Not satisfied yet
Date:February 20, 2013
"Bought the new n54l model and struggling to get any OS installed on the system without the system getting stalled. Rht, oel, ubuntu, win serv 2012 ess all seem to have the same problem ... Hp support is looking into the problem but ... Not clear if that will produce a solution, although they do their best ... I guess..."

Little nimble device
Date:January 24, 2013
"Got the N40L running esxi 5.1 with 16GB of ram.
I am surprised the power this little box has for this money.
Dont expect the highest performance, but for development and testing this thing is perfect!
Mine is running a L4D2 server, fileserver, management and Vcenter appliance without any problems."

Great home server
Date:January 21, 2013
"I've got this for as my home server. Running Windows 7 + Ubuntu.
Main usage is for media server but I've started to use this as my NAS/File server too. This server is amazingly powerful for the price.
One star -, because I can't buy this in Singapore but have to be shipped from US/other regions."

Great product, absolutely alone in a big market

Date:November 10, 2012
"Got this little jet to use at home, as NAS, web and media server. Fantastic cost x benefit. Carefully designed to deliver server-class engineering with low power consumption and tiny size. To be absolutely perfect, shoud have SATA LFF six-bay version available. Great job!"

Good job HP! Solid WIN
Date:August 31, 2012
"Got two of these a few weeks ago.
I was slightly concerned that the processor wouldn't be up to the task, but I'm glad to say I was wrong.
This product is very nicely spec'd.
Two RAM slots (in such a small box 1 wouldn't shouldn't be a surprise).
4 HDD 3.5" bays with RAID 0, 1 support.
7 USBs
Virtualization support.
Full HD VGA out.
Two expansion slots.
Currently I have Oracle Linux 5.7 running on the one with:
Another Oracle Linux VM (Apache & Squid) running in virtual box inside.
Oracle Database 11gR2 XE
Samba for Windows file sharing
I still haven't seen the CPU's go above 80% - Linux makes good use of them. Have yet to experience any lag.
On the other box I'm playing around with Oracle Linux 6.3. This version of OL has the new gnome and that mea lots of pretty graphics. Even with an inflates UI (being used over VNC) the server doesn't flinch but just carries c doing its thing.
Great job HP!"
