# New Aloe Cultivars from the USA, South Africa & Australia

Peter Schedler  
Sherwood Lodge, Bradfield, Reading, RG7 6JB, UK

Aloes have long been popular amongst succulent growers and have been available from specialist growers, succulent interest groups and nurseries throughout Europe and the USA as small indoors "window-sill" plants, generally with novel leaf forms and textures. In recent years breeders, particularly in the USA, have been striving to create dwarf flowering cultivars so adding colour to their unusual leaf features (see *Miniature Aloes* by Brian Kemble, *Alsterworthia International*, Vol. 5, Issue 2 July 2005, pp. 14-16).

More recently other American succulent breeders have released a number of new miniature aloes (John Trager, Kelly Griffin, Karen Zimmerman, etc.) many through the annual succulent introduction program of the Huntington Botanical Gardens in San Marino, California. Huntington's renowned Desert Garden holds some 200 of the 589 currently known and described natural aloe species in the world.

The aim of the ISI (International Succulent Introductions) programme is to propagate and distribute new or rare succulents to collectors, nurseries and institutions. Propagation of new cultivars is by grafts, offshoots or rooted cuttings produced under nursery conditions, and in some cases by sterile *in vitro* laboratory tissue culture techniques. In line with sound conservation practices, no field collected species are sold.

Some of the recent introductions from this and similar sources in the USA are now available in Europe through tissue culture propagation and distribution by the Netherlands based STC (Succulent Tissue Culture) company.

## *Aloe 'Christmas Carol' KG (Fig. 1)*

A small *Aloe* of very striking appearance, from the rosette's central lime green colour to the brilliant red/orange leaf margins. In addition, it has thick, serrated succulent leaves with raised spines on them. Introduced in 2010 by Rancho Soledad Nurseries and Xeric Growers, both in California.

## *Aloe 'Guido' KG (Fig. 2)*

Another miniature *Aloe* comprising rosettes with white edgings and elongated white markings on the

1

otherwise green leaves. It grows to a maximum 20 cm in height and is only partly frost hardy.

## *Aloe 'Green Sand' (formerly 'Vito') KG (Fig. 3)*

A Kelly Griffin hybrid ('Vito') which was registered by the tissue culture nursery under the name 'Green

Sand' to obtain Plant Breeders' Rights for commercial sale.\* It has a rosette comprising leaves of a soft, "furry" and warty texture and appearance, which appeals to many succulent collectors and is characteristic of many of the recent miniature *Aloe* hybrids coming from this source.

\* private communication

On the outdoors front, two South African breeders, Andy de Wet and Leo Thamm, have each long been producing a range of larger flowering cultivars for garden display with the emphasis on colour and

3

extended flowering seasons. These have been released at steady intervals during the last few years in South Africa and several by Leo Thamm since 2006 in Australia.

The following examples illustrate some of their creations :

*Aloe ‘Hedgehog’ AdW (Figs. 4)*

Released in South Africa in 2006 this small, compact *Aloe* (about 200 x 200 mm) is fast-growing and flowering peaks about January to February in the Northern Hemisphere (early July to late August in South Africa) when it produces reddish-pink to pale pink flowers. Leaves are grey-green in colour, edged with white to green teeth. It is cold tolerant down to about -5 C, and is a complex hybrid of four different *Aloe* species.

*Aloe ‘Charles’ AdW (Fig. 5 )*

A more recent release (2009) growing up to 1-2 metres high. A spectacular bicoloured (red & white ) cultivar, it flowers between July and August in South Africa.

*Aloe ‘Zelda’ AdW ( Fig. 6 )*

An early release from 2006 this cultivar has bicoloured pink to creamy white blossoms arising from a full, compact rosette of attractive greyish leaves. Ideal for containers, tubs or small gardens, it rarely exceeds 300

x 300 mm in size.

*Aloe ‘Copper Shower’ LT ( Figs. 7)*

Another recent release in South Africa, this cultivar produces a mass of coppery orange flower clusters. Of medium height, it is a complex hybrid with *A.*

*arborescens* as one of its constituents, which it resembles in several growth features. It produces many offshoots, which should be removed if one wishes to prevent a bushy growth habit and rather promote growth and more flowering stems. In the Northern Hemisphere this cultivar flowers between late September to early December.

*Note: most of the cultivars mentioned above have been granted Plant Breeders' Rights in their country of origin, which protects them from unauthorised propagation for sale.*

*KG = Kelly Griffin, AdW = Andy de Wet, LT = Leo Thamm.*

### A new book on Aloes.....

with an international rather than country-specific approach is now being compiled that will bring together for the first time both *Aloe* species and cultivars in a comprehensive and fully illustrated form. It is aimed at the horticultural and gardening market and the increasing numbers of succulent enthusiasts and growers who wish to expand their knowledge of this striking group of succulents, to which too little attention has been directed in the past outside their indigenous home, the continent of Africa. One of the book's features will be an illustrated compilation of all known *Aloe* cultivars and their breeders.

Peter Schedler.

### Up-to-date news.

Bruce Bayer has recently reported on FaceBook that he has been asked to submit his species classification for consideration of inclusion in a revision of *The Illustrated Handbook of Succulent Plants* and that a DNA study in South Africa is recommending that *Haworthia* be included in *Aloe*.

The DNA study deals only with taxa above the rank of species and has to be "peer reviewed" for publication. Only species named in accordance with the International Code of Botanical Nomenclature will be eligible for inclusion in a revised Handbook.

J.C. Manning, SANBI, has arranged for Bruce Bayer's informal names, which do not comply with the ICBN, to be brought into line with the provisions of that code. The results are on pages 7-17.

Date of publication 15 Feb. 2012.

# Nomina Nova recorded for the Asphodelaceae for 2010 in the Repertorium Plantarum Succulentarum published by the I.O.S. 2011.

