Re: 2007 Annual Monitoring Report
Holtz Krause Landfill

Dear Bill:

I have enclosed two copies of the 2007 Annual Monitoring Report for the Holtz Krause Landfill.

Please let me know if you have any comments or need additional information. I can be reached at (715) 261-6536.

Sincerely,

A handwritten signature in black ink, appearing to read "David Erickson".

2007 Annual Performance Evaluation Report

Holtz Krause Landfill

Wausau, Wisconsin

1.0 Introduction

The Holtz-Krause Landfill (WDNR License No. 00674, Facility Id. No. 3737055880) is located in the City of Wausau in Marathon County, Wisconsin. This report documents the performance of the composite cover and gas extraction systems, and summarizes the results of the groundwater monitoring, for the year 2007.

This report was prepared by:

David A. Erickson Telephone: (715) 261-6536
City of Wausau
407 Grant Street
Wausau WI 54403

2.0 Final Cover System

2.1 System Overview

The Holtz Krause Landfill has a cover system consisting of 6" of topsoil, 2½' of soil, a 40 mil VLDPE geomembrane, and 2' of clay overlying the base grade and former landfill cap. The cap system has performed well during the year 2007.

2.2 Vegetative Cover/Erosion

The vegetative cover is well established in all areas and there have been no erosion problems over the last year. The landfill cover was mowed once during 2007, in August, by the Salzman's.

2.3 Settlement/Surface Drainage

The landfill has experienced differential settlement and the surface of the cap reflects that impact. The east and west sides drain away from the landfill at slopes of up to 25% but the main portion of the landfill cap was constructed to drain to the south at a 2% slope with a 1% grade for a length of about 250' near the middle. These flatter areas have always been slow to drain and the differential settlement is apparent with some areas having marginal drainage.

The O&M plan requires a settlement survey every three years and settlement surveys were conducted in June of 2005 and April of 2008.

The settlement surveys, as well as a walkover of the site, indicates the most extreme differential settlement is to the east of EW-13. The differential settlement is on the order of 2' over a distance of approximately 20' as discussed in the 2005 annual report.

Overdrawing the gas extraction system could draw in oxygen and increase the amount of settlement in a given area.

2.4 Site Security

We did not have any significant vandalism incidents during 2007. The blower house, blower house gate, and extraction wells are protected by padlocks and we have not had problems with unauthorized persons accessing these facilities.

A locked gate is maintained at the end of the access road off of Kent Street but most of the site is not fenced or controlled. Signs have been posted since the fall of 1999 prohibiting motorized vehicles and motorcycle activity has been significantly reduced as a result.

The landfill includes several properties owned by Holtz & Krause Contractors, Inc and Holtz Krause Real Estate Development, Inc. These properties have been tax delinquent since before the cap was constructed. Recently these corporations were acquired by Leonard Salzman and he has been utilizing the properties. The Salzman's mowed the site and baled the grass, store equipment and materials in the building and along the edge of the cap to the north, and construction started in 2007 for a cell phone tower on the property extending to the north of the cap. These activities are potential violations of the restrictions placed on the site and represent a sort of security issue that needs to be resolved.

3.0 Gas Extraction System

3.1 System Overview

The gas system consists of 35 extraction wells, header pipes interconnecting those wells, a blower building and candlestick flare, and a condensate drain line connected to the Wausau sanitary sewer system. A system of 10 gas probes around the perimeter of the landfill allows monitoring for methane.

3.2 Gas Extraction System Repairs/Construction

There were no repairs to the gas extraction system during 2007. Issues that are being monitored include:

Granular material collects in the base of the demister unit, as discussed in previous reports. This material is believed to be mineral scale from the inside of the header system but it could be 3M fill that was used in the landfill construction. The amount of material is minimal, on the order of one cup each quarter.

Settlement has created low spots in the gas extraction system header pipes that fill with condensate and interfere with the flow of the landfill gas.

The depths and water levels in the extraction wells were measured on March 17 and 18, 2004. The water level indicator initially encountered an obstruction at a depth of approximately 24' in EW-1 but was able to be advanced to the bottom of the extraction well at 32.3'. A sewer camera was used to inspect the inside of extraction wells EW-1 and EW- 18. The camera confirmed that the well screens have partially collapsed due to settlement.

3.3 Settlement of Gas Extraction System Header

The header system is designed to allow condensate to drain. Differential settlement can create low spots within the header pipe that fill with condensate and interfere with the gas extraction. The header line pressure readings taken during the monthly extraction well monitoring are reviewed to confirm that the header system is performing adequately.

Readings indicate there has been relatively little flow from extraction wells EW-26 through EW-35. The system has generally maintained vacuum in the header system through this area during 2007 but we have had sporadic problems with condensate blocking the header pipe.

Observations in previous years have also indicated that some condensate collects in the header system between EW-11 and EW-12, and between EW-13 and EW-14. This has been confirmed with the sewer line camera. Blockage at those locations has obstructed flow from EW-12 and EW-13.

Inspections of the drip legs and drain line outfall in the Kent Street sanitary sewer manhole have not indicated any problems or deficiencies with those units. The drip legs maintain system vacuum while allowing condensate to drain to the sanitary sewer.

3.4 Blower House Monitoring

The blower house is monitored weekly as part of the O&M Plan. The blower ran continuously during 2007 except for short time periods during the year due to maintenance activities.

The gas extracted from the landfill should be balanced so that methane does not migrate off-site and oxygen is not drawn into the landfill waste. Increasing the flow rate would generally be expected to decrease the concentration of methane in the landfill gas. Maintaining the methane concentration at 45 to 50 percent is one rule of thumb used to determine the proper flow rate.

The blower has been operated at a flow rate of approximately 150 - 200 cfm in an effort to meet the conflicting goals. Measurements electronically recorded with the LANDTEC GEM 500 instrument generally indicate a slightly higher flow rate. The measurements manually recorded on the weekly inspection forms were made with a Magnehelic pressure gage and are usually more consistent.

The methane levels at the blower averaged 25.2 percent, ranged from 15.4 to 42.9 percent, and are below the 45 to 50 percent guideline. The average methane concentration is expected to continue to gradually decrease.

The flame at the blower house blows out easily if the methane concentration is in the lower 20 percent range. The blower system continues to operate if the flare is not lit. The flare was out on several occasions during 2007 depending on weather and barometric conditions

3.5 Extraction Well Monitoring

3.5.1 Extraction Well Field Readings

A review of pressure readings throughout the header system and oxygen levels at the blower building does not indicate leaks.

The percentage of methane, carbon dioxide, and oxygen; relative pressure on the well and header sides of the control valve; flow; and temperature are monitored with the LANDTEC GEM 500 Gas Extraction Monitor. A printout of the readings is included in Appendix N. As with the blower, a rule of thumb for optimum methane levels in individual wells would be 45 to 50 percent.

3.5.2 VOC Testing

The landfill gas at the blower house and extraction wells EW-3, EW-5, EW-6, EW-20, EW-21, and EW-27 are tested annually for VOC's. In addition, the blower house samples were analyzed for the percentage of carbon dioxide, carbon monoxide, nitrogen, oxygen, and methane. The samples were collected on March 19, 2007 and the results of these tests are summarized in Appendix A.

3.6 Gas Probe Monitoring

The perimeter gas probes are monitored quarterly in accordance with the O&M Plan to check for migration of methane. The Landtec GEM-500 is used for the gas probes as well as the extraction wells. Methane was not detected in any of the gas probes during 2007. The probe monitoring data indicates that the extraction system is effectively providing protection against gas migration to the surrounding properties. The GEM 500 readings are included in Appendix N.

3.7 Condensate Testing

The flow or quantity of condensate produced is not measured but it appears to be a small amount and only during the winter months.

A sample of the condensate from the gas extraction system was collected from Condensate Drip Leg No 1 (WDNR ID 301) on March 19, 2007. The sample was tested for VOC's and the results are summarized in Appendix B.

4.0 Monitoring System Status

4.1 Gas Probes

The landfill perimeter gas probes presently consist of GP1S/GP1D, GP2S, GP3S/GP3D, GP4S, GP5S, GP6S, GP7R, GP9, GP10, and GP11. GP1S/GP1D and GP3S/GP3D are nested probes with one deep and one shallow probe within one protective casing. The gas probe locations are included in the site map Figure 2.

The gas probes are monitored and inspected on a quarterly basis. Inspection activities include visual inspection of the access; labeling; conditions of the casing, lid, and lock; and of the condition of the PVC extension and petcock.

4.2 Groundwater Monitoring Wells

The existing monitoring wells are listed on the table of current monitoring requirements in Appendix M. The groundwater monitoring wells are sampled on an annual or semi-annual basis.

No deficiencies or problems with the wells have been noted during 2007. Two new monitoring wells, MW-25C and MW-26C were installed in August of 2006. The well locations are shown on the attached site map Figure 2.

5.0 Groundwater Analytical Results

5.1 Background

Groundwater samples were collected in accordance with the sampling schedule. All wells are sampled annually in June, semi-annual samples are collected from some of the wells in December, and additional quarterly samples were collected from select wells in March and September. The sampling schedule is included in Appendix M.

5.2 Groundwater Monitoring

5.2.1 Procedures

The sampling and testing for 2007 was done in accordance with the SAP with the following exceptions:

- The two new wells (MW-25C and MW-26C), and two additional wells (MW-24C and MW-24D) were sampled in March and September in addition to the normal June and December events.
- Water levels and field parameters were not obtained from EW-3R during June or December because of the presence of free-phase petroleum product.
- The samples were analyzed using EPA method 8260. This method includes tetrahydrofuran which had not been analyzed prior to 2006.

5.2.2 Groundwater Quality Data

Tables summarizing the results for all parameters detected during 2007 are included in Appendix K (sorted by well) and Appendix L (sorted by parameter). Tables identifying WAC Chapter NR140 PAL and ES exceedances, sorted by parameter and by well, are included in Appendices D through G. Results of analytical testing have also been submitted to the WDNR on electronic media.

Field measurements of groundwater elevation, pH, specific conductance, temperature, oxidation-reduction potential (ORP), and dissolved oxygen (DO) are summarized for each sampling event in Appendix C.

The following parameters, as shown in the tables in Appendix E and G, had a PAL and or ES exceedance during 2007:

Arsenic: Arsenic exceeded the ES (10 µg/l) in well MW-22B and the PAL in MW-4B, MW-8B, MW-8C, MW-12B, MW-21A, MW-22B, MW-24B, and MW-24C. Arsenic was detected at concentrations of up to 11.1 micrograms per liter (µg/l) and has been interpreted to be naturally occurring.

Benzene: Benzene exceeded the PAL (0.5 µg/l) in 10 wells and exceeded the ES (5 µg/l) in 4 of those wells during 2007. Benzene versus time graphs are included in Appendix H for all wells having a PAL exceedance in 2007. Results in general continue to be relatively steady or slightly decreasing.

Chloromethane: Chloromethane (methyl chloride) exceeded the PAL (0.3 µg/l) in 4 wells but did not exceed the ES (3 µg/l) in any wells. This is a significant reduction over previous years and

appears to correlate with the switch from the EPA 8021 to the EPA8260 test procedure which occurred in December of 2006.

1,2-Dichloroethane: 1,2 Dichloroethane exceeded the PAL (0.5 µg/l) in MW-22B.

Naphthalene: Naphthalene exceeded the PAL (10 µg/l) in MW-3R.

Tetrahydrofuran: Tetrahydrofuran exceeded the PAL in 8 wells and the ES in 3 of those wells. Tetrahydrofuran was not included in the analyte list prior to 2006. A graph of tetrahydrofuran concentrations is included in Appendix J.

Vinyl Chloride: Vinyl chloride was detected at levels above the PAL (0.02 µg/l) in 4 wells and above the ES (0.2 µg/l) in 3 wells. Vinyl Chloride versus time graphs are included in Appendix I for those wells which have previously exceeded the enforcement standard.

5.2.3 Groundwater Level and Flow Data

Groundwater elevation data was obtained from the June and December sampling events and is recorded on the Field Data Summary sheets in Appendix C. Groundwater contours are also presented on Figure 3 through Figure 6. Surface water is generally present in the stream along the east side of the landfill, in Horseshoe Slough and Pils Slough to the south of the site, and in Cemetery Slough to the east of the site.

The groundwater flow direction on the north-east side of the landfill is to the southwest but the flow changes to a predominantly westerly direction on the west side of the site. The two new wells help establish the flow direction on the west side of the site.

The groundwater contours indicated on Figure 3 through Figure 6 are based on measurements from both monitoring wells and piezometers. Where well nests provide measurements at varying depths, the deeper, non-bedrock well (piezometer) information was used (i.e. MW-25C). The well nests generally show limited if any vertical gradient so data from shallow monitoring wells were used where deeper wells were not present.

6.0 Expenses

The O&M expenses are summarized in the following table:

| | 2007 Projection | 2007 Actual | 2008 Projection |
|------------------------------|--------------------|----------------|--------------------|
| Mowing, Snow-plowing | \$1,500.00 | \$524.32 | \$600.00 |
| Electric & Telephone | 4,750.00 | 5,523.49 | 6,000.00 |
| Laboratory Testing | 13,500.00 | 9,345.00 | 10,000.00 |
| Monitoring Well Construction | 0.00 | 0.00 | 0.00 |
| Consultant | 14,000.00 | 8,097.79 | 7,500.00 |
| Consultants - ROD Amendment | 0.00 | 0.00 | 0.00 |
| Settlement Survey | 0.00 | 0.00 | 3,500.00 |
| City Staff | 12,000.00 | 11,513.67 | 10,000.00 |
| Misc | 1,250.00 | 1,892.58 | 1,500.00 |
| Total: | \$47,000.00 | \$36,896.85 | \$39,100.00 |

This table includes 2007 expenses that were paid in 2008. The 2008 projection estimates are based on the following:

The landfill cap will not be mowed by the City

The 2008 estimates do not include contingencies for major repairs or unexpected expenses.

Anticipated future expenses include completing the ROD amendment and, more significantly, repairing problems in the header system related to differential settlement.

The agreement between the Steering Committee and the City of Wausau provides the financial assurance for the continued maintenance of the landfill. The balance remaining per that agreement is:

| | |
|--------------------|----------------|
| Balance 1/1/07: | \$2,099,681.88 |
| Expenditures 2007 | 36,896.85 |
| Interest Generated | 130,185.10 |
| Balance 1/1/08 | \$2,192,970.13 |

