CANYON

CANYON: Enjoy. Create. Perform. Explore.

CANYON is a cheerful, young and dynamic lifestyle brand that thrives to make life more comfortable by offering a wide range of practical, easy-to-use and affordable IT-related consumer electronics and computer peripherals to the many people. Our product range is developed with our commitment to offer beautiful and stylish product design at competitive prices, without compromising the quality. This is at the heart of the CANYON brand and our daily business activities globally.

To guarantee an efficient supply of products, we have an established network of sales offices in more than 50 countries and strategically located distribution centers in the Netherlands, Finland, Czech Republic and Dubai. Quality control teams are located in China and Taiwan to ensure our products are meeting the latest standards and requirements.

Founded in 1999, CANYON is one of the world's fastest growing brands in IT-related consumer electronics in Asia and the EMEA region.

All specifications and/or images are subject to change without prior notice. All trade names, logos and combinations are for information purposes only and may be trademarks of their respective owners.

CANYON

CNP-NS3

The CNP-NS3 is a portable stand and notebook cooler that offers you several advantages. Avoid tiredness, neck and back pain with an ergonomic position of your laptop by elevating it at an eye-level for more comfort. This stand also features an integrated, ultra silent fan to improve heat dissipation and to optimize your performance and system stability. Simply plug the USB port directly into your laptop to activate the cooling fan when needed; and put back the cable in its very practical storage compartment underneath when you are done. This notebook stand is suitable for notebooks from 7" to 15.4".
The CNP-NS3 is part of our Platinum Series, which targets especially businesses and professionals or anybody who appreciates a combination of high quality, functionality and competitive prices.

[What is a MPV?]

MPV, or sometimes also referred to as MP4, is known as the next generation of MP3 players. MPV actually is a multimedia MP3 player. It is a handheld device that enables you to store and support various multimedia objects such as images, videos and music. It usually comes with a color LCD screen. There are several models available on the market with various features such as video player, built-in microphone and/or speaker, FM tuner, memory card readers, data storage, and others. All multimedia players should be compatible with standard audio MP3 files, JPEG format for images and MP4 format for videos. With cables and software, it is easy to transfer files from a computer or from the Internet.

[Headphones]

From our noise-cancelling headphones to neck models to headsets with integrated microphone, CANYON surely has a model that suits your needs and style. Whatever your choice is, one thing is for sure: You will be pleased with the comfort and clear digital sound quality of our products, a must when enjoying your music on the go, when mixing tunes, when chatting over the Internet or when playing computer games.

What are Noise-cancelling headphones?

Noise-cancelling headphones reduce unwanted ambient sounds (i.e. acoustic noise) by means of active noise control. Essentially, this involves using a microphone placed at the ear combined with electronic circuitry interference, which cancels out the noise within the enclosed volume of the headphone. Keeping noise level low at the ear makes it possible to enjoy music without raising the volume unnecessarily. It can also be used to help a person to sleep in a noisy environment such as an airliner.

What are scissor type keys?

The innovative scissor type keys takes your keyboard up a notch, as it provides a similar typing experience as with a notebook. It reduces the force needed per key press and makes your writing process very enjoyable. The pressure can come from the side and not necessarily from straight up, which allow an easy and effortless typing.

5

What is the difference between laser and optical technology?

While a laser mouse tracks movement with laser pin-pointing technology, optical mice employs LED lights (it is that red light beam you can see when you flip over the mouse). The more dots per inch (dpi) a mouse can track the more sensitive and accurate it is. A standard optical sensor detects in average 400-600dpi, and a laser mouse can track more than 2,000dpi. The laser mouse offers a faster tracking speed but as it is very sensitive, it might not work well on reflective surfaces whereas an optical mouse works on virtually any surface. Due to a more advanced technology used for laser mice, these usually have a higher price. However, it is important to clarify that none of these two technologies is really better than the other. It all depends on your needs and preferences.

[Bluetooth]

We offer two models of Bluetooth adapters for you to choose from, if you want to connect multiple devices such as mobile phones, PDAs, laptops, PCs, printers, GPS receivers, digital cameras and video game consoles. Growing in popularity, Bluetooth devices have the advantage to give you more control with wireless networking, communication and sharing of information by synchronization.

What is Bluetooth technology?

Bluetooth is a wireless technology that provides a reliable connection between multiple devices rather than with the traditional cable link. It uses short range communications technology facilitating data transmissions over short distances from devices, creating wireless personal area networks (PANs). And to the contrary of what some people may think, this technology is not very expensive and doesn't consume much power.

PACKS

CANYON had the idea a few years ago –long before its competitors– to introduce Chat Packs: A simple and user-friendly solution for Internet communications combining color-assorted headset with microphone and webcam. The remarkable success of such 'value pack' makes it our most popular product ever. Our Chat Packs are very convenient and gives you great quality video calling performance, and they are also compatible with the major instant messaging applications such as Skype, MSN, and Yahoo.