- Aloe acutissima* var. *berevoana* (Lavranois) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 27, 2010. *Nom. inval.* (Art. 34.1b, 33.4), based on *Aloe berevoana*. [Suggested change in status on a provisional base.]
- Aloe candicans* (H. Perrier) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 27, 2010. *Nom. inval.* (Art. 34.1b, 33.4), based on *Aloe deltoideodonta* var. *candicans*. [Suggested change in status on a provisional base. *Non Aloe candicans* (Haworth) Roemer & Schultes 1829.]
- Aloe candicans* var. *fallax* (J.-B. Castillon) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 27, 2010. *Nom. inval.* (Art. 34.1b, 33.4), based on *Aloe deltoideodonta* var. *fallax*. [Suggested change in status on a provisional base.]
- Aloe cipolinicola* (H. Perrier) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 28, 2010. Basionym: *Aloe capitata* var. *cipolinicola*.
- Aloe deltoideodonta* var. *ruffingiana* (Rauh & Petignat) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 28, 2010. Basionym: *Aloe ruffingiana*.
- Aloe divaricata* ssp. *deinacantha* (T. A. McCoy & al.) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 27, 2010. *Nom. inval.* (Art. 34.1b, 33.4), based on *Aloe deinacantha*. [Suggested change in status on a provisional base.]
- Aloe divaricata* ssp. *tulearensis* (T. A. McCoy & Lavranos) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 27, 2010. *Nom. inval.* (Art. 34.1b, 33.4), based on *Aloe tulearensis*. [Suggested change in status on a provisional base.]
- Aloe divaricata* var. *deinacantha* (T. McCoy & al.) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 27, 2010. *Nom. inval.* (Art. 34.1b, 33.4), based on *Aloe deinacantha*. [Suggested change in status on a provisional base.]
- Aloe fievetii* var. *ambatofinandranensis* J.-B. Castillon, Cact.-Avent. Int. No. 85: 6-7, ill., 2010. Typus: *Castillon* 46 (TAN, P).
- Aloe gneissicola* (H. Perrier) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 28, 2010. Basionym: *Aloe capitata* var. *gneissicola*.
- Aloe martialis* J.-B. Castillon, Cact.-Avent. Int. No. 85: 3-4, ill., 2010. Typus: *Malcomber* & al. 1185 (MO).
- Aloe neilcrouchii* Klopper & G. F. Smith, Bothalia 40(1): 94-95, ill., 2010. Typus: *Crouch* & *Johnson* 1247 (PRE, NH).
- Aloe newtonii* J.-B. Castillon, Bradleya 27: 152, ill. (p. 151), 2009. Typus: *Reynolds* 7885 (TAN, K, PRE). [The name was incorrectly treated as illegitimate under Art. 52.1 in RPS 60 because of a confusing citation of synonymies.]
- Aloe nicholsii* G. F. Smith & N. Crouch, Bradleya 28: 103-106, ill., 2010. Typus: *Crouch* 1270 (PRE, NH).
- Aloe perdita* Ellert, Aloe 46(3): 51, 2010. Typus: *Ellert* 172 (ARIZ) [Ex cult. Bulawayo, Zimbabwe and Tucson, Arizona]. [First published invalidly (Art. 8.2) in l.c. 45(4): 76-77, ill., 2009 ('2008') (cf. RPS 60).]
- Aloe rugosquamosa* (H. Perrier) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 28, 2010. Basionym: *Aloe compressa* var. *rugosquamosa*.
- Aloe seibanicola* Orlando & El Azzouni, CactusWorld 28 (4): 208-210, ill., 2010. Typus: *Orlando* & *El Azzouni* 241504 (FT).
- Aloe versicolor* var. *steffanieana* (Rauh) J.-B. Castillon & J.-P. Castillon, Aloe Madagascar, 28, 2010. Basionym: *Aloe steffanieana*. [Sphalm. 'stefaniana'.]
- Bulbinella calcicola* J. C. Manning & Goldblatt, Bothalia 40(2): 197-199, ill., 2010. Typus: *Claassens* & *Claassens* 11 (NBG, K, MO).
- Chortolirion latifolium* Zonneveld & G. Fritz, Bradleya 28: 32-33, ill., 2010. Typus: *Fritz* 1025 (PRE).
- Haworthia** 'Ollason's Pride' P. I. Forster, Alsterworthia Int. 10(3): 2-3, ill., 2010. [A hybrid with *H. cooperi* as one parent. Based on *Haworthia ollasonii* G. R. Hayer 1971 (*nom. inval.*, Art. 36.1, 37.1).]
- Haworthia** Sect. **Attenuatae** (Pilbeam) Breuer, Gen. Haworthia Book 1, 4, 2010. Basionym: *Haworthia* Subsect. *Attenuatae*.
- Haworthia** Sect. **Turgidae** (Pilbeam) Breuer, Gen. Haworthia Book 1, 4, 2010. Basionym: *Haworthia* Subsect. *Turgidae*.
- Haworthia** **adelaidensis** (Poellnitz) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia reinwardtii* var. *adelaidensis*.
- Haworthia** **angustata** (Poellnitz) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia cymbiformis* var. *angustata*. *Haworthia anna* M. Hayashi, Haworthia Study 22: 10, ill., 2010. *Nom. inval.* (Art. 36.1,
- Haworthia araneoides* M. Hayashi, Haworthia Study 22: 10, ill., 2010. *Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]
- Haworthia** **arcana** (G. F. Smith & N. Crouch) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia limifolia* var. *arcana*.
- Haworthia baviens* M. Hayashi, Haworthia Study 22: 10, ill., 2010. *Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]
- Haworthia** **brevicula** (G. G. Smith) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia reinwardtii* var. *brevicula*.
- Haworthia** **calitzdorpensis** (Breuer) M. Hayashi, Haworthia Study 22: 11, 2010. Basionym: *Haworthia mucronata* var. *calitzdorpensis*. [Sphalm. 'calitzensis'.]
- Haworthia cocksia* M. Hayashi, Haworthia Study 22: 10, ill., 2010. *Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]
- Haworthia** **compacta** (Triebner) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia cymbiformis* var. *compacta*.
- Haworthia** **coriacea** (Resende & Poellnitz) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia tessellata* var. *coriacea*. *Haworthia corticosa* M. Hayashi, Haworthia Study 22: 10, ill., 2010. *Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]
- Haworthia** **depauperata** (Poellnitz) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia triebneriana* var. *depauperata*.
- Haworthia** **diversicolor** (Triebner & Poellnitz) M. Hayashi, Haworthia Study 22: 11, 2010. Basionym: *Haworthia triebneriana* var. *diversicolor*.
- Haworthia** **flaccida** (M. B. Bayer) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia herbacea* var. *flaccida*.
- Haworthia** **glaucophylla** (M. B. Bayer) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia limifolia* var. *glaucophylla*.
- Haworthia** **ikra** Breuer, Gen. Haworthia Book 1, 7, 2010. Typus: [neo icono]: H. Jacobsen, Handb. Sukk. Pfl. 2: 724, fig. 644, 1956. [Neotype designated by Breuer, World Haworthias 1: 201, 1998, for the replaced name]. [*Nom. nov. pro Haworthia obtusa* f. *truncata* H. Jacobsen 1955, although labelled as "stat. nov."].
- Haworthia** **inspida** Breuer, Gen. Haworthia Book 1, 7, 2010. Typus: *Bayer* 1702 (NBG). [*Nom. nov. pro Haworthia zantneriana* var. *minor* M. B. Bayer 1999, although labelled

as "stat. nov.".]

