

Nokia CK-7W

All hardwired handsfree carkits require professional installation

HANDSFREE HARDWIRED BLUETOOTH CARKIT

Manage your time more efficiently and manage your calls while on the go with the Nokia Advanced Car Kit. It offers convenient, easy-to-use handsfree communication in a vehicle, and allows you to connect your phone via the Pop-Port™ connector or wirelessly via a Bluetooth connection. An automatic radio mute turns down the tunes while you're on a call, and with a single button you can activate name dialing*, answer and end calls, and adjust the volume.

The Nokia Advanced Car Kit is compatible with a broad range of mobile phones through its two connection options - either wirelessly via a Bluetooth connection or through cable via the Pop-Port™ connector. Wireless Connection with Bluetooth Wireless Technology Mobile phones equipped with Bluetooth technology can establish a wireless connection with the Nokia Advanced Car Kit. Once paired with your phone, the kit automatically activates the connection when you start the ignition. Just slide in, buckle up, and you're ready to go. Plug In to Pop-Port™ Simply pop your compatible phone into the holder mounted in the vehicle and the Nokia Advanced Car Kit takes over your communications. Some compatible Nokia mobile phone holders can also charge your phone, so you can have a fully powered-up battery when it's time to leave the car.
