## Sportline watch website

### Sports watch functions. Sports watch brands.

Home > Sportline Sportline heart rate monitors (HRMs) produce innovative products such as the Duo, Solo and TQR series of strapless heart rate monitors. These monitors are ECG accurate and have enjoyed increasing popularity. The Duo series of Sportline heart rate monitors have, as the name "Duo" implies, dual use. It can be used as a strapless finger touch heart rate monitor. Alternatively it can be used with a chest strap to provide continuous heart rate monitoring if required.

So you get the best of both worlds. The top spec Sportline Duo 1060 even comes with a built-in pedometer. The Solo series of heart rate monitors provide on-demand heart rate measurement. You simply put your finger on the wrist watch sensor for a few seconds and your heart then appears on the wrist watch display. Since it does not require chest strap, it is a convenience for many users. However, strapless heart rate monitors can't provide continuous heart rate monitoring. The TQR series of Sportline heart rate monitors are actually analog watches with finger touch heart rate measurement technology. They look like ordinary, regular watches and thus can be worn on all kinds of occasions. You can find more specific info about the individual models by clicking on their images below. You can also view the product on Amazon by clicking the "Click to Order" button. Functions of the watch also include a clock and alarm setting. As with many stopwatches, the buttons to control the settings are deliberately limited to aid simplicity. If the hourly chime is set, then it can be difficult to work out how to turn it off. Using the right combination, however, it is possible to turn off the hourly chime on the stopwatch, which will enable the battery life to be conserved. Press the button on the right labeled "start/stop" and at the same time press the button on the left labeled "split/reset." Hold both of these buttons down to scroll through the functions. Release both buttons when the "Alarm Set" display is reached. This will show the time that the alarm is set for, even if the alarm is not active. Press and hold the "Mode" button, which will remove the bars shown under the days of the week. Wait until all of the bars have been removed. This will stop hourly chiming.
