Juvenile
moulting to Immature
plumage

Adult

Morphometrics:

	Adult Male	Adult Female
Wing:	145 – 155 mm	136 – 150 mm
Tail:	92 – 113 mm	95 – 106 mm
Bill:	13 – 14 mm	11.7 – 13 mm
Tarsus:	20 – 23.1 mm	22.2 23.5 mm
Weight:	No information	

Ageing:

Little information available on ageing apart from published records that suggest juveniles are duller, plainer and greyer or browner than adults, or overall more olive than adults;
No information available on timing of moults, so all birds should simply be aged as (1+).

Sexing:

No information available.