**Haworthia janvlokii** (Breuer) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia picta* var. *janvlokii*.

**Haworthia johannii** (M. Hayashi) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia scabra* var. *johannii*.

**Haworthia lavrani** (C. L. Scott) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia sordida* var. *lavrani*.

**Haworthia namaquensis** (M. B. Bayer) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia arachnoidea* var. *namaquensis*.

**Haworthia obesa** (Poellnitz) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia cymbiformis* var. *obesa*.

**Haworthia olivacea** (G. G. Smith) Breuer, Gen. Haworthia Book 1, 7, 2010. Basionym: *Haworthia reinwardtii* var. *olivacea*.

**Haworthia pallidifolia** (G. G. Smith) M. Hayashi, Haworthia Study 22: 11, 2010. Basionym: *Haworthia turgida* var. *pallidifolia*. [Repeated by Breuer, Gen. Haworthia Book 1, 7, 2010.]

**Haworthia papillaris** Breuer, Gen. Haworthia Book 1, 7, 2010. Typus: *de Vries* 124 in Breuer 5379 (Res. Inst. Evol. Biol. Tokyo). [*Nom. nov. pro Haworthia truncata* var. *minor* Breuer 2003, although given as "stat. nov.".]

*Haworthia patriae* M. Hayashi, Haworthia Study 22: 10, ill., 2010. [*Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]

**Haworthia paucifolia** (G. G. Smith) M. Hayashi, Haworthia Study 22: 11, 2010. Basionym: *Haworthia angustifolia* var. *paucifolia*. *Haworthia platinosa* M. Hayashi, Haworthia Study 22: 10, ill., 2010. [*Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]

**Haworthia rooivleiensis** (M. B. Bayer) Breuer, Gen. Haworthia Book 1, 7, 2010. Typus: *Bayer* s.n. in *Karoo Garden* 36/70 (NBG). [*Nom. nov. pro Haworthia heidelbergensis* var. *minor* M. B. Bayer 1999, although given as "stat. nov.".]

**Haworthia salina** (von Poellnitz) M. Hayashi, Haworthia Study 22: 11, 2010. Basionym: *Haworthia stayneri* var. *salina*.

**Haworthia scabrida** Breuer, Gen. Haworthia Book 1, 8, 2010. Typus: *Bayer* 1700 (NBG). [*Nom. nov. pro Haworthia heidelbergensis* var. *scabra* M. B. Bayer 1999, although given as "stat. nov.".]

**Haworthia scabrispina** (M. B. Bayer) Breuer, Gen. Haworthia Book 1, 8, 2010. Basionym: *Haworthia arachnoidea* var. *scabrispina*.

**Haworthia setulifera** (Poellnitz) Breuer, Gen. Haworthia Book 1, 8, 2010. Basionym: *Haworthia planifolia* var. *setulifera*.

*Haworthia similis* M. Hayashi, Haworthia Study 22: 10, ill., 2010. [*Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]

*Haworthia simofuri* M. Hayashi, Haworthia Study 22: 10, ill., 2010. [*Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]

**Haworthia standeri** (J. Esterhuizen) M. Hayashi, Haworthia Study 22: 11, 2010. Basionym: *Haworthia integra* var. *standeri*.

**Haworthia suberecta** (Poellnitz) Breuer, Gen. Haworthia Book 1, 8, 2010. Basionym: *Haworthia turgida* var. *suberecta*.

**Haworthia sublineata** (Poellnitz) Breuer, Gen. Haworthia Book 1, 8, 2010. Basionym: *Haworthia triebneriana* var. *sublineata*.

*Haworthia swanea* M. Hayashi, Haworthia Study 22: 10, ill., 2010. [*Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]

**Haworthia tenuis** (G. G. Smith) Breuer, Gen. Haworthia

Book 1, 8, 2010. Basionym: *Haworthia reinwardtii* var. *tenuis*.

**Haworthia toonensis** (M. B. Bayer) Breuer, Gen. Haworthia Book 1, 8, 2010. Basionym: *Haworthia heidelbergensis* var. *toonensis*.

**Haworthia tricolor** (Breuer) M. Hayashi, Haworthia Study 22: 11, 2010. Basionym: *Haworthia picta* var. *tricolor*.

**Haworthia variabilis** (Breuer) Breuer, Gen. Haworthia Book 1, 8, 2010. Basionym: *Haworthia viscosa* var. *variabilis*.

*Haworthia viridula* M. Hayashi, Haworthia Study 22: 10, ill., 2010. [*Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]

*Haworthia yarrowia* M. Hayashi, Haworthia Study 22: 10, ill., 2010. [*Nom. inval.* (Art. 36.1, 37.1). [Published as provisional name.]

#### Editors notes:

1. Authors sometimes first publish species names provisionally. These names are not, therefore, valid at the time of publication under the ICBN and are usually followed by n.n. (*nomina nova*), a term sanctioned by the ICBN to indicate they are provisional and not validly published.
2. The Rep records only species names published under the provisions of the ICBN either as valid (**Bold type**) or invalid (*italics*). The ICBN article(s) under which the names are rejected are quoted. Authors subsequently validate these names in later publications.
3. Ingo Breuer's and Dr Hayashi's species names are all included in the Rep as they are published under the provisions of the ICBN.
4. The Rep does not include Bruce Bayer's species names comprised of two Latin names e.g. *H. retusa* '*nigra*', as these are published outside the provisions of the ICBN. For Bruce's species please see his Haworthia Updates, all of which except No. 1 have been published by Alsterworthia International. These modify his classification in Haworthia Revisited wherein the species were published in accordance with the ICBN, but no so in later Updates.
5. Ingo Breuer's revision of the genus Haworthia was published recently by Alsterworthia International as the Genus Haworthia, Book 1. Recommended retail price £39.50 + p & p. Member's price £24.00 + £3.50 p & p EU, £4.50 rest of the world. See Alsterworthia 11(1) 20-21.
6. For Ingo's Book 2 please see Alsterworthia International 11(3) 16-17.

