordert werden. Nach Bestimmung durch uns, die hoffentlich nicht allzu fehlerhaft ist, und nach Eingabe der Daten in unsere persönliche Griechenland-Data Base werden alle Herbarbelege im Botanischen Museum Berlin-Dahlem deponiert.

In den zwei Reisen im Jahr 1997 ergänzten wir unsere Sammlung ohne Berücksichtigung der Dubletten um ungefähr 10.500 Pflanzen. Insgesamt umfaßt unser Herbar nunmehr 61.000 Pflanzen alleine aus Griechenland, davon etwa 10.000 Pflanzen von der Peloponnes und 51.000 Pflanzen vom griechischen Festland.

Zur Feststellung der UTM-Gitternetzdaten und der Greenwich-Daten haben wir zum ersten Mal konsequent ein Satelliten-Navigations-Gerät benutzt. Mit Hilfe des mit Batterien oder über das PKW-Stromnetz versorgten 12-Kanal GPS Eagle Explorer konnten wir innerhalb kürzester Zeit den exakten Standort ermitteln. In einigen Fällen konnten dadurch eklatante Fehler der griechischen Straßenkarte ausgeglichen werden. Voraussetzung für eine möglichst genaue Messung ist, daß mindestens 3 Satelliten erfaßt werden konnten. In der Praxis wurden überwiegend 6 Satelliten erfaßt. Nur an zwei halben Tagen funktionierte das System nicht; da aus bisher ungeklärten Gründen jeweils kein oder nur ein Satellit Signale abgab. An Fundorten mit hohen, dichten Bäumen oder direkt an Felswänden war es zum Teil notwendig den Meßstandpunkt um 10 oder 20 Meter zu verändern, um eine genügende Anzahl von Satelliten zu erfassen. Gegenüber den UTM- und Greenwich-Daten konnten Höhenangaben nur recht ungenau ermittelt werden. Bei 5 Satelliten und mehr wichen die gemessenen Höhen etwa 20-30 m von den Angaben des Thommen-Höhenmeßgerätes ab. Bei 3-4 Satelliten konnte die Abweichung bis 70 m betragen. Insgesamt, vor allem aber bei Aufhalten in Bergmassiven hat sich das benutzte Gerät als ausgesprochen hilfreich und leicht handhabbar erwiesen.

Während der genannten 2 Einzelreisen haben wir 120 10 x 10 km-UTM-Rasterfelder besucht

Fundorte Sterea Ellas und Epiros

In den folgenden Fundortlisten haben wir die Daten, wie sie auf den Herbaretiketten erscheinen, um die Nummern der jeweils gesammelten Belege (Spalte 3) ergänzt.

Fundort	Fundort-Nr.	Herbarbelege
Etolia-Akarnania, Ep. Nafpaktias, 1,3 km NW Andirrio, 10.3.1997 Krautiger Ölbaumhain, 10 m EH 64.54, 38°20'00"N, 21°44'30"E	Eto 359	50.463-50.507
Etolia-Akarnania, Ep. Nafpaktias, Makynia, 10.3.1997 Strand, Krautfluren, 5 m EH 64.34, 38°20'30"N, 21°43'00"E	Eto 360	50.508-50.533
Etolia-Akarnania, Ep. Nafpaktias, N Makynia, 10.3.1997 Phrygana, Sa, 110 m EH 64.15, 38°21'00"N, 21°43'00"E	Eto 361	50.534-50.552
Etolia-Akarnania, Ep. Nafpaktias, 1,8 km SW Riza, 10.3.1997 Felswand, 140 m EH 54.94, 38°20'30"N, 21°41'00"E	Eto 362	50.553-50.569