Appendix H

MW-4B

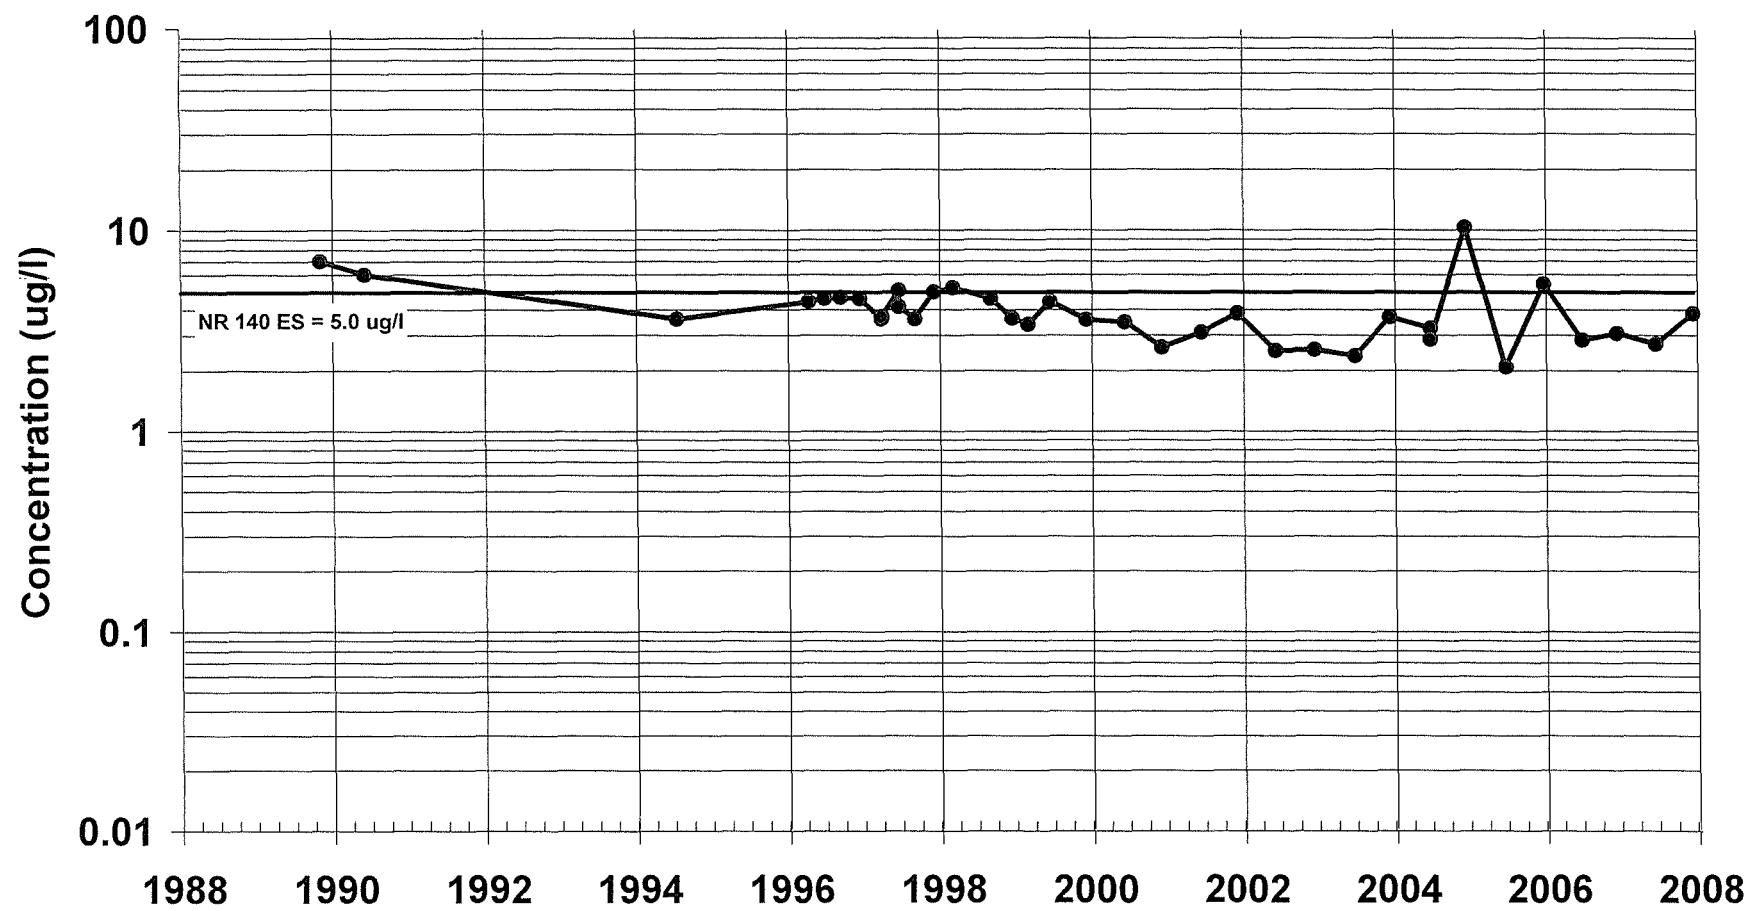

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-8B

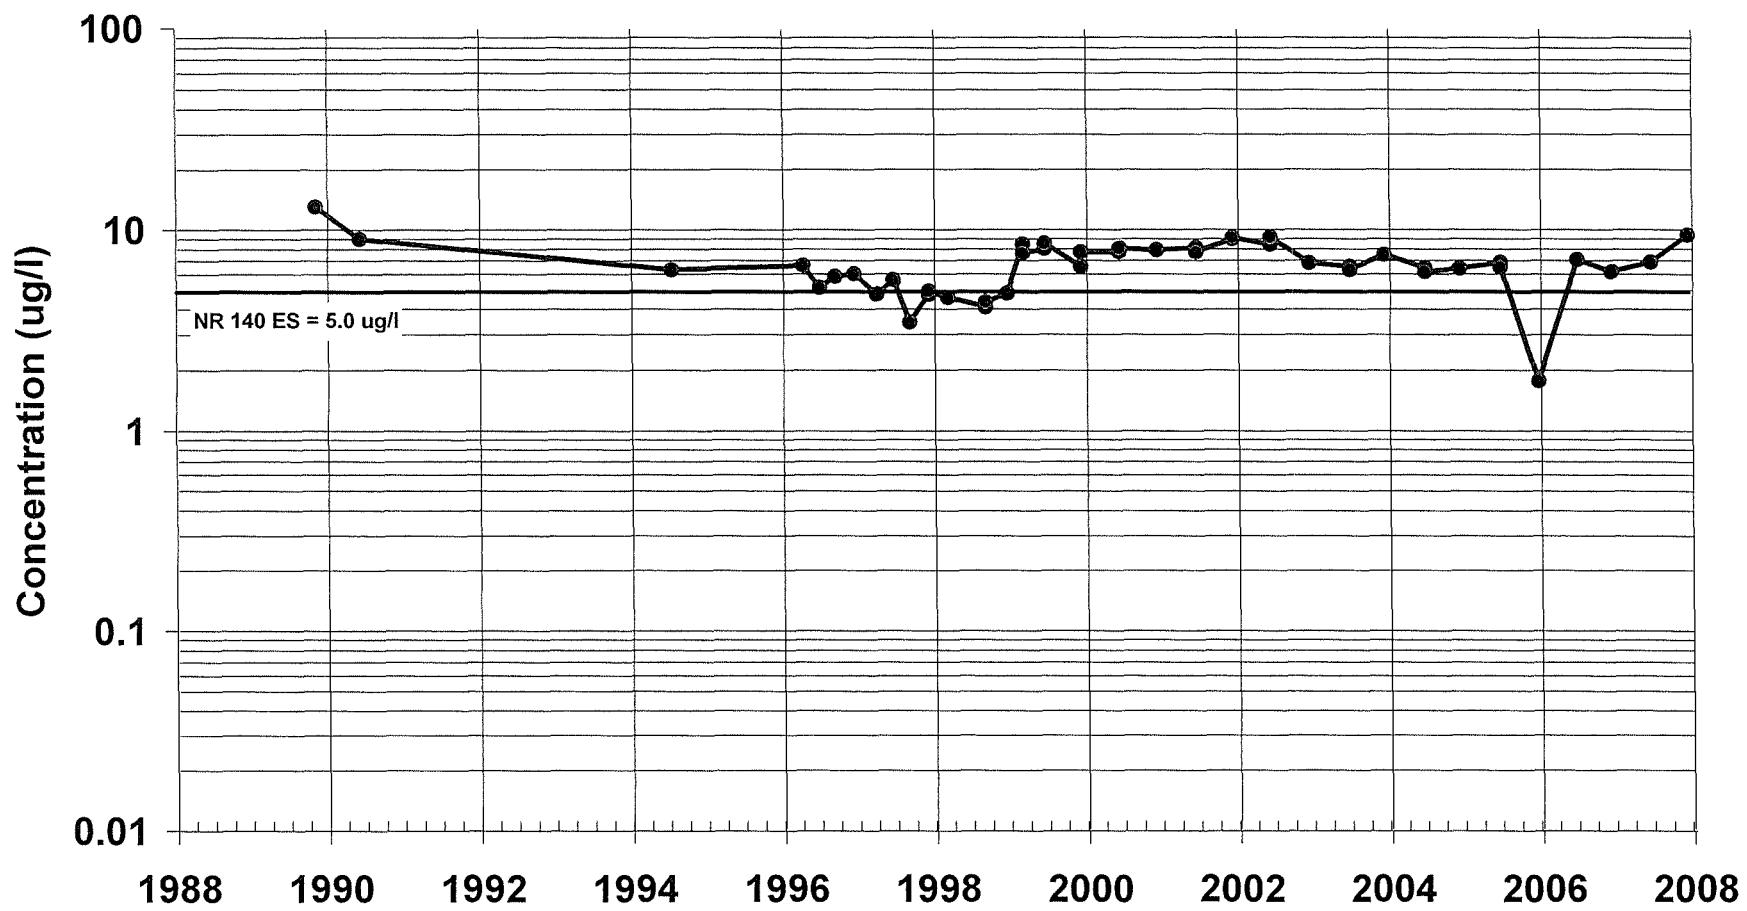

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-8C

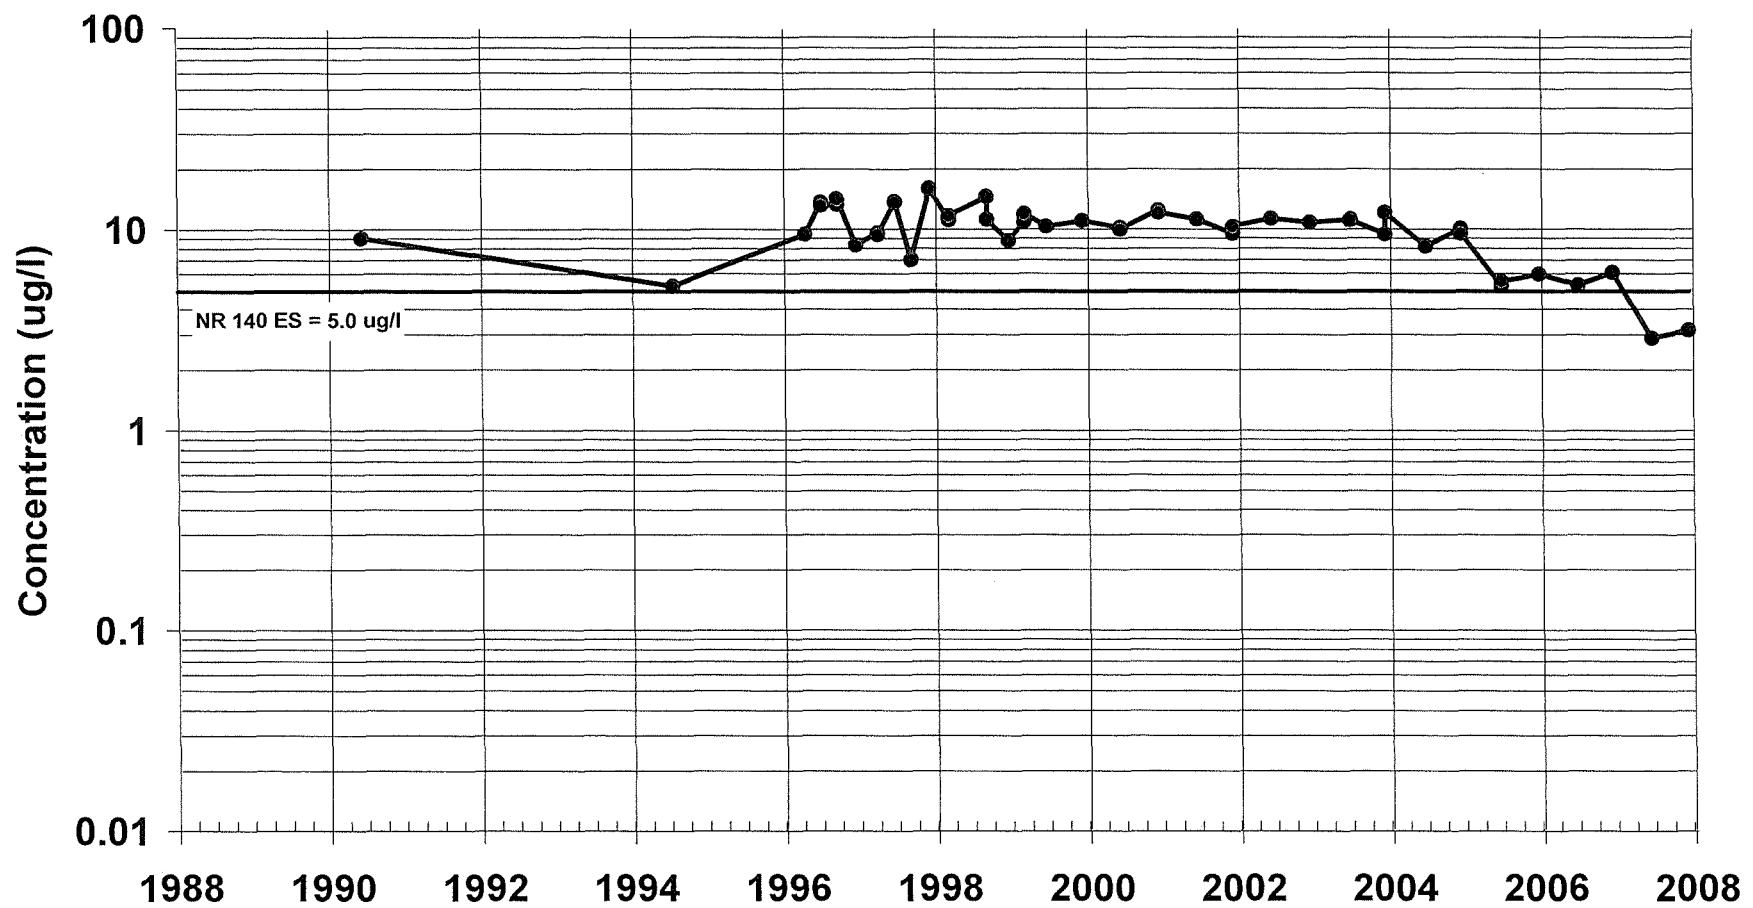

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-11C

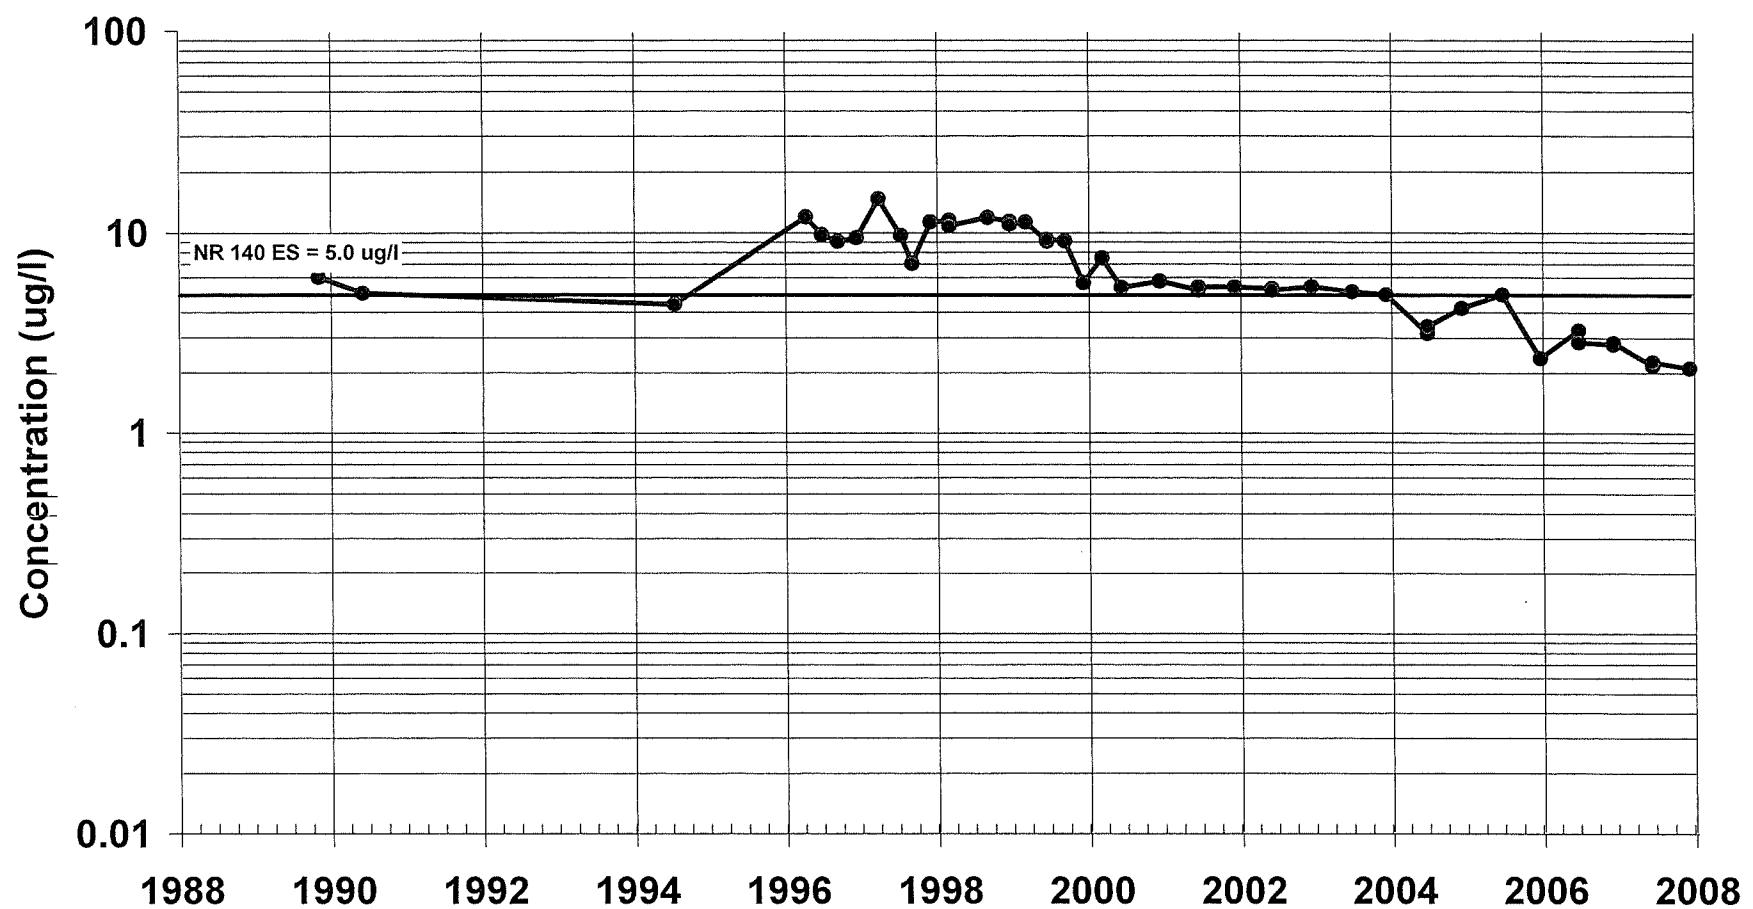

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-12B