# A rationalization of names in *Haworthia*

## A list of species with new combinations and new synonyms

M.B. Bayer\* and J.C. Manning\*\*

\*PO Box 960, Kuilsriver 7579, South Africa

\*\*South African National Biodiversity Institute, P/Bag X7, Claremont 7735, South Africa

With the impending revision of the IOS Succulent Lexicon and a growing awareness that the current classification of the genus *Haworthia* is unnatural, the time is ripe to propose a list of species names that I (MBB) consider worthy of recognition. My considered opinion is that there are at most about 60 species in *Haworthia* and that a better and more critical treatment would reduce this still more. This contrasts markedly with Breuer (2010), who lists 368 'accepted' species and reports the even more startling claim that Hayashi recognises 550! Some of this increase is due to the tendency for these authors to treat my varietal names as full species but they have also described many new species *de novo*. They, as well as Gerhard Marx, who recently also entered the fray with some very harsh words for me, have my considerable respect for their talents and enthusiasm, but I am unable to accept all of their proposed taxa in the context of my extensive field knowledge of the genus and my practical experience of patterns of variation among wild populations.

Species concepts in the genus have always been idiosyncratic, driven primarily by a propensity to recognize variation over similarity and fostered by a general ignorance of the extent of intra-population variability in the wild. The recent almost exponential proliferation of names has succeeded in surrounded the genus with a thicket of nomenclatural twigs that is almost impossible to penetrate and which obscures rather than illuminates any real understanding of the genus. The very appeal of the genus is its almost infinite capacity to vary, and it is a tragedy that they are no longer appreciated for their individuality, but are instead pushed into or pulled out of taxonomic boxes almost willy-nilly. It is very difficult not to suspect the motivation behind some of this bedlam.

While we in no way wish to proscribe anybody from expressing their opinions, we issue an urgent plea for restraint. The nomenclatural flood that has all but submerged the genus will only be exacerbated by floating additional formal names and combinations on the turbulent waters. In fact, we go so far as to recommend a moratorium on the publication of any new taxa in the genus that are proposed without an extensive survey of relevant variation patterns in the wild. Scientific journals reduce the chances that inadequately researched papers will see the light of day by sending all submissions to competent referees for comment and evaluation. Popular journals that transgress into the scientific arena by accepting descriptions of new taxa should do the same and the responsibility for this lies firmly with the editors.

Every scientific name that enters currency has to be accounted for by botanists in their lists and publications. To remove them from circulation requires a separate, formal act for each and every name. Dealing with the many dubious names in *Haworthia* is a taxing task that can be ill afforded. Numerous invalidly published or illegitimate names have also entered circulation through non-adherence to the International Code of Botanical Nomenclature, which aims to regulate scientific names. This adds to the confusion and to the work.

What in fact is the primary purpose of these scientific names?

Among botanical circles, species names carry a great deal of weight. In most instances they imply that individuals that share a name also share a common ancestry and can interbreed to produce viable seeds. Species with different names will not. Is this philosophy applied in *Haworthia*? The process of recognising species in botanical circles is generally top-down, with genera being first split into component species and the species then into subspecies or varieties according to the particular patterns of variation shown by the constituent populations. This does not seem to apply in *Haworthia*. Here the process is largely bottom-up, with individuals or populations being given names and then shuffled into or among species. This is patently absurd.

In general terms, botanical names largely reflect similarities whereas horticultural names highlight differences. This is most evident in the extensive use of varietal names among horticulturally interested groups. This level is relatively infrequent in purely botanical circles. The two systems are thus not always congruent and little is to be served by confusing them. We therefore recommend that growers exploit the advantages of the International Code of Nomenclature for Cultivated Plants, which is aimed at specially selected or human-altered plants. Here the level of cultivar is appropriately employed. We also urge the Editors of popular journals to encourage the use of this system among their contributors. The great advantage of this system is that it removes the hierarchical constraints that are inherent in the Linnaean system and that have already created problems with the placement of varieties and forms of *Haworthia*.

Professional botanist in general together with the majority of amateur botanists seem intent on reducing or increasing species in accordance with the ICBN in the light of their own species concepts which results in diverse classifications with vastly different numbers of species. In general they pay little attention to the ICNCP which does provide for species names to be recycled and for habitat plants to be given cultivar names under appropriate circumstances e.g. i) species names no longer regarded as being justified may be converted to cultivar names when those species are absorbed into another species, ii) for newly discovered population to be absorbed into an existing species but given a cultivar name to recognise any distinctive features that population has, iii) that individual clones or groups of clones with horticultural merit can be selected from a variable population and brought into cultivation with a cultivar name. This would help to reduce the number of new species names being published and recycle existing species names when they are no longer considered acceptable for scientific purposes.

## THE LIST.

All taxa that we accept are indicated in **bold**. Taxa that are not accepted at any rank are included as synonyms. Where possible we formally synonymise such names that have not yet been formally synonymised, but many others (indicated with an asterisk \*) do not appear in the International Plant Names Index ([www.ipni.org](http://www.ipni.org)) as of 20 January 2012 and are thus evidently unpublished or manuscript name. The publication of such names in the literature is irresponsible. Names that are separated by a full stop (.) are based on different types (heterotypic or taxonomic synonyms) whereas those separated by a colon (:) are based on the same type (homotypic or nomenclatural synonyms).

**Haworthia** Duval Pl. Succ. Horto. Alenc.: 7pp (1809). Baker in Jl. S. Afr. Bot. 18: 197(1880). Baker in Fl. cap. 6: 332 (1896). Berger in Das. Pfl. 4: 74 (1908). Bayer, New Haworthia Handb. (1982). Scott, The genus *Haworthia* (1985). Type species: *H. arachnoidea* (L.) Duval. [Typification largely by Breuer & Metzing in Taxon (1996)].  
= *Catevala* Medik. (1786). *Apicra* Willd. (1811).

± 60 species, very variable and complex. The taxonomy of the genus is still unresolved. Species concepts used here largely follow Bayer's (1976, 1982, 1997 and subsequent Haworthia Update volumes) treatments and are based on geographical distribution and co-occurrence.

