

Anadarko Hackett Tower

The Woodlands, Texas

676,359 SF

Architecture: Greater than 50,000 SF

Hackett Tower is the second office building in the master-planned Anadarko campus located on a prominent site in The Woodlands.

Anadarko's Hackett and Allison Towers were completed more than a decade apart. Together they create an amenity-rich, urban corporate campus.

Hackett Tower continues established campus design elements such as the gently curved facade, the grid expression and the executive balcony near the top of the building.

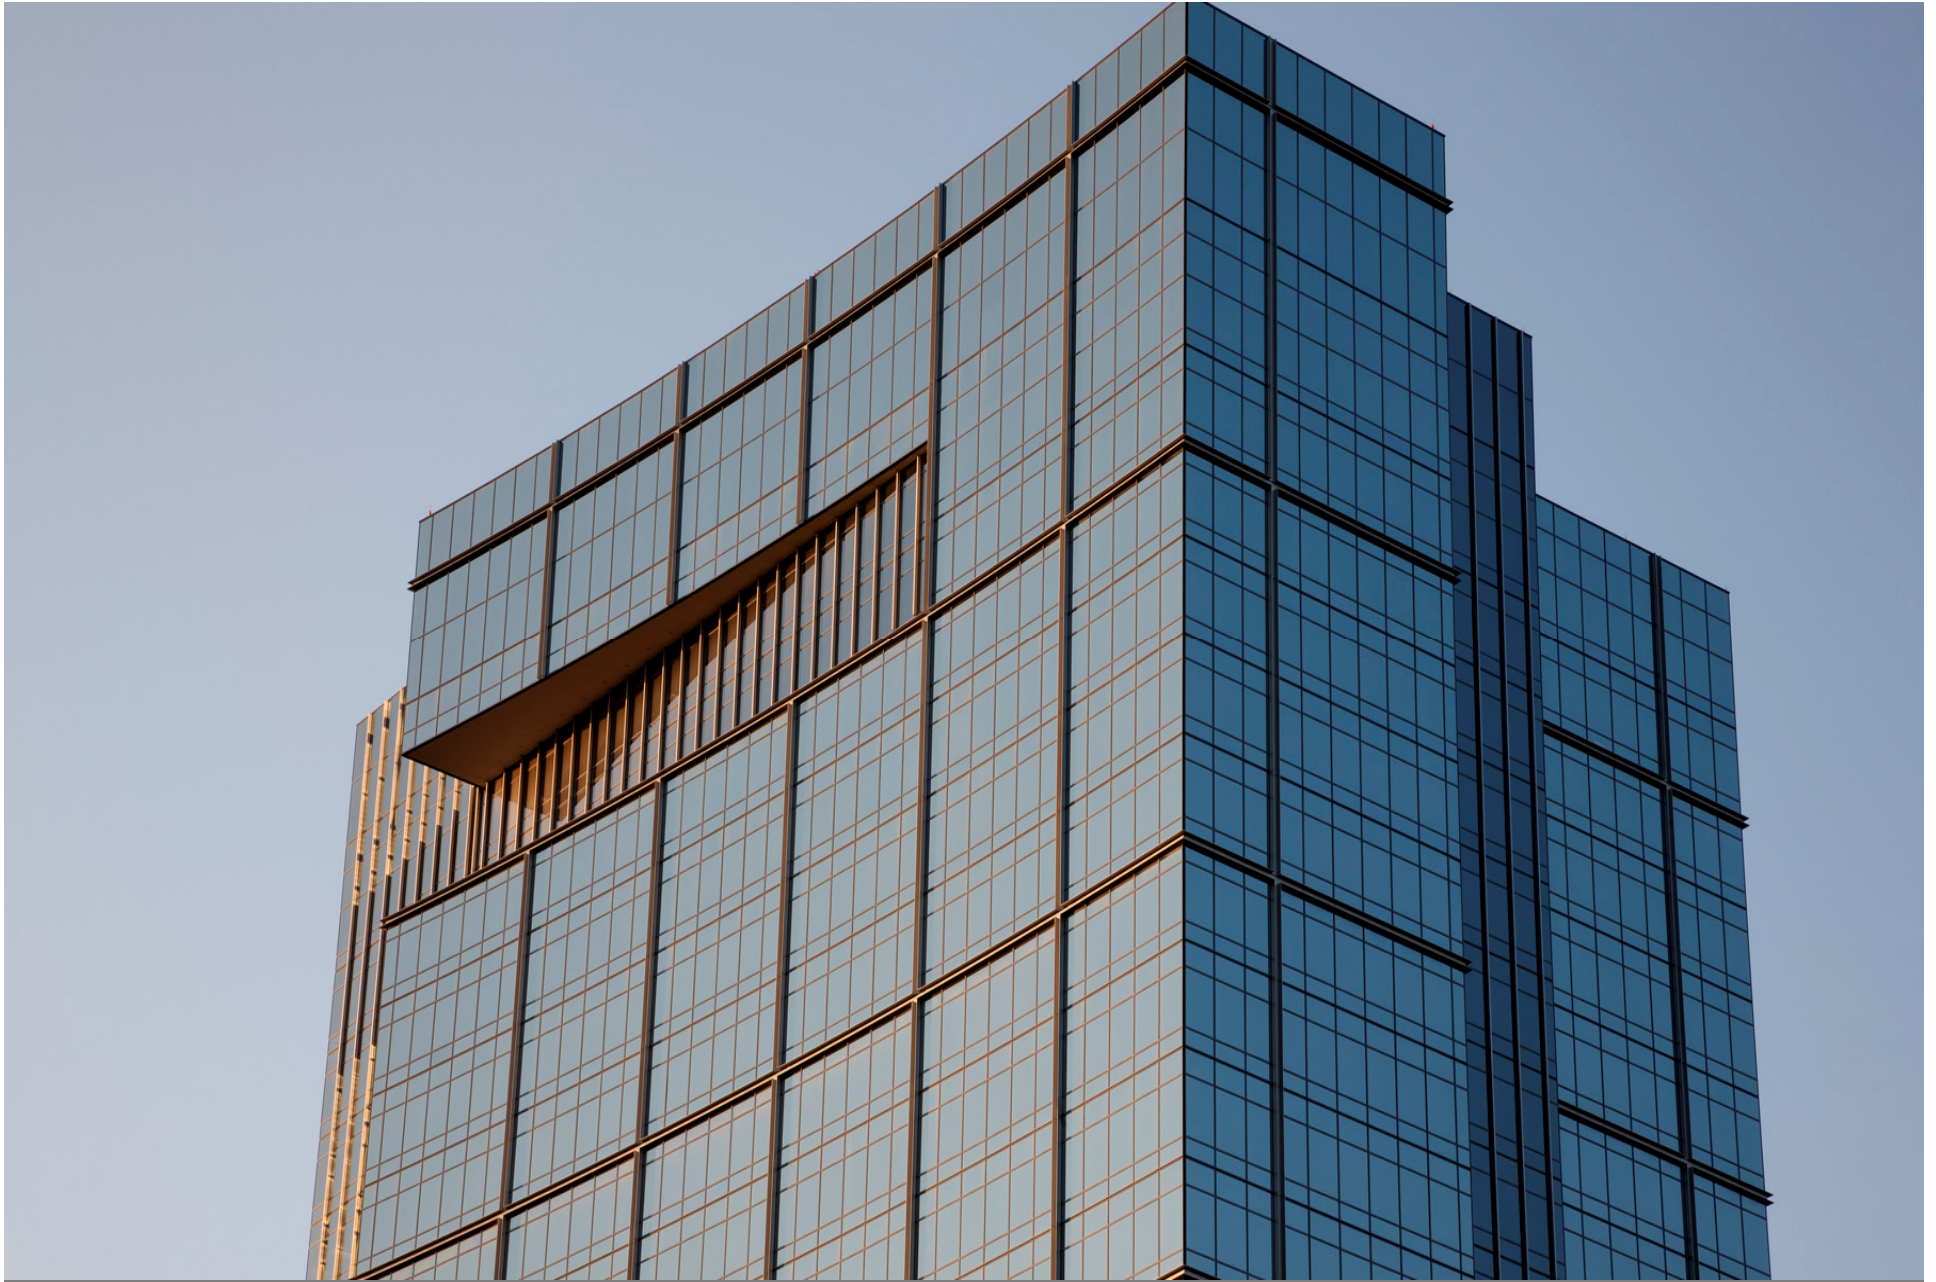

Hackett Tower observes the company workplace standard of private offices. Clerestory windows on office partitions increase natural light penetration into the core.

Hackett Tower features a state-of-the-art cable net glazing system with large expanses of transparent glass that provide unrestricted views of the surrounding area.

The ground level lobby is surrounded with frameless glass forming a seamless connection to the woodland setting and waterway and introducing abundant natural daylight.

The high performance unitized curtain wall system combined with natural daylight controls and thoughtful building orientation mitigates the adverse effects of solar heat gain.

On the 11th floor, above the garage, a green roof provides an attractive outdoor space adjacent to the conference center. The outdoor venue is used for events as well as casual meetings.

One of Anadarko's prime concerns was creating a healthy environment for its people. To that end, the campus includes health & wellness facilities including this dramatic basketball court.

Drought resistant native landscaping, water features and sculpture create an attractive ground level experience for Anadarko employees as well as Woodlands residents and visitors.