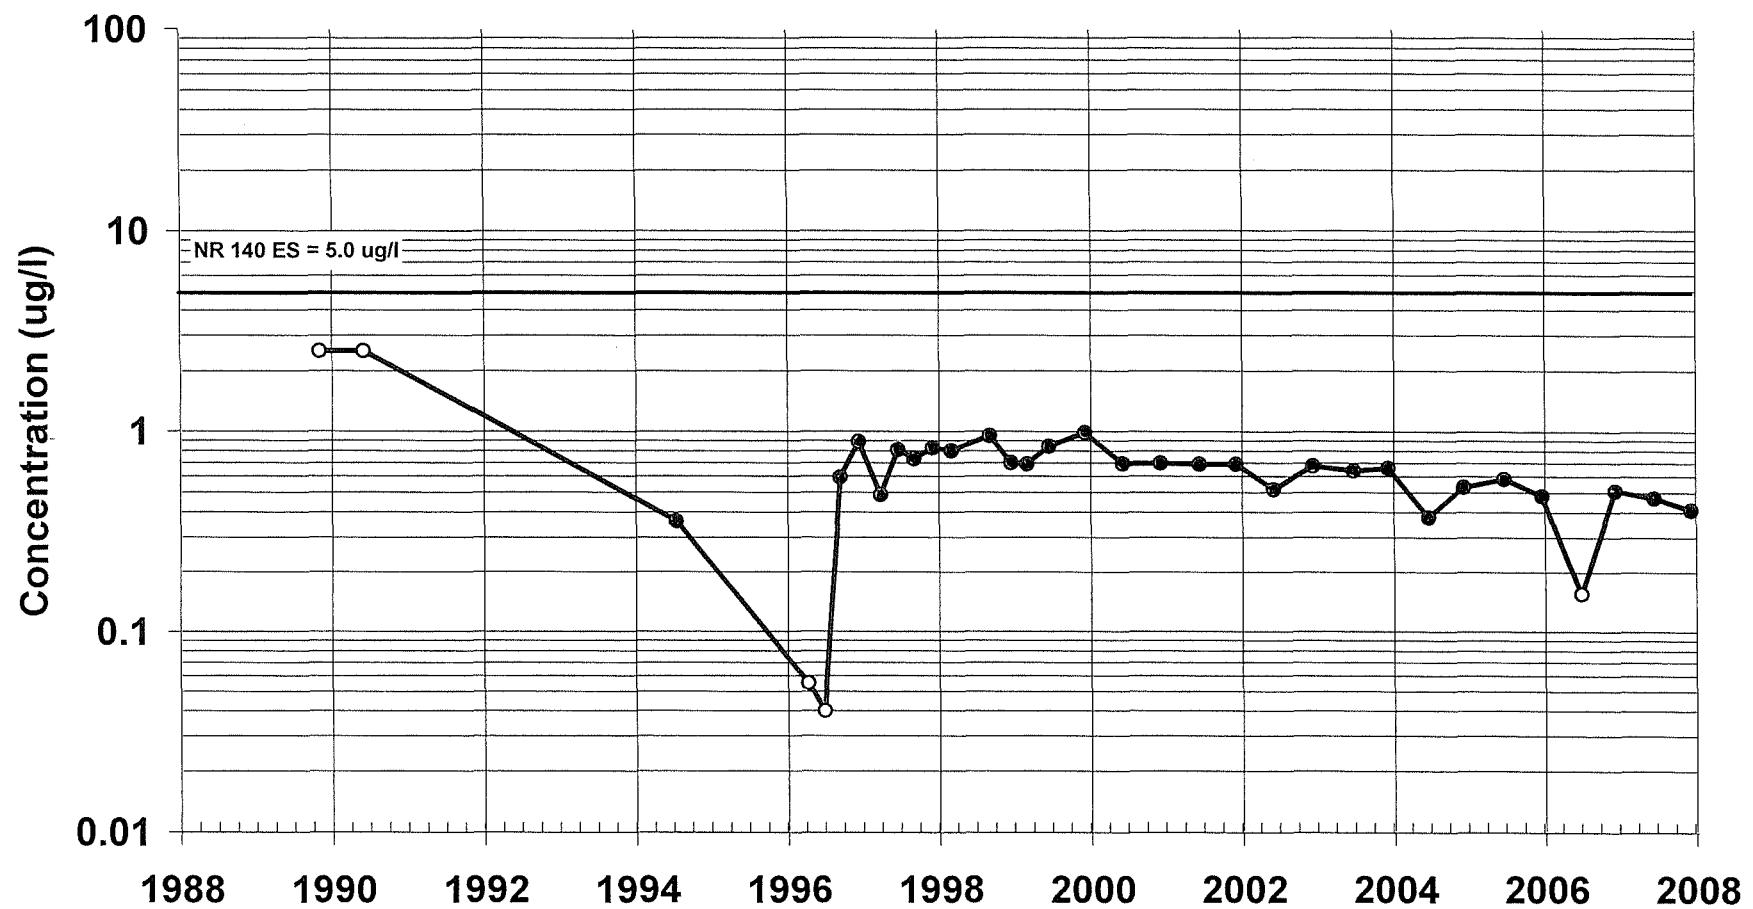

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-19A

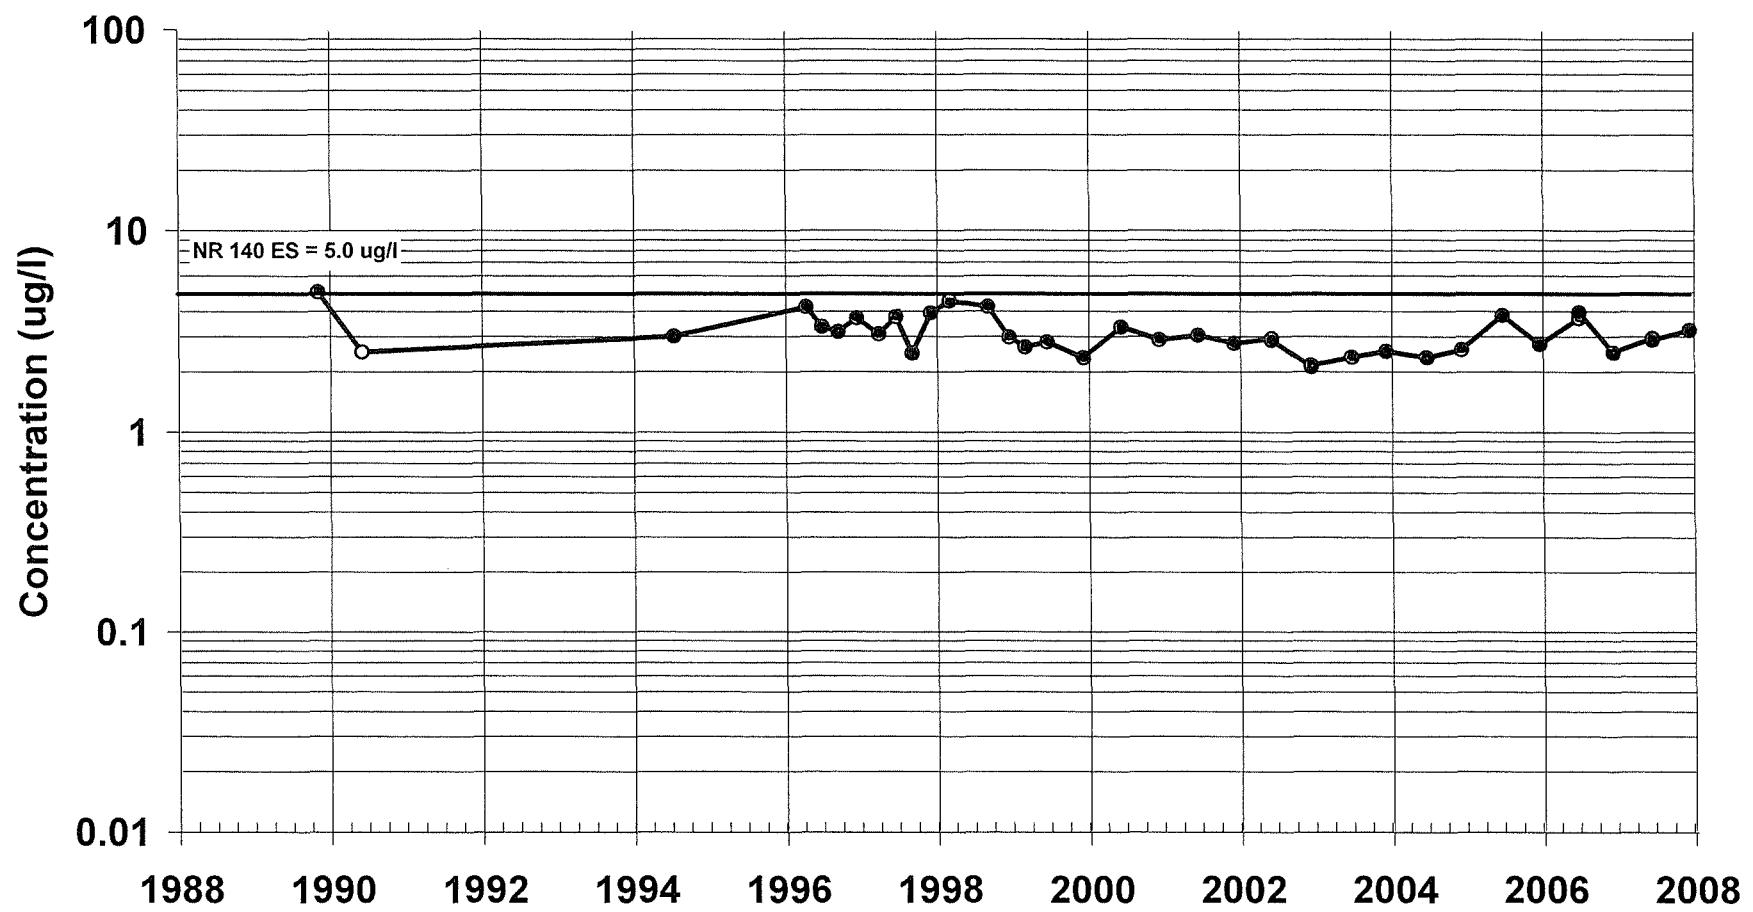

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-22B

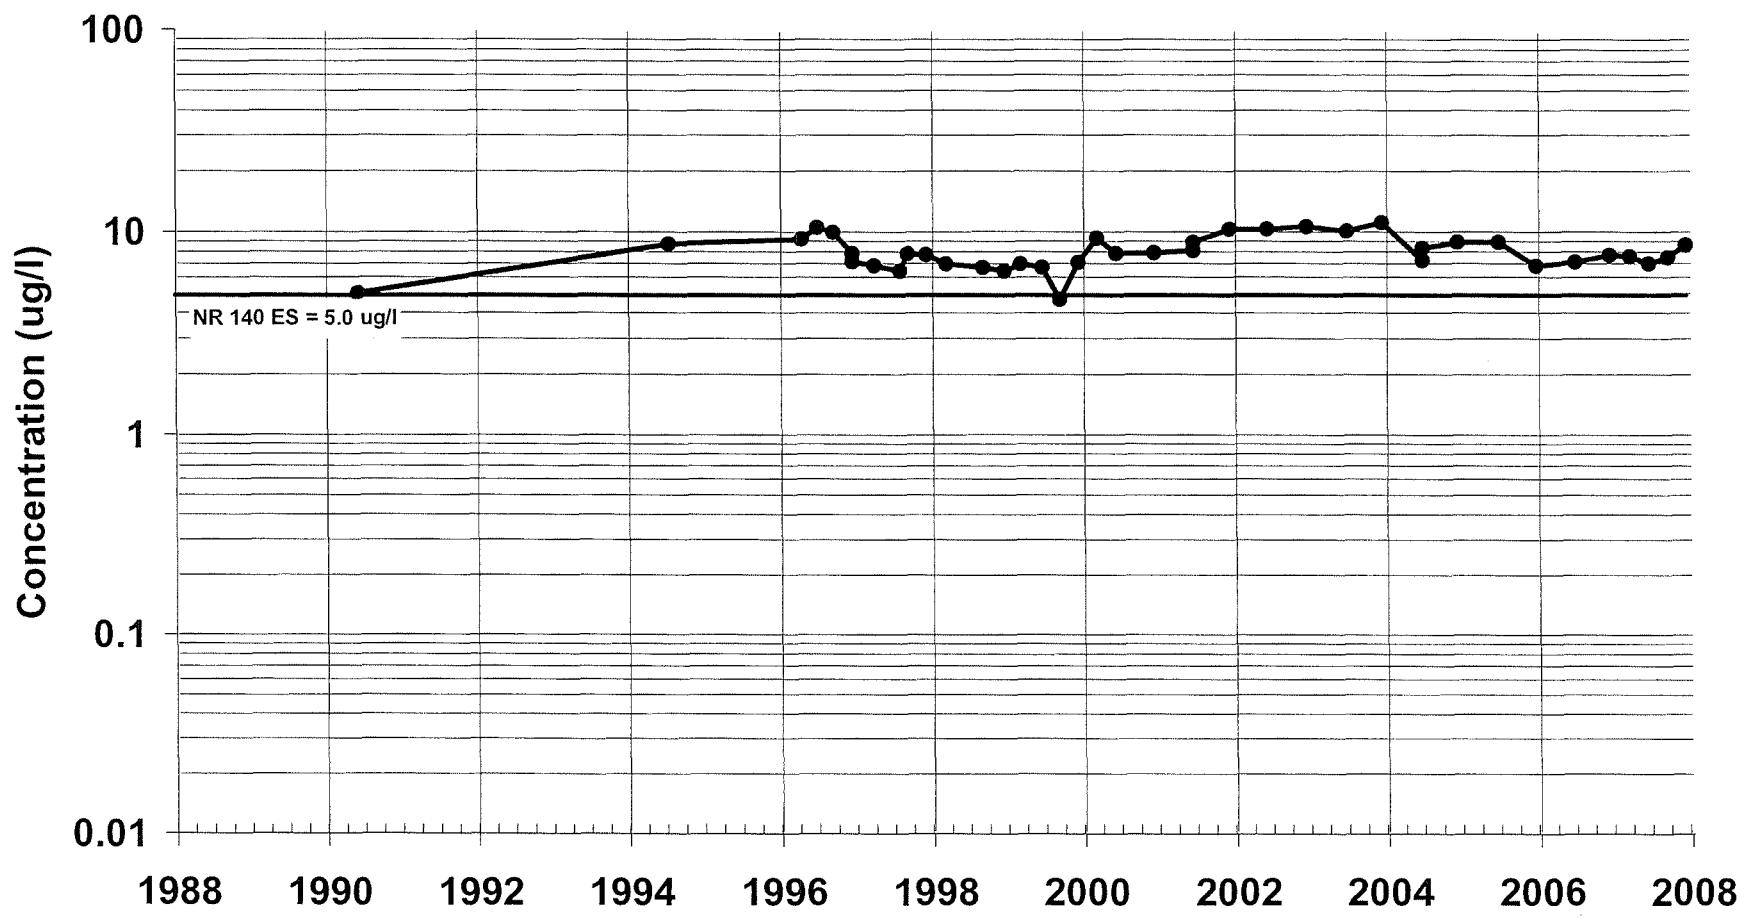

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-24C

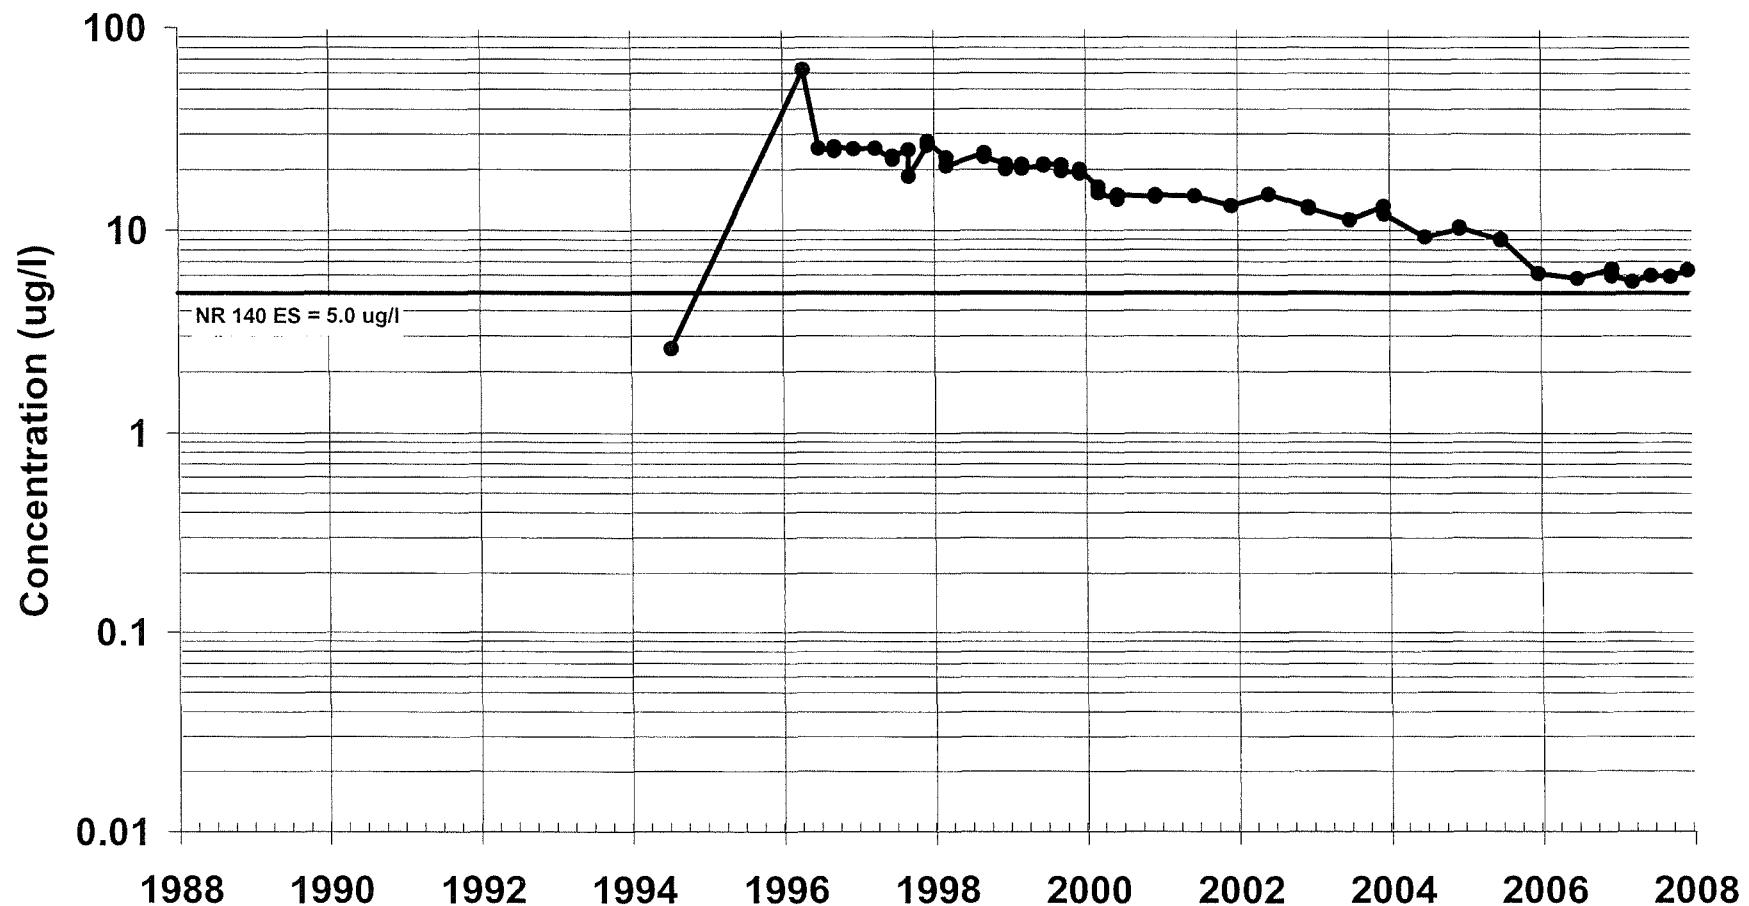

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-24D

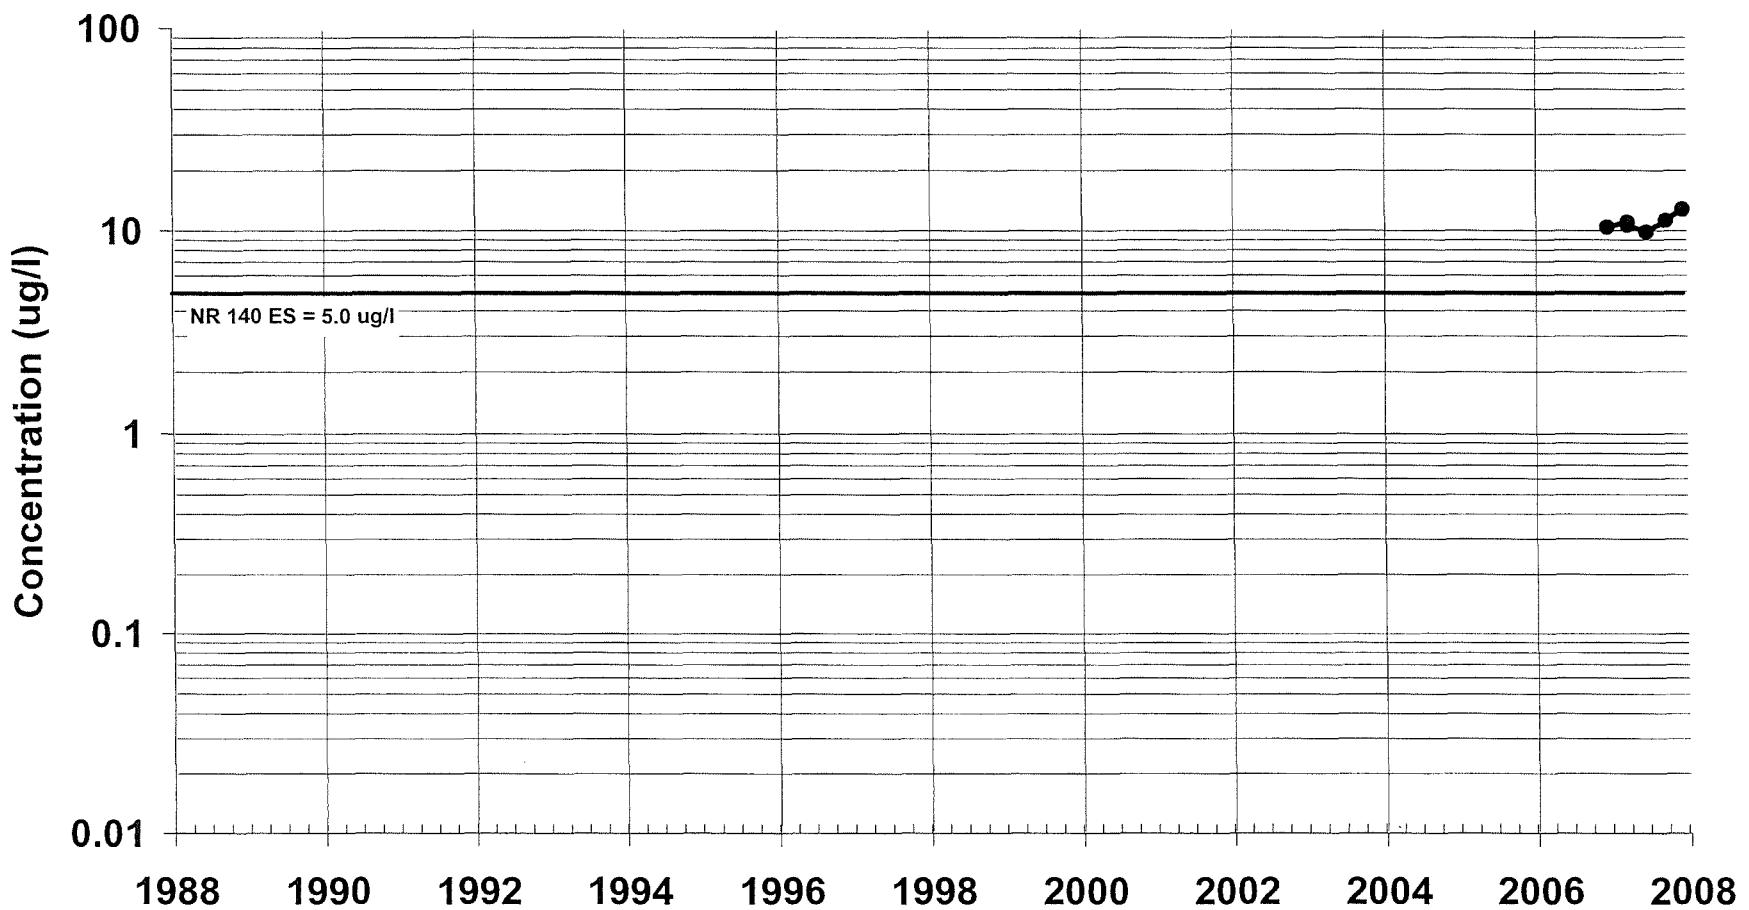