NOTE: Recent phylogenetic analyses of nuclear and plastid DNA sequence data supports the view that the three subgenera comprise quite distinct lineages not immediately related to one another. They are thus as distinct as some of the other smaller genera and should thus logically be treated as separate genera. A more useful option is probably to include all of the alooid genera within *Aloe*.

### Key to the subgenera

1. Flowers triangular or rounded-triangular at base; tube obclavate-curved; outer tepals free; style upcurved; seeds irregularly angled . . . subg. *Haworthia*
2. Flowers hexangular at base, gradually narrowing to junction with pedicel (substipitate); tube obcapitate-curved; outer tepals partly fused to inner; style straight; seeds irregularly angled . . . . . subg. *Hexangulares*
3. Flowers rounded at base and abruptly joined to pedicel (non-stipitate); petals partly fused; tube obcapitate-straight; style straight; seeds flattish . . . subg. *Robustipedunculatae*

### I. Subgenus **Haworthia**. Type species: as for genus. ± 41 spp.

**H. angustifolia** Haw. in Philos. Mag. J. 66: 283 (1825). Neotype, designated by Breuer & Metzing (1997): Grahamstown to Aliceade, *Bruyns* 1653 (NBG).  
= *Aloe stenophylla* Schult. & Schult.f. (1829). *H. albanensis* Shonl. (1912). *H. angustifolia* var. *grandis* Smith (1943).

#### *H. angustifolia* var. **angustifolia**

*H. angustifolia* var. **altissima** Bayer in Haw. Revis.: 26 (1999). *H. altissima* (Bayer) M.Hayashi in Haworthia Study 3: 13 (2000). Type: Riebeek East to Carlisle Bridge, *Smith* 5220 (NBG).

*H. angustifolia* var. **baylissii** (Scott) Bayer in Haw. Revis.: 27 (1999). *H. baylissii* Scott (1968). Type: Oudekraal, Zuurberg, *Bayliss* sub Scott 796 (PRE).

*H. angustifolia* var. **paucifolia** Smith in Jl. S. Afr. Bot. 14: 48 (1948). *H. paucifolia* (Smith) M.Hayashi in Haworthia Study 22: 11 (2010). Type: Frazers Camp, *Smith* 6819 (NBG).

**H. arachnoidea** (L.) Duval in Pl. Succ. Hort. Alenc.: 7 (1809); *Aloe pumila* var. *arachnoidea* L. (1753); *Catevala arachnoidea* (L.) Medik. (1786); *Apicra arachnoidea* (L.) Willd. (1811). Lectotype, designated by Scott (1977): Commelin, Praeludia Bot.: t. 27 (1703). Epitype, designated by Breuer & Metzing (1997): Buitenkloof, Langvlei, *Bayer* 153 (NBG).

= *H. arachnoidea* var. *minor* Haw. (1819).

#### *H. arachnoidea* var. **arachnoidea**

= *H. joubertii* M.Hayashi in Haworthia Study 14: 16 (2005), nom. inval. *H. laxa* M.Hayashi in Haworthia Study 14: 14 (2005), nom. inval. *H. limbata* M.Hayashi in Haworthia Study 14: 16 (2005), nom. inval. \**H. isomorpha* \**H. gilva*

*H. arachnoidea* var. **aranea** (Berger) Bayer in Haw. Revis.: 30 (1999); *H. bolusii* var. *aranea* Berger (1908); *H. aranea* (Berger) Bayer (1976). Lectotype: Engler, Pflanzenr. 33: 114, f. 39 A–E (1908). Epitype, designated by Breuer & Metzing (1997): Robinson Pass, Moeras River Drift, *Bolus* 12372 (BOL).

*H. arachnoidea* var. **namaquensis** Bayer in Haw. Revis.: 31 (1999); *H. namaquensis* (Bayer) Breuer in Gen. Haworthia 1: 7 (2010). Type: Karrachabpoort, Richtersveld, *Bayer* 1674 (NBG).

*H. arachnoidea* var. **nigricans** (Haw.) Bayer in Haw. Revis.: 32 (1999); *H. setata* var. *nigricans* Haw. (1821). Neotype, designated by Bayer (1997): SW Vanwyksdorp, *Bayer* 2419 (NBG).

= *H. helmiae* V.Poelln. (1937); *H. unicolor* var. *helmiae* (V.Poelln.) Bayer (1976). *H. venteri* V.Poelln. (1939); *H. unicolor* var. *venteri* (V.Poelln.) Bayer (1976). *H. scottii* Breuer in Avonia 21: 55 (2003), **syn. nov.** *H. nigrata* M.Hayashi in Haworthia Study 15: 14 (2006), **syn. nov.** \**H. apata* \**H. regens* \**H. formosa* \**H. kuromisa*

*H. arachnoidea* var. **scabrispina** Bayer in Haw. Revis.: 34 (1999); *H. scabrispina* (Bayer) Breuer in Gen. Haworthia 1: 8 (2010). Type: Baviaans, *Bayer* 2105 (NBG) \**H. matiesita*

*H. arachnoidea* var. **setata** (Haw.) Bayer in Haw. Revis.: 34 (1999); *H. setata* Haw. (1819). Iconotype: artist unknown, specimen received from Dr Mackrill ex Cape (K).

= *H. setata* var. *media* Haw. (1821). *H. setata* var. *major* Haw. (1821). *Aloe setosa* Schult. & Schult.f. (1829). *H. gigas* V.Poelln. (1932); *H. setata* var. *gigas* (V.Poelln.) V.Poelln. (1938). *H. minima* var. *major* V. Poelln. (1938); *H. tenera* var. *major* (V.Poelln.) Uitew. (1948). *H. pectinis* M.Hayashi in Haworthia Study 10: 13 (2003), **syn. nov.** *H. tretyrensis* Breuer in Avonia 21: 58 (2003), **syn. nov.** *H. candida* M.Hayashi in Haworthia Study 16: 16 (2006), **syn. nov.** *H. cangoensis* M.Hayashi in Haworthia Study 14: 13 (2005), nom. inval. *H. angiras* M.Hayashi in Haworthia Study 14: 13 (2005), nom. inval. *H. kogmansensis* M.Hayashi in Haworthia Study 14: 14 (2005), nom. inval.

**H. aristata** Haw. in Suppl. Pl. Succ.: 51 (1819). Iconotype: (K). Epitype: Deadman's Gulch (Soutkloof), *Smith* 3550 (NBG).

= *H. denticulata* Haw. (1821). *H. lapis* Breuer & M.Hayashi in Alsterworthia Int. Special Issue 7: 6 (2004), **syn. nov.** *H. rava* M.Hayashi in Haworthia Study 14: 11 (2005), nom. inval.

**H. bayeri** Hammer & Venter in Cact. Succ. J (US) 69: 75 (1997). Type: S Uniondale, *Stayner* in KG164/69 (NBG).

= *H. hayashii* M.Hayashi in Haworthia Study 7: 14 (2002), **syn. nov.** *H. laeta* M.Hayashi in Haworthia Study 12: 13 (2004), **syn. nov.** *H. indigoa* M.Hayashi in Haworthia Study 12: 13 (2004), **syn. nov.** *H. truterorum* Breuer & Marx in Aloe 48: 54 (2011), **syn. nov.**

**H. blackburniae** Barker in J. S. Afr. Bot. 3:93 (1937). Type: Calitzdorp, *Reynolds* 1842 (NBG).

*H. blackburniae* var. **blackburniae**

*H. blackburniae* var. **graminifolia** (Smith) Bayer in Haw. Revis.: 42 (1999); *H. graminifolia* Smith (1942). Type: Schoemanspoort, M. Courtenay □ Latimer in Smith 5222 (NBG).

*H. blackburniae* var. **derustensis** Bayer in Haw. Revis.: 41 (1997); *H. derustensis* (Bayer) M.Hayashi in Haworthia Study 3: 13 (2000). Type: W. De Rust, Vlok sub Venter 93/24 (NBG).

**H. bolusii** Baker in J. Linn. Soc. Bot.:215 (1880). Type: Graaff-Reinet, Bolus 158 (K).

= *H. odetteae* Breuer in Avonia 21: 51 (2003), **syn. nov.** *H. odysséi* M.Hayashi in Haworthia Study 14: 11 (2005), nom. inval. *H. capillaris* M.Hayashi in Haworthia Study 16: 16 (2006), **syn. nov.**

*H. bolusii* var. **bolusii**

*H. bolusii* var. **blackbeardiana** (V. Poelln.) Bayer in Haw. Hand.: 31 (1976); *H. blackbeardiana* V.Poelln. (1932). Lectotype, designated by Breuer & Metzing (1997): ex cult. V.Poelln. 1932 (B).

= *H. blackbeardiana* var. **major** V.Poelln. (1937). *H. inermis* V.Poelln. (1932); *H. altilinea* var. *inermis* (V.Poelln.) V.Poelln. (1937); *H. altilinea* var. *limpida* f. *inermis* (V.Poelln.) V.Poelln. (1940). *H. batteniae* Scott (1979). *H. calaensis* Breuer in Alsterworthia Int. Special Issue 7: 5 (2004), **syn. nov.** *H. specksii* Breuer in Alsterworthia Int. Special Issue 7: 8 (2004), **syn. nov.**\**H. hogisia* \**H. speciosa* \**H. malvina*

*H. bolusii* var. **pringlei** (Scott) Bayer in Haworthiad 16: 62 (2002). *H. decipiens* var. *pringlei* (Scott) Bayer in Haw. Revis.: 67 (1999); *H. pringlei* Scott (Bradleya 12:103,1994). Type: Adelaide district, Scott s.n. PRE 8970 (PRE). *H. hisui* M.Hayashi in Haworthia Study 12: 10 (2004), **syn. nov.** *H. lazulis* M.Hayashi in Haworthia Study 14: 11 (2005), nom. inval. *H. aquamarina* M.Hayashi in Haworthia Study 10: 13 (2003), **syn. nov.** *H. hastata* M.Hayashi in Haworthia Study 12: 9 (2004), **syn. nov.**

**H. chloracantha** Haw. in Revis.:57 (1821); *Aloe chloracantha* (Haw.) Scult. & Schult.f. (1829). Neotype, designated by Breuer & Metzing (1997): N Herbertsdale, Bayer KG411/75 (NBG).

*H. chloracantha* var. **chloracantha**

*H. chloracantha* var. **denticulifera** (V.Poelln.) Bayer in Haw. Hand.: 112 (1976); *H. angustifolia* var. *denticulifera* V.Poelln. (1937); *H. denticulifera* (V.Poelln.) M.Hayashi in Haworthia Study 3: 13 (2000). Type (icono.): (B).

= *H. angustifolia* var. *lilliputana* Uitew. (1953).

*H. chloracantha* var. **subglaucia** V.Poelln. in Kakteenkunde 9:135 (1937); *H. subglaucia* (V.Poelln.) M.Hayashi in Haworthia Study 3: 13 (2000). Neotype, designated by Breuer & Metzing (1997): Great Brak, Hurling & Neil (BOL).

**H. cooperi** Baker in Refug. Bot. 4: 233 (1871). Type: Cape, Cooper (K).

= *H. vittata* Baker (1871).

*H. cooperi* var. **cooperi**

= *H. pallens* Breuer & M.Hayashi in Alsterworthia Int. Special Issue 7: 7 (2004), **syn. nov.**\**H. turcosa* \**H. elegans* \**H. foeda* \**H. yocans*

*H. cooperi* var. **dielsiana** (V.Poelln.) Bayer in Haw. Revis.: 51 (1999); *H. dielsiana* V.Poelln. (1930); *H. pilifera* var. *dielsiana* (V.Poelln.) V.Poelln. (1940); *H. obtusa* var. *dielsiana* (V.Poelln.) Uitew. (1948). Neotype, designated by Bayer (1999): Sheldon, A.J. van der Merwe in Smith 1140 (NBG).

= *H. joeyae* Scott (1975).

*H. cooperi* var. **doldii** Bayer in Haworthiad 16: 65 (2002); *H. doldii* (Bayer) M.Hayashi in Haworthia Study 14: 11 (2005).

Type: Chalumna, Dold 3961 (GRA).

*H. cooperi* var. **gordoniana** (V.Poelln.) Bayer in Haw. Revis.: 52 (1999); *H. gordoniana* V.Poelln. (1937); *H. pilifera* var. *gordoniana* (V.Poelln.) V.Poelln. (1938); *H. obtusa* var. *gordoniana* (V.Poelln.) Uitew. (1948). Neotype, designated by Bayer (1999): Patensie, Smith 3028 (NBG).