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-25C

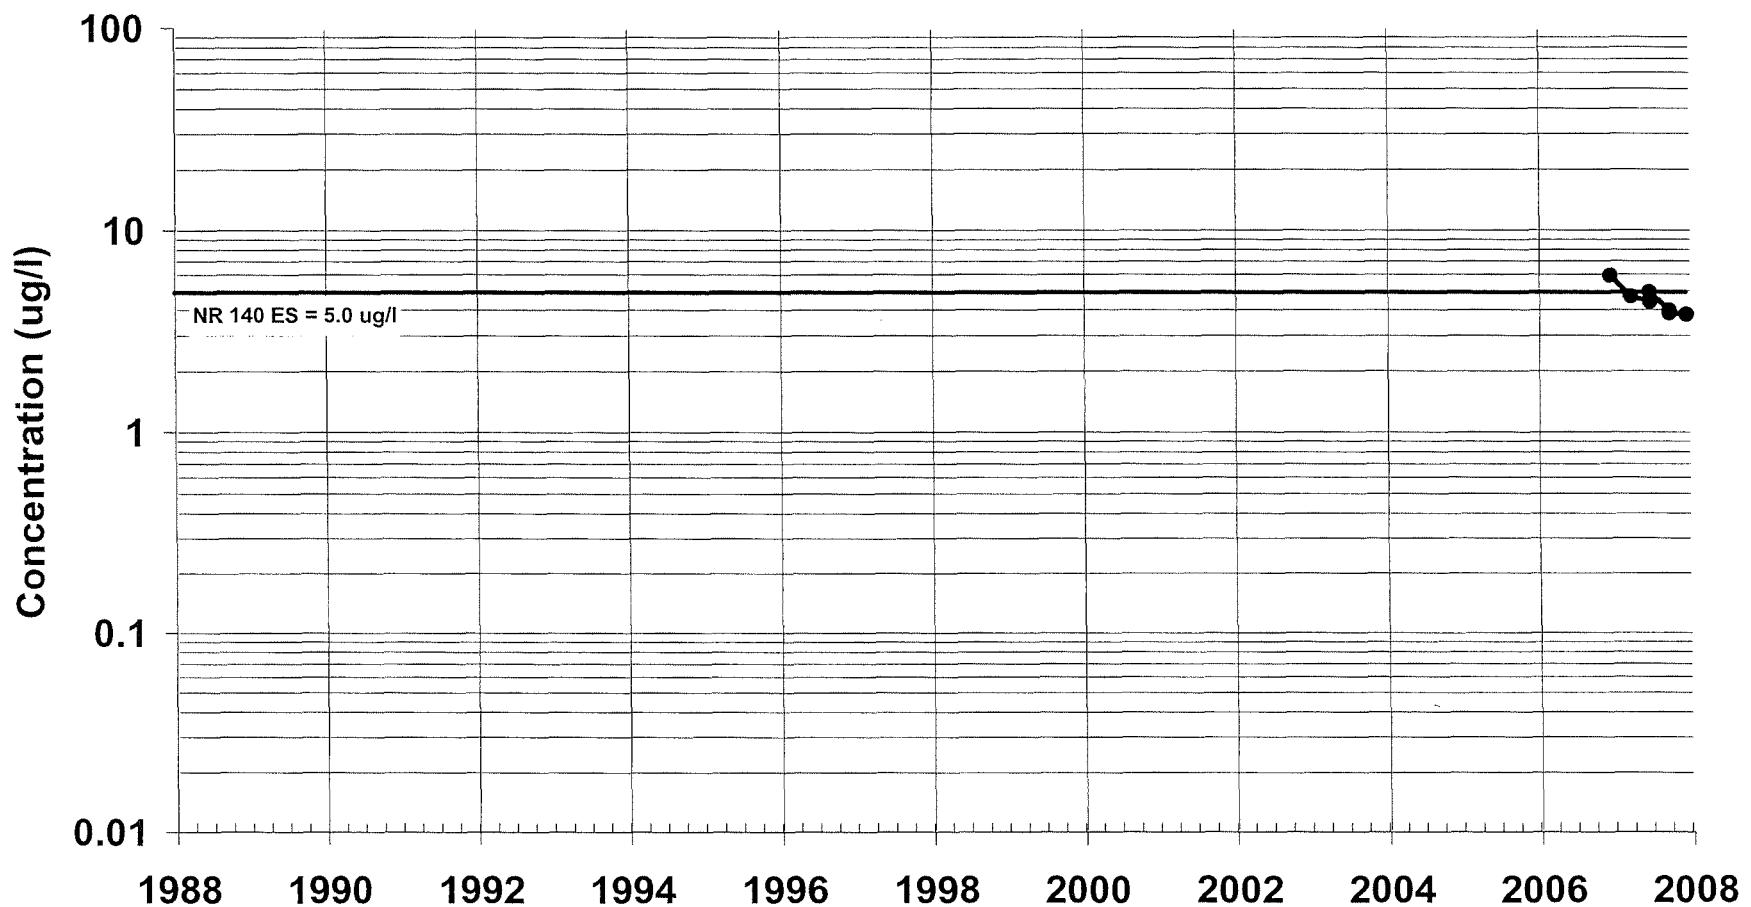

Benzene Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-26C

Benzene Concentration

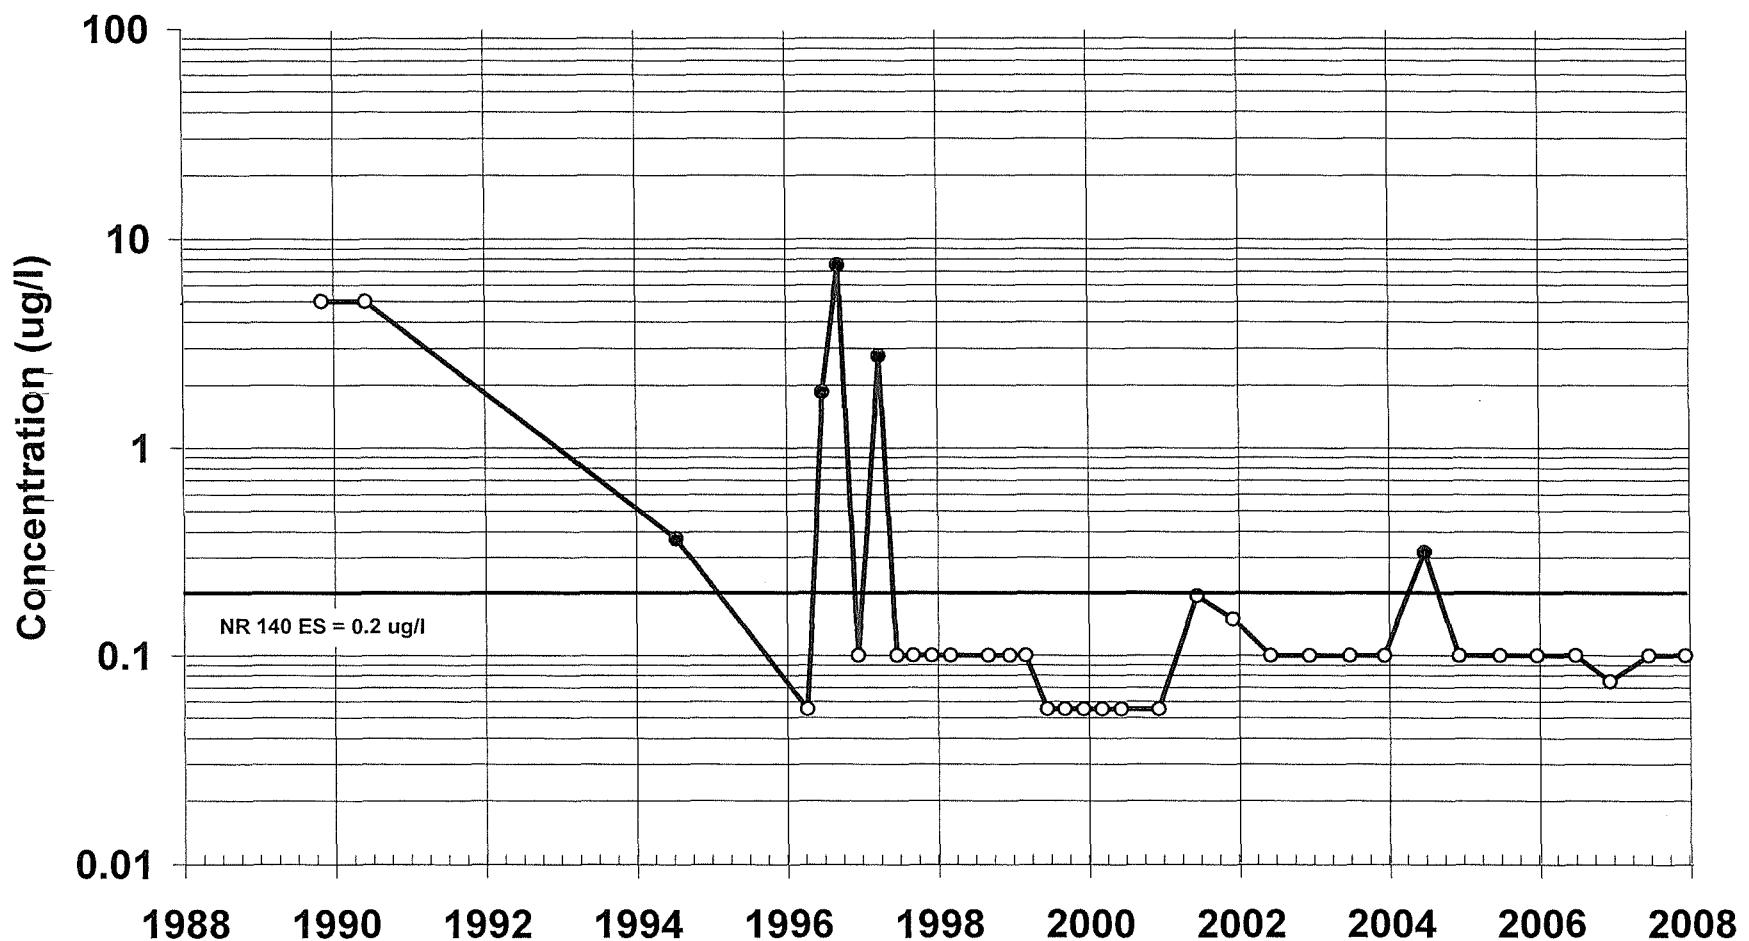

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

Appendix I

MW-4B

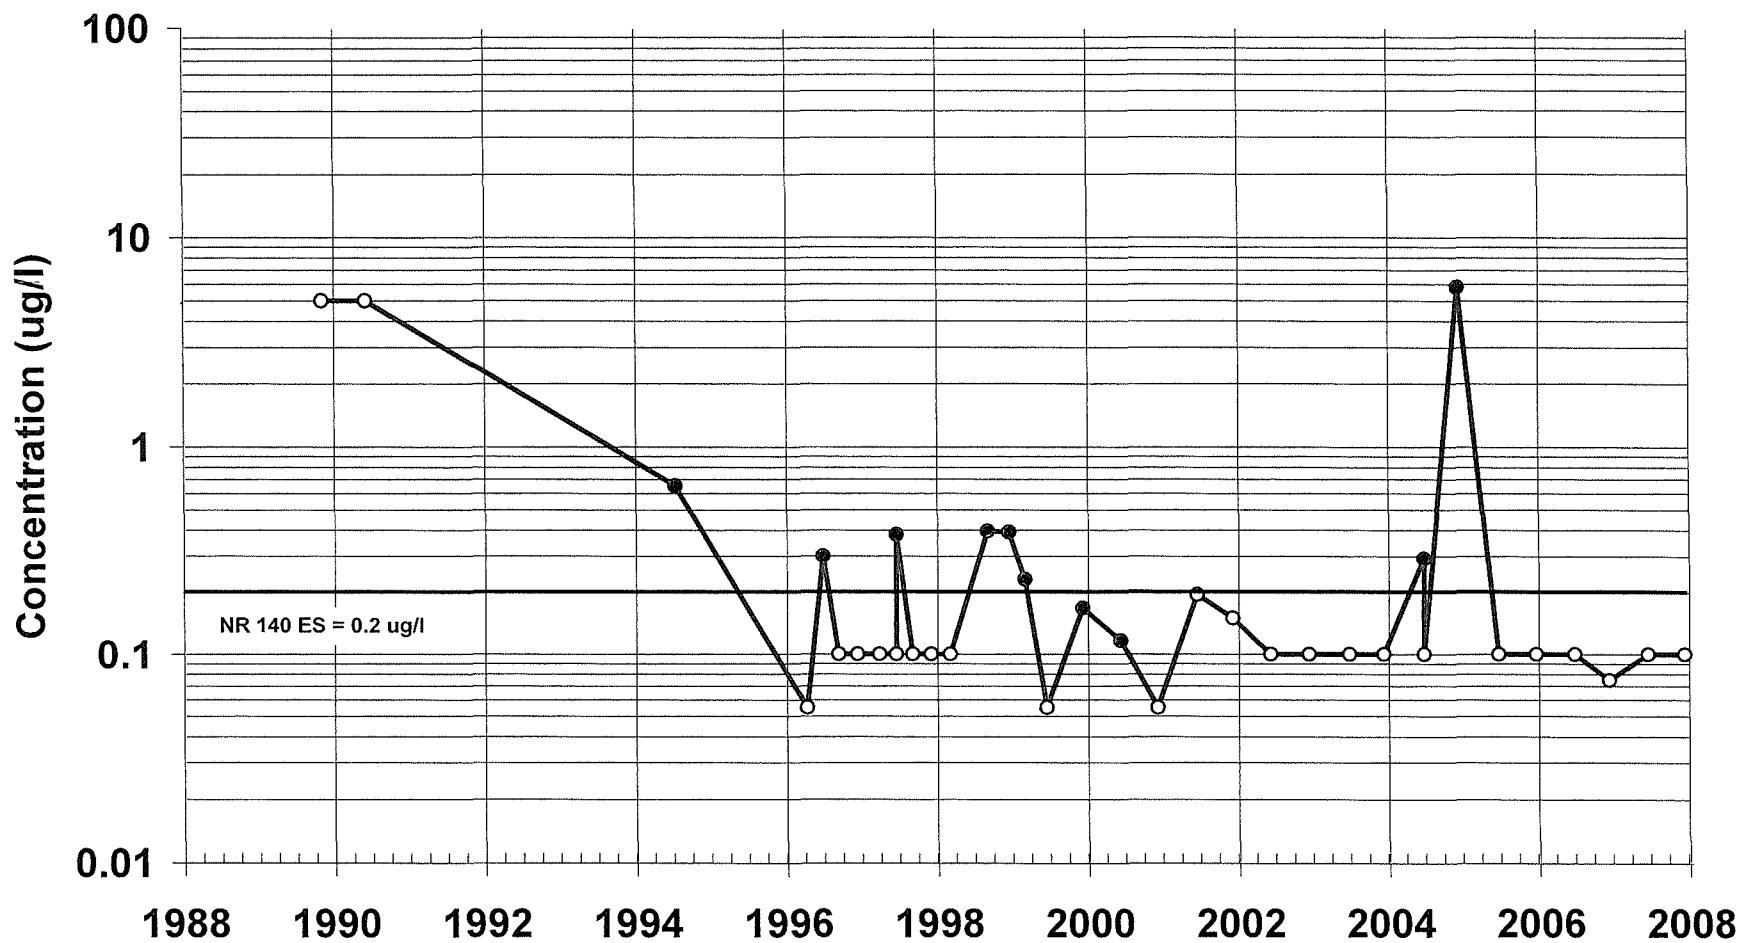

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-8B

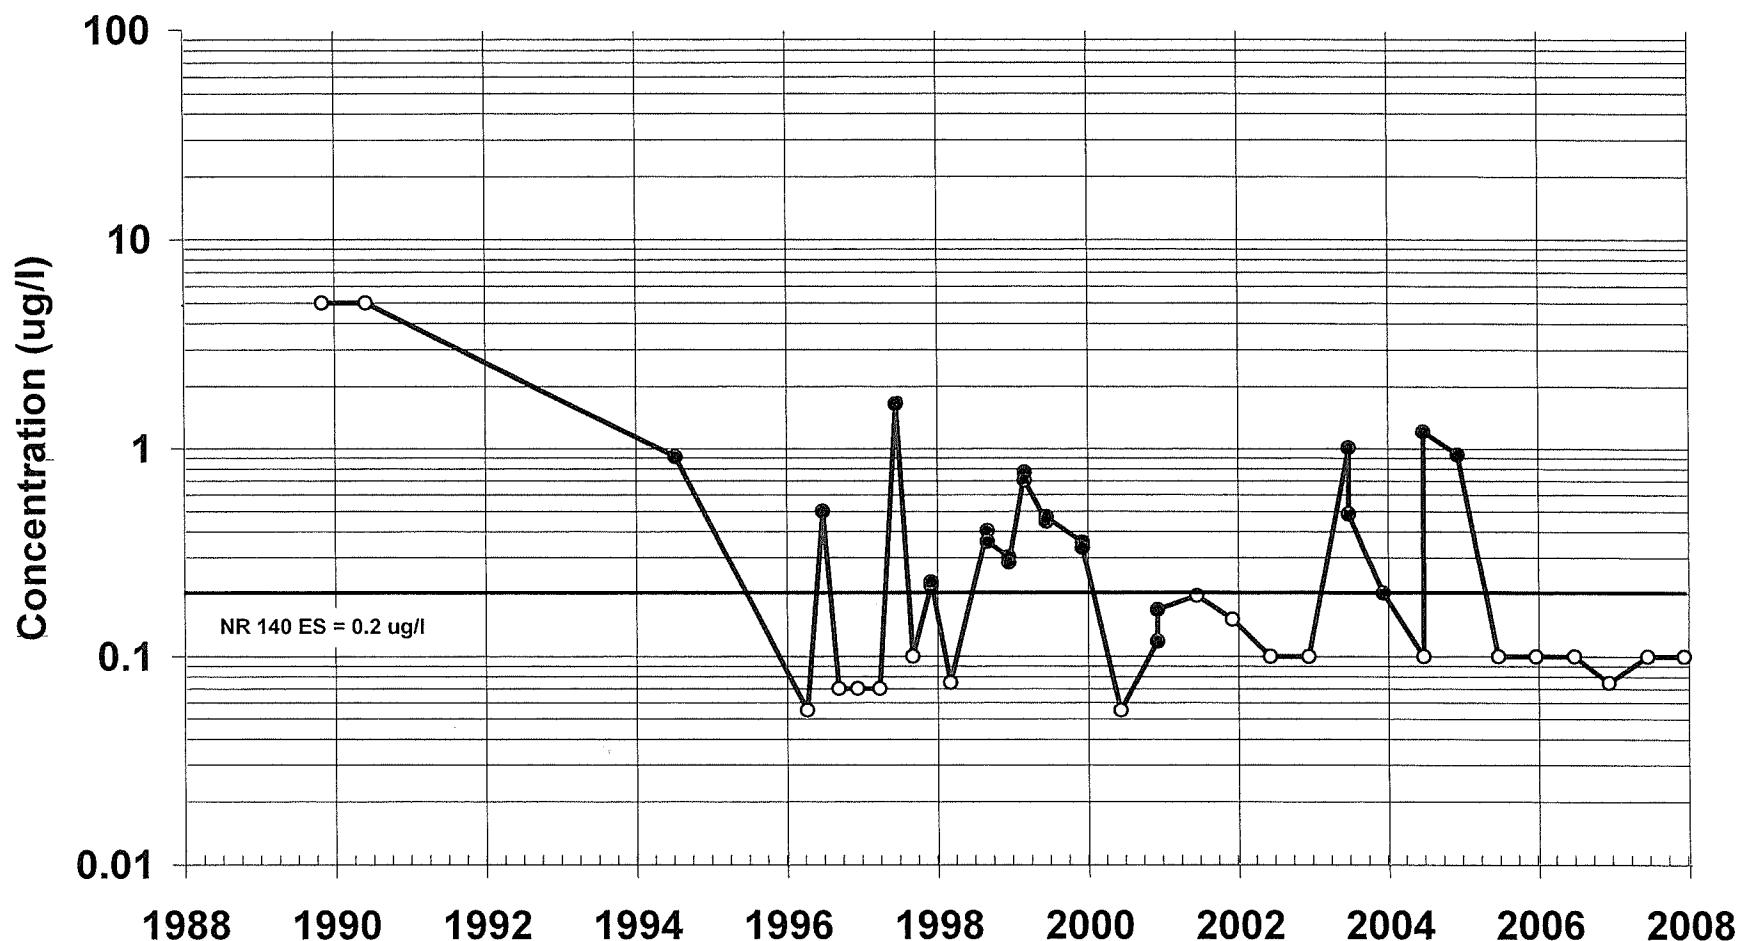