= *H. harryi* M.Hayashi in Haworthia Study 12: 9 (2004), **syn. nov.** *H. jeffreis* M.Hayashi in Haworthia Study 12: 10 (2004), **syn. nov.** *H. pusilla* M.Hayashi in Haworthia Study 12: 10 (2004), **syn. nov.** *H. ligulata* M.Hayashi in Haworthia Study 12: 6 (2004), **syn. nov.** *H. venetia* M.Hayashi in Haworthia Study 12: 6 (2004), **syn. nov.**\**H. brandea* \**H. cineraria* \**H. compressa* \**H. gelatina* \**H. ionandra* \**H. neritica* \**H. silvicola* \**H. tomentosa*

*H. cooperi* var. **gracilis** (V.Poelln.) Bayer in Haworthiad 16: 64 (2002); *H. gracilis* V.Poelln. (1929). Neotype, designated by Bayer (1999): Hellspoort, Britten (PRE).

= *H. caerulea* M.Hayashi & Breuer in Haworthia Study 12: 7 (2004), **syn. nov.**

*H. cooperi* var. **isabellae** (V.Poelln.) Bayer in Haworthiad 16: 62 (2002); *H. gracilis* var. *isabellae* (V.Poelln.) Bayer in Haw. Revis.: 77 (1999); *H. isabellae* V.Poelln. (1938). Neotype, designated by Bayer: Humansdorp, Gamtoos bridge, *H. Hall* sub NBG 68799 (NBG).

= *H. aurea* M.Hayashi in Haworthia Study 9: 12 (2003), **syn. nov.** *H. arabesqua* M.Hayashi in Haworthia Study 12: 7 (2004), **syn. nov.** *H. bella* M.Hayashi in Haworthia Study 12: 8 (2004), **syn. nov.** *H. florens* M.Hayashi in Haworthia Study 12: 11 (2004), **syn. nov.** *H. pilosa* M.Hayashi in Haworthia Study 12: 7 (2004), **syn. nov.** *H. bathylis* M.Hayashi in Haworthia Study 15: 116 (2006), **syn. nov.** *H. lachnosa* M.Hayashi in Haworthia Study 16: 16 (2006), **syn. nov.** *H. ciliata* M.Hayashi in Haworthia Study 14: 11(2005), nom. inval. \**H. kromia*. \**H. patriae* \**H. cuprina* \**H. dasylis*

*H. cooperi* var. **leightonii** (Smith) Bayer in Haw. Hand.: 128 (1976); *H. leightonii* Smith (1950). Type: Kayser's Beach, Smith 6938 (NBG).

= *Haworthia leightonii* var. *davidii* Breuer in Avonia 21: 49 (2003), **syn. nov.**: *Haworthia davidii* (Breuer) M.Hayashi & Breuer (2005). Type: SW East London, Breuer 6970 (TUAT). \**H. sabita*?

*H. cooperi* var. **minima** (Bayer) Bayer [as (Baker) Bayer], comb. et stat. nov.: *H. minima* Baker (1880) hom. illegit. non (Aiton) Haw. (1812); *H. gracilis* var. *minima* Bayer [as (Baker) Bayer] (1999). Iconotype: (K).

= *H. tenera* V.Poelln. (1932); *H. translucens* subsp. *tenuera* (V.Poelln.) Bayer (1976); *H. gracilis* var. *tenuera* (V.Poelln.) Bayer (1999); *H. cooperi* var. *tenuera* (V.Poelln.) Bayer (2002).

*H. cummingii* Breuer & M.Hayashi in Haworthia Study 10: 4 (2003), **syn. nov.**

*H. cooperi* var. **picturata** (Bayer) Bayer in Haworthiad 16: 65 (2002); *H. gracilis* var. *picturata* Bayer (1999); *H. picturata* M.Hayashi (2000). Type: Enon, Thode 21507 (NBG).

= *H. oculata* M.Hayashi in Haworthia Study 12: 10 (2004), **syn. nov.**\**H. florida* \**H. imperialis* \**H. kubusie*

*H. cooperi* var. **pilifera** (Baker) Bayer in Haw. Revis.: 54 (1999); *H. pilifera* Baker (1871); *H. obtusa* var. *pilifera* (Baker) Uitew. (1948). Iconotype: Refug. Bot.: 234 (1871).

= *H. stayneri* V.Poelln. (1937); *H. pilifera* var. *stayneri* (V.Poelln.) V.Poelln. (1938); *H. obtusa* var. *stayneri* (V.Poelln.) Uitew. (1948). *H. stayneri* var. *salina* V.Poelln. (1937); *H. pilifera* var. *salina* (V.Poelln.) V.Poelln. (1938); *H. obtusa* var. *salina* (V.Poelln.) Uitew. (1948); *H. salina* (V.Poelln.) M.Hayashi (2010). *H. pilifera* var. *dielsiana* f. *acuminata* V.Poelln. (1940); *H. obtusa* var. *dielsiana* f. *acuminata* (V.Poelln.) Uitew. (1948). *H. luri* M.Hayashi in Haworthia Study 14:11 (2005), nom. inval. \**H. sabrina*

*H. cooperi* var. **truncata** (Jacobs.) Bayer in Haw. Rev.: 55 (1999); *H. obtusa* var. *pilifera* f. *truncata* Jacobs in Nat. Cact.

- Succ. J. 10: 81 (1955); *H. ikra* Breuer (2010). Neotype, designated by Bayer (1999): Runlets, Mgwali, *Smith* 5295 (NBG).
- H. cooperi* var. **venusta** (Scott) Bayer in Haw. Revis. (1999); *H. venusta* Scott in Bradleya 14:87 (1996). Type: NE Alexandria, *Britten* 781 (GRA).
- H. cooperi* var. **viridis** (Bayer) Bayer in Haworthiaad 16: 65 (2002); *H. gracilis* var. *viridis* Bayer (1999). Type: Perdepoort, *Smith* 6867 (NBG).

**International Code of Nomenclature for Cultivated Plants**

**Down-load the full text from:-**

**[http://www.actahort.org/chronica/pdf/sh\\_10.pdf](http://www.actahort.org/chronica/pdf/sh_10.pdf)**

**If you have any problems accessing the pdf file direct you can access it through the ISHS web site.**

**Printed copies of the ICNCP have been issued at €20 - see [www.ishs.org/pub/scripta.htm](http://www.ishs.org/pub/scripta.htm)**

The International Society for Cultivated Plants wishes to make the provisions of the ICNCP better known and understood and has now made the full text of that Code freely available from their web site. All who have any form of interest in cultivated plants should have a copy. Please take this opportunity to down-load one now.