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-8C

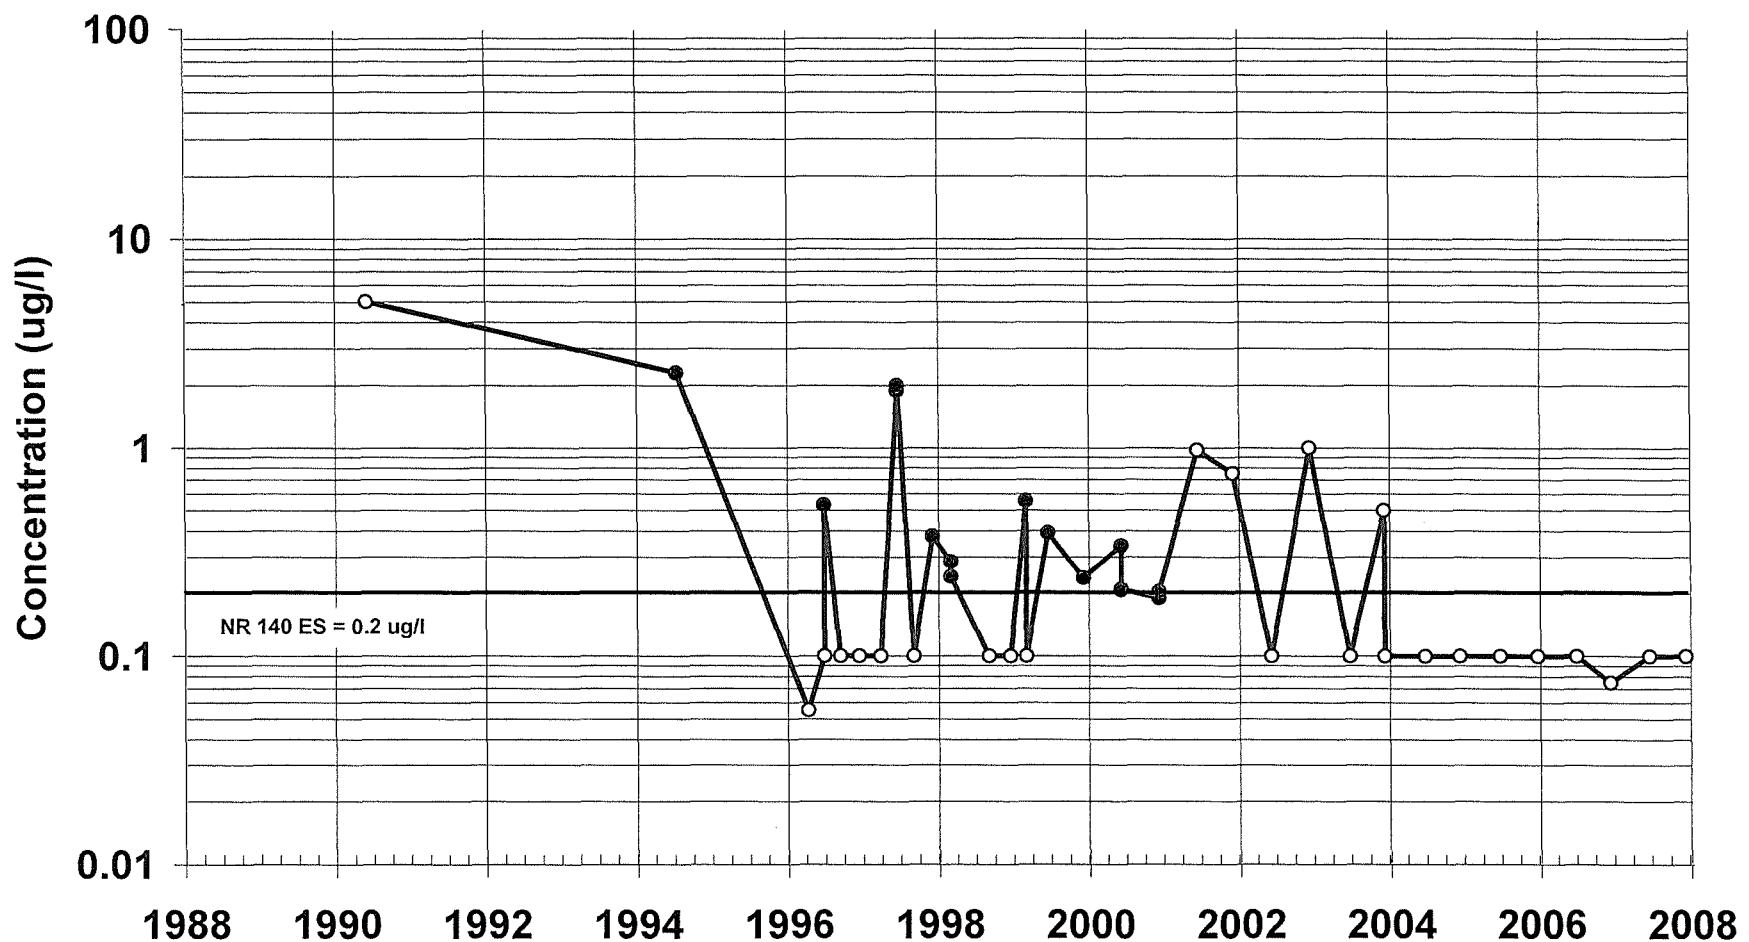

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-11C

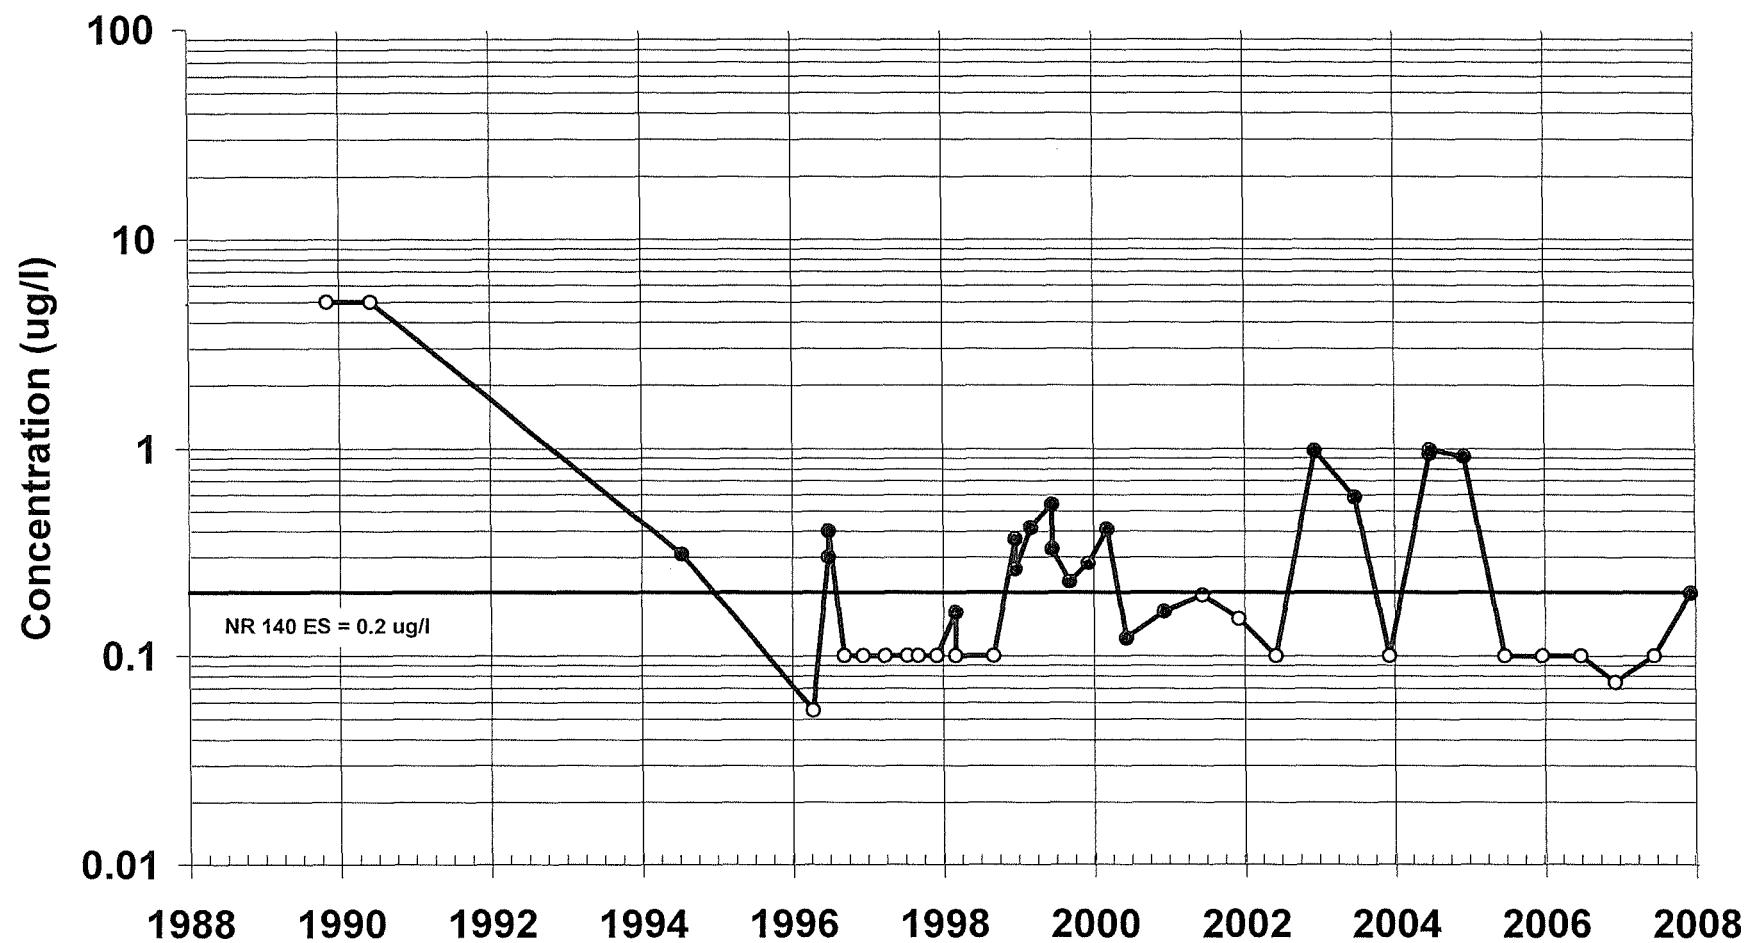

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-12B

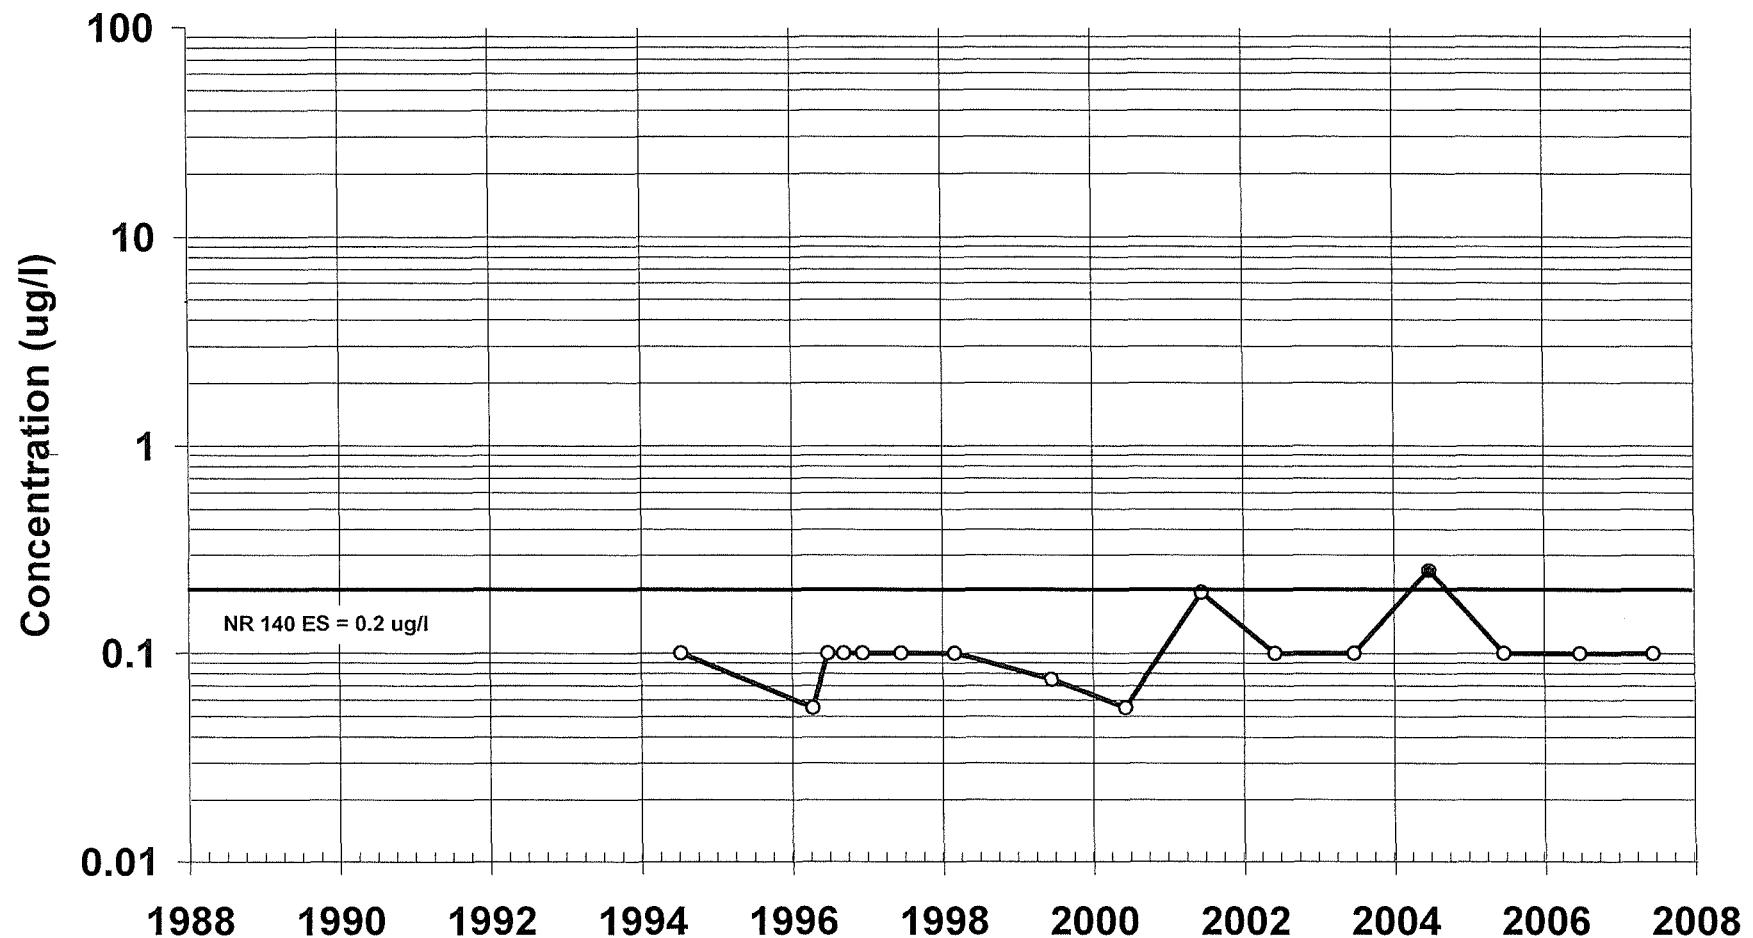

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-16BR

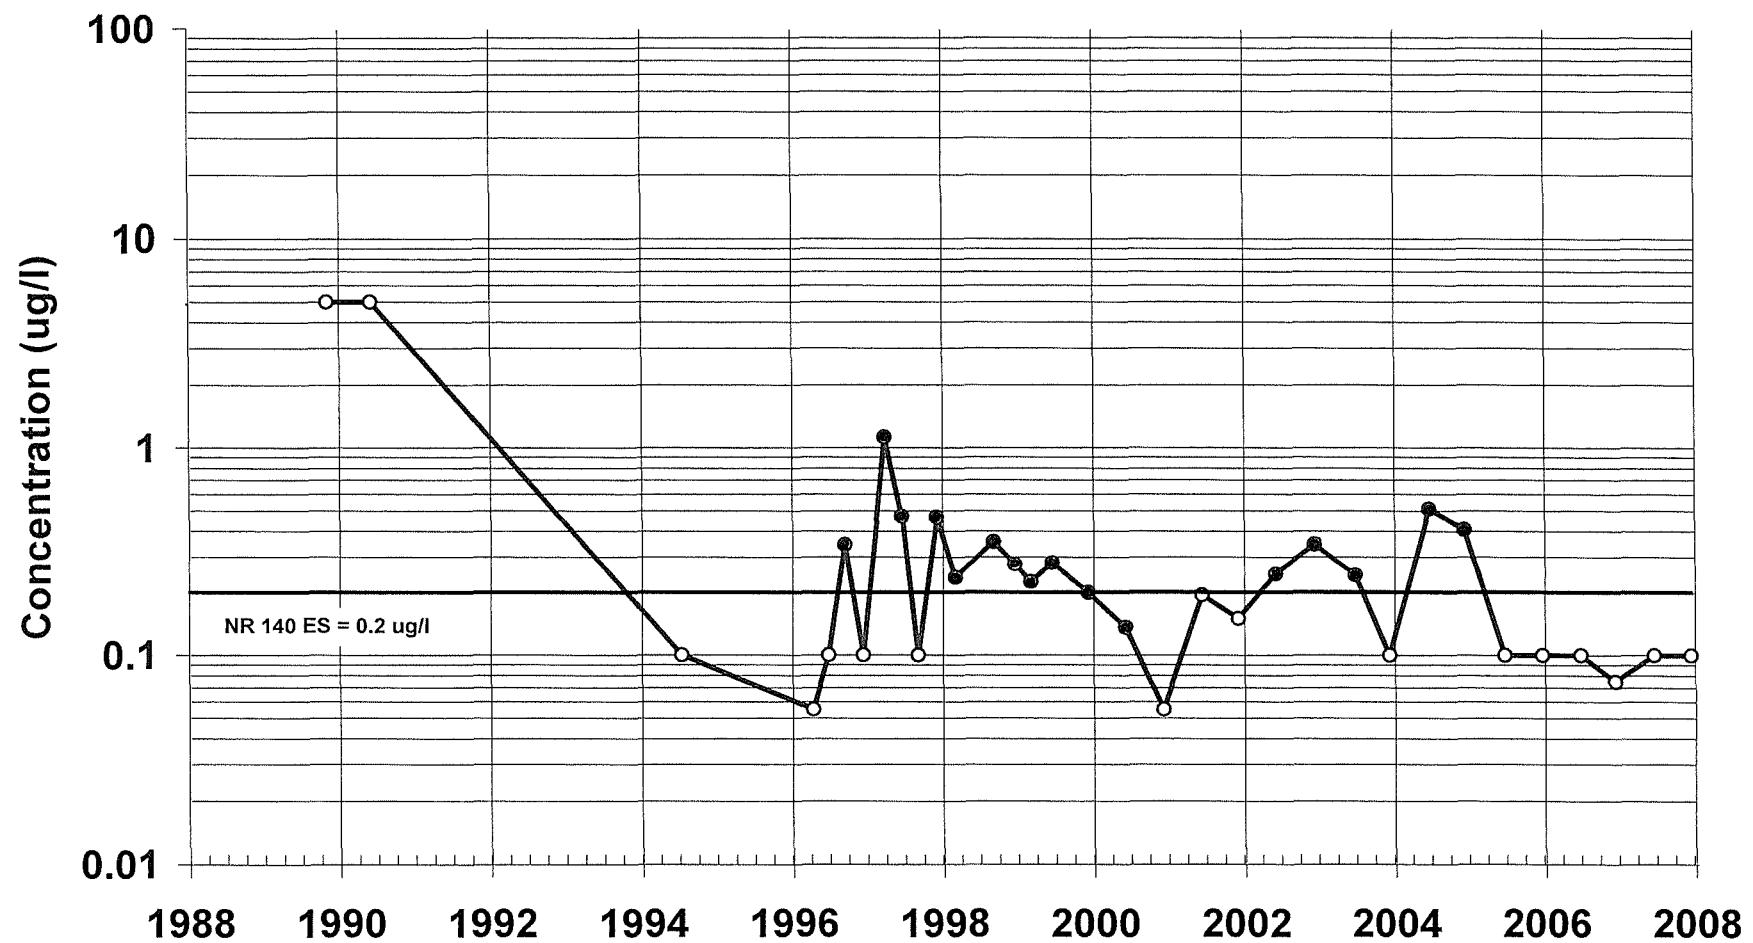