*If your sole interest is in the classification of species under the ICBN  
you definitely also need a copy of the ICNCP.*

*It provides for species names to be used as cultivar names under certain circumstances and for cultivar names to be given to selected populations of a species as well as individual clones under certain circumstances. See the ICNCP for full details.*

### **Bruce Bayer's Haworthia Update No. 7.....**

..... is in preparation and will be available shortly. The results of more extensive field work are fully discussed and illustrated. The photographs on the front and back covers of this journal, taken from Update 7, show two species with quite different growth forms in two quite different habitats. More information will be in the July journal.

## Seed List 2012

Joel Lode's seed list, which supplies seed to three societies, has expanded considerably and new additions are made to it at various times as seed comes in from various sources.  
It is no longer practical for the list to be printed and kept up-to-date.

From 2012 the seed list will be available only on line.

**One of the benefits of this change is that the entire list is now available to Alsterworthia International members, thus increasing the number of genera and species available to them**

The seed list is in three languages – English, French and Spanish.

To access the illustrated list of other succulents log on to:

<http://cactus-aventures.com/SeedCatalogue/SeedlistSUC.html>

This will produce the home page as follows but in colour

Scroll down to access the other succulent seed list, decide which species you wish to order and **record them in this**

### Cactus Aventures

Les graines CITES1 ont été récoltées en serre / The CITES1 seeds are artificially propagated

Las semillas CITES1 han sido recolectadas en invernadero, sobre plantas madre.

La liste n'est désormais plus numérotée, ce n'est pas un oubli. Mettez vous-mêmes vos numéros

Now, the list is not numbered. Please add your own - La lista no tiene numerotación, ahora es normal. Ponga su propia numerotación.

#### **order on the order form – see below.**

If cacti seed also interests you, click on Cactaceae just above the commencement of the Other Succulent seed list.

Click on the “General Terms of Sale HERE” near the top of the home page **and ensure you comply with them.**

Click on the “Order form here” and complete your order.

**You must list your order in catalogue order. Do not diverge from this order by adding at the end etc.**

**Sort out what you wish to order first and then order in catalogue order.**

**Payment by credit card is accepted. If you do not require substitutes you MUST pay by credit card.**

**You will be charged only for seed supplied.**

The volume of seeds and the number of orders is so great that Joel Lode needs all the available time to fulfil orders. He is unable to deal with seed enquires and correspondence. Please do not write to him to ask if any particular seed is available. Decide what you want from the list, order in list order and pay by credit card.

You will receive all the seed that is available and pay only for the seed supplied.

# Haworthia or The Art of Camouflage.

Jean -André Audissou  
36, avenue du Stade,  
17450 Fouras, France.

<http://www.audissou.com>

Haworthias are difficult plants to find in nature because they protect themselves from the sun's heat by growing under bushes or even under stones, as we shall see farther on. Only some species grow in full sun such as *Haworthia maxima* (Fig.1) *H. fasciata*, *H. longiana* and *H. marginata* (Fig.2).

Certain species are prominent and can be located simply by moving vegetation aside (Fig. 3). This method can be tedious if the plants are few in number. On more stony ground with fewer bushes other species find protection under the stones and are not easier to find.

I recall having to search a long time for *H. archeri* (*Haworthia marumiana* var. *archeri* sensu Bayer) in September 2007 on very stony, dry ground east of Matjiesfontein. It was only after one hour and when renewing the laces in my boots that I saw a unique individual under a rock. It was

4

impossible to take a photo without raising the rock (Fig. 4). The rock was put back in its original place.

Meeting Gerhard Marx a little later, I gave him directions to the site, which he visited a month later. He did not find any plants. He waited until the end of January the following year to return there because he knew the plants would be in flower and exposed by them. This is what happened and he thus found several plants from which flower stems rose between the rocks.

Locating species by their flower stems implies visiting the site at the appropriate flowering season, but all do not flower at the same time. In all cases it is the most efficacious method for locating species which grow level with the ground, like *H. bayeri* (Figs. 5-8), *H. pygmaea* (Photos 9-10). *H. bruynsii* (Fig. 11.) or *H. springbokvlakensis* (Figs. 12-13). It is these which are covered with sandy soil and small pebbles in the dry season and cannot be found without flower stems. In September 2010, I easily found to the west of Mosselbay a group of *H. pygmaea* once again by their flower stems. I returned to the same place in the following year at the same time and it took more than one hour to find some individuals because their flowering was late and flowering stems had hardly begun to grow.

Other species also require the presence of flowers if they are to be found in their natural environments of bushy herbaceous plants. Plants concerned are *H. graminifolia*

(*H. graminifolia* v. *graminifolia* sensu Bayer), figs. 14.-15. It was the presence of flowers that allowed the discovery of the plants in 1982.

**Fig. 11.***Haworthia bruynsii*. Langveld.  
**Fig. 12 & 13.***Haworthia springbokvlakensis*. Springbokvlakte (greyish-brown). 13 cleaned.  
**Fig. 14.***Haworthia graminifolia* Schoemanspoort

Other species grow in dry soils which provides protection during the dry season when they are drawn into the ground e.g. *H. cooperi* v. *pilifera* (Fig. 17), *H. pubescens* (Fig. 16), *H. maculata* and *H. devriesii* (Figs. 18-19). The outer leaves of the last dry out after the rainy season and form protection against dehydration. It is sufficient for the wind to cover the plant with sand for it to become invisible. Again, the presence of flower stalks is a significant sign for finding plants.

During a visit with Gerhard Marx to De Rust at a site of *Haworthia bayeri* in September 2008, I commented that certain plants were reddish (Fig. 20) because of too much exposure to the sun. The reason for this was that the inhabitants of the near by township came to cut the plants to supplement their cooking. In these conditions the plants had little chance of surviving to the end of the dry season.

I sincerely believe (and practice) that a plant's protection should be restored in its original position after it has been photographed.

It is naturally frustrating for an author of an article to publish photos of plants hidden by sand or branches, because their beauty is obscured. But it is useful for people who do not have, or have little, experience of the terrain to enable them to experience the difficulties of locating certain species in situ.