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-19A

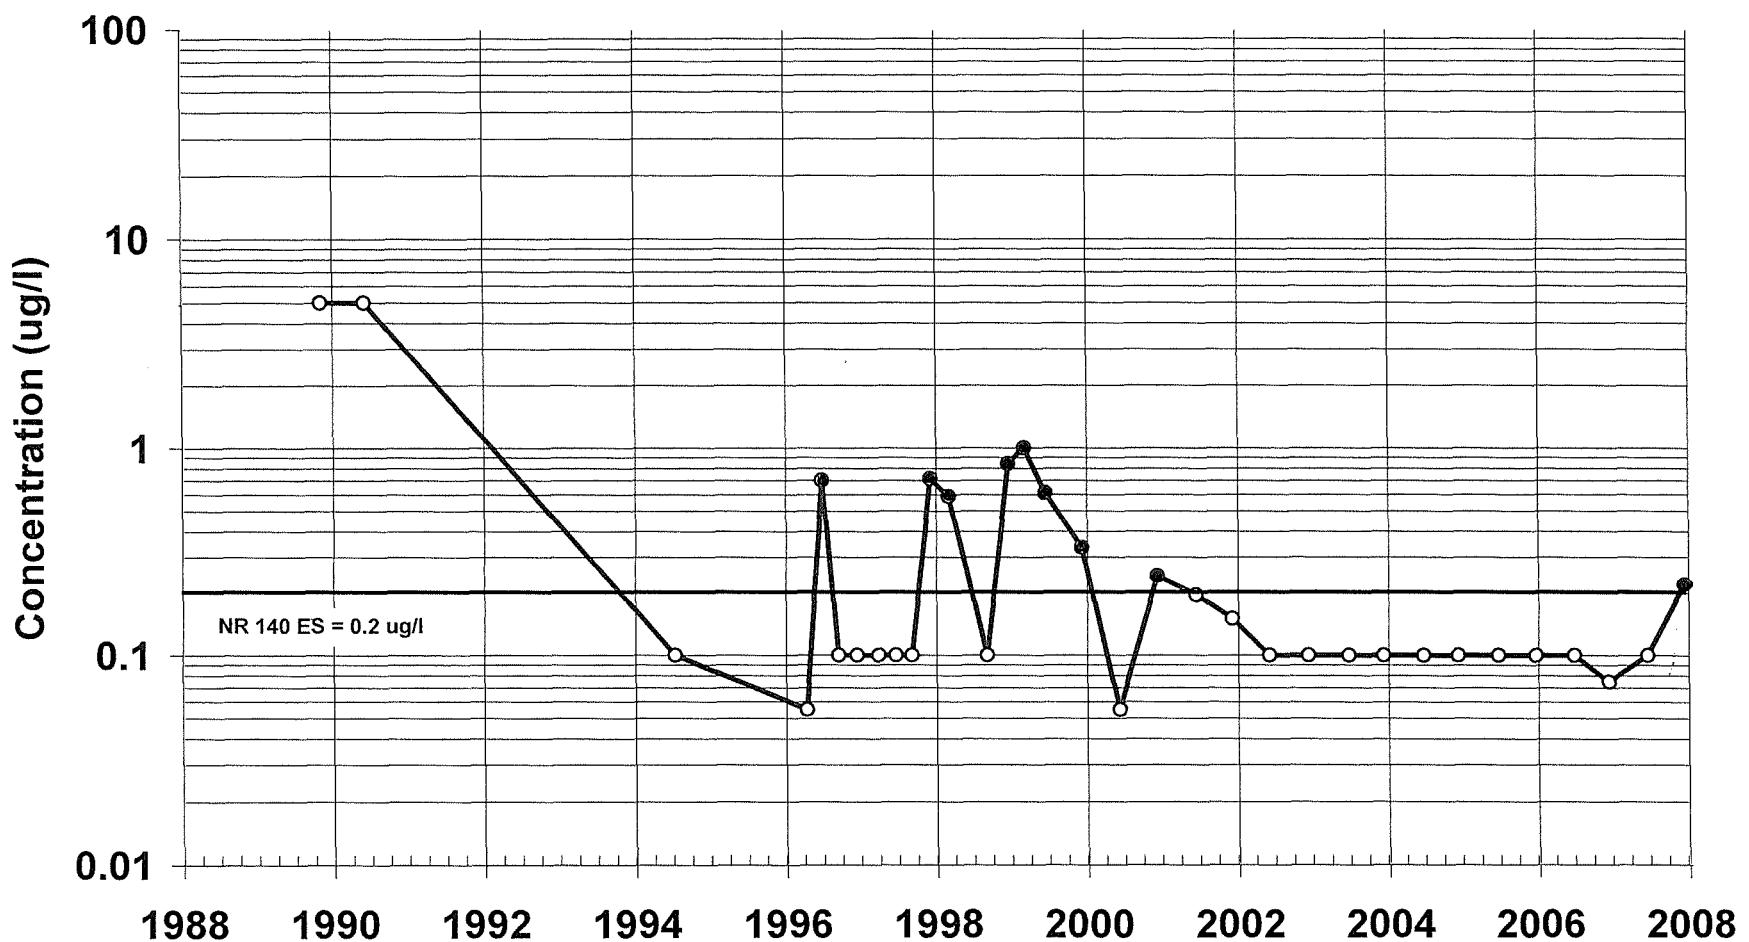

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-22B

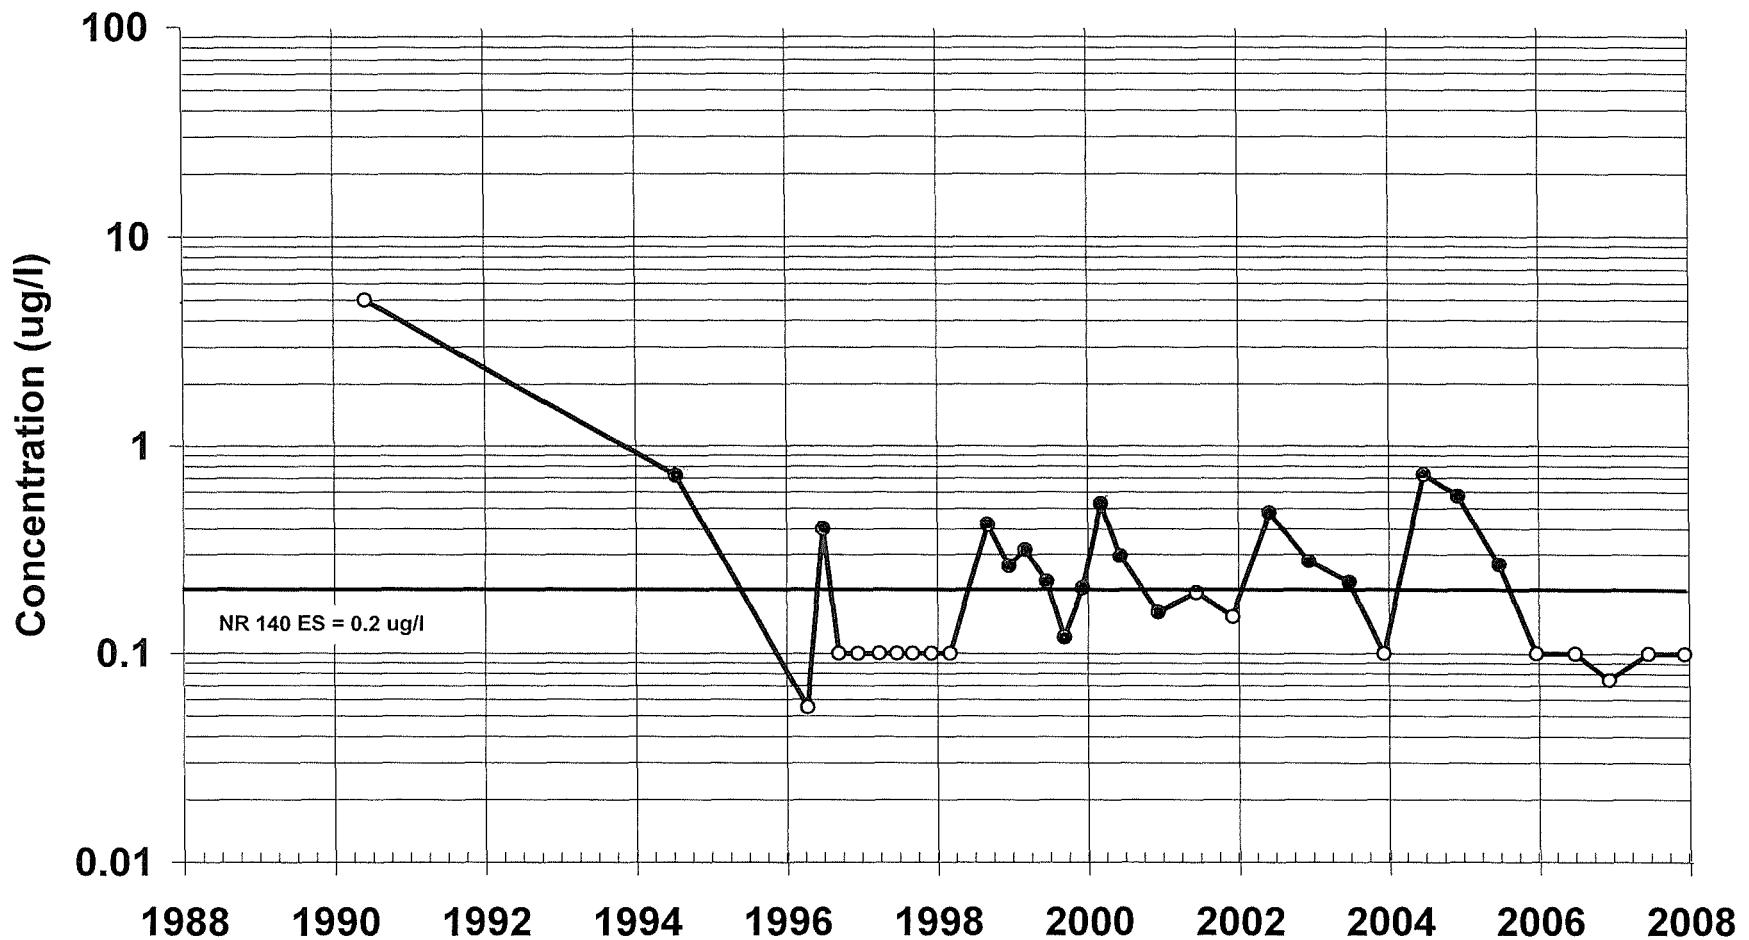

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-24B

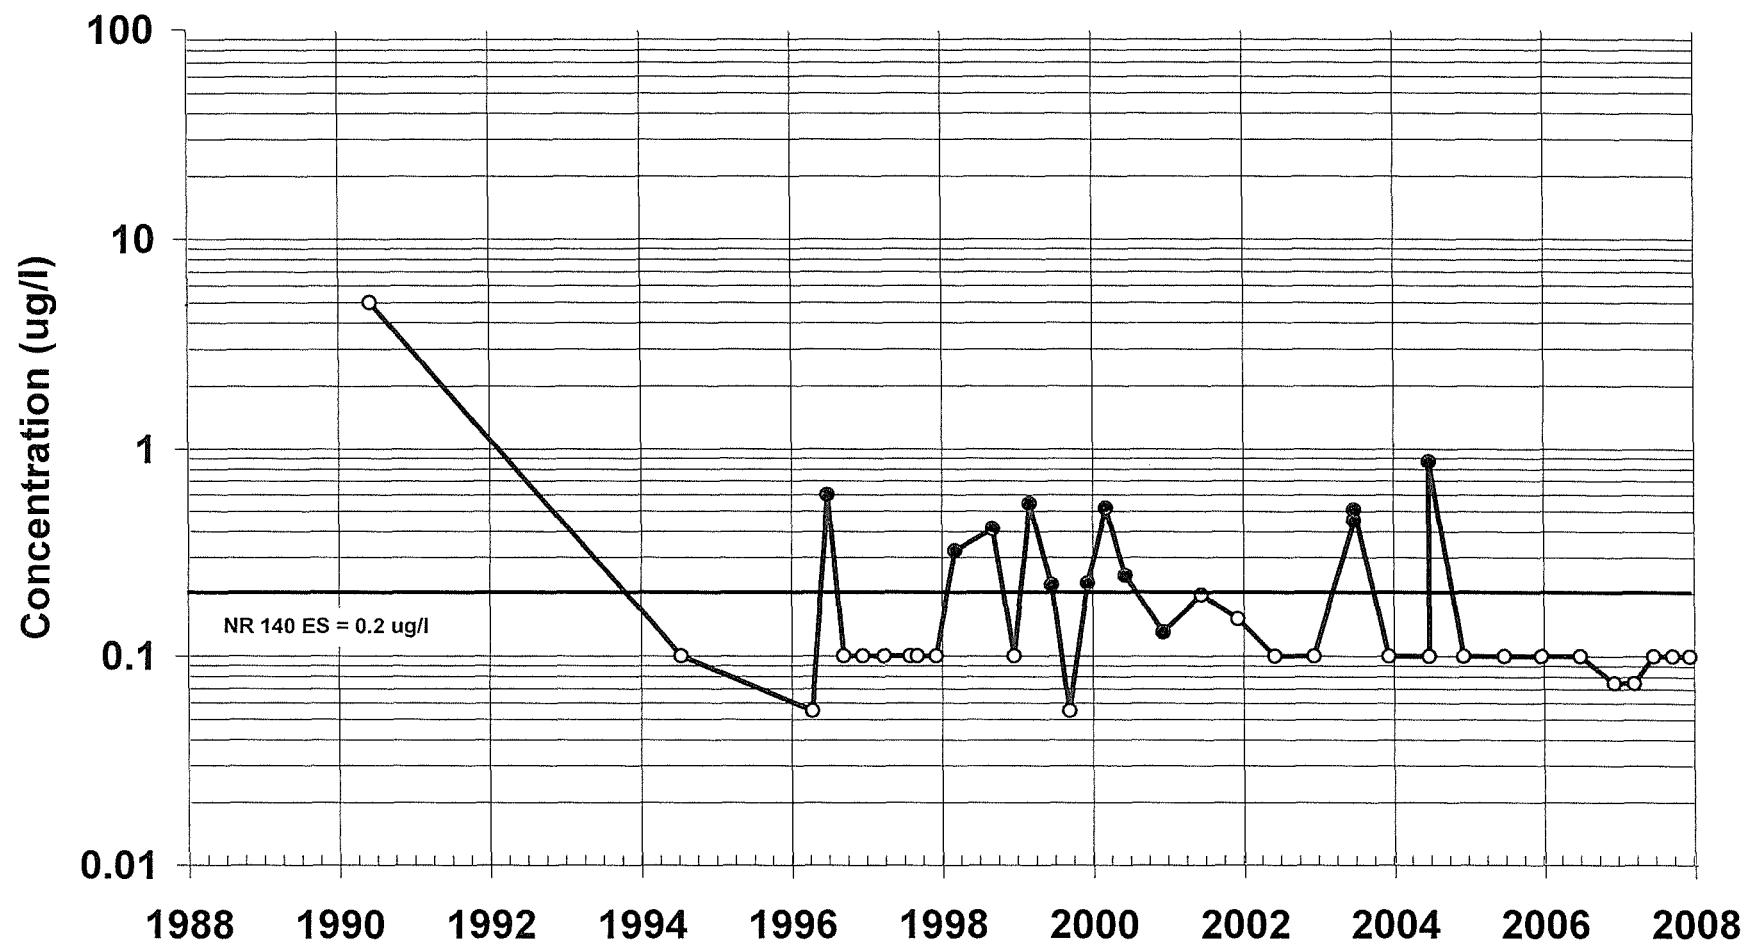

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-24C

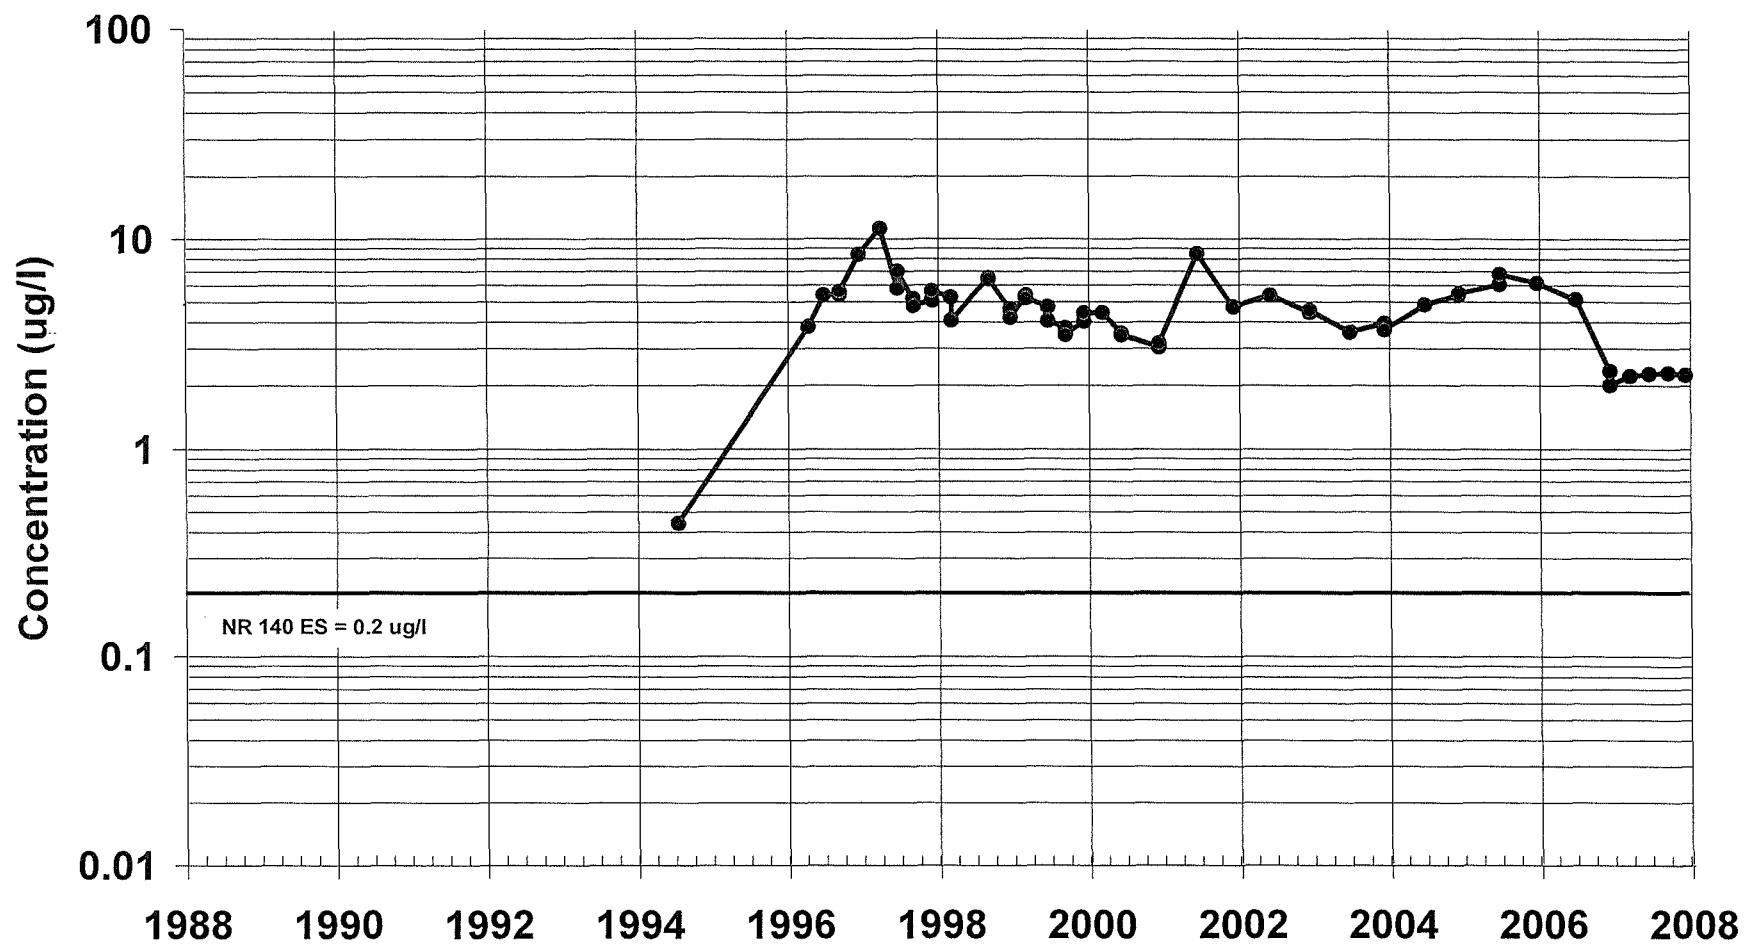

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-24D

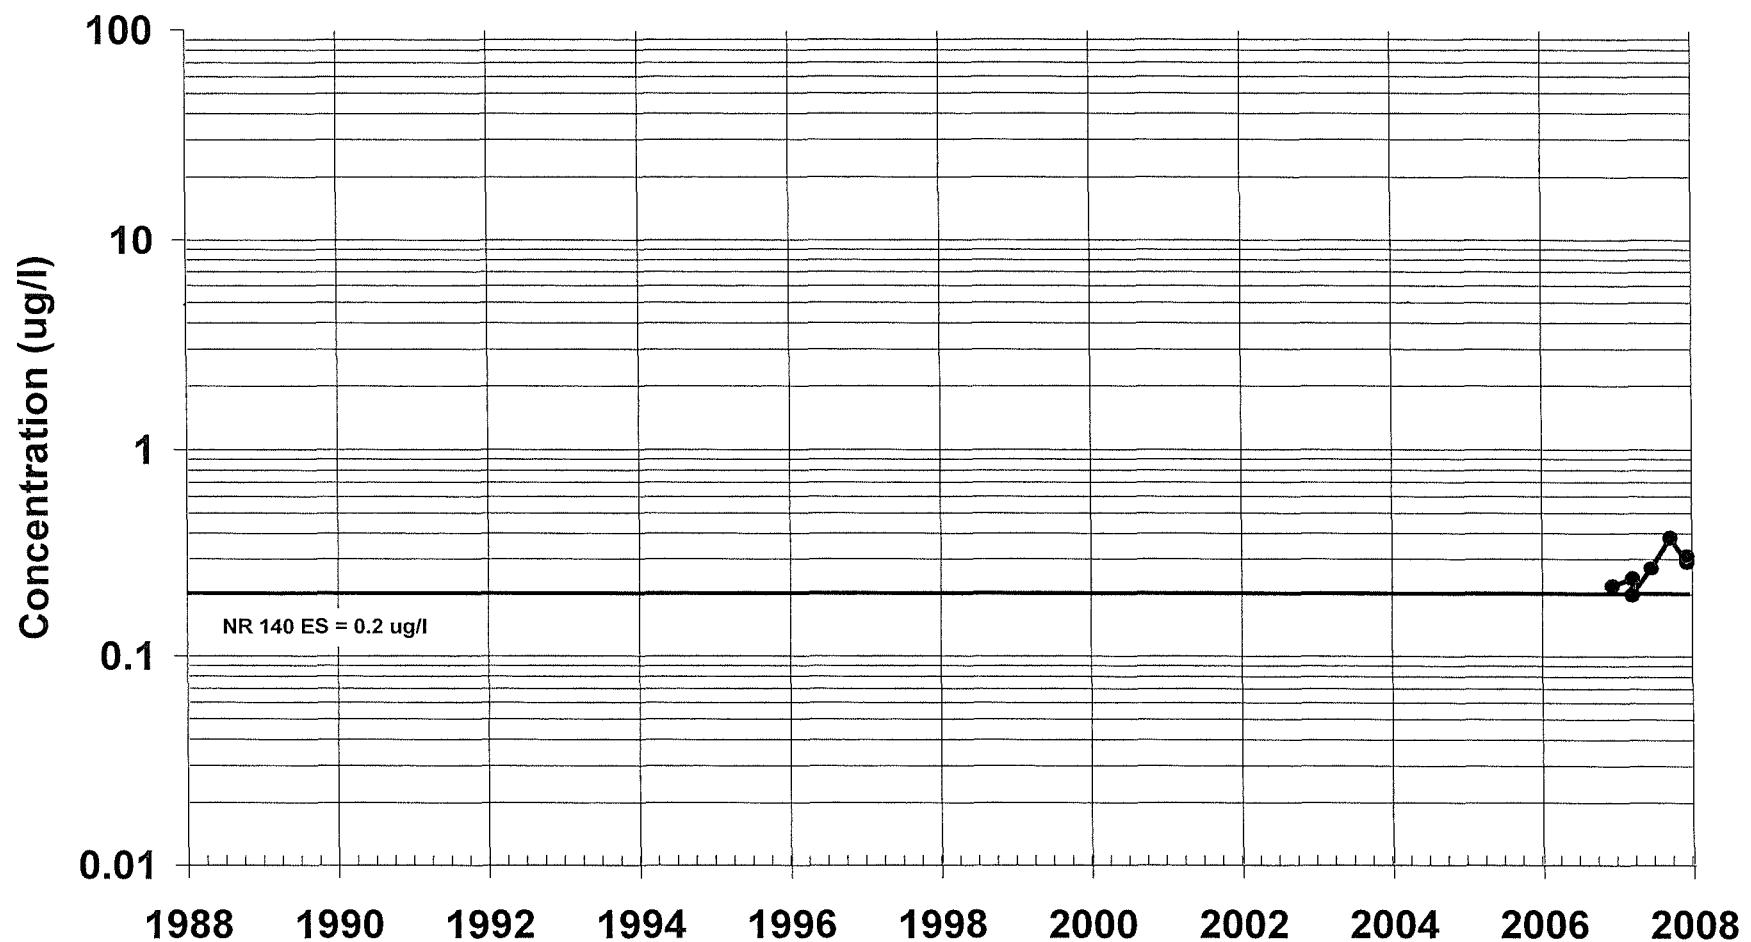

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-25C

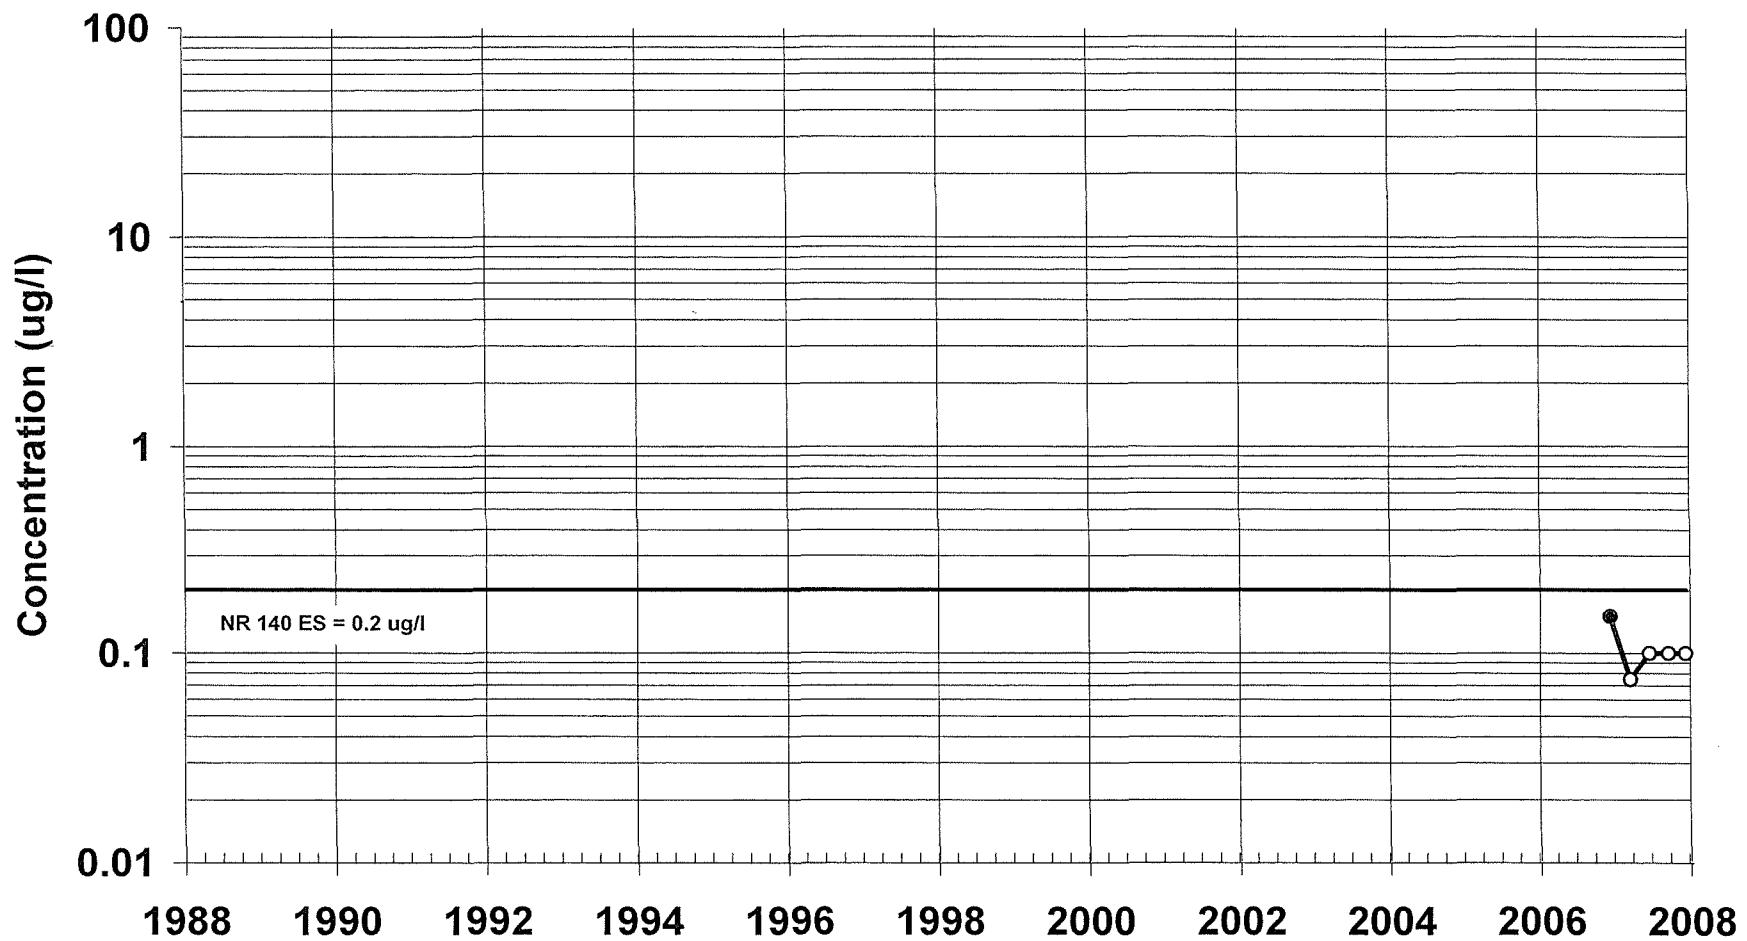

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

MW-26C

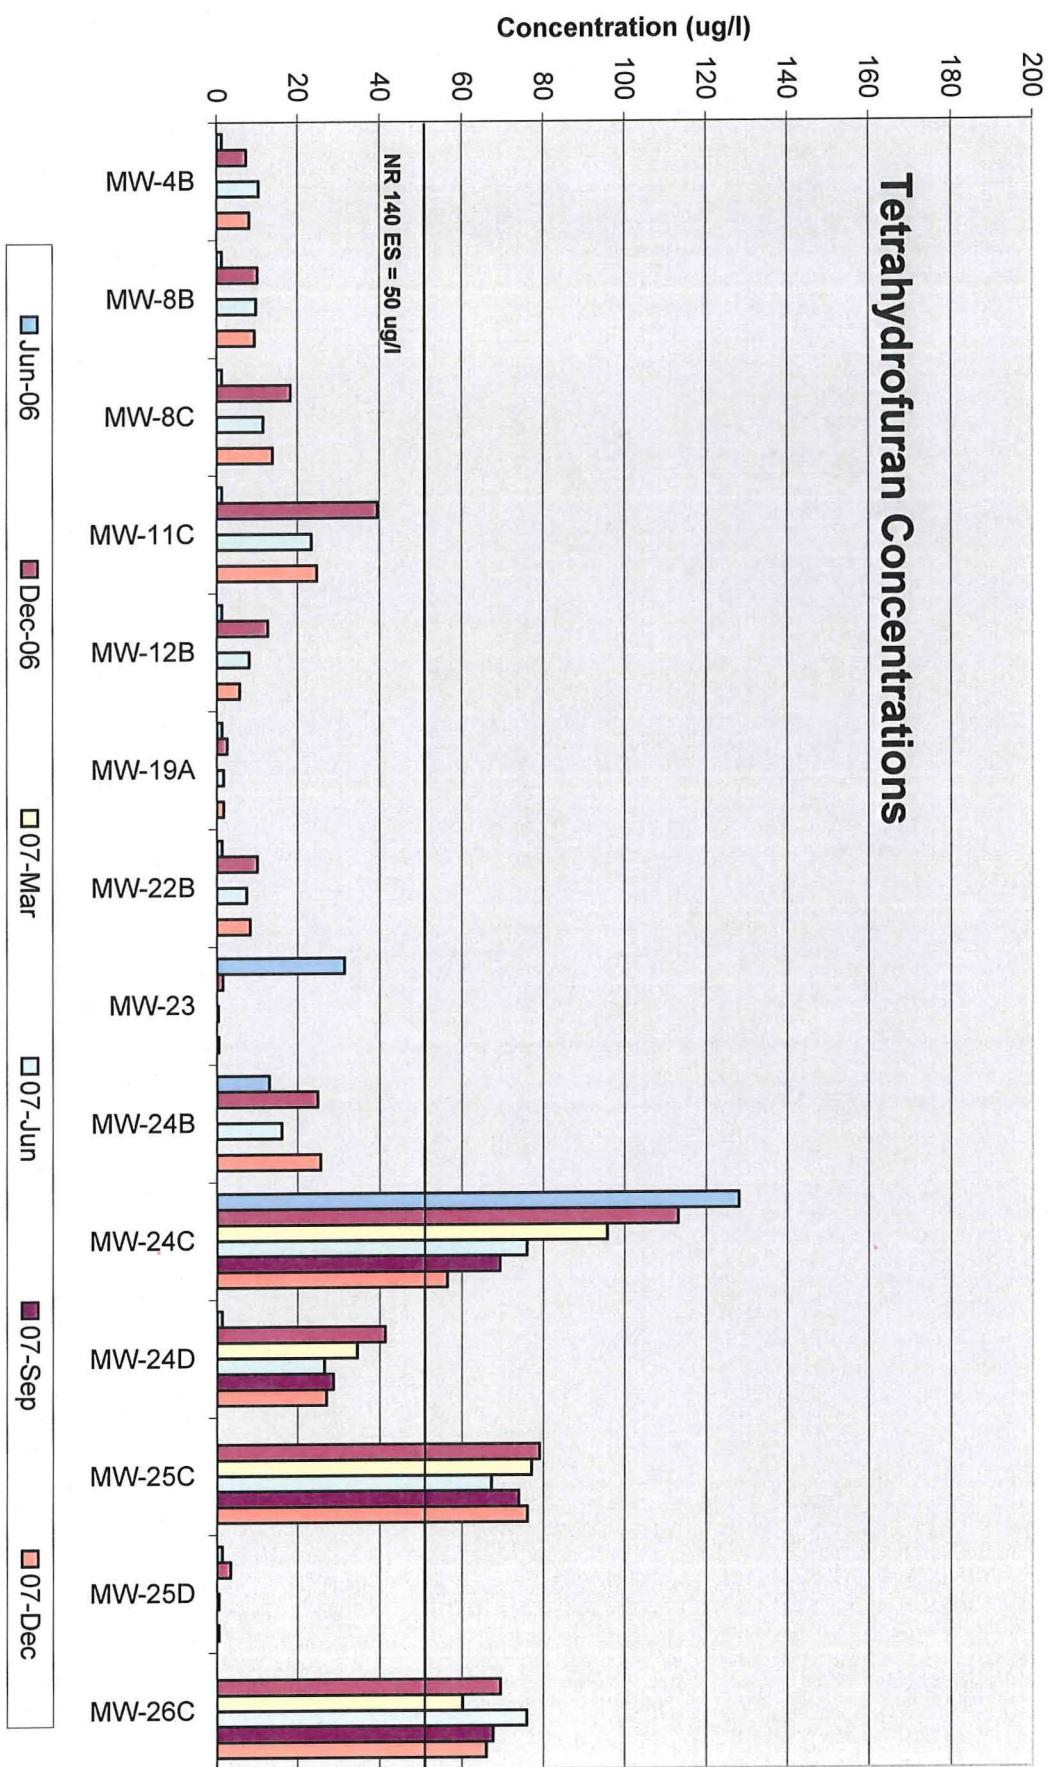

Vinyl Chloride Concentration

Open circle indicates that compound was not detected. Non-detected data displayed at one-half reporting limit.

Appendix O

Antenna tower constructed on Holtz Krause property to north of landfill cap
05/01/2007

Railroad equipment along north-east side of cap
05/01/2007

Salzman trailers along east side of cap
05/01/2007

Crack in turf east of EW-13
Looking south-west 05/01/2007

Toe drain on west side of landfill
05/01/2007

Landfill cap looking north-west from EW-34
05/01/2007

East bank of cap looking south
05/01/2007

Ponded water on cap looking west north-west
05/01/2007
